Some contention was made by the appellees that the increase in low water flow expected to be provided by the tributary reservoirs (which is the normal function of a power reservoir)[1] would increase the hydraulic gradient or backwater curve in the TVA lakes on the main stream with the result of slightly increasing the depths at the heads of such lakes.[2] However, *if the appellees are constructing their power projects so as properly to provide an incidental navigation channel,* as we believe they are, there will be no need for any artificial enrichment of flow to maintain adequate depths at the upper ends of the lakes. In fact there is no such need; and the only practical result of such increased flow is to increase the velocities at the heads of the lakes, the effect of which, if any, is unfavorable to navigation. (See p. 34, *supra.*)

But *if the appellees are not constructing their power project so as to provide an adequate incidental navigation channel,* then the suggestion comes to this: Normally the project depths in the few hundred yards of channel lead-

---

[1] On this point, as on so many others, the appellees' witnesses took conflicting positions, depending upon which best served for the moment. Thus, in their efforts to build up flood control storage on the TVA main stream dams, appellees' witnesses used a flat pool which would mean no flow whatever, and hence no backwater curve. (Bowman R. 1727, 1730, 1733-4.)

[2] The court in its opinion states: "Norris Dam was built and is being operated to create extra head of water power at Wilson Dam." (R. 559.) This, while accurate, is only a half truth, for Norris Dam, as well as other tributary dams, was built and is being used to create additional firm power capacity at all high dams down stream. This, of course, is not, as the court says, through increase of head, which is negligible, but through increase of low water flow with consequent marked increase of firm or commercial power capacity.

ing to the locks at the upper ends of pools would be secured by excavation, at a cost of a few thousand dollars. However, if this contention were valid, the simple expedient of adopting a disingenuous plan to secure the last one or two feet of this depth by constructing three huge power reservoirs many miles away on the tributaries at a cost of approximately $120,000,000, may be made to serve to bring the construction of such huge power developments on the tributaries within the field of federal power as the incidental result of a navigation improvement. The mere statement of the proposition would seem to carry its own refutation. Where the means to the end are so irrational or pretensive that, in an unnatural, indirect, abnormal and excessively expensive fashion, they merely tend in some negligible degree to forward or promote a constitutional purpose in a manner and at a cost irreconcilable with reason or common sense (but do overwhelmingly, plainly and directly serve to forward an objective which is outside the constitutional power and which objective affords the only rational explanation of the means adopted or justification for the cost incurred), it will not do to say that such a course lies within the field of Congressional discretion as to choice of means. That would extend the federal power without any practical limits.

The only relation of these tributary dams to navigation suggested by the court in its opinion (R. 550) is that *temporarily*, during the construction period and owing to the order of construction adopted by TVA in the interests of speedy power development, releases of impounded water from the tributary reservoirs during a low water season will somewhat, but inadequately, increase the depths in the portions of the Tennessee River where TVA has as yet done nothing. These low water releases would be comparable to the low water releases of any power reservoir; they would not produce the project depths; and they would, of

course, be an incident of the operation of the TVA power system except in so far and so long as the TVA may not be able to wrest markets away from the appellants fast enough to keep pace with its rapidly expanding power system.[1]

Laying to one side the fact that the Federal Navigation Project could have been entirely completed before this time at a cost less than that of Norris and Wheeler Dams alone, and that TVA construction on the tributaries and at Wheeler and Pickwick has been dictated by a desire for speedy power development with consequent delay in providing even an incidental navigation channel (see pp. 29-31, *supra*), this contention, most broadly stated, would mean that the relation of these great tributary power projects to navigation consists of a temporary, insubstantial and inadequate benefit to an inconsequential commerce merely during a construction period.[2] (See Construction Schedule submitted by TVA to Congress in its report of March 31, 1936; Comp. Ex. 328°, p. 27, and at the recent Hearings be-

---

[1] Even though long reaches of the Tennessee River remain wholly unimproved after five years of TVA operation and even though the TVA system is yet so underloaded as to make regulation of flow for power purposes relatively unimportant, the record of the operations of Norris Dam in the only year of its operation before the trial below, show daily and weekly fluctuations in flow and week-end and holiday shutdowns of flow, which are characteristic of operations for power production, but which are of no benefit, and may be detrimental, to navigation. (Woodward R. 1814, Barker R. 1994-5; Comp. Ex. 916.)

[2] The trifling character of this claim of even a *temporary* benefit to navigation is shown by the testimony of appellees' witness Woodward R. 1796-7. (See pp. 25-26, *supra*.) More than half of the traffic on the Tennessee River in 1935 and 1936 (the last years for which statistics were available at the time of trial) consisted of materials moved by TVA for its construction. (Alldredge R. 2071-2.) Over 80 per cent of the non-TVA traffic on the Tennessee River consists of short local movements of sand and gravel at several points on the river, which movements are independent of any improvement on the Tennessee River. (Putnam R. 1161, 1163; Comp. Exs. 344*, 345*; Alldredge R. 2072.)

for the House Committee, Def. Ex. 153°, p. 948.) There is no pretense that there would be any practical effect on the unnavigable conditions existing between Knoxville and Chattanooga.

To suggest that such an inconsequential and transient matter could bring these great power developments within the field of federal power, take away from the States control over their resources, remove the conduct of such a business from the field of State police power, and deprive the citizens of the State of the right to exercise their property rights and to carry on a local State business, subject only to State regulation, would seem quite to outrun the bounds of common sense.

(d) Both the statutory scheme and the administrative plan are plainly attempts, in the guise of exercising the implied power to improve streams for navigation, to exercise power not granted but forbidden to the Federal Government.

In the previous subsections of Point I, we have dealt with the circumstances that, under the TVA Act and under the TVA Unified Plan, the water power will not be created by the operation of structures built for the improvement of navigation so that there is a complete absence of federal power in the premises. But both the Act and the administrative plan also fall under the condemnation of another constitutional principle.

It is an established principle that the attainment of a prohibited end may not be accomplished under the pretext of exerting powers which have been granted to the United States. This principle has been frequently stated by this Court.

In *McCulloch v. Maryland*, 4 Wheat. 316, the Court said:

> "Should Congress, in the execution of its powers, adopt measures which are prohibited by the constitution; or should Congress, under the pretext of executing its powers, pass laws for the accomplishment of objects not intrusted to the government; it would become the painful duty of this tribunal, should a case requiring such a decision come before it, to say that such an act was not the law of the land." (Loc. cit. 423.)

In *Linder v. United States*, 268 U. S. 5, this Court stated the principle as follows:

> "Congress cannot, under the pretext of executing delegated power, pass laws for the accomplishment of objects not entrusted to the Federal Government. And we accept as established doctrine that any provision of an act of Congress ostensibly enacted under power granted by the Constitution, not naturally and reasonably adapted to the effective exercise of such power but solely to the achievement of something plainly within power reserved to the States, is invalid and cannot be enforced." (Loc. cit. 17.)

The foregoing principle is to be applied in the light of the great canon of construction laid down in *McCulloch v. Maryland, supra*:

> "Let the end be *legitimate*, let it be within the scope of the constitution, and all means which are appropriate, *which are plainly adapted to that end, which are not prohibited, but consist with the letter and spirit of the constitution*, are constitutional." (Loc. cit. 421.)

These principles apply to the exercise of an express power, and they should be applied even more rigorously where, as here, the alleged basis of federal action is the exercise of an *implied* power. Here it is plain that the end is not legitimate, that the means sought to be employed are prohibited, and that neither is consistent with the letter or the spirit of the Constitution. No realistic reading of the TVA Act, no realistic examination of the TVA Unified Plan, can result in any other conclusion than that the de-

liberate and purposeful creation of a great power development is the primary end and purpose sought to be achieved by both. "To a constitutional end many ways are open; but to an end not within the terms of the Constitution, all ways are closed." *Carter v. Carter Coal Co., supra,* 291. The creation of a great federal corporation for the purpose of developing the maximum power resources of the Tennessee River and its tributaries, just as the development of such power resources might have been undertaken by private interests, States or municipalities under the Rivers & Harbors Act of July 3, 1930, is an admission on the face of the Act that the maximum development of the power resources of the Tennessee River and its tributaries would not result from the mere improvement of the Tennessee River for navigation and that such objective can be achieved only by the adoption of plans and structures specially selected, located and adapted to the development of power.

Pursuant to the statutory purpose, the structures of the TVA Unified Plan are plainly and directly adapted to, and do accomplish, the maximum development of the power resources of the Tennessee River and its tributaries within the scope of the execution of the statute embodied in that plan which is merely a current construction program. While creating no superior navigation facilities, the TVA structures involve an expenditure six and three-tenths times as great as the cost of an equivalent, if not superior, navigation improvement—and in lump sum approximately $400,000,000 more than an equivalent or superior navigation improvement. No rational explanation of the selection, design, location and order of construction of these structures and of this vast additional expenditure appears except the adaptedness of such structures to power development and the fact that they will create the greatest hydroelectric power system in the United States, if not in the

world, whereas structures having a real and *bona fide* adaptedness to navigation improvement would produce no commercial power. These TVA structures include great tributary reservoirs, creating five-sixths of the water power, with dams ranging from 265 to 450 feet in height, located far from any navigation facilities and regardless of location, plainly and directly adapted to power development but wholly unsuited to, and indeed destructive of, navigation improvement even if the tributaries were susceptible of practical navigation. To say that the adoption of such a scheme falls within the power of Congress to select the means to an end would be plainly untenable. It is plain that the only end toward which these means are directed and for which they have any real or rational adaptedness, is electric power development—a subject outside the field of federal constitutional power. Any claim that the means have any real or substantial relation to the improvement of navigation is irreconcilable with reason, common sense or intellectual honesty. Their adoption is rationally explicable only upon the basis that the end is to promote the unconstitutional objective of a purposeful power development in the guise of exercising a constitutional power.

These conclusions inescapably follow from a reading of the provisions of the Act and an examination of the structures, nature and purposes of the TVA Unified Plan. (See pp. 12-14, 17-20, *supra.*) They are confirmed by the opinion of a distinguished officer of the Corps of Engineers, the traditional guardians of the preservation and improvement of the navigable waters of the United States, and by the admissions of the appellees themselves. Thus General Pillsbury, in his testimony before a Committee of the Congress, said of the TVA dams:

> "The high dams are very much more costly than low ones. They are not better for navigation but the

justification for their large expenditure can be found only in the power that they make available." (Comp. Ex. 365†, p. 302.)

Dr. Morgan, testifying before a Committee of the Congress as Chairman of the Tennessee Valley Authority, in response to an inquiry whether the purpose of the Tennessee Valley Authority dams is not the production of electrical energy, said:

"That is the major purpose." (Comp. Ex. 112†, p. 262, R. 2674.)

Numerous other statements of like tenor are found in the various Congressional Hearings on TVA appropriations. (Comp. Exs. 108†, p. 25, R. 2621-2; 112†, p. 287, R. 2680.) In an official TVA press release made public late in 1933 (excluded by the court as immaterial)[1] the appellees said:

"If we admit that the use of electricity can not be increased manyfold; if that is our mental attitude, then we must be logical and immediately stop construction of the Cove Creek (Norris) Dam and of the Joe Wheeler Dam." (Comp. Ex. 800, excluded, R. 3706.)

The appellees have never explained why they thought the construction of dams *now* alleged to have been constructed for the *improvement of navigation should be stopped because of an absence of a market for electric power.*[2]

---

[1] The error of the trial court in excluding the official Press Releases referred to in this subpoint is discussed at pp. 219-225, *infra.*

[2] In other official TVA Press Releases made public in 1934 (likewise excluded by the court as immaterial) the appellees stated:

"*The Norris Dam is being built for power development,* but that is not an end in itself. • • • It is only a means to an end. The object of building a dam is to provide power; the object of providing power is to raise economic and social conditions of a region." (Comp. Ex. 863, excluded, R. 3829.)

"*The TVA has under way, as you know, a comprehensive program for the development of the power resources of the*

(Continued on page 120)

Indeed, every man in the street and every man in the countryside throughout the nation knows that TVA is primarily a power development. As Mr. Chief Justice Taft said in the *Child Labor Tax Case*, 259 U. S. 20, 37;

> "All others can see and understand this. How can we properly shut our minds to it?"

And in the language of Mr. Justice Field in *Ho Ah Kow v. Nunan*, 12 Fed. Case No. 6546, at 255:

> "* * * we cannot shut our eyes to matters of public notoriety and general cognizance. When we take our seats on the bench we are not struck with blindness and forbidden to know as Judges what we see as men * * *."

Otherwise our great constitutional questions will be decided upon the basis of solemn pretenses which every man in the street knows are at war with the facts, upon a kind of feigned issue; and respect for the law, for the courts and for our constitutional system, as well as the interest of public morals and public welfare, will gravely suffer. That would leave a wide field in which individuals and minorities could depend only upon the cold comfort of the ballot box for the protection of many constitutional rights and the maintenance of our dual system of government against the tyranny of political majorities or of those temporarily in power. In practical effect we would then have a constitution decreeing the rights of minorities and individuals and the separation of State and federal power under our dual system of government with no effective means of vindicating those rights.

Tennessee River and its tributaries. No more ambitious program of hydro-electric development has ever been actually undertaken in this country." (Comp. Ex. 834, excluded, R. 3763.)

Many similar statements of appellees are found in other official Press Releases excluded by the court (Comp. Exs. 796, R. 3689; 834, R. 3766; 786, R. 3679; 790, R. 3682; 815, R. 3732; 844, R. 3800.)

We respectfully submit that the facts in regard to the TVA Unified Plan *conclusively and indisputably* show exactly that *pretended* exercise of federal power, in fact outside the field of federal power, which has been uniformly condemned by this Court.

(c) The trial court failed to find or consider the controlling issue of fact and applied an erroneous principle of law.

Neither in the opinion nor in their findings do the majority of the trial court touch the controlling questions of fact and law on this issue. Nowhere do they recognize that the question is whether the water power is to be created as the incidental result of the operation of structures which have a real, substantial and *bona fide* relation to the improvement of navigation. The trial court apparently deemed the controlling question to be whether a federal power development is *"inconsistent"* with navigation or, in effect, whether it obstructs navigation, and that under the euphonious title of a "multiple purpose project" the Federal Government may yoke together constitutional and unconstitutional enterprises. (Opinion, R. 545, 549.) But the constitutional limitations upon the power of the Federal Government to create water power may not be thus escaped.

If by "multiple purpose project" is meant a structure which has a real, substantial and *bona fide* relation to the improvement of navigation, but in its operation necessarily creates some water power, then the TVA projects are not "multiple purpose projects." The facts hereinbefore reviewed disclose that the TVA structures on the main stream are power developments with merely incidental navigation facilities. (See pp. 20-36, *supra.*) The tributary projects are built at locations far removed from any navigation facilities and are completely devoid of relation to navigation improvement.

If by "multiple purpose project" is meant a single statutory or administrative scheme which includes a navigation project or improvement and also a separate power project or development, then such a scheme is beyond federal constitutional power. Thus defined the expression "multiple purpose" is not synonymous with "incidental result." It is the same as though the United States were to assert the right to construct a commercial office building, a department store or factory, and to engage in any business for which the structures were suitable, by making provision for a post office in one corner of the premises. The Federal Government can not escape constitutional limitations by yoking together an unconstitutional structure or objective with a constitutional structure or objective. In such cases, either the whole scheme falls or the unconstitutional structure or objective must be eliminated. *Retirement Board v. Alton R. Co.*, 295 U. S. 330, 362; *Carter v. Carter Coal Co.*, 298 U. S. 238, 312; *Employers' Liability Cases*, 207 U. S. 463, 501.

2. The creation of the water power may not be sustained under any constitutional power of the Federal Government over flood control.

The decision of this point does not require, and therefore under the decisions of this Court does not permit, a determination of the scope of federal power in the matter of flood control; for the facts clearly establish that none of the commercial water power will be created by the operation of flood control structures. *This consideration is conclusive upon this point.*

(a) None of the commercial water power is created by the operation of any flood control structures included in the TVA Unified Plan.

TRIBUTARY RESERVOIRS. The three tributary reservoirs, *which will create five-sixths of the firm or commercial water power,* severally consist of a large power reservoir upon which is superimposed a relatively small flood control reservoir. These power reservoirs and flood control reservoirs on the tributary projects are as separate and distinct as though they were built at entirely different locations. *These small flood control reservoirs do not and can not produce any firm or commercial power.* (See pp. 38-46, *supra.*)

MAIN STREAM RESERVOIRS. The main stream projects consist almost wholly of reservoirs to create head and store water for power with incidental navigation facilities necessary to prevent complete obstruction to navigation by the TVA power structures. The flood reservoirs superimposed on these power reservoirs other than at Gilbertsville are not only very small (for illustration, only one foot high at Guntersville), but from their very nature and purpose they can produce no firm or commercial power regardless of their size. And it would make no difference if these reservoirs below the power projects were navigation structures (as they are not); for in either event these lower reservoirs would provide no flood control and the superimposed flood control structures would produce no commercial power. (See pp. 49-53, *supra.*)

This is a suit to enjoin the creation, transmission and sale of water power (the water power being converted into electricity for some of these purposes) in competition with the appellants, and hence the foregoing considerations dispose of the issue without examination of the scope of federal power over flood control.

(b) The creation of water power is the primary purpose of the TVA Unified Plan and flood control is minor, if not pretensive, and any attempt to sustain that plan as a flood control project falls as an attempt to accomplish a forbidden object under the pretense of exercising a constitutional power.

A statement and discussion of the pertinent constitutional principle is found at pages 115-121, 96-101, *supra.*

It is a fundamental fact that flood control and power development are conflicting. The flood control reservoirs on the tributary projects are very small in relation to the power reservoirs upon which they are superimposed. Yet the amount of flood control provided at Chattanooga and above (where practically all flood damage in the Tennessee basin occurs) is so small as to be almost valueless in a great flood when flood protection is needed and valuable. The three tributary projects are located on the Clinch, Hiwassee and Little Tennessee Rivers. The TVA Unified Plan makes no pretense of providing any flood protection on the other important tributaries of the Tennessee River, including the Emory River, where the greatest loss of life and damage to property through floods in the Tennessee basin has been experienced. (pp. 46-49, *supra.*) Obviously, a *bona fide* flood control system would have taken care of this situation.

Furthermore, the cost of the flood control structures superimposed on top of these tributary power reservoirs is so small in relation to the cost of the power structures upon which they are built as also to establish that the creation of water power is the primary purpose and the provision of flood control incidental, if not pretensive. *United States v. Constantine,* 296 U. S. 287, 289. Thus, two and six-tenths times as much dependable flood storage could have been provided at the site of the Norris Dam for less than one-fourth the cost of Norris Dam and reservoir.

It is plain that the TVA Unified Plan, taken as a whole, does not materially benefit flood control on the Mississippi River. As General Pillsbury testified before the House Committee on Military Affairs, in reference to the TVA dams, "the effect on the Mississippi would be measured in inches and fractions of an inch in a high flood," and the construction of the TVA dams would not "have an appreciable effect on the flood waters of the Mississippi." (See p. 60, *supra.*) Moreover, it is conceded that the tributary reservoirs are beyond prediction distance (Woodward R. 1783-4, 1806-8) and hence could not be used for flood control on the Mississippi even though local flood protection were sacrificed. A *bona fide flood control system, giving ten times as much dependable flood storage and immeasurably more flood protection*[1] *where needed at and above Chattanooga could have been built for a fraction of the cost of the TVA Unified Plan and for much less than the cost of the three TVA tributary projects alone.* (See pp. 48, 55-57, *supra.*)

The flood control reservoirs superimposed on the main stream power reservoirs are (except at Gilbertsville) even smaller (for illustration, only one foot high at Guntersville) in relation to the power reservoirs upon which they are built. These main stream reservoirs destroy more valley storage than they provide flood storage; and no project may take credit for flood control until it has paid back the storage of which it has robbed nature. The main stream reservoirs above Chattanooga would be flooded out in any great flood when they are really needed. The TVA Unified Plan over-all would not furnish enough flood protection to

---

[1] The ratio of increase in flood protection is much greater than the ratio of increase in dependable flood storage because the small amount of flood control provided by the TVA Unified Plan at and above Chattanooga would be almost wholly ineffective in a great flood when flood protection is the most needed and the most valuable.

make practicable the construction of levees necessary for flood protection at Chattanooga. (pp. 49-57, *supra.*) Indeed, more than two years after the TVA Unified Plan had been officially reported to the Congress, the Congress, in apparent recognition of the obvious lack of any material flood control features in that plan, passed the Act of June 28, 1938, directing the Secretary of War and the Corps of Engineers to make a preliminary examination, survey and report for flood control at Chattanooga.

The construction of the TVA Unified Plan will cause annual damages several times greater than the average annual flood damage on the Tennessee River and all its tributaries. The total area normally flooded by the TVA reservoirs (exclusive of Wilson) will be over 465,000 acres (Def. Ex. 153†, p. 919), which greatly exceeds the number of acres occasionally flooded in the Tennessee Valley in a state of nature. Indeed TVA is purchasing more than 912,000 acres for the TVA reservoirs (exclusive of Watts Bar, Coulter Shoals and Fontana projects, for which land has not yet been purchased) to provide the additional land which will be overflowed in time of flood with the necessary margin of shore land. (Def. Ex. 153†, p. 947.) The total average annual flood damages of all kinds *on the Tennessee River and all of its tributaries is only $1,784,000 including the estimated damages from a hypothetical 500 year flood.*[1] (Comp. Ex. 105°, p. 734.)

---

[1] The total estimated average annual damage from all floods (including a hypothetical 500 year flood adopted by the Corps of Engineers for the purpose of its estimates) through flooded lands is only approximately $170,000 on the Tennessee River, excluding tributaries, and $291,000 including tributaries. The total estimated average annual damages to all kinds of property in all floods (including the hypothetical 500 year flood) is only about $981,000 on the Tennessee River (excluding tributaries) of which $211,000 occurs below Hales Bar (substantially at Chattanooga), and $770,000 at Chattanooga and above. (Comp. Ex. 105°, p. 734.)

The trial court excluded, as irrelevant and immaterial, evidence that the average annual value of crops standing in September and October (which, of course, did not include crops, such as hay and small grain, harvested earlier) on the land which will be flooded by TVA in the Chickamauga, Guntersville, Pickwick and Wheeler reservoir basins was $3,126,000 or an average of over $20.00 per acre. (Offer to Prove, R. 1244-50; Def. Ex. 153†, p. 947.) On the same basis, the total estimated value of crops on lands which will be flooded by TVA reservoirs at normal pool level (excluding Watts Bar, Coulter Shoals and Fontana for which figures as to the amount of land to be flooded are not yet available) would be over $6,498,000. In addition to the land to be flooded at normal pool level by the foregoing reservoirs, TVA is purchasing, and presumably retiring from production, nearly 600,000 acres more at such reservoirs.

The complete elimination of all flood damages on the Tennessee River and its tributaries (including estimated damages from a hypothetical 500 year flood) would not justify a capital outlay of $45,000,000; and the small TVA flood control reservoirs superimposed on the TVA power reservoirs would not eliminate any substantial part of these damages. It is a fundamental principle that expenditures for flood control structures may not exceed the capitalized value of the flood damages eliminated by those structures. (Compare Declaration of Policy in Omnibus Flood Control Act of June 22, 1936, 49 Stat. 1570, 33 U. S. C. 701a.) Where, as here, it is claimed that structures costing many times the capitalized value of any flood damages eliminated are built for flood control, it is plain that the contention is a pretense and subterfuge.

The facts herein reviewed and many other facts stated at pp. 38-60, *supra,* plainly show that flood control is a minor purpose, if not merely pretensive.

(c) It is plain on the face of the Act that power development is not incidental to flood control.

Earlier in this brief, we have analyzed the TVA Act and shown that power development is the primary purpose of the Act. (See pp. 12-14, pp. 102-106, *supra.*) Just as those analyses of the statute show that power development is not, under the Act, incidental to navigation improvement, so do they also show that power development is not incidental to flood control under the Act. Again the question is not, as the trial court seemed to think, whether the statute went so far as to say that TVA should develop the maximum power resources of the Tennessee basin in disregard of any federal constitutional power or duty in the field of flood control, but whether the statute did direct the TVA to develop the power resources of the Tennessee system. And the statute does say upon its face that whatever Congress intended to do with respect to navigation or flood control, it definitely intended also deliberately, separately and purposefully to develop the maximum power resources of the Tennessee River and its tributaries.

(d) Assuming a determination of the scope of federal power over flood control were involved (which it is not), that power does not extend beyond the power to protect navigation channels and navigation works.

Were the facts of this case such as to require or permit a determination of the scope of federal power over flood control (which they are not), we think it plain that the power of the Federal Government over flood control does not extend beyond the power to protect or improve navigable channels of interstate navigable streams. Cf. *Jackson v. United States,* 230 U. S. 1, 18, 23; *Cubbins v. Mississippi River Commission,* 241 U. S. 351. Navigable streams are natural instrumentalities of interstate commerce; and the Federal Government has been charged with their protection

and improvement. But flood control structures for that purpose may not constitutionally be undertaken by the Federal Government unless the structures have a real, substantial and *bona fide* relation, rather than an indirect, remote and insubstantial relation, to the protection of the navigation facilities. And no flood control benefits to navigation accrue from the TVA Unified Plan. (See pp. 36-37, *supra.*)

Subject to the paramount jurisdiction of Congress over the navigable waters of the United States, the power to protect lives and property from destructive floods is vested in the several States under their police powers. Cf. *Leovy v. United States,* 177 U. S. 621; *Manigault v. Springs,* 199 U. S. 473; *Orr v. Allen,* 248 U. S. 35; *Cubbins v. Mississippi River Commission,* 204 Fed. 299; *St. Louis Southwestern Ry. Co. v. Board of Directors,* 207 Fed. 338.

Such power as Congress may possess in the matter of flood control is implied from the interstate commerce power. Implied powers may not be treated as express powers so that federal power is indefinitely extended by a series of concentric circles of increasing diameter until all constitutional limitations are destroyed. Nor may factual relationships be extended by inference piled upon inference until federal power is made to embrace things having remote, indirect and insubstantial relations to the thing within the federal field. Federal power over flood control may not, therefore, reasonably be extended to include protection against flood hazards to life or property within the several States or to subjects and instrumentalities primarily falling within the jurisdiction and police power of the States. While the Federal Government may spend for the general welfare, it may not itself engage in activities not authorized by the Constitution merely because they may be deemed, or even in fact are, for the general welfare.

Protection of property and people is inherently a matter of local concern. Its relation to interstate commerce is

indirect. Its relation to the States is immediate and comprehensive. To extend the interstate commerce power to such matters, as distinguished from the exercise of the spending power, would be to displace the States in a field so wide that its limits cannot be foreseen. For if that be an appropriate exercise of the interstate commerce power, the matter does not end there. Thus, it would then logically follow, as asserted by the appellees below, that Congress may construct facilities for the protection against floods of any and all of the means of production because the produce or semi-finished and finished articles may subsequently move in interstate commerce. If such a relationship is sufficient to sustain the exercise of the interstate commerce power, then the Federal Government may engage in agriculture, manufacture, and practically all of the internal activities of a State upon the ground that by promoting them, there will be indirectly promoted a movement of interstate commerce. Every activity of production and consumption has some bearing upon interstate commerce, but plainly that power may not be so far extended. Otherwise Congress may, for illustration, forbid or regulate the cutting of wood lots, tiling of boggy meadows and the cultivation of fields, even though such things have only an indirect and negligible effect upon flood control.

B.

The electricity will not be produced as an incident of the exercise of the war or national defense power.

Section 1 of the Act defines the national defense aspects of the Act as follows:

> "That for the purpose of maintaining and operating the *properties now owned by the United States in the vicinity of Muscle Shoals, Alabama, in the interest of the national defense,* and for agricultural and industrial development * * *, there is hereby created

a body corporate by the name of the Tennessee Valley Authority."

It, therefore, appears that the only national defense aspect of the statute is the maintenance and operation of the plants in the vicinity of Muscle Shoals which were adapted for the manufacture of materials useful in making munitions. The evidence introduced by the appellees in this case establishes that the properties of the Government at Muscle Shoals require and utilize only a fraction of the firm power capacity of Wilson Dam as it was constructed under the National Defense Act of 1916. (R. 2223; Def. Ex. 147, R. 4237.)

The national defense powers of the Federal Government are found in the Constitution in Article I, Section 8, Clauses 11 to 16. In summary they include (1) the power to declare and wage war; (2) the power to raise and support armies and navies and call out State militia; and (3) the power to provide for the government of the army, navy and militia. The trial court erroneously assumed that the national defense powers are found in the *limitation* upon the *grant of the power of taxation* contained in Article I, Section 8, Clause 1 of the Constitution and entirely overlooked or ignored the only relevant grants of power in the Constitution. (Opinion R. 559.)

In the emergency of war, the power of Congress under these national defense powers is very extensive. *Northern Pacific R. R. Co. v. North Dakota*, 250 U. S. 135; *Dakota Central Tel. Co. v. South Dakota*, 250 U. S. 163; *United States v. Pennsylvania etc. Central Coal Co.*, 256 Fed. 703; *The Lake Monroe*, 250 U. S. 246. Undoubtedly in time of war these powers would permit the commandeering of any instrumentality necessary to supply the armed forces (Cf. *International Paper Company v. United States*, 282 U. S. 399; *Highland Co. v. Russell Car & Snow Plow Co.*, 279 U. S. 253) or would authorize the Government to enter

into the manufacture of any product essential to the successful prosecution of the war. But it has never been held that in time of peace the Federal Government may carry on all of the businesses which might be commandeered or which might produce articles essential or convenient in the prosecution of a war. In a modern war practically every business and commercial activity is essential to the successful prosecution of the war. But that does not mean that in time of peace the Constitution authorizes the Federal Government to take over or engage in all private industry and business.

However, apart from these controlling considerations, *the record makes plain that the TVA Unified Plan will not in fact augment the national defense assets of the nation.* The statutory and administrative purposes are that all of the power to be produced by TVA shall be sold for domestic, rural, commercial and industrial uses in displacement of the facilities, businesses and markets of existing utilities. The scheme is merely to substitute TVA facilities for privately owned facilities in the business of supplying electricity to the public. This merely makes domestic, rural, commercial and industrial consumers dependent upon TVA facilities rather than upon privately owned facilities; and manifestly private interests neither can nor will build or maintain facilities to serve a market which has been taken from them on the chance that it may be returned to them *temporarily* in time of war, should TVA find military outlets for its power.

While undoubtedly the facilities of any of these appellants or of any electric utility could be commandeered in time of war, just as the facilities of TVA may be commandeered by the Government in time of war, the fact is that the net total power assets of the nation will be in no wise increased by substituting TVA facilities for privately owned facilities in supplying the peace time needs of the

business, industry and population of the United States. In time of war the business, industry and population *which has been brought to a state of dependence upon TVA facilities,* can no more readily, or with any less severe consequences, be deprived of essential light, heat and power because they are dependent upon TVA facilities than if they had continued to be dependent upon privately owned facilities. Any appropriation of the TVA power facilities for war uses would leave Memphis, Chattanooga and Knoxville (to speak only of the large cities upon which TVA has already fastened its hold) just as dark as though they had continued to be served by private enterprise and it became necessary to appropriate their power supply for war uses.

POINT II.

NEITHER THE STATUTORY NOR THE ADMINISTRATIVE METHOD OF DISPOSING OF THE ELECTRICITY IS WITHIN THE CONSTITUTIONAL POWER OF THE FEDERAL GOVERNMENT AND EACH VIOLATES THE FIFTH, NINTH AND TENTH AMENDMENTS.

The appellees concede that the Federal Government has no power under the Constitution to engage generally in the business of supplying electricity to the public. The constitutional question is, therefore, whether the Federal Government may reach the same result through the exercise of its power to dispose of property, and if so, what if any, are the limitations upon that power which are expressed in our constitution or inherent in our constitutional system.

A.

The power to dispose of federal property does not include any power of regulation or the power to engage in the conduct or management of a business having no relation to the purposes for which the Federal Government was established; and any such purported exercise of that power is in excess of its scope.

We here deal with the *scope* of the power to dispose of property as measured by the terms of the grant and apart from the inherent limitations of our constitutional system. That power is found in Article IV, Section 3, Clause 2 of the Constitution, which, with the material portions italicized, reads:

> "*The Congress shall have power to dispose of* and make all needful rules and regulations respecting the territory or other *property belonging to the United States*; and nothing in this Constitution shall be so construed as to prejudice any claims of the United States or of any particular State."

That there is a wide difference between the nature of the power to dispose of property and the nature of the great legislative and regulatory powers of the Federal Government (which are granted in Article I, Section 8 of the Constitution) is obvious. The power to dispose of property was granted merely to enable the Federal Government to dispose of the public lands and such other property as might be no longer needed for the governmental purposes for which it was acquired. (*Story, Commentaries on the Constitution,* 5th ed. Vol. II, pp. 202-6.) It is proprietary in nature; and in any event, it carries no grant of legislative or regulatory power over the States or the people.

In *Kansas v. Colorado,* 206 U. S. 46, this Court, after stating that the scope of the power had never been definitely settled, said:

> "* * * But clearly it (the power to dispose of property) *does not grant to Congress any legislative control over the States,* and must, so far as they are concerned, be limited to authority over the property belonging to the United States within their limits." (loc. cit. 89.)

And further:

> "We do not mean that its (United States) legislation can override State laws in respect to the general subject of reclamation." (loc. cit. 92.)

It therefore follows that any purported exercise of the power to dispose of property which is for the purpose, or which has the direct and necessary effect, of exercising or substantially interfering with the exercise of any of the powers reserved to the States, of destroying any functions of the States, of regulating the matters of intrastate concern or of disparaging or destroying any of the rights retained by the people, is *not merely an unconstitutional exercise of this power but is outside of the scope of this power.* While such an exercise of the power to dispose of property would also violate the inherent limitations of our constitutional system (see pp. 140-144, *infra*), the distinction is important; for if a federal act is not within the scope of the constitutional power invoked, it falls; and it is unnecessary to go further and determine whether the act would have violated the inherent limitations of our constitutional system in any event.

The great regulatory powers, such as the power to regulate interstate commerce, transfer a large segment of governmental power to the Federal Government and remove it from the powers reserved to the States and the people under the Tenth Amendment and the rights retained by the people under the Ninth Amendment. But, it can never be said that because of the existence of the power to dispose of property, some element of the police power,

some element of the legislative power, some governmental power or retained right has been taken away from the States or the people that has not been otherwise granted to the Federal Government. Any other conclusion would deprive the States of governmental power and the people of rights never delegated by them, and endow the Federal Government with power never granted but prohibited to it.

That the power to dispose of property is not the power to engage in business plainly appears from the language of the grant as well as from its history. That the clause could ever have been intended to vest such a power in the Federal Government is denied by the known character and purposes of the members of the Constitutional Convention, by the known understanding and atmosphere in which the Constitution was adopted by the States and by the established understanding of the functions of government at the date of the adoption of the Constitution. *Warren, "The Making Of The Constitution,"* 599-600, *South Carolina v. United States,* 199 U. S. 437, 457-9. The fact that the recognition of such a power in the Federal Government, as hereinafter more particularly pointed out, would create an irreconcilable conflict with the power of the States to regulate their internal concerns or to maintain their tax resources, and would destroy the essence of their statehood and the retained right of the people to own and carry on businesses, would seem sufficient to establish the unsoundness of such an interpretation.

"The United States do not and cannot hold property, as a monarch may, for private or personal purposes." *Van Brocklin v. Anderson,* 117 U. S. 151, 158. The United States owns oil reserves, forests, mineral deposits and vast public lands. It can dispose of these various kinds of property. May it, therefore, establish a federally owned and operated corporation to dispose of the oil with a system of pipe lines (high tension transmission lines) and tank farms (electric

substations) throughout the United States and establish United States filling stations at every crossroads in the land? And in establishing such an oil business, would it make any difference whether the Government sold it directly at the crossroad gas stations, or through agents, or through independent dealers, at prices fixed by the federal corporation or its employees? And if so, may it establish a national coal corporation and sell coal at retail in every village in the land? And if so, may it—because of its ownership of forests—establish a lumber company and sell lumber and establish lumber yards in every village? And if so, may it—because of its ownership of public lands—pack vegetables, meats and milk, mill flour and establish a system of super-groceries throughout the United States in order more profitably to "dispose of its property" or even with the altruistic purpose of supplying groceries at less than cost to all or some classes of the people?

If the power to dispose of property grants the Government the right to engage in business, it must necessarily follow that it has a right to do all these things and many more. It must inevitably follow that it has the right and power to establish a legal or *de facto* monopoly in all of the principal businesses generally carried on by private enterprise. It must necessarily follow that it has the right to deprive the States of tax revenues from substantially all of the businesses ordinarily carried on in the State by private enterprise. It must result that it has the power to deprive the people of owning or engaging in most of the businesses ordinarily carried on by private enterprise except as federal employees. It must follow that it has the power to deprive the States of all power to regulate the conduct of these businesses within their borders and to transfer that power of regulation to a group of federal agents working for a federal corporation. Plainly the argument that the power to dispose of property includes the power to carry on business proves too much.

Looking at the language of the grant in its common and accepted understanding, the power to dispose of property is not the power to carry on a business. No trustee or executor granted the power to dispose of, or sell, property would be permitted by any court to engage in the conduct of a business.[1]

The federal possession of property is not the equivalent of a grant of constitutional power. The circumstance of Government possession does not vest the Government with the power to use the property in any way, or as the basis for any business, that a private individual might use it. It does not authorize the Government to engage in activities for which it has received no grant of constitutional power and which may even have been expressly prohibited to it.

This conclusion is reenforced by the established principle that the intrusion of any federal power into a field normally reserved to the States may not be sustained unless the necessity therefor clearly appears. *Florida v. United States,* 282 U. S. 194, 211-12.[2] The same principle dictates that in construing the scope of a federal power (and particularly a power which is non-regulatory and merely a proprietary and implementing power), it should not be construed in a fashion which must inevitably bring it into collision with matters of intrastate concern involving the very

[2] Cf. *Illinois Central R. R. Co. v. Public Utilities Commission,* 245 U. S. 493; *Railroad Commission of Wisconsin v. Chicago, Burlington & Quincy R. R. Co.,* 257 U. S. 563; *New York v. United States,* 257 U. S. 591; *Arkansas R. R. Commission v. Chicago, Rock Island & Pacific R. R. Co.,* 274 U. S. 597; *Schechter Poultry Corp. v. United States,* 295 U. S. 495, 546-8; *United States v. Butler,* 297 U. S. 1.

essence of their statehood and their very existence, or so as not merely to disparage but destroy one of the most valuable rights retained by the people, the right to carry on business and earn a livelihood, unless the language and the history of the provision compel such an interpretation. Here the history of the provision repels such an interpretation and the language can be made to cover the interpretation only by attributing to it an unusual and exaggerated meaning, which is neither commonly understood nor commonly used in everyday life or in legal instruments which are daily before the courts for construction.

The instant case not only fails to disclose any compelling reason for such an intrusion into the field normally reserved for the States, but the Court excluded evidence showing that the utilities had offered to purchase all of the power produced by TVA at prices fixed by arbitration, by competitive bidding or by the published rate schedules of TVA and give the electricity the widest possible distribution so as to bring the benefits, if any, of TVA power to the largest number of people. (Willkie R. 1504-7.) Thus the Federal Government would not only have realized the largest possible amount from the sale of its property (if that were its purpose), but would have secured the widest possible distribution of federal electricity, if that were its purpose.

B.

In any event the power to dispose of property may not be used for the purpose, or with the direct and necessary effect, of governing concerns reserved to the States and the people or of upsetting the balance of our dual system of government.

We here deal with the limitations upon the power to dispose of property which are expressed in the Constitution and which are inherent in our constitutional system, that is, the limitations upon the exercise of the power however its *scope* may be interpreted. It is plain that the power to dispose of property is at least subject to the express and implied limitations by which the great regulatory powers of the Federal Government are confined. *Ashwander v. Tennessee Valley Authority*, 297 U. S. 288. Even the great affirmative regulatory powers of the Federal Government are subject to the Fifth Amendment and may not be used to achieve prohibited ends, govern concerns reserved to the States and the people or so as to impair our dual system of government and upset the federal balance.[1] Whether a challenged statute or act violates this principle is not merely a question of legislative or administrative intent but also a question of fact. *Wisconsin v. Illinois*, 278 U. S. 367, 415; *Veazie Bank v. Fenno*, 8 Wall. 533, 541.

---

[1] *McCulloch v. Maryland*, 4 Wheat. 316, 421, 423; *South Carolina v. United States*, 199 U. S. 437, 451; *Veazie Bank v. Fenno*, 8 Wall. 533, 541; *Collector v. Day*, 78 U. S. (11 Wall.) 113, 124; *Ambrosini v. United States*, 187 U. S. 7; *Pollock v. Farmers' Loan etc. Savings Bank*, 157 U. S. 429, 584; *Hammer v. Dagenhart*, 247 U. S. 251; *Carter v. Carter Coal Co.*, 298 U. S. 238; *Schechter Corp. v. United States*, 295 U. S. 495, 546; *National Labor Relations Board v. Jones & Laughlin*, 301 U. S. 1, 37; *Linder v. United States*, 268 U. S. 5, 17; *Monongahela Navigation Co. v. United States*, 148 U. S. 312; *Louisville Joint Stock Bank v. Radford*, 295 U. S. 555.

In *Ashwander v. Tennessee Valley Authority, supra,* this Court said:

"(3) We come then to the question as to the validity of the method which has been adopted in disposing of the surplus energy generated at the Wilson Dam. The constitutional provision is silent as to the method of disposing of property belonging to the United States. That method, of course, must be an appropriate means of disposition according to the nature of the property, it must be one adopted in the public interest as distinguished from private or personal ends, and we may assume that *it must be consistent with the foundation principles of our dual system of government and must not be contrived to govern the concerns reserved to the States.*" (loc. cit. 338.)

* * * * *

"The transmission lines which the Authority undertakes to purchase from the Power Company lead from the Wilson Dam to a large area within about fifty miles of the dam. * * * And the transmission lines for electric energy are but a facility for conveying to market that particular sort of property, and the acquisition of these lines raises no different constitutional question, *unless in some way there is an invasion of the rights reserved to the State or to the people.* We find no basis for concluding that the *limited undertaking* with the Alabama Power Company amounts to such an invasion." (loc. cit. 339.)

* * * * *

"We limit our decision to the case before us, as we have defined it. The argument is earnestly presented that the Government by virtue of its ownership of the dam and power plant could not establish a steel mill and make and sell steel products, or a factory to manufacture clothing or shoes for the public, and thus attempt to make its ownership of energy, generated at its dam, a means of carrying on competitive commercial enterprises and thus drawing to

the Federal Government the conduct and management of business having no relation to the purposes for which the Federal Government was established. The picture is eloquently drawn but we deem it to be irrelevant to the issue here. *The Government is not using the water power at the Wilson Dam to establish any industry or business.*" (loc. cit. 339-340.)

The foregoing quotations plainly establish:

1. That the power to dispose of property "must not be contrived to govern the concerns reserved to the States" (and we assume that the same principle must inevitably apply to the rights retained by the people); and
2. That the power to dispose of property must not be so exercised as to upset the balance of our dual system of government.

And they plainly imply,—what inevitably follows from the foregoing propositions—

1. That, among other things, there is a limit beyond which the Government may not go in the sale of a public utility commodity in the guise of exercising the power to dispose of property; and
2. That the Federal Government may not use the power to dispose of property to establish the Federal Government in a competitive commercial enterprise and draw to that Government the conduct and management of business having no relation to the purposes for which the Federal Government was established.

Obviously this must be so. The very size and nature of the enterprise may be such as necessarily to invade or destroy the rights and functions of the States and the rights retained by the people and to upset the balance of our dual system. If the Federal Government may engage in businesses within the State, it may do so only in the exercise of federal constitutional power and hence with immunity from State police power.

The trial court wholly failed to consider any of the controlling limitations pointed out by this Court in the *Ashwander* case (Opinion R. 562-5). The majority of the trial court declined to make the essential findings of fact upon which such legal questions must be determined. Some, but not all, of such essential findings were made by Judge Gore in his Additional Findings.

Thus the trial court wholly failed to consider or answer the questions: (1) whether a federally owned and operated electric system with 15,000 miles of transmission lines covering all, or large parts, of eight States, and with generating capacity more than adequate to supply this vast territory might be considered a "limited undertaking"; (2) whether a federal undertaking of that size, coupled with a specific and detailed regulation of the rates, services and practices of local electric distribution and the imposition of a policy of having the local electric business carried on by publicly owned or non-profit organizations constitutes an invasion of State rights; (3) whether such a vast undertaking upsets the balance of our dual system of government; (4) whether the taking over of the local electric business by the United States and the consequent deprivation of the right of the people to engage in that business, subject only to local regulation, violates the Ninth and Tenth Amendments; and (5) whether the *de facto* regulation of privately owned utilities, pending their acquisition or destruction by TVA, and the *de facto* prevention of State authorities from regulating them, or even compelling continued service where they had been bankrupted or dismembered by the activities of TVA constitutes an invasion of the rights reserved to the States or the people.

The trial court merely ignored the rights retained by the people. It disposed of the question of the invasion

of the reserved powers of the States by holding: (1) that federal usurpation of State powers is cured by State consent, and (2) that even if there is an unconstitutional invasion of the rights reserved to the States, only the State can object. These errors of the trial court are discussed later at appropriate points in this brief.

C.

The power of the State to authorize and regulate the business of supplying electricity to the public within the States is complete, unqualified, exclusive and inalienable.

The distribution and sale of electricity within the States is a local public service. That the business is subject to full and complete regulation by the States under their inherent police powers does not admit of doubt. *Union Dry Goods Co. v. Georgia Public Service Corp.*, 248 U. S. 372, 374; *Munn v. Illinois*, 94 U. S. 113, 124; *Nebbia v. New York*, 291 U. S. 502, 524; *Slaughter-House Cases*, 83 U. S. 36. It is one of the most characteristic and well established subjects of local police power. It is a subject as to which "the authority of the State is complete, unqualified and exclusive." *Nebbia v. New York, supra*, loc. cit. 524. Any Federal interference in this field "is plainly repugnant to the exclusive power of the State over the same subject," (*License Tax Cases*, 5 Wall. 462, 471); for the exercise of State police power "is not subject to national supervision." *South Carolina v. United States*, 199 U. S. 437, 453.

Acting under its police power to promote the health, welfare and prosperity of its people, a State in regulating this business, may:

1. require a franchise for carrying on the business;
2. define the area in which the holder of the franchise may carry on the business;

3. prohibit duplication of facilities to reduce costs, promote efficiency of service and protect investments made to provide the public service;
4. compel extensions of service;
5. prohibit abandonment of service or, stated conversely, enforce continued service at non-confiscatory rates;
6. determine the internal policy of the State as to public or private ownership and operation of local utilities;
7. regulate rates and rate policies;
8. regulate the quality, terms and conditions of the service other than rates; and
9. determine whether and to what extent the regulatory power of the State shall be exercised or held in abeyance.[1]

This partial enumeration of common forms of State regulation by no means exhibits the scope of the State's discretion in controlling this local public business as it deems best for the health, welfare and prosperity of its people. Thus in the matter of rates alone, the State may adopt a policy of favoring industrial use over commercial and domestic use, or the converse, as it deems best for the promotion of the prosperity of the State. It may adopt a policy of uniform rates throughout the State to promote dispersion of industry, decentralization of population and equality of opportunity, or it may require rates to be based

---

[1] Among cases illustrating the exercise of these powers are: *New York ex rel. v. McCall*, 245 U. S. 345; *New York ex rel. v. Public Service Commission*, 269 U. S. 244; *Railroad Commission v. Eastern Texas R. R.*, 264 U. S. 79, 85-6; *Bullock v. Railroad Commission*, 254 U. S. 513; *Brooks-Scanlon Co. v. Railroad Commission*, 251 U. S. 396; *United Fuel Gas Co. v. Railroad Commission*, 278 U. S. 300, 309; *Union Dry Goods Co. v. Georgia Public Service Corp.*, 248 U. S. 372, 374; *Milwaukee Electric Ry. v. Wisconsin Railroad Comm.*, 238 U. S. 174; *Banton v. Belt Line Ry. Corp.*, 268 U. S. 413, 419; *Great Northern Ry. v. Washington*, 300 U. S. 154.

upon costs in each local area. It may regulate rates of publicly owned utilities or not as it sees fit. *Wisconsin Traction, Light, Heat & Power Co. v. Menasha,* 157 Wis. 1; *Wheeling v. Benwood-McMechen Water Co.,* 115 W. Va. 353; *Georgia Public Service Commission v. City of Albany,* 180 Ga. 355; See Note 76 A. L. R. 851. It may determine when and how its water resources may be developed for power and other non-federal uses. Full and complete discretion in the premises is reserved to the States under the Tenth Amendment.

No federal power whatever exists in the premises. There is *no vague or nebulous power* in the Federal Government to right supposed wrongs committed by the States. Thus, in *Carter v. Carter Coal Co.,* 298 U. S. 238, 291, this Court said:

> "The proposition, often advanced and as often discredited, that the power of the federal government *inherently extends* to purposes affecting the nation as a whole with which the states severally cannot deal or cannot adequately deal, and the related notion that Congress, entirely apart from those powers delegated by the Constitution, may enact laws to *promote the general welfare,* have never been accepted but *always definitely rejected by this Court.*"

And further:

> "* * * It is no longer open to question that the general government, unlike the states, * * * *possesses no inherent power in respect of the internal affairs of the states*; and emphatically not with regard to legislation. * * *
>
> "* * * And adherence to that determination is incumbent equally upon the federal government and the states. *State powers can neither be appropriated on the one hand nor abdicated on the other.* As this court said in *Texas v. White,* 7 Wall. 700, 725,—'the preservation of the States, and the maintenance of their governments, are as much within the design and care

of the Constitution as the preservation of the Union and the maintenance of the National Government. The Constitution, in all its provisions, looks to an indestructible Union, composed of indestructible States.' Every journey to a forbidden end begins with the first step; and *the danger of such a step by the federal government in the direction of taking over the powers of the states is that the end of the journey may find the states so despoiled of their powers, or—what may amount to the same thing—so relieved of the responsibilities which possession of the powers necessarily enjoins, as to reduce them to little more than geographical subdivisions of the national domain.* It is safe to say that if, when the Constitution was under consideration, it had been thought that any such danger lurked behind its plain words, it would never have been ratified." (loc. cit. 295-6.)

This police power of the States is inalienable. In *Northern Pacific R. Co. v. Minnesota ex rel. Duluth,* 208 U. S. 583, this Court said:

"* * * But the exercise of the police power cannot be limited by contract for reasons of public policy; nor can it be destroyed by compromise; and it is immaterial upon what consideration the contracts rest, as it is beyond the authority of the state or the municipality to abrogate this power so necessary to the public safety." (loc. cit. 598.)

An additional and insurmountable objection arises where the prospective alienee is the Federal Government; for a State may not contract with the Federal Government for its exercise of powers which are prohibited to it and reserved to the State. Both are constitutionally without power so to contract. A State is not only without power to contract not to exercise its police powers, but it is also without power to delegate the exercise of its police powers to another government. I *Cooley's Constitutional Limitations* (8th Ed.) 224.

D.

Under the Ninth Amendment, the people have the right to earn a livelihood, and acquire and use property by engaging in the electric business, subject only to State regulation.

Under the Tenth Amendment all powers not granted to the Federal Government are reserved to the States or the people. One of the rights thus reserved to the people is the right of local self-government, that is, to manage and control their internal affairs without supervision or interference by the Federal Government.

The Ninth Amendment provides:

> "The enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people."

One of the rights which was not enumerated and which was retained by the people is the right to earn a livelihood and to acquire and use property by engaging in businesses in the various States, subject only to the regulation of the States and free from interference by the Federal Government. Cf. *Steward Machine Co. v. Davis*, 301 U. S. 548, 580. Both this view of the nature of the right and that it is one of the rights protected by the Ninth Amendment is supported by contemporary evidence. Virginia and other States ratified the Constitution with reservations, stating in part:

> "That there be a Declaration or Bill of Rights asserting and securing from encroachment the essential and unalienable rights of the people."

And further stating that:

> "there are certain natural rights of which men, when they form a social compact cannot deprive or divest their posterity, among which are the enjoyment of life and liberty, with the means of acquiring, possessing and protecting property, * * *." (Formation of the

Union, p. 1027, cited by Kelsey, "The Ninth Amendment to the Federal Constitution," 11 Ind. L. J. 309.)[1]

But whether or not properly designated as a natural right, it is in any event plainly a right retained by the people under our constitutional system. In the *License Tax Cases*, 5 Wall. 462, this Court said:

> "No interference by Congress with the business of citizens transacted within a state is warranted by the Constitution, except such as is strictly incidental to the exercise of powers clearly granted to the legislature. The power to authorize a business within a state is plainly repugnant to the exclusive power of the state over the same subject." (loc. cit. 471.)

In *Duke Power Company v. Greenwood County*, 91 F. (2d) 665, the court commented on this right as follows:

> "It is said that every person engaged in business which is subject only to State control has the right to pursue that business free from the regulation of the Federal Government. This is true; * * *." (loc. cit. 676.)

And the court might well have added that the people are protected against the greater invasion of this right which would be incident to the Government entering into and making a federal monopoly of such a business with the consequence of completely destroying the right of the people to engage in it.[2] Even the great substantive con-

---

[1] See also remarks of Madison in House of Representatives, Monday, May 8, 1789, I Annals of the Congress of the United States, First Congress, The Debates and Proceedings in the Congress of the United States, 437, 439.

[2] For cases holding that the right to engage in business, acquire property and earn a livelihood are rights of individuals which are protected under our constitutional system, see *New State Ice Co. v. Liebmann*, 285 U. S. 262, 278; *Dent v. West Virginia*, 129 U. S. 114, 121; *Duplex Co. v. Deering*, 254 U. S. 443, 465; *Buchanan v. Warley*, 245 U. S. 60, 74; *Liggett Co. v. Baldridge*, 278 U. S. 105, 111; and *Truax v. Corrigan*, 257 U. S. 312, 327.

stitutional powers may not be exercised so as to "disparage" or "deny" this right. Much less may a mere proprietary power such as the power to dispose of property be so used.

When the Constitution was adopted there was no thought that it authorized the Government to usurp, or created the possibility of the Government usurping, "the ordinary business of individuals" and "driving them out of the market"; and if such a possibility had been envisioned it is plain that "the Constitution would not have been adopted, or an inhibition would have been placed among Madison's amendments." Then "all avenues of trade were open to the individual. The Government did not attempt to exclude him from any. Whatever restraints were put upon him were merely police regulations to control his conduct in the business, and not to exclude him therefrom. The Government was not a competitor nor did it assume to carry on any business which ordinarily is carried on by individuals." *South Carolina v. United States*, 199 U. S. 437, 457-9. By the Ninth Amendment this right of the people to engage in business within the States free from ouster by the Federal Government was specifically retained.

In this aspect of the case the fundamental question is also raised as to whether the Constitution assumes the local and private development, ownership and management of natural resources, or whether, on the contrary, it authorizes the Federal Government, a government of delegated powers, to develop and manage natural resources, even though not incidental to the exercise of some one or more of the delegated powers. We think it plain that constitutional amendment is necessary if the Federal Government is to obtain the great substantive power of developing and managing the water power resources of the watersheds of the great navigable streams.

E.

To the extent that statutory and administrative methods of disposing of property are constitutional, they are supreme; and consequently in case of conflict between a purported exercise of the power to dispose of property and the reserved powers of the States and the people and the retained rights of the people, such purported exercise of the federal power must be held unconstitutional or the reserved powers of the States and the people and the retained rights of the people are destroyed.

Any purported exercise of the power to dispose of property must be judged in the light of this principle. If the methods of disposal of the electricity authorized by the TVA Act and employed in the TVA Unified Plan are valid and constitutional, there can be no question, as will hereinafter appear, but that the method of distribution of electricity and consequently electric service to the public in the States, has been placed beyond State regulation. Whatever TVA may lawfully do, it is supreme in doing. There is no neutral ground. The Federal Government has no inherent powers, but only the powers given it in the Constitution and with respect to them the States must give way.

In *Butler v. United States,* 297 U. S. 1, it was argued that the Act was not compulsory on the States, since any State—

> "* * * may declare the contract void and thus prevent those under the State's jurisdiction from complying with its terms." (loc. cit. 74.)

Of that argument this Court said:

> "The argument is plainly fallacious. The United States can make the contract only if the Federal power to tax and to appropriate reaches the subject matter of the contract. If this does reach the subject matter, *its exertion cannot be displaced by State action.*" (loc. cit. 74.)

And so in the *Ashwander* case (297 U. S. 288), this Court said:

> "To the extent that the power of disposition is thus (in the Constitution) expressly conferred, it is manifest that the Tenth Amendment is not applicable." (loc. cit. 330.)

Or as phrased in *United States v. California*, 297 U. S. 175, 184:

> "The sovereign power of the States is necessarily diminished to the extent of the grants of power to the Federal Government in the Constitution."

It therefore follows that if, as hereinafter appears, the method of disposal of the electricity authorized by the TVA Act and employed in the TVA Unified Plan deprives the States of their power to regulate this local public service and deprives the people of their right to engage in this business, it must be held that this method of disposal of property is unconstitutional and void *or* it must be held that this proprietary and ancillary power has taken away the police powers of the States in this important and extensive field and has destroyed the right of the people to engage in this business. The issue is squarely made. It may not be avoided.

F.

Both the TVA Act and the TVA Unified Plan must be judged by their natural and reasonable effect in the situation in which they operate.

It is a fundamental principle of constitutional law that the validity of a statute must be judged by its natural and reasonable effect. The natural and reasonable effect of a statute must be determined both from a consideration of the language of the statute on its face and from a consideration of the practical operation of the statute in the situation

to which it applies.[1] In *Collins v. New Hampshire,* 171 U. S. 30, 33-34, this Court stated the rule in the following language:

> "*The direct and necessary result* of a statute must be taken into consideration when deciding as to its validity, even if that result is not in so many words either enacted or distinctly provided for. *In whatever language a statute may be framed, its purpose must be determined by its natural and reasonable effect.*"

In *Standard Oil Co. v. Graves,* 249 U. S. 389, 394, this Court said:

> "It (the statute) must be judged by its necessary effect, and if that is to violate the Constitution of the United States, the law must be declared void."

Obviously, administrative action in the execution of the statute must similarly be judged by its "direct and necessary result" and by its "natural and reasonable effect." The administrative agents of the Congress may not escape the limitations which bind Congress itself. *United States v. Reynolds,* 235 U. S. 133, 148; *Ho Ah Kow v. Nunan,* 12 Fed. Cas. (No. 6546) 252.

S. 550, 555; *Minnesota v. Barber,* 136 U. S. 313, 319; *Spradlin v. Royal Mfg. Co.,* 73 F. (2d) 776, 778; *Carolina & N. W. Ry. Co. v. Clover,* 46 F. (2d) 395, 398; *Atlantic Refining Co. v. Trumbull,* 43 F. (2d) 154, 159.

G.

The natural, reasonable, intended and inevitable effect of the operation of the method of disposal authorized by the TVA Act and employed in the TVA Unified Plan is to govern matters reserved to the States and to the people, upset the balance of our dual system of government, deprive the people of their rights under the Ninth and Tenth Amendments, and take property in violation of the Fifth Amendment.

We now examine the scope of the enterprise authorized by the TVA Act and established by the TVA Unified Plan, and their direct and necessary effect upon the powers reserved to the States and the people, and the rights retained by the people.

1. **The TVA Act authorizes, and the TVA Unified Plan establishes, a commercial business of such size and nature as necessarily to destroy the powers reserved to the States and the people, and the retained rights of the people, in all of Tennessee and large parts of six or more other States.**

The undertaking authorized by the TVA Act and established by the TVA Unified Plan consists of a federally owned and operated electric system to serve the public in all of Tennessee and large parts of six or more other States.

(a) The TVA Act authorizes TVA to develop all of the power resources of the Tennessee River and its tributaries. (See analysis of Act, pages 12-14, *supra.*) To augment and firm up this vast hydro-electric capacity, TVA is authorized to construct and acquire steam generating plants. (Sec. 4(j).) While no additional grant of power in respect to power development would seem necessary or possible, the scope of the power development is emphasized by the provision that the President shall recommend any additional legislation which he may deem proper for the

"especial purpose of bringing about in said *Tennessee drainage basin and adjoining territory* • • • *the maximum generation of electric power* consistent with flood control and navigation." (Sec. 23.)

In 1930, the Corps of Engineers reported to Congress that the maximum development of the power resources of the Tennessee River and its tributaries would produce a firm or dependable power capacity of 5,000,000 kilowatts and an annual firm or dependable energy output of 25,000,000,000 kilowatt-hours. (Comp. Ex. 105°, p. 3, par. 10; p. 88, par. 67.) At the same time the Corps of Engineers advised the Congress that the total annual output of both firm and secondary power in the entire Tennessee River basin was then approximately 1,180,000,000 kilowatt-hours and that the estimated demand for 1950 was only 5,900,000,000 kilowatt-hours.[1] (Comp. Ex. 105°, p. 16, par. 21.)

It is thus apparent that the amount of power which TVA was authorized to develop vastly exceeded the entire market for, or use of, electricity which then existed or could be expected to exist in the measurable future, if ever, within practicable transmission distance from the power sites authorized to be developed. However, a mere inspection of a map is sufficient to show that the area of practicable transmission of power covers the entire State of Tennessee and large parts of the six other States of which any part lies in the Tennessee basin, as well as parts of additional States. (Comp. Ex. 327*.)

The Act authorizes TVA "to unite the various power installations into one or more systems by transmission lines" (Sec. 4 (j)), so as to create one vast grid system or power pool. *This was not only to increase the firm power capacity but also so that the entire power capacity of this vast power pool could be drawn upon by tapping the trans-*

[1] This estimate was based upon a rate of increase which past experience indicated and subsequent experience has shown to have been far too great.

mission or grid system at any point. The Act thus provided for a power supply unlimited in relation to the market which would be physically accessible. It authorized a transmission system which would blanket this vast area physically accessible to the power to be developed. (Sec. 12.)

(b) *The TVA Unified Plan is only a stage in the execution of the statute—a mere current construction schedule*; and already TVA has sought and obtained funds for preliminary investigation of additional power sites. (See pp. 17-20, 68, *supra*.) As TVA has reported to Congress and as other evidence shows, *in an extreme low water year* the completed TVA Unified Plan (*without the aid of any TVA steam generating plants now existing*[1] *or which may be constructed under Sec. 15 of the Act*), will have a capacity nearly *eight times* as great as the total amount of electricity, *both firm and secondary*, generated in 1936 for public use by public utilities in the entire State of Tennessee, more than twice as great as the total generation of electricity, *both firm and secondary*, for public use by public utilities in the entire States of Tennessee, Alabama and Mississippi, and equal to more than 80 per cent of the entire generation of electricity, *both firm and secondary*, for public use by public utilities in the entire States of Virginia, North Carolina, Georgia, Kentucky, Tennessee, Alabama, and Mississippi, the seven States of which any part lies in the Tennessee River basin.[2] *In an extreme low water year* the TVA Unified Plan alone will have a capacity more than *twice as great* as the total sales of electricity, both firm and secondary, by public utilities within the entire area lying within

---

[1] In addition to the steam generating plants at Muscle Shoals, TVA now owns steam generating plants at Corinth and Tupelo, Mississippi. (Comp. Ex. 116†, pp. 464, 466, R. 2706A, 2706C.)

[2] An inspection of the map (Comp. Ex. 327*), will show that substantial parts of these States, with the exception of Tennessee and Kentucky, lie more than 250 miles from any of the TVA dams, and hence beyond practical transmission distance.

100 miles of any of the dams included in the TVA power system, and substantially greater than the total sales of electricity, both firm and secondary, by public utilities within an area lying within 150 miles of any of such dams. *In a typical or average water year* the capacity of the TVA Unified Plan will be nearly 33⅓ per cent greater than in an extreme low water year without the use of steam plants constructed[1] or which may be constructed. (See pp. 66-69, *supra.*)

All of the large power plants in the TVA power system are now interconnected, or are to be interconnected, to form one huge power pool so that the entire power resources may be tapped at any point. The TVA Unified Plan contemplates and requires a vast transmission system to market the electrical energy to be produced. (See statement of Dr. A. E. Morgan at Congressional Hearings, Comp. Exs. 109†, pp. 166, 187, R. 2635, 2641; 112†, pp.

---

[1] Generating capacity, extreme low water year, under TVA Unified Plan—firm and secondary, without use of steam plants 7,660,000,000 kwh.

Average or typical water year (Comp. Ex. 509, R. 3350) 10,000,000,000 kwh.

Generated for public use by public utilities, 1936, entire State of Tennessee—firm and secondary (Comp. Ex. 486, R. 3329) 1,000,000,000 kwh.

Generated for public use by public utilities, 1936, entire States of Alabama, Tennessee and Mississippi—firm and secondary (Comp. Ex. 486, R. 3329) 3,700,000,000 kwh.

Generated for public use by public utilities, 1936, entire states of Virginia, North Carolina, Georgia, Kentucky, Tennessee, Alabama and Mississippi—firm and secondary (Comp. Ex. 486, R. 3329) 9,300,000,000 kwh.

Total sales by utilities, 1936, for consumption within 100 miles of TVA dams—firm and secondary (Comp. Ex. 499, R. 3332) 3,660,000,000 kwh.

Total sales by utilities, 1936, for consumption within 150 miles of TVA dams—firm and secondary (Comp. Ex. 499, R. 3332) 7,160,000,000 kwh.

262-3, 270, R. 2674-5, 2678-9; 114†, p. 525, R. 2685.) The testimony is uncontradicted that a transmission system of from 12,000 to 15,000 miles will be required for that purpose. The total mileage of transmission lines of the eighteen companies which were originally parties to this appeal, including their transmission lines in large areas lying more than 250 miles from any of the TVA dams, is only approximately 11,000 miles. The total mileage of transmission lines in the entire State of Tennessee, exclusive of TVA lines, is only a little over 2,000 miles. *It is thus apparent that the electric system provided by the stage in the execution of the TVA Act known as the TVA Unified Plan, will blanket the entire State of Tennessee and large parts of adjoining States.* (See pp. 65-70, *supra.*)

It is inconceivable that the TVA Unified Plan, and much less the statutory scheme, could be held to constitute a "limited undertaking." That such mammoth undertakings (free as they are from regulation by the States) must invade the powers reserved to the States, upset the federal balance, and destroy the rights retained by the people is, we think, a case of *res ipsa loquitur. If such mammoth federal undertakings are valid, the right of the State to regulate entry into this local public business and the right of the people to engage in that business, subject only to State regulation, will be effectively destroyed.*

In the *Ashwander* case, this Court sustained the transaction because it was a "limited undertaking" which did not "amount to such an invasion."[1] Both of the

---

[1] The *Ashwander* case involved only power produced at Wilson Dam which was constructed under the National Defense Act of 1916, a short mileage of low voltage transmission line *suitable only for local service,* and a comparatively small mileage of rural and urban distribution lines. The firm capacity of Wilson Dam, as constructed under the National Defense Act of 1916, was only 28,000 kilowatts irrespective of load factor (Kurtz R. 1217;

(Continued on page 159)

quoted phrases are terms of degree. *Both plainly recognize the existence of a dividing line beyond which the TVA power operations will not be so "limited" but will "amount" to an invasion.* There are many occasions in the law for the application of the rule of reason expressed by Mr. Justice Cardozo in his concurring opinion in the *Schechter* case (loc. cit. 554) that—

> "The law is not indifferent to considerations of degree"

to which he added in his dissenting opinion in the *Carter Coal Company* case (loc. cit. 327):

> "It can not be indifferent to them without an expansion of the commerce clause that would absorb or imperil the reserved powers of the States."

Once it is understood that there is *a dividing line*, which protects the States in their power to regulate this public service and the people in their right to engage in this business, it is plain that if the power of the States and the right of the people are to have and retain any substance, that line has been definitely passed.

2. The TVA Act, as a purported exercise of federal power, authorizes TVA to exercise, and under the TVA Unified Plan, TVA is exercising, the authority to engage in the business of supplying electricity to the public within the States.

(a) The TVA Act, having authorized the creation of this vast electric system, then authorizes TVA to engage in the business of supplying electricity to the public without

---

Putnam R. 1167) and such firm capacity would be insufficient to serve even one of the larger towns which TVA has now contracted to serve. Thus such firm power capacity is less power than TVA has contracted to supply to either Chattanooga (Comp. Ex. 129, R. 2859), or Knoxville (Comp. Ex. 118, R. 2808), and hardly more than half as much power as TVA has contracted to supply to Memphis (Comp. Ex. 118, R. 2807). The TVA Unified Plan has a firm capacity at 60% load factor, 40 times as great as that of Wilson Dam, as originally constructed (Kurtz R. 1215, 1217).

State franchise or regulation in any and all of the States within practicable transmission distance. (See analysis of TVA Act, pp. 14-17, *supra.*)

Although state-regulated utilities may not build competing lines without express authorization by the State and may not extend their lines into areas which will not justify the service and thereby impose what the State deems to be an unjustified burden upon public electric service to the industries and citizens of the State,[1] TVA may build duplicate lines at will. It may seize the cream of the territory and business of state-regulated agencies supplying this public service and thereby disable such agencies from supplying the service in the thin or scattered markets remaining or greatly increase the cost of so doing. Thus, TVA has attempted to take over the business of The Tennessee Electric Power Company in Chattanooga, which constitutes the heart of its integrated business and makes possible economical and efficient service throughout the sixty-four counties in the State of Tennessee in which it offers service.

At the time of the trial below the appellees were attempting to seize the markets of the Tennessee Public Service Company in the City of Knoxville and thereby leave that state-regulated agency with fringes of thin territory and an unprofitable transportation system so as to make virtually impossible the continuance of service in its territory outside of the City of Knoxville and the continuance of this transportation service in that City. Since

---

[1] Cf. Tennessee Code, 1932, Sections 5502, 5504, 5451; Order of Tennessee Railroad and Public Utilities Commission, Jan. 1, 1937, Docket No. 2045; Acts of South Carolina, 1932, No. 871 Secs. 2(j), 2(w); Alabama Laws, 1920, p. 38, §49; Kentucky Laws 1934, c. 145, §4(l); West Virginia Laws, 1935, c. 115, Sec. 11; North Carolina Consolidated Statutes §2784; Virginia Laws, 1936, p. 1056; *State v. Nashville Railway & Light Co.*, 151 Tenn. 77.

this appeal was taken, the Tennessee Public Service Company has sold all of its electric properties in Knoxville and vicinity to TVA and the City of Knoxville,—rather obviously, we think it fair to say, in order to escape this economic destruction which threatened to become a *fait accompli* before this appeal could be heard.

All this TVA may do, if the Act is valid, without the consent or regulation of the State and in destructive competition with the agencies to which the State has granted franchises to provide and secure this local public service. And when TVA has driven out the state-regulated agencies, occupied the field and created a situation where the public is helplessly dependent upon the continuation of that service for the protection and promotion of public health, safety and prosperity, TVA may abandon or withdraw its service in whole or in part without State consent. Cf. *United Fuel Gas Co. v. Railroad Commission*, 278 U. S. 300, 309.[1] *It is manifest that to the extent that TVA takes over the business of supplying this public service, the*

---

[1] For cases illustrating the power of the State to enforce continued service by utilities so long as the public supplies sufficient patronage to afford a fair return at reasonable rates, see also *New York ex rel. v. Public Service Comm.*, 269 U. S. 244; *Railroad Commission v. Eastern Texas R. R.*, 264 U. S. 79, 85-6. To the effect that a utility cannot pick and choose the localities in which it will serve and withdraw from given localities at will without the consent of the State, see *United Fuel & Gas Co. v. Railroad Commission*, 13 F. (2d) 510; *Peoples Natural Gas Co. v. Public Utilities Comm.*, 279 Pa. St. 252; *Fort Smith L. & T. Co. v. Bourland*, 267 U. S. 330, 336; *Public Service Corp. v. American Lighting Co.*, 67 N. J. Eq. 122; *Public Service Gas Co. v. Newark*, 86 N. J. Eq. 384, 388; *Southern R. R. Co. v. Hatchett*, 174 Ky. 463; *Colorado & S. R. Co. v. State Railroad Comm.*, 54 Col. 64; *Colorado Tel. Co. v. Wilmore*, 53 Col. 385; *Northern Ill. L. & T. Co. v. Ill. Comm. ex rel. Ottawa*, 302 Ill. 11; *Ches. & Ohio R. R. v. Public Service Comm.*, 242 U. S. 603; *Pittsburgh & Shawmut Coal Co. v. Delaware & N. R. Co.*, 289 Fed. 133, 134-5; *Hocking Valley R. Co. v. Public Utilities Comm.*, 92 O. S. 9; *Brownell v. Old Colony R. Co.*, 164 Mass. 29; *New York & Quebec Gas Co. v. McCall*, 245 U. S. 345, 351.

police power of the State to protect and promote the public health, general welfare and prosperity of the people in this vital and inherently local field is gone forever. And the slightest consideration of the size of the enterprise sought to be authorized by the Act shows that it will be gone in the entire State of Tennessee and in large parts of six or more neighboring States. (See pp. 82-85, *supra.*)

(b) The TVA, acting under this purported statutory authority, is already engaged in the intrastate business of supplying electricity to the public in four of these States, that is, Tennessee, Alabama, Georgia and Mississippi and has contracted to supply electricity in Kentucky. The size and nature of the TVA Unified Plan makes certain that upon its completion TVA will necessarily extend its business[1] into large areas of the other States of which any part lies in the Tennessee River basin. The size of the TVA Unified Plan alone (which is a mere stage in the execution of the statute) makes certain that its completion will result in TVA driving out state-regulated agencies, occupying the field and creating public dependence upon its service throughout practically all, if not all, of the State of Tennessee and large parts of six or more neighboring States.

---

[1] That TVA is now engaging and under the TVA Unified Plan will further engage in a gigantic commercial business or industry can not be denied. To deny it would be to say that supplying electricity to the public is not a business or industry and that no public utility in the United States is engaged in business or industry. The TVA Act specifically refers to "*its (TVA's) business in generating, transmitting and distributing electric energy.*" (Sec. 26.) In official statements issued to the public through the press, all of which were excluded by the court as immaterial, the appellees have stated: "*The Act definitely puts the Federal Government into the business of rendering electric service.*" (Comp. Ex. 815, R. 3732.) "The Tennessee Valley Authority power program is not a taxpayers' subsidy. *It is a business undertaking.*" (Comp. Ex. 790, R. 3681.)

That to the extent that TVA takes over the business of supplying electricity to the public in these States, the States will be deprived of all police power over that peculiarly local public service is not open to debate. And it is equally clear that the right of citizens to earn a livelihood and to acquire and use property by engaging in that business will be gone forever.

3. The TVA Act authorizes TVA to regulate, and under the TVA Unified Plan, TVA is exercising the power to regulate, its own rates and service, the rates and service of distributors of TVA power and the rates of privately owned and state-regulated utilities operating in the area.

Regulation by TVA of its own Rates and of the rates of TVA distributors. (a) The TVA Act authorizes TVA to fix its own rates. (Sec. 14.) TVA is authorized to regulate the rates of distributors of TVA power by including "in any contract for the sale of power such terms and conditions, including resale rate schedules, * * * as in its judgment may be necessary or desirable for carrying out the purposes of this Act." (Sec. 10.) It is authorized to regulate all of the terms and conditions of service of distributors of TVA power by establishing "such rules and regulations" as it deems necessary or desirable. (Sec. 10.) Where TVA temporarily sells power to persons doing business for profit, it shall require that resale rates "shall not exceed a schedule fixed by the (TVA) board *from time to time* as reasonable." (Sec. 12.) [1] All of these rates are to be fixed by TVA without hearing and without appeal or review.

---

[1] As hereinafter more particularly pointed out, the statutory scheme is to establish a policy of having the local electric business carried on by public agencies and non-profit organizations; and sales of power to corporations or persons supplying electricity to the public for profit is contemplated only as a temporary expedient for disposing of the surplus of TVA power in the interim while that policy is being fully established.

TVA is required to establish a policy in the various States of favoring domestic and rural use over industrial use. (Sec. 11.)[1] Whether the State believes that favoring industrial use will, by stimulating the development of the State, best contribute to the public prosperity is immaterial. This policy is fixed by the TVA Act without regard to the assent or non-assent of the States. TVA must require power marketed through municipalities and non-profit organizations to be "distributed without discrimination" according to the TVA theories in that field of rate regulation. (Sec. 12.) TVA "may make such rules and regulations governing the sale and distribution of such electric power as in its judgment may be just and equitable." (Section 10.) Again all of these regulations are to be made by TVA without hearing and without appeal or review.

(b) TVA, acting under the authority of the statute, has been and still is consistently exercising the power to fix its own rates, terms and conditions of service and to regulate the rates, terms and conditions of service of all distributors of TVA power. (See pp. 80-82, *supra.*) TVA expressly denies the power of the States to regulate its

---

[1] The bald attempt to usurp State powers is strikingly illustrated by the fact that this declaration of policy in the TVA Act is taken literally from the declaration of policy in the Power Authority Act of the State of New York, where the State in the exercise of State powers, declared:

"• • • in the development of hydroelectric power therefrom, the said project shall be considered primarily as for the benefit of the people of the state as a whole and particularly the domestic and rural consumers, to whom the power can economically be made available, and accordingly that sale to and use by industry shall be a secondary purpose to be utilized principally to secure a sufficiently high load factor and revenue return which will permit domestic and rural use at the lowest possible rates and in such manner as to encourage increased domestic and rural use of electricity." (Ch. 772, Sec. 5, (5), Laws of 1931, New York.)

rates, terms and conditions of service or the rates, terms and conditions of service of distributors of TVA power.[1] All of the contracts between TVA and distributors of TVA power require the distributors to observe resale rate schedules attached to the contract and to submit to such further regulation as TVA has seen fit to impose. (See pp. 206-209, *infra.*) Thus TVA is authorized, and claims the right, to fix its rates and the rates of distributors of TVA power as it chooses. *It may double its rates or cut them in two and, if the TVA Act is valid, the States are powerless in the premises.* It may discriminate between different localities in fixing rates. It may establish uniform rates throughout the States in which it operates or it may fix a different rate for every village. It may take over one-half of a State and establish an entirely different rate structure and policy from that established and enforced by the State in the remainder of its territory. And if the TVA Act is valid, then, as TVA has claimed, these are "matters clearly beyond your (State) control."[1] *Manifestly there is no relation between the regulation of the resale rates of distributors of TVA power, public, non-profit or private, and the disposal of Government property.*

If the TVA Act is valid, manifestly to the extent that TVA displaces state-regulated agencies and occupies the field of supplying electricity to the public, the power of the States to regulate rates and to impose any of the other regulations of this local public service commonly invoked in the public interest is taken away. And the right of the peo

---

[1] The trial court excluded, as immaterial, a written statement filed with the Alabama Public Service Commission and signed by all three Directors of TVA, in which TVA declined to submit for examination by such Commission its cost records and books, and said: "*And since your Commission cannot directly determine the rates and rate policies of this national agency, it should not try to do this indirectly, by calling for testimony concerning matters clearly beyond your control.*" (Comp. Ex. 884, excluded; R. 3878, 3880-1.)

ple to engage in the business is destroyed. Again, we invite the attention of the Court to the fact that the size of the electric enterprise included in the TVA Unified Plan makes certain that this deprivation of the powers of the States and the rights of the people will extend throughout Tennessee and large parts of six or more neighboring States. Nor can the size of the enterprise properly be viewed apart from the fact that the power is to be sold at subsidized rates which do not meet the costs of production, transmission and distribution, and with which state-regulated agencies, which must bear all of these costs, obviously can not compete. (See pp. 79-81, *supra.*) The situation may be aptly illustrated by *paraphrasing* the language of this Court in *Walla Walla City v. Walla Walla Water Co.*, 172 U. S. 1, as follows:

> "The city (TVA) might fix such prices as it chose for its water (electricity) and might even furnish it free of charge to its citizens (the public) and raise the funds for maintaining the works by a general tax. It (TVA) would be under no obligation to conduct them for profit, and the citizens would naturally take their water (electricity) where they could procure it cheapest. The plaintiff (appellants), upon the other hand, must carry on its business (their businesses) at a profit, or the investment becomes a total loss." (loc. cit. 11.)

It is thus plain that the displacement of state-regulated agencies and the pre-emption of the field of supplying electricity to the public by TVA is inevitable. And, ironically, one of the major subsidies which makes this result inevitable is the deprivation of the States of their tax revenues which in 1937 amounted to many millions of dollars from these appellants alone. Nor may the situation properly be viewed apart from the facts (1) that, with the exception of one or two small municipalities which owned and operated their distribution systems at the time of the passage of the

TVA Act, every municipality now or formerly served by appellants with which TVA had a contract at the time of trial was the beneficiary of a PWA grant of 30 or 45 per cent of the cost of the distribution system, and in most cases of a loan for the cost of the balance, repayable only out of earnings, if any, to be derived from the distribution of TVA power, and (2) that the facilities of practically every non-profit organization distributing TVA power had been constructed by TVA and had been financed by TVA or REA and in some cases had been constructed with labor donated by CWA. (See pp. 75-79, *supra.*)

All of these factors, taken in connection with the unlimited character of the undertaking, are of the utmost importance in measuring the extent of the threatened invasion of the powers of the States and of the rights of the people; for inescapably, to the extent that TVA occupies the field, both the powers of the States and the rights of the people are displaced and destroyed.

Regulation by TVA of Rates of Existing Utilities Not Distributing TVA Power and Displacement of State Regulation. Not only the natural and reasonable effect, but the direct, necessary and intended effect, *of the Act and of the TVA Unified Plan* in the situation in which they operate, is to regulate the rates of all other utilities not distributing TVA power and operating in the TVA area. The statutory and administrative provisions for the regulation of the rates of distributors of TVA power is an integral and essential part of the statutory and administrative scheme to regulate all local electrical rates in the TVA area, including the rates of non-distributors of TVA power. (See analysis of statute, pp. 14-17, *supra.*) It is apparent that the standard contract provisions, prescribed and established in advance of any negotiations for sale of TVA power to, or through, municipalities and non-profit associations (fixing as they do what the ultimate consumer

shall pay in every classification of service, how his payments shall be collected and accounted for, and when collected, how they shall be expended and used) have no relation to the disposal of federal property and can have no object other than the establishment of a system of federal control over every operation in the electric power business. Such intention was affirmed by the TVA Directors themselves in their Minutes of October 13, 1933 [1] (excluded by the court as immaterial), and is borne out by all of their subsequent acts in the promotion of a market for the sale of TVA power.

The statute is specifically directed to bring about the sale of electricity in the territory "at the lowest possible rates" (Sec. 11) and specifically authorizes direct service by TVA where it "deems existing rates unreasonable." (Sec. 10.) Thus the threat of economic destruction hangs over the heads of the non-conforming. In this connection the vast size of the enterprise authorized by the Act and of the enterprise embodied in the TVA Unified Plan is again of controlling importance. It is plain that with electricity offered for sale in an amount which is unlimited in relation to the available market, a supply far greater than the demands of the area, at subsidized rates far below the rates of appellants under State regulation, the appellants can sell and continue in business at all only by adopting the rates from time to time promulgated by TVA and

---

[1] "For the Authority's operations to provide a yardstick of public operation by which to measure private operations it is essential that the Authority engage not only in the generation but participate in the transmission and distribution of electricity, since these latter two phases of electric service represent the most important part of the cost of such service. A public yardstick to have value necessarily means public operation from power house to consumer's premises. (*It is for this reason that the Authority has adopted a policy of rate and accounting control of municipal distribution operations.*)" (TVA Minutes of October 13, 1933; Comp. Ex. 708, excluded, R. 3640.)

not by collecting the rates fixed by State authority. (See pp. 80-81, *supra*.) As this Court said in the *Walla Walla* case, *supra*, the public "would naturally take their water (electricity) where they could procure it cheapest." (loc. cit. 11.) The Federal Government can no more deny the intent to achieve, or the responsibility for achieving, a result flowing necessarily and inevitably from the operation of a statute upon an economic law, than it could deny an intent to achieve, or responsibility for achieving, a result naturally and inevitably flowing from the operation of a statute upon a law of nature.

The regulation of the rates of appellants and other utilities in the TVA area at the level fixed from time to time by TVA will be the natural and inevitable effect of that stage of the execution of the statute which will be represented by the completion of the TVA Unified Plan. This is patent from any consideration of the size of the enterprise in relation to the market (see pp. 80-81, *supra*) and of the circumstances that this unlimited quantity of electricity is being offered at rates conceded to be "substantially below" (and as shown by evidence excluded by the trial court as immaterial, from 25 to 60 per cent below) the state-regulated rates. While the trial court excluded, as immaterial, testimony of experts in the utility business that the operation of the TVA Act and of the TVA Unified Plan will directly and definitely so regulate appellants' rates, the uncontradicted evidence leaves no room for doubt on that point.

The court also excluded evidence that the appellees are so construing and administering the Act and the TVA Unified Plan. Thus the court excluded, as irrelevant, an official TVA Press Release stating in the words of Director Lilienthal:

> "The power policy written into the Tennessee Valley Authority Act represents an attempt to regulate public

utilities not by quasi-judicial commissions, but by competition." (Comp. Ex. 815, excluded, R. 3732.)[1]

While apparently admitting, as they must, that *de facto* the TVA Act and the TVA Unified Plan will regulate and fix appellants' rates, the appellees contend that that does not constitute regulation in law because neither the Act nor the TVA Unified Plan provides a penalty by fine or imprisonment for failure to adopt rates promulgated from time to time by TVA. The contention is plainly without substance in law or in fact for the following reasons:

First: The court below in its opinion referred to "the inevitable effect of the lower rates of the TVA within this area and the economic necessity forced upon the complainants of lowering their rates to meet the competitive rates of the Authority * * *." (R. 555.) The appellants must accept the rates promulgated by TVA or

---

[1] This was not an isolated instance of this declaration of the administrative interpretation and administration of the Act. Other illustrations (out of a very large number published in official TVA Press Releases, all of which were excluded by the court as immaterial), are:

"Regulation by Commission had in many states proved ineffectual. * * * And so, to supplement regulation by Commissions, Congress passed the TVA Act." (Comp. Ex. 799, excluded, R. 3698.)

"The National Power Policy of the President and the Congress, written into the Tennessee Valley Authority Act, recognize that electric power, next to the soil, is our greatest resource. * * * And so, to supplement regulation by Commissions, Congress passed the Tennessee Valley Authority Act. * * * We believe that definite plans of the Authority now in process of execution afford the quickest means of accomplishing a thorough revision of rate schedules and rate theories throughout the country, and with it, an increase in the use of electricity. This is an essential part, as I see it, of the new national power program inaugurated by the Tennessee Valley Authority Act." (Comp. Ex. 800, excluded; R. 3703, 3707; see also Comp. Exs. 790, R. 3683; 796, R. 3691; 839, R. 3773.)

suffer the complete loss of their business and economic destruction. This control over the rates of appellants and other utilities in the area is plainly effected by economic coercion. Regulation effected by economic coercion is no less regulation than when effected by fine or imprisonment; and if the subject over which federal regulation is achieved through economic coercion does not fall within the field of federal regulatory power, such regulation is unconstitutional. *United States v. Butler*, 297 U. S. 1, 70-1.

Obviously, the regulation of appellants' rates under the TVA Act and under the TVA Unified Plan is much more direct, definite and certain, and the economic consequences of non-conforming are much more disastrous under the TVA Act and under the TVA Unified Plan, than was the regulation of the production of unwilling farmers under the Agricultural Adjustment Act. Regulation of the electric industry so as to bring about the sale of electricity "at the lowest possible rates" is the very heart of the TVA Act, just as the regulation of production was the heart of the old Agricultural Adjustment Act. And manifestly, the offer to purchase federal control of local electric rates with *unlimited amounts of subsidized power*, with *gifts* and *loans (repayable, if at all, only out of earnings)* for the construction of systems to distribute TVA power, *with loans carrying no personal obligation* to non-profit organizations for the construction of systems to distribute TVA power and with the *donation* of labor by the CWA (see pp. 75-82, *supra*), greatly exceeds the economic power and coercion exerted by the machinery provided for purchasing control of agricultural production under the Agricultural Adjustment Act.

Second: To say that the rates of existing utilities are not regulated upon the ground that they might stubbornly and wilfully choose destruction rather than submit to such federal regulation would be to remove the law from

the field of common sense and realities. It would be to place constitutional rights at the mercy of the disingenuous scrivener, the clever scheme, the sharp practice.

It has long been settled that to offer a citizen the choice between the rock and the whirlpool, between submission to unconstitutional regulation and economic destruction, is not the open sesame to the avoidance of constitutional limitations and that under such circumstances the citizen may restrain the unconstitutional exercise of power which he could only avoid by submitting to his own destruction.

Thus, in *Frost v. Railroad Commission*, 271 U. S. 583, the effect of a State statute was to compel private carriers for compensation to submit to regulation as public carriers or to cease to use the highways entirely. It was argued that the private carrier was not obliged to submit himself to the condition for he had a free choice. In dealing with this argument, this Court said:

> "If so, constitutional guaranties, so carefully safeguarded against direct assault, are open to destruction by the indirect but no less effective process of requiring a surrender, which, though in form voluntary, in fact lacks none of the elements of compulsion. Having regard to form alone, the act here is an offer to the private carrier of a privilege, which the state may grant or deny, upon a condition, which the carrier is free to accept or reject. *In reality, the carrier is given no choice, except a choice between the rock and the whirlpool,—an option to forego a privilege which may be vital to his livelihood or submit to a requirement which may constitute an intolerable burden.*" (loc. cit. 593.)

This regulation of appellants' rates is plainly forbidden by the Fifth Amendment for several reasons. It is a field in which the Federal Government has no jurisdiction. It establishes appellants' rates at a confiscatory level. It

fixes appellants' rates without hearing, appeal or review. And apart from these violations of the Fifth Amendment, there is manifestly an unconstitutional delegation of power to TVA, as there is no adequate standard set up in the Act and no reasonable statutory method for the determination or review of the rates prescribed. Cf. *Panama Refining Co. v. United States,* 293 U. S. 388; *Schechter Corp. v. United States,* 295 U. S. 494.

Third: If it could be held (as we think it can not) that the *de facto* regulation by TVA of the rates of the appellants does not constitute regulation in law, that would not remove the vice in this aspect; for it clearly prevents the State from exercising its power of regulation. We have already seen that through subsidies and even through disregard of the statutory direction to sell the electricity at rates above cost after allowing for the benefit of the statutory subsidies (see pp. 79-80, *supra*), TVA has established rates conceded to be "substantially below" the state-regulated rates. The court excluded proof that these subsidized rates are in fact from 25 to 60 per cent below such state-regulated rates. The trial court states (Opinion R. 555), and the facts inescapably establish, that the appellants must adopt the rates from time to time promulgated by TVA. The result is that the rates of appellants are to be regulated below a fair return upon the property devoted to the public use.

Since the States, in regulating utility rates, are by constitutional limitation required to allow a reasonable return, it is obvious that there is nothing which the States can do in the premises and that their power of regulation is completely ousted. To deny that there is a displacement of the jurisdiction of the State because the States may retain in form of law a power to regulate rates, which action of the Federal Government has in fact made it impossible

for them to exercise, would be to make a farce of the law and of our constitutional system. Plainly the necessary and inevitable result of the operation of the Act and of the TVA Unified Plan is to substitute federal regulation of the rates of privately owned utilities in the area for State regulation under constitutional limitations. Further, the inevitable effect of the operation of that plan is to prevent existing utilities from reducing fixed costs through refinancing and to prevent them from raising necessary capital at reasonable rates, if at all, for extensions. (See pp. 83, 88-89, *supra*.) These are obviously direct and substantial interferences with proper and efficient State regulation.

While the court excluded the evidence as immaterial, the appellants below offered to show that the savings which could be achieved by the appellants from refinancing alone, in the absence of the disastrous threat of TVA competition and regulation, would be on the order of millions of dollars (see pp. 88-89, *supra*); and obviously such savings would be passed on to the consumers in any rate proceeding before a duly constituted State body. We have already pointed out that one of the effects of the TVA Unified Plan, as it is being executed, is to dismember the highly integrated and efficient systems built up by the appellants by seizing the hearts of their markets and the cream of their businesses (such as Chattanooga in the case of The Tennessee Electric Power Company) and destroying the economy with which the service could otherwise be supplied to the public. (See pp. 84, 88, *supra*.) In some instances this dismemberment threatens some of appellants with bankruptcy unless they choose to abandon what they believe to be their constitutional rights and are concurrently able to sell their facilities to TVA,—and that sorry alternative is made more desperate still by the fact that the price offered by TVA must be accepted upon pain of duplication and de-

struction.[1] *Under such circumstances the power of the State fairly and constitutionally to regulate rates, to order extensions of service, to compel continuation of service, to establish uniform State-wide rates and otherwise to adopt policies deemed to be for the general welfare and prosperity of the State is set at naught.*

In the court below it was argued that the decision of this Court in the *Ashwander* case sustained the power of TVA to regulate rates. It seems sufficient to say that the opinion in the *Ashwander* case discloses no consideration, and much less any approval, of the claimed right of TVA to regulate rates; but on the other hand, the opinion of this Court in the *Ashwander* case does clearly establish that any invasion of the powers of the States or of the rights of the people by TVA is beyond the constitutional power of the Federal Government.

4. The TVA Act establishes, and TVA under the Unified Plan is carrying out, a policy of having the local electric business carried on by public bodies or non-profit organizations.

(a) The TVA Act, without regard to State policy, affirmatively and in detail provides for the establishment of a policy of having the local electric business carried on by public bodies or non-profit organizations. (See analysis of Act, pp. 14-17, *supra.*) The Act requires TVA to "give preference to States, counties, municipalities and cooperative organizations • • • not organized or doing business for profit." (Sec. 10.) TVA may enter into contracts for a term of thirty years with public bodies or non-profit organizations (but not with corporations or persons doing a utility business for profit) provided they will build

---

[1] See statement of Chairman A. E. Morgan before Congressional Committee, Comp. Ex. 109†, pp. 162-3, R. 2633-4; also R. 1127, 1135.

transmission lines to TVA generating stations or transmission lines. (Sec. 12.) Indeed, the Act requires that all contracts for the sale of power to private companies or persons doing business for profit, which power is to be resold for profit, shall contain a cancellation clause so that TVA may recapture the power for use in promoting the statutory policy of having the local electric business in the several States carried on by public agencies or non-profit organizations. (Sec. 10.) Plainly sales to persons doing a utility business for profit are, under the statute, only a temporary expedient to be used to dispose of power not otherwise saleable pending the establishment of this statutory policy.

Further to forward this policy, TVA may extend credit for a period not exceeding five years to public bodies and non-profit organizations situated within transmission distance from any TVA generating station to acquire existing distribution facilities and incidental works, including generating plants and interconnecting transmission lines (Sec. 12a) and for that purpose may issue bonds in the amount of $50,000,000 on the credit of the United States. (Sec. 15a.) *The statutory purpose to establish this policy within the States could not be written more plainly on the face of the Act.*

When these provisions of the Act are read in the light of the fact that under the statute quantities of electricity unlimited in relation to the available market are to be offered for sale at subsidized rates with which no unsubsidized competitor can compete, it is plain that the establishment of such a policy within the States is *not only the natural and reasonable effect, but the inevitable effect, of the operation of the Act.* It follows under economic law that "citizens would naturally take their water (electricity) where they could procure it cheapest." *Walla Walla City v. Walla Walla Water Co., supra.* And as before pointed

out, *Congress can no more disavow a result inescapably following from the operation of a statute on an economic law than it can disavow a result inevitably following from the operation of a statute upon a law of nature.*

(b) TVA, as it must, has followed this statutory policy. While the trial court excluded the evidence as immaterial, the appellants offered to prove that privately owned and operated utilities had repeatedly offered to purchase the power being generated and to be generated under the TVA Unified Plan at a price fixed by competitive bidding, by arbitration or by the published rate schedule of TVA and to pass on any saving to the public. (Offer to Prove, Willkie R. 1505-7.) While only a small fraction of the total power capacity which will result from the completion of the TVA Unified Plan has yet been achieved, TVA has developed its power capacity far beyond the demand of its current customers due to the fact that it has taken some time to construct duplicate transmission and distribution systems or force the sale of existing distribution systems. In the meantime it refuses to sell power to privately owned utilities except with provision for recapture for use in promoting the statutory policy of having the local electric business carried on by public agencies and non-profit organizations in accordance with the provision of the Act to which reference has been made. That under the TVA Unified Plan appellees are acting to establish this statutory policy is therefore not open to debate.[1]

---

[1] The effectiveness of the operation of the statutory and administrative scheme to have local electric business carried on by public bodies and non-profit organizations is strikingly illustrated by the situation in the territory served by the appellant Alabama Power Company which, to avoid duplication of testimony, was taken as typical. (R. 936, 965.) During the period between 1915 and 1930, thirty-three municipalities operating their own electric distribution systems voted to sell such systems to the Alabama Power Company and no municipality voted to acquire a distribution system for municipal operation. (R. 941, Comp. Ex.

(Continued on page 178)

5. There is no real or substantial relation between the power to dispose of federal property and the regulation of local electric rates or the establishment within the States of a federal policy of having the local electric business carried on by public or non-profit organizations.

The regulation of retail rates and federal control over the method of carrying on the local electric business is obviously unnecessary to the disposal of federal property. No justification appears except the desire to impose federal regulation and control over the local electric industry. (See pp. 138-139, *supra.*) No honest reading of the statutory scheme of disposal can result in a conclusion that it is merely a method of getting the property to market. In fact the provisions of the Act provide a limitation on the market. The method of disposing of the property provided by the Act is a method of promoting public or non-profit operation of the local electric business and federal regulation of that business. The very provisions of the Act which contrive to govern the concerns reserved to the State, likewise limit the market for the sale of power. It is not a market in which all buyers may participate on equal terms. And the TVA Unified Plan establishes in operation those statutory purposes.

6. The natural and reasonable effect of the operation of the Act, by bringing about a federal monopoly of the local electric business, is to deprive the States of important tax revenues.

It has long been an established principle of constitutional law that the Federal Government may not exercise its power of taxation so as substantially to burden or interfere with the functions of the States. *Collector v. Day,*

186, R. 2967-8.) Since the passage of the TVA Act in 1933, 18 municipalities, 13 of which received service from The Alabama Power Company, voted to acquire electric systems. Of the 13, 6 are now buying their electric requirements from or are under contract to buy from the TVA. (Comp. Ex. 191, R. 3001; R. 948.)

78 U. S. (11 Wall.) 113, 124; *Pollock v. Farmers Loan Co.*, 157 U. S. 429, 584; *Ambrosini v. United States*, 187 U. S. 1.

While the recent decisions of this Court in *Helvering v. Gerhardt*, 304 U. S. 405, and *Allen, Collector, v. Regents*, 304 U. S. 439, may be regarded (although we think it doubtful) as requiring a plainer showing of interference with State functions through exercise of the federal taxing power than had been the previously established rule, it seems plain that nothing in those decisions sanctions any substantial interference with or burdening of State functions through the exercise of the taxing power. And it would seem that if the traditional doctrine that the Federal Government may not use its power of taxation so as substantially to interfere with or burden State functions is not to be abandoned, the adoption by the Federal Government of a systematic course of conduct, which has the direct and necessary effect of depriving the States of large sources of taxation and revenue, must be equally inadmissible. Manifestly, if the Federal Government may take over vast industries within the States and operate them as federal monopolies, the tax resources of the States will in a large measure continue to exist only at sufferance of the Federal Government. The record here shows that in 1937 the 18 original appellants alone paid approximately $16,000,000 in taxes and the larger part of these taxes was paid to States and state agencies. (See p. 62, *supra*.) The inevitable effect of the operation of this Act is substantially to deprive the States of that source of taxation and of that important revenue.

H.

The objection that the statutory and administrative scheme for the disposal of the electricity is unauthorized by the Constitution and contravenes the Fifth, Ninth and Tenth Amendments cannot be cured by the consent of a State; and were the question one of release from inherent constitutional limitations, they could not be surrendered in the vital characteristics here involved except by constitutional amendment.

TVA denies the right of the States to exercise any power or control whatsoever over its business and activities. (See pp. 80-81, 164-166, *supra.*) Nevertheless six states, doubtless moved by the prospect of large federal expenditures or of distribution of electric power at rates subsidized by the Federal Treasury (Cf. *Butler v. United States, supra*), passed statutes exempting TVA from State regulation as a public utility or purporting to authorize municipalities and cooperative associations to distribute TVA power.[1] In Alabama and Tennessee these statutes were in varying degrees involved or mentioned in certain cases before the highest courts of those States. *Chattanooga v. Tennessee E. P. Co.*, 172 Tenn. 505; *Memphis P. & L. Co. v. Memphis*, 172 Tenn. 346; *Tennessee P. S. Co. v. Knoxville*, 170 Tenn. 40; *Alabama P. Co. v. Membership Corp.*, 234 Ala. 396; *Oppenheim v. Florence*, 229 Ala. 50. TVA was not a party to any of these cases, and in none of them did the court purport to pass upon the validity of the TVA Act or of TVA activities. In none of these cases was the validity of TVA regulation of rates of private utilities involved or considered. Nor did the courts in any of these cases pass upon the validity of TVA interference with the

---

[1] Such statutes were passed in Alabama, Mississippi, Tennessee, Kentucky, North Carolina, and Georgia. These statutes are printed in the separate Appendix to this brief, pp. 47-66.

sovereign functions of the States in regulating local electric rates or the electric business generally. In each case the court assumed that the State police power must continue unimpaired.

However, the trial court, after citing the foregoing cases, said:

> "The actions which the complainants attack are authorized by the states themselves. It is strange doctrine that acts authorized by a sovereign state constitute interference with its sovereign rights because of the fact that they are also authorized by the Federal Government. We think that deliberate cooperation between the state and the United States, authorized in each case both by the state legislature and by the Congress, constitutes no abdication of any state right." (R. 563.)

Apart from the fact there there is no pretense of State consent in three of the States involved,[1] the trial court misconceives and misstates the point. There was no contention that "acts authorized by a sovereign State" are unlawful, "*because* of the fact that they are also authorized by the Federal Government." The contention—which is not a "strange doctrine"—is that the Federal Government may not appropriate police powers of the States and may not do that even with the State's consent.

Nor is it the contention that constitutional federal action is made unlawful by concurrent State action in the same field. Where federal power is being constitutionally exercised, assent or non-assent by the State is immaterial. As this Court said in *Butler v. United States, supra,* "if the federal power reaches to the subject-matter, its exertion cannot be displaced by State action." (loc. cit. 74.) But the question here is whether action of the Federal

---

[1] Virginia, West Virginia and South Carolina.

Government otherwise unconstitutional because in excess of the powers granted under the Constitution and in contravention of the Fifth, Ninth and Tenth Amendments is brought within the scope of federal constitutional power by State consent. More precisely the question here is whether a State may confer constitutional authority upon the Federal Government to engage in and monopolize the business of supplying electricity to the public in the State, regulate the local electric business and deprive the people of the right to engage in that business or, if they can remain in business at all, to carry it on free from federal interference or regulation. This is a question which was not raised or considered in the State cases relied upon by the trial court and in any event the question is one of federal law upon which the determination must be finally made by this Court. And if the State cases could be construed, as we think they cannot, as holding that absence of federal power may be supplied and violation of federal constitutional limitations may be excused by the action of a single State, the holding would plainly be grossly erroneous. The problem involves on the one hand the granting of powers to the Federal Government *which are not found in the Federal Constitution,* and, on the other, the *abdication of powers reserved to the States and the people and the surrender of rights retained by the people* under the Federal Constitution. Neither may be done under our dual system of government without constitutional amendment.

In *Ashton v. Cameron County Water Improvement District,* 298 U. S. 513, this Court said:

> "Neither consent nor submission by the States can enlarge the powers of Congress; none can exist except those which are granted. *United States v. Butler,* 297 U. S. 1. The sovereignty of the State essential to its proper functioning under the Federal Constitution cannot be surrendered; it cannot be taken away by any form of legislation." (loc. cit. 531.)

In *United States v. Butler*, 297 U. S. 1, 72, this Court said:

> "But if the plan were one for purely voluntary cooperation it would stand no better so far as Federal power is concerned. *At best, it is a scheme for purchasing with federal funds submission to federal regulation of a subject reserved to the states.*"

And in *Carter v. Carter Coal Co.*, 298 U. S. 238, 295, this Court said:

> "* * * State powers can neither be appropriated on the one hand nor abdicated on the other."

There is an inherent lack of power in the Federal Government to "invade the rights reserved to the States or to the people" or "to govern the concerns reserved to the States." No want of federal authority can be supplied, no violation of federal constitutional prohibition can be cured by the consent of a State.

Here we have not a case of cooperation between the State and Federal Government in the exercise of their constitutional powers, *but a case of abdication by the State and usurpation by the Federal Government.* The situation is plainly distinguishable from that presented in *Steward Machine Co. v. Davis*, 301 U. S. 548. In that case the Federal Government was found to have the constitutional power to levy the federal taxes and to carry out the scheme of the statute. This federal power was not destroyed or limited by the cooperation of the States in the exercise of independent constitutional powers. The consent or cooperation of the State in the *Davis* case neither enlarged nor diminished the power of the Federal Government. That is the vital distinction overlooked by the trial court. While our constitutional system does not preclude the *cooperation* of the State and Federal Governments in the exercise of the constitutional powers of each, it does preclude the abdication of powers by the States and the usurpation

of powers by the Federal Government by collusion between them.[1] It does preclude the destruction or "disparagement" of the rights retained by the people by any action short of the amendment of the Constitution by constitutional processes.

But if it be assumed *arguendo* that the question here is whether the Federal Government may be relieved from the inherent limitations imposed by our dual system upon the exercise of its express powers by consent of a single State, the answer is equally plain. The limit of the doctrine that a State may, in some circumstances, by consent remove constitutional limitations upon the exercise of an express power, which exist only in the inherent limitations of our dual system of government, is that the States may not surrender the "essence of their statehood." *United States v. Bekins*, 304 U. S. 27, 53.

Here consent of the States requires that they shall strip themselves of their police power in one of the largest and most important fields of State government and that they shall delegate to the Federal Government their police power to regulate the business of supplying electricity to the public. This police power is inherent and involves the very essence of Statehood under our system of government. It has been consistently held by this Court that that power may not be abdicated or bartered away. *Northern Pacific R. Co. v. Minnesota ex rel. Duluth,*

---

[1] In the court below the appellees made, and the trial court apparently accepted, the contention that there can be no federal invasion of State rights in the absence of interference with *affirmative regulation*. States may adopt a policy of non-regulation or a policy of most complete and detailed regulation. Thus, some States regulate rates of publicly owned utilities and some do not, but neither the conscious decision not to exercise, nor the inadvertent neglect to exercise, such State powers invites or permits the Federal Government to invade the States and exercise powers reserved to the States and forbidden to the Federal Government.

supra; *Atlantic Coast Line v. Goldsboro*, 232 U. S. 548; *Denver & Rio G. R. Co. v. Denver*, 250 U. S. 241. Nor may it be delegated to any other authority. *I Cooley's Constitutional Limitations*, 224 (8th Ed.)[1]; *Clark v. Washington*, 12 Wheat. 40. It has never been surrendered to the general government. *New York v. Miln*, 11 Pet. 102, 139; *Slaughter House Cases*, 16 Wall. 36, 63; *Keller v. United States*, 213 U. S. 138, 144.

If the States may surrender that sovereignty, no reason is apparent why the States may not surrender the power to regulate all of their internal affairs for a price. And if that is so, then the Federal Government, by the use of federal funds or by gifts of federal property or by "sales" of federal property at less than cost or even at less cost than it is possible to produce them without the use of the credit of the nation, may acquire all of the reserved rights of the States,—and as those rights are successively purchased, the States will be progressively weakened and less able or willing to defend their rights or discharge their duties. *Carter v. Carter Coal Co., supra*, 296.

In *United States v. Bekins, supra*, there was involved no surrender of State police power to the Federal Government; no surrender of the "essence of statehood." There was involved only State consent to a single and non-recurring action involving a release of a political subdivision of

---

[1] "One of the settled maxims in constitutional law is, that the power conferred upon the legislature to make laws cannot be delegated by that department to any other body or authority. Where the sovereign power of the State has located the authority, there it must remain; and by the constitutional agency alone the laws must be made until the constitution itself is changed. The power to whose judgment, wisdom, and patriotism this high prerogative has been intrusted cannot relieve itself of the responsibility by choosing other agencies upon which the power shall be devolved, nor can it substitute the judgment, wisdom, and patriotism of any other body for those to which alone the people have seen fit to confide this sovereign trust." (p. 224.)

the State which the State desired and was powerless to give. *Here is involved the surrender of State police power for twenty or thirty years and, under the inexorable force of indisputable facts, a surrender forever.* "Not by arguments so divorced from the realities of life" (Dissenting Opinion of Cardozo, *J.*, *Ashton v. Cameron County District, supra*, p. 541) has our dual system been preserved for 150 years. There is an inherent lack of power in both the Federal Government and the State Governments to violate the "foundation principles of our dual system of government."

Nor should the rights retained by the people be overlooked. They include the right to carry on an intrastate business free from federal interference or regulation and the right to engage in a lawful business *without being ousted* by the Federal Government making a legal or *de facto* federal monopoly of that business. We deny the right of a single State, or the right of any group of States (less than enough to amend the Constitution by constitutional processes) to empower the Federal Government to "disparage" the rights of the people and much less to destroy them. No State Government acting in collusion with the Federal Government behind the backs of the people may take away the rights reserved and guaranteed to the people by the Constitution. Back of the power of both the State and Federal Governments stands the people as sovereign. Certain rights were reserved not to the States but to the people, and those rights can be surrendered only by the people acting through constitutional processes.

I.

The principles laid down in the Ashwander Case condemn the method of disposal authorized by the Act and adopted by the TVA Unified Plan.

In the court below the appellees contended that the validity of the method of disposal authorized by the Act and adopted by the TVA Unified Plan is sustained by the decision of this Court in the *Ashwander* case. The trial court, as before pointed out, declined to consider whether the reserved powers of the States or the rights of the people were invaded, or whether the undertaking upsets our dual system of government. Having thus disregarded the controlling limitations upon the power to dispose of property which were laid down by this Court in the *Ashwander* case, the trial court held that the *Ashwander* case sustains the disposal of property under examination because the *Ashwander* case involved "every kind of electric facility, many miles of distribution and transmission lines" and the continuous production of electric energy at Wilson Dam. (Opinion, R. 564.)

Thus a controlling point in the mind of the trial court was the *kind* of facilities rather than their extent or the effect of the undertaking upon reserved rights or upon our dual system of government. And even that statement was fundamentally unsound; for the transmission lines in the *Ashwander* case were only 44,000 volts, suitable for taking power to a small local market while here the large transmission lines are 154,000 volts (built for ultimate increase to 220,000 volts), *which are suitable only for the backbone of an immense electric system.* The *Ashwander* case only involved the purchase of facilities of very limited capacity and very limited extent. It did not involve any of the questions of rate regulation, substantial displacement of State police powers in the entire field of regulating the electric business, destruction of state-regulated agencies created to carry on this public service, or destruction of the right

of the people to engage in the business through displacement by a federal monopoly, all of which are present in this case.

The essence of the trial court's conclusion is that because this Court held in the *Ashwander* case that a "limited undertaking" (insignificant in comparison with the TVA Unified Plan or the power system authorized by the TVA Act) did not constitute an invasion of the rights reserved to the States and the people, did not upset the balance of our dual system of government, and did not constitute engaging in a business or industry, no method of disposal of property,—no matter how large, no matter what the effect upon the reserved rights of the States or the people, no matter whether it is branded inescapably as a competitive commercial enterprise by the mere fact that it inevitably takes over the entire business or industry of supplying electricity to the public in a large part of seven or more States, —could violate any of these limitations. The mere statement of the proposition is sufficient to refute it.

As the Court of Appeals said in *TVA et al. v. Tennessee E. P. Co., et al.*, 90 F. (2d) 885, 890-1, R. 274:

> "The Ashwander case was a derivative suit brought by preferred stockholders of the Alabama Power Company to set aside the contract as *ultra vires*. By limitations imposed upon the Court by the nature of the suit, and through limitations of the judicial process, *the Ashwander case was kept within very narrow compass.*"

Both special counsel for TVA and the then Solicitor General insisted in the *Ashwander* case that since the transmission lines involved ran from Wilson Dam and the electric energy generated at Wilson Dam was more than sufficient to supply all of the requirements of the contract,[1]

---

[1] Indeed when the contract was made and for more than two years thereafter, there was no other source of electricity available to TVA.

the questions properly before this Court were limited to the constitutional authority for the construction of Wilson Dam and for the disposition, as provided in the contract, of the electric energy there generated;[1] and this Court accepted that factual hypothesis as the basis of its decision. (*Ashwander* case, loc. cit. 326.) The sole questions thus were (a) whether TVA could lawfully generate electric current at Wilson Dam as it had been constructed under the National Defense Act, and (b) whether TVA could lawfully acquire the transmission lines (*limited in capacity and length*) involved in that contract to carry such current to a local market. These were the only questions decided by this Court.

To avoid any possible misconception of the scope of its decision, this Court said:

> "* * * We express no opinion * * * as to the status of any other dam or power development in the Tennessee Valley, whether connected with or apart from the Wilson Dam, or as to the validity of the Tennessee Valley Authority Act or of the claims made in the pronouncements and program of the Authority apart from the questions we have discussed in relation to the particular provisions of the contract of January 4, 1934, affecting the Alabama Power Company." (loc. cit. 340.)

The Court of Appeals said in *TVA v. Tennessee E. P. Co., supra:*

> "* * * What then may have been merely tentative or speculative may now be approaching realization. What then was remote may now be imminent, and mere concept have fruition in action of a definite and concrete character constituting an actual or threatened interference with the rights of those complaining. This may only be determined by a full hearing on the merits." (loc. cit. 892, R. 277.)

---

[1] This is apparent from the excerpt from the argument of the Solicitor General in this Court, which is printed in the separate Appendix to this Brief, pp. 67-69.

This statement of the Court of Appeals is abundantly sustained by the record. The record establishes that the stage of the execution of the TVA Act which is embodied in the current TVA Unified Plan involves the generation, transmission and distribution of electric power over an area embracing a large part of seven or more States and has so far progressed that the appellants are now face to face not merely with threatened subsidized competition,—already an accomplished fact,—but the appropriation of their businesses and the destruction of the value of their properties.

The execution of the statute has reached a stage which involves no "limited undertaking" but one so vast that it must be held beyond the constitutional power of the Federal Government or it must be held that the federal power to dispose of property does give the power to destroy the powers reserved to the States and the rights retained by the people, to upset the balance of our federal system and to engage in a competitive commercial business within the States. No intermediate ground remains; for as we have already shown, such is the inevitable effect of the TVA Unified Plan upon the rights of the States and the people, and upon our dual system of Government. If that stage of the execution of the statute involved in the TVA Unified Plan be not held to constitute an unlimited undertaking and be not held to be an unwarranted destruction of the reserved powers of the States and of the rights of the people in the field of supplying electric service to the public, then it is impossible to conceive of any undertaking of the Federal Government which is subject to those limitations.

POINT III.

THE RIGHT OF APPELLANTS TO SUE, IN THE SITUATION SHOWN ON THIS RECORD, IS PLAIN.

The opinion of the trial court, in so far as it bears upon the right of appellants to sue, states:

"* * * Whatever compulsion exists is the inevitable compulsion exercised by the fact that a *competitor* sells at lower rates than complainants. But if the *operation of the TVA is legal,* the complainants have no legal right not to be subjected to *such competition* even though it curtail or destroy their business. *Alabama Power Co. v. Ickes,* 58 S. Ct. 300, 82 L. Ed. ...., decided January 3, 1938." (R. 552.)

* * * * *

"In view of the inevitable effect of the lower rates of the TVA within this area, and the economic necessity forced upon the complainants of lowering their rates to meet the *competitive rates of the Authority,* we conclude that the record presents evidence of *substantial future damage* to these complainants. But such damage constitutes *damnum absque injuria unless sales of power by the TVA are unlawful.*" (R. 555.)

* * * * *

"* * * It therefore is essential to the decision of the case pleaded in the bill to determine the constitutionality of this statute." (R. 558.)

* * * * *

"Moreover, no State has intervened as a party in this proceeding to protest that its laws are violated by the TVA, and no regulatory commission is a party to this action. These complainants are not authorized to object on behalf of the states. *Georgia Power Co. v. Tennessee Valley Authority,* 14 F. Supp. 673, 676. Questions of the conflict of the TVA statute with the sovereign power of the states are not properly raised until the interested parties are before the court." (R. 563.)

With the exception of the novel rule laid down with reference to the right of a citizen to resist the exercise of federal power over him in matters reserved to the States (hereinafter discussed), these excerpts from the opinion below seem clearly to recognize the obvious right of the appellants to sue in all aspects of the suit. But subsequent to the filing of this opinion, the majority of the trial court adopted verbatim conclusions of law drafted and submitted by the appellees without opportunity to the appellants to comment upon them or point out that many of them are plainly erroneous, others argumentative, others half truths and others wholly inapplicable.[1] Cf. *Morgan v. United States*, 304 U. S. 1.

The appellees' conclusions, thus adopted by the majority of the court, state that appellants have no standing (1) to challenge the right of TVA to sell to (more accurately *through*) municipalities and non-profit cooperative organizations because such entities have a legal right to engage in the electric business under State law (Conclusions 53-54, R. 663); or (2) to challenge the right of TVA to sell directly to rural customers or industrial customers "not previously served by any of the complainant companies" for lack of proof of actual or threatened damage. (Conclusions 55-56; R. 663.)[2]

---

[1] Gore, *J.*, declined to adopt the Conclusions of Law submitted by the appellees. (R. 572.)

[2] The arbitrary character of these conclusions readily appears from the following facts. The court throughout the trial repeatedly sought to restrict not only the scope but also the *quantum* of proof offered by the appellants on any issue and in particular pressed the appellants not to offer any further proof of damage upon the ground that the court thought the threat of damage to appellants obvious and would assume substantial damage. (R. 1259-60, 1266, 1414, 1470, 1483.) In each such instance, counsel for the appellees made no protest or objection.

Furthermore, the record disclosed the keenest competition between TVA and appellants operating in the areas where the partial execution of the TVA Unified Plan already had made TVA

(Continued on page 193)

And finally the majority of the trial court, in complete disregard of what they had said in their opinion, adopted the following Conclusion:

> "57. The complainant companies have no legal right to be free from competition, and they have no legal standing or right to challenge the statutory powers of the Authority to generate, transmit, and sell electric energy *in competition with them*, or some of them." (R. 663.)

This Conclusion is unsupported by principle or authority.

---

power available. Indeed, one of the claims of appellees was that appellants had greatly accelerated their extensions of rural service in the areas in which TVA was offering such service. (R. 2147, 2149-52.) In the matter of industrial customers, the record disclosed the keenest competition (Add. Fdg. 117, R. 704), as illustrated by the competition for the business of the Monsanto Chemical Company (R. 955-6; 1503-4; Comp. Exs. 628, R. 3477; 118, R. 2828), Volunteer Portland Cement Company (R. 1133-5; Comp. Ex. 564, R. 3378; Def. Ex. 154°, p. 192), The L. N. Gross Company (R. 1031-2), The Victor Chemical Company (Def. Ex. 154°, p. 302) and The Aluminum Company. (Def. Ex. 154°, pp. 309, 313; Def. Ex. 147, pp. 4, 6.) This was all aside from the obvious fact (supported by evidence given by officers of the Alabama Power Company and omitted with reference to such of the other appellants as had not already offered proof on that point upon insistence of the court that the Alabama testimony should be taken as typical), that each of the appellants maintains a Sales Promotion Department which, among other things, is actively and aggressively engaged in attempting to sell electricity to companies now providing their own power by reason of ownership of pre-existing plants or by reason of by-product development of electricity and to secure the location of new industries in the territories served by them. (R. 936, 788, 801; see pp. 63-64, 83-84, *supra*.) Not only is the attempt to eliminate these phases of TVA activity upon the ground of failure to prove threatened damage unsupported and in the teeth of the record, but it can not be reconciled with a fair trial.

A.

One threatened with direct and special injury through the application of a federal statute or the act of a federal officer may maintain a suit to determine whether the statute is constitutional or the act is authorized.

It is an established principle that one threatened with direct and special injury—not common to the public generally—through the application of a federal statute or through the act of a federal officer, may invoke a judicial determination whether the statute is constitutional, or the act is authorized, by a suit for injunctive relief. *Frothingham v. Mellon,* 262 U. S. 447, 488; *Philadelphia Co. v. Stimson,* 223 U. S. 605; *Alabama Power Co. v. Ickes,* 302 U. S. 464. A citizen establishes his right to maintain such a suit if he is—

> "* * * able to show * * * that he has sustained or is immediately in danger of sustaining some direct injury as the result of its enforcement and not merely that he suffers in some indefinite way in common with people generally." (*Frothingham v. Mellon,* loc. cit. 488.)[1]

No better statement of the principle has been made than that found in *Philadelphia Co. v. Stimson, supra,* where this Court said:

> "Where the officer is proceeding under an unconstitutional act, its invalidity suffices to show that he is

---

[1] The foregoing quotation omits the language "not only that the statute is invalid" which obviously is not a condition of the right to sue *but only a condition of the right to prevail*; for it is well settled that the constitutionality of a statute will not be determined except in a case where the complainant has a right to sue. Any other view would result in the circular reasoning that the right to sue may not be established without antecedent showing of unconstitutionality and that unconstitutionality may not be determined without antecedent establishment of the right to sue. If the citizen in addition to showing that he is threatened with direct and special injury, establishes that the statute is unconstitutional, he is entitled to relief upon the merits.

without authority, and it is this absence of lawful power and his abuse of authority in imposing or enforcing in the name of the State unwarrantable exactions or restrictions, to the irreparable loss of the complainant, which is the basis of the decree. *Ex parte Young,* 209 U. S. p. 159. And a similar injury may be inflicted, and there may exist ground for equitable relief, when an officer, insisting that he has the warrant of the statute, is transcending its bounds, and thus unlawfully assuming to exercise the power of government against the individual owner, is guilty of an invasion of private property." (loc. cit. 621-2.)

Alabama Power Co. v. Ickes, supra, involved merely the application of this principle. No new principle was laid down. The case chiefly emphasizes that the challenged action must invade "a legal right" of the person seeking to maintain the suit. *Damnum absque injuria* is not enough.

It remains only to inquire what are the rights which the appellants seek to protect and whether they are invaded by the statute or the official action challenged in this suit.

B.

The legal rights of appellants which are invaded or threatened with immediate invasion.

The legal rights of appellants which they seek to protect are: (1) the right to be free from illegal competition and (2) the right to engage in and carry on the business of supplying electricity to the public within the States free from displacement by the Federal Government and free from federal interference, regulation or control.[1] These

[1] The appellants also have a right to be free from the injury or destruction of their going businesses through slander or libel of their businesses, from the injury or destruction of their businesses brought about by an illegal concert of action between federal agencies and from the injury of their businesses through sale of TVA power at less than cost. While these circumstances

(Continued on page 196)

rights are entitled to protection both from injury produced by the operation of an unconstitutional statute and from injury produced by unauthorized action of federal officials or agencies.

First: The appellants are severally engaged in the business of supplying electricity to the public under franchises (conceded to be non-exclusive for the purposes of this suit) granted by the States or their political subdivisions which have jurisdiction in the various territories in which appellants operate. (See pp. 61-63, *supra.*) A non-exclusive franchise is property. It is exclusive as against all persons attempting to engage in the business illegally, without a franchise or under a void franchise. It follows that, there being no adequate remedy at law, the holder of a non-exclusive franchise has a standing in equity to protect his property against such an injurious invasion.[1] This means that the holder of a non-exclusive franchise has a right to invoke a judicial determination of whether any

---

[1] *Frost v. Corporation Commission*, 278 U. S. 515, 521; *Corporation Commission v. Lowe*, 281 U. S. 431, 435; *Alabama Power Co. v. Ickes*, 302 U. S. 464, 484-5; *City of Campbell v. Arkansas-Missouri Power Co.*, 55 F. (2d) 560, 562; *Gallardo v. Porto Rico Ry. L. & P. Co.*, 18 F. (2d) 918, 922; *Arkansas-Missouri Power Co. v. City of Kennett*, 78 F. (2d) 911; *Iowa Southern Utilities Co. v. Cassill*, 69 F. (2d) 703; *Kansas Gas & Elec. Co. v. City of Independence*, 79 F. (2d) 32.

(Continued from page 195)

have a material bearing upon other issues in the case, they also would appear to be violations of the TVA Act. The trial court declined to receive the evidence on these issues in so far as it was offered to show violations of the Act and did not consider or decided whether such activities violated the Act. For that reason they are not discussed in this brief in relation to their apparent violation of statutory authority except in so far as they are referred to in Point IV dealing with errors in procedure and in rulings on evidence. In Point IV they are discussed only to the extent necessary to show the materiality of the excluded evidence from the standpoint of violations of the statute as well as in relation to other issues in the case.

actual or threatened competition with him is legal and, if that involves the constitutionality of a statute or the existence of official authority, then a determination of the constitutional question or of the extent of the official authority. And for the purpose of determining the rights of appellants to sue, it must be assumed that the appellees are attempting to engage in the business illegally, without a franchise or under a void franchise.

Second: The appellants have a right to engage in and carry on the business of supplying electricity to the public within the several States subject only to State regulation and free from ouster, interference, regulation or control by the Federal Government. (See pp. 148-150, *supra.*) They have a right to be free from displacement or supersession in carrying on that business by the operation of federal statutes or the action of federal agencies which results in taking over the business as a federal enterprise. It is plain, therefore, that if the appellees are displacing or interfering with the appellants in the conduct of such business, or if the appellees are exercising federal regulation or control over the appellants' operation of such business, they are invading that legal right. And appellants have a standing to invoke a judicial determination whether that invasion is legal.

C.

The right of appellants to sue to enjoin actual and threatened illegal competition is clear.

It is plain that the appellees are severally threatened with the most severe and destructive sort of competition. That a threat of competition is a threat of irreparable damage is established by the decisions of this Court. *Walla Walla v. Walla Walla Water Co.*, 172 U. S. 1, 12; *Frost v. Corporation Commission*, 278 U. S. 515, 521; *Alabama Power Co. v. Ickes, supra.*

The trial court in its opinion stated, with great moderation, that "*the record presents evidence of substantial future damage to these complainants.*" (R. 555.) The Opinion further states that:

> "* * * The Authority concedes that it sells, or intends to sell, power at substantially lower rates—residential, industrial and rural—than those of the complainants and *that some displacement of service will result.*" (R. 554.)

It is plain on the record that these statements, although conceding damages more than sufficient to sustain the right of appellants to sue, are gross understatements and that in fact the appellants are threatened with devastating subsidized competition, with duplication of their facilities and consequent injury to, if not destruction of, their value and in many instances with complete destruction of their businesses and the value of their properties. (See pp. 86-89, *supra.*)[1] Manifestly, the damage from the threatened competition in the case at bar is immeasurably more serious and destructive than that which threatened the complainant in *Frost v. Corporation Commission, supra*, or in *Walla Walla v. Walla Walla Water Co., supra.*

---

[1] Damages arising from illegal competition include loss of business and markets, duplication and consequently destruction of value of facilities, loss of credit and inability to refinance or obtain new financing at reasonable rates, if at all. (See pp. 86-89, *supra.*) Damages arising from injury of appellants' going businesses through a campaign of misrepresentation among the customers of appellants to the effect that TVA rates fixed even below subsidized cost represent fair rates and that the state-regulated rates of appellants are unreasonable and unfair, and from confederation between PWA and TVA to compel existing utilities to sell facilities at prices fixed by TVA and retire from the field or suffer destruction of the value of their properties, also flow from competition, although it would seem that, as charged by appellants below, these activities are also violations of the TVA Act. The trial court did not consider or pass upon whether such activities violated the Act. However, such activities also sustain the right to sue.

It necessarily follows that the majority of the trial court erred when, in conflict with their opinion, they adopted appellees' Conclusion of Law 57 (R. 663) that appellants have no standing to challenge the right of appellees to "sell electric energy *in competition with them.*"

(1) The right to be free from illegal competition includes competition for future or unattached business.

The majority of the trial court, in complete disregard of its opinion, also adopted Conclusions of Law submitted by the appellees to the effect that appellants had failed to prove any damage in fact, actual or threatened, "resulting from the sales of power by the Authority direct to rural customers *not previously served by any of the complainant companies,*" or "resulting from the sales of power by the Authority direct to industrial customers *not previously served by any of the complainant companies*" (Conclusions 55, 56; R. 663.)

This anomalous holding, wholly unsupported by reason or authority, is that the holder of a non-exclusive franchise has no right to be free from illegal competition for unattached business. Manifestly the essence of competition is to secure the business of new or potential customers. It is in this very field that competition is necessarily the keenest. Thus, in *Frost v. Corporation Commission, supra,* this Court did not say that the appellant was only entitled to an injunction against the competition of the appellees for attached business, but that he was entitled to an injunction against the illegal competition of the appellees for any and all business then, or to become, available in the field of his operations. In the *Frost* case, this Court said:

> "That the immunity thus granted to the corporation is one which bears injuriously against the individual does not admit of doubt, since by multiplying plants without regard to necessity *the effect well may be to*

deprive him of business which he would otherwise obtain if the substantive provision of the statute were enforced." (loc. cit. 523.)

The injurious effect of competition for new business is aptly illustrated in the instant record by the competition for the business of The Monsanto Chemical Company, The Victor Chemical Company, The L. N. Gross Company and others now served by TVA or under contract to use TVA power. The keen competition for the business of rural customers, a relatively new and gradually expanding field, is also plainly established in the record. (See footnote pp. 192-193, *supra*; R. 1056-8.)

The court further refers in its opinion and findings to the circumstance that the execution of the TVA Unified Plan had not yet reached a stage where power is already being sold in the territory of all of the appellants. (R. 551-2; Fdg. 111, R. 625-6.) If this were a suit for damages, one could understand the purpose of the observation, but its relevancy in a suit to prevent the consummation of that very wrong is difficult indeed to perceive. It also attaches some unexplained significance to the fact that some of the existing service of TVA is in the so-called "ceded area"[1] under the contract of January 4, 1934, between certain of the appellants and TVA. (R. 552.) The court apparently overlooks the fact that the contract of January 4, 1934, has long since expired according to its terms and that, assuming its validity in elements not involved in

---

[1] The use of the term "ceded area" is highly significant and instructive. It suggests the first step in the creation of a new federal province, which is neither the United States nor any State, and in which the Federal Government will carry out in disregard of the laws of the States an experiment in social, economic and political planning heretofore unknown to our law. Of course, the so-called "ceded area" is insignificant in comparison with the area of existing and threatened power operations of TVA.

the *Ashwander* case, *neither the restrictions upon TVA* nor the privileges granted to TVA are any longer in force or effect in so far as they refer to competition for existing of new business.

(2) The right to be free from illegal competition includes competition for business handled by TVA through municipal and cooperative distributors.

The majority of the trial court further, and again in disregard of its Opinion, adopted Conclusions of Law that the appellants have "no standing or right to challenge the legal right of the Authority to sell electric energy at wholesale to municipalities and cooperatives." (Conclusions 53, 54, R. 663.) It must be remembered that for purposes of determining the right to sue, we must assume that the appellees are engaged in this branch of their business, as in all others, without requisite legal authority. It is plain that in engaging in this business (even if it be assumed that the municipalities and cooperatives are entirely free and uncontrolled entities, which we shall hereinafter show is not the fact), the appellees are in active competition with the appellants.

In such instances, TVA is supplying exactly the same commodity and serving exactly the same market as that previously served or previously and presently sought to be served by the appellants in the conduct of their business; and TVA is displacing the commodity and service of the appellants in their markets. If that is not competition, then competition as it has been known for hundreds of years must be redefined. In such instances the appellants are competing for the business of supplying such municipalities at wholesale with electric energy or for supplying the municipalities and their inhabitants at retail, or both. Plainly, every municipality which has, acquires or builds a distribution system without generating facilities is a potential cus-

tomer of the appellants.[1] Obviously, TVA, in undertaking to supply the requirements of a municipality which does not generate its own electricity, is competing with the appellants who are serving that territory under their statutory duty to serve. The fact that in such instances TVA sells wholesale and distributes through retail distributors does not avoid the fact of competition, nor does it destroy the right of the appellants to protect their businesses and properties against damages from illegal competition.

Citizens El. Ill. Co. v. Lackawanna & W. P. Co., 255 Pa. 145, is squarely in point. In that case the complainant had a non-exclusive franchise to supply electricity to the public in the township of Jenkins. The Jenkins Electric Company likewise held a non-exclusive franchise to supply electricity to the public in Jenkins Township, but possessed no generating facilities and hence had to purchase such electricity as it distributed from outside sources. The defendant Electric Company holding no franchise to carry on the business in Jenkins Township entered into a contract to supply the Jenkins Electric Company with electricity at wholesale. The court held that this constituted illegal competition by the defendant with the complainant and that the complainant was entitled to an injunction to restrain such wholesale supplying of the other company competing with the complainant under a valid non-exclusive franchise. Plainly this must be so.

Chicago v. Mutual Electric Light Co., 55 Ill. App. 429, involved the validity of a contract entered into by the Hyde Park E. L. & P. Co., holding a franchise to supply electricity to the public in a designated area of the City of

---

[1] For example, Tupelo, Mississippi, before taking service from TVA, was a wholesale customer of appellant, Mississippi Power Company, and Athens, Alabama, before taking TVA service, was served at wholesale by appellant, Alabama Power Company. (Def. Ex. 143; R. 4192.)

Chicago, to sell electricity at wholesale to the Mutual E. L. & P. Co., which held a franchise to supply electricity in an adjoining area of the City of Chicago in which the Hyde Park Company held no franchise. In holding that this contract had the effect of extending the service of the Hyde Park Company into the territory for which it held no franchise and was therefore illegal, the court said:

"The right to furnish and transmit electricity is the essence of the grant. That alone is the public and useful end to be subserved. The poles, conduits and strung wires, are mere means to attain the useful ends accomplished by transmitted electricity." (loc. cit. 435.)

* * * * *

"Possessing this grant, and operating under it, the Hyde Park Company, by contract with another corporation possessing a like grant and privilege within another and different territory, connects its wires at the line where the territories of the two corporations meet, with the wires of the other corporation, and proceeds to transmit electricity over the wires of that corporation into territory within which it has no power to operate, *with the same effect and for the same purposes that it operates within its own territory.*

In every essential the doing of that is the same as if it had strung its own wires within that foreign territory and had transmitted electricity over them for the lighting and heating of, and furnishing power for, that territory.

Such is a most palpable evasion of the limitations of its grant and is a flagrant excess of the due exercise of its powers." (loc. cit. 436.)

(3) While the existence of such a relationship is not an essential of appellants' right to sue, the municipalities and cooperatives are in reality mere agents for the distribution of TVA power; and in any event, TVA so far controls and participates in the sales by distributors that the validity of its participation may be tested at the suit of an injured party.

Since it is plain that illegal competition includes competition for the business handled by TVA through municipalities and cooperatives, it is unnecessary to determine this question. However, were its determination essential to a determination of the right of the appellants to sue *in any aspect* of this suit, an analysis of the TVA contracts with its distributors would alone compel the conclusion that the municipalities and cooperatives are mere agents for the distribution of TVA power. While, as hereinafter pointed out, some of the criteria which the courts have considered in determining whether the relationship between a producer and distributor is one of agency are plainly inapplicable and without significance in the factual situation here involved, a consideration of the applicable criteria does, we think, establish that the relationship between TVA and its distributors is one of agency.

The Legal Criteria of Agency. The terminology employed in the contracts is not conclusive (*United States v. General Electric Co.*, 272 U. S. 476; *Mitchell Wagon Co. v. Poole*, 235 Fed. 817) and that would be particularly true where, as here, the municipalities and cooperatives are variously designated as distributors and purchasers. (Cf. Rules and Regulations, R. 2794-9, and section "Power Supply" R. 2773.)[1] While a reservation of title, or of a right to demand the return of the goods, in the producer may (but does not necessarily) establish the relationship

---

[1] For brevity, hereinafter references to particular sections of TVA contracts are designated merely by the title of the contract section and a record page where it may be found, viz. "Power Supply" R. 2773.

as one of agency, the absence of either or both does not establish that the relationship is not an agency. *Mitchell Wagon Co. v. Poole,* 235 Fed. 817.

Control by the producer of the price at which the goods shall be sold by the distributor to ultimate consumers has always been regarded as strong evidence that the relationship between the producer and distributor is that of agency. *In re United States Electrical Supply Co.,* 2 F. (2d) 378; *In re Wright-Dana Hardware Co.,* 211 Fed. 908; *Rudin v. King-Richardson Co.,* 37 F. (2d) 637; *In re Smith,* 192 Fed. 574. The reservation of control by the producer over the terms on which the distributor sells, is also evidence that the relationship is one of agency. *In re Thomas,* 231 Fed. 513; *In re Kruse,* 234 Fed. 470; *John Deere Plow Co. v. McDavid,* 137 Fed. 802.

Another element considered by the courts in determining the nature of the relationship between a producer and distributor is whether the distributor is bound to pay for the goods supplied to him regardless of whether such goods are sold and, under the ordinary conditions of merchandising *tangible* goods, such an absolute obligation is frequently held to establish the relationship as one of sale and not of agency. *In re United States Electrical Supply Co.,* 2 F. (2d) 378. However, where the distributor does not pay the producer until he has sold the goods (usually such contracts provide that the distributor will make monthly payments for goods sold by him during the previous month), the relationship is one of agency or consignment rather than of sale. *Ludvigh v. American Woolen Co.,* 231 U. S. 522; *McCallum v. Bray Robinson Clothing Co.,* 24 F. (2d) 35; *In re Renfro-Wadenstein,* 47 F. (2d) 238. And, of course, where the arrangement merely amounts to a guarantee of collections, that is, when the distributor assumes the risk of non-payment by the ultimate consumers,

it is well settled that the relationship is one of agency *del credere*. *United States v. General Electric Co., supra.*

Requirements for monthly or weekly reports by the distributor evidence an agency relationship.[1] Control by the producer over bookkeeping methods and details of sales, reservation of rights of inspection, requirements for separate accounts of transactions relating to the producer's goods and requirements that the distributor shall purchase all of such goods handled by him from the producer (which is in effect that he shall not purchase from others), have uniformly been held to establish the relationship as one of agency and not of sale. *McCallum v. Bray Robinson Clothing Co.*, 24 F. (2d) 35; *Butler Bros. Shoe Co. v. United States Rubber Co.*, 156 Fed. 1; *In re Renfro-Wadenstein*, 47 F. (2d) 238. In short, the reservation of control by the producer over the distributor goes far to establish that the relationship is one of agency.

Application of Pertinent Legal Criteria of Agency to the TVA Contracts. Under the TVA contracts delivery by the producer to the distributor is made only in the case of, to the extent of and simultaneously with, sale and delivery by the distributor to the ultimate consumer. That is, the distributor maintains no "stock of goods," but merely, as it were, withdraws the "goods" from the "warehouse" or supply of the producer when and as the distributor makes sale and delivery to the consumer. In this situation such criteria as "retention of title" or "right to demand return of the goods" are obviously inapplicable. However, when such of the foregoing criteria as are pertinent

---

[1] *In re Renfro-Wadenstein*, 47 F. (2d) 238; *In re Thomas*, 231 Fed. 513; *McCallum v. Bray Robinson Clothing Co.*, 24 F. (2d) 35; *Rudin v. King-Richardson Co.*, 37 F. (2d) 637; *In re Warner-Quinlan Co.*, 86 F. (2d) 103; *In re Reynolds*, 203 Fed. 162; *Mitchell Wagon Co. v. Poole*, 235 Fed. 817; Cf. *United States v. General Electric Co., supra.*

in the situation are applied to the contracts between TVA and its distributors, it seems plain that such distributors are mere agents for the distribution of TVA power.

The distributor is obligated to take all electricity used or sold by it from TVA. ("Power Supply," R. 2730, 2773.) This, of course, is tantamount to a requirement that the distributor shall not distribute power from any other source. *Radio Corp. v. Lord*, 28 F. (2d) 257, 261.

The distributors are not obligated to make payment for energy delivered by the producer in any calendar month until the 15th day of the succeeding month, or 5 days after the receipt of a bill from TVA, whichever is the later. (Terms and Conditions "Billing," R. 2791.) The regulations imposed by TVA upon the distributors include a requirement that bills shall be rendered to ultimate consumers monthly and shall be paid within 10 days. (Rules and Regulations "Billing," R. 2796.) When these provisions are taken together, the effect is that the distributor is not obligated to remit to the producer until he has sold and collected for the goods delivered by the producer subject only to a liability for unpaid accounts as is usual in an agency *del credere*.

TVA fixes the price at which and the terms on which the distributor shall sell the energy to ultimate consumers. (Rules and regulations, R. 2794-9; "Resale Rates," R. 2731, 2766.) TVA prohibits the distributors from discriminating among customers ("Discrimination," R. 2777, 2815), and from selling electricity for sub-metering or resale. (Terms and Conditions "Sub-Metering," R. 2794.) In the case of cooperatives, it also prohibits the distributor from selling to any non-member unless such customer is approved by TVA. ("Non-Member Customers," R. 2767, 2822.)

The distributor is required to render a complete annual report to TVA in the form prescribed by TVA and

such other reports and information as TVA requests ("Reports," R. 2776, 2815) and to furnish promptly any operating and financial statements requested by TVA relating to the sales of electric energy. TVA prescribes the manner and method of bookkeeping and reserves the right at all times to inspect the books and records. The distributor is required to segregate the proceeds of the sale of electricity in a separate fund. (Terms and conditions "Accounting and Handling of Funds," R. 2787-8.) TVA requires that any of the distributor's employees who handle money shall be bonded. ("Bonding of Employees," R. 2769, 2815.) TVA also prescribes the manner in which the proceeds from the sale of goods shall be expended by the distributor. ("Disposition of Revenues," R. 2813, 2747, 2775.)

TVA prescribes the rules and regulations which the distributors must incorporate in any agreement with ultimate consumers. (Rules and Regulations, "Scope," R. 2799.) These regulations include such matters as applications for service, classification of customers, deposits from customers, standards for customers' wiring, inspection by the distributor, customers' liability for distributor's property, distributor's right of access to customer's premises, billing, termination of contract by customers, reconnection charges, discontinuance of service by distributors, service charges for temporary service, voltage fluctuations and additional loads, charges for non-standard service, meter tests and prohibition against resale by purchasers from distributors. (Rules and Regulations, R. 2794-9.)

TVA owns all of the property up to the point of delivery which is on the low voltage side of the sub-station. ("Point of Delivery," R. 2773, 2811.) TVA specifies how demand, energy and power factor shall be measured, how and when meters shall be tested, requires distributor's lines to conform to certain standards and reserves the right

of access to and inspection of distributor's property at all times. (Terms and Conditions, R. 2785-7.) TVA also supplies advisory services to Cooperatives in the problems of personnel and administration. ("Rendition of Advisory Services," R. 2768, 2814, 2826.) The contract is not assignable without TVA's consent. (R. 2732, 2827.)

A fair consideration of the arrangements between TVA and its distributors in the light of the facts on which they operate can, we think, leave no doubt that such distributors are mere agents for distribution of TVA power.

Liability of Appellees to Suit is not Dependent Upon Existence of Technical Legal Agency. Laying to one side *arguendo* the controlling fact that TVA sales through municipal and cooperative distributors are plainly competition by TVA with the appellants (see pp. 201-203, *supra*), the right of a person damaged by such action to test the validity of such TVA activities is not dependent upon the establishment of technical legal agency. In determining the right to sue, the question is not what is the precise legal relation through which the federal power is brought to bear, but whether in fact the federal agency has so far associated itself with, participated in, controlled or directed the activities damaging the citizen that it must be held accountable and required to justify its acts at the suit of the citizen. The foregoing review of the contract relations of TVA with its distributors, as well as other facts previously discussed, inescapably establish that TVA has not only completely associated itself with and fully participated in these activities but has also instigated, directed and controlled them. These circumstances plainly establish appellants' right to sue apart from their undeniable right to sue because TVA is in direct competition with them for this business. (See discussion of *Alabama Power Co. v. Ickes*, pp. 211-214, *infra*.)

D.

There is a clear right in appellants to sue to vindicate their right to engage in and carry on the local electric business free from federal interference, regulation or control and without being displaced by the Federal Government taking over the business.

We should not have thought this point open to discussion had not the trial court announced the novel doctrine that a citizen may not challenge the federal regulation or destruction of his business or legal rights, where or to the extent that the unconstitutionality of the federal action rests upon an invasion of the powers reserved to the States, even though the same action also invades the rights reserved to or retained by the people, but that the constitutionality of such statutes or action can be challenged only by the State. (R. 563.) Among the rights reserved to and retained by the people are the right of local self-government and the right to carry on local intrastate businesses (1) without being displaced by the Federal Government taking over and carrying on such businesses as federal enterprises and (2) free from federal interference, regulation or control. (See pp. 148-150, *supra*.) When either of these rights are invaded, the rights of the people are invaded although the same act may involve an invasion of the reserved powers of the States.[1]

Thus, no one would doubt the right of a utility to maintain a suit to enjoin actual or threatened federal regulation of its intrastate rates either on the ground that federal

---

[1] Damages arising from invasion of this right include ouster of appellants from the business or occupation of supplying electricity to the public, regulation of appellants' rates by a Government without jurisdiction in the premises, vast losses through regulation of appellants' rates to a confiscatory level and the injurious effects of the imposition of a federal policy of having the local electric business carried on by publicly owned and nonprofit organizations.

regulation would be unconstitutional for lack of jurisdiction, or on the ground that the particular regulation would be confiscatory. And the right to maintain the suit would not be affected by the fact that the regulation would also invade the reserved powers of the States. But it is unnecessary to labor the point. There is no peculiar rule applicable to cases where the unconstitutional character of federal action rests upon an invasion of powers reserved to the States. That a private interest, individual or corporate, may sue where its legal rights are invaded by federal usurpation of State powers has been uniformly sustained by this Court. *United States v. Builer*, 297 U. S. 1; *Carter v. Carter Coal Co.*, 298 U. S. 238; *Bailey v. Drexel Furniture Co.*, 259 U. S. 20; *Hammer v. Dagenhart*, 247 U. S. 251; *Hill v. Wallace*, 259 U. S. 44.

E.

The right of appellants to sue is clear under the decision of this Court in Alabama Power Co. v. Ickes.

The appellees below contended, and the trial court apparently assumed, that the decision of this Court in *Alabama Power Co. v. Ickes*, 302 U. S. 464, precluded or, at least, greatly restricted the right of appellants to sue.[1] That the ruling of this Court in the *Alabama* case neither limits nor forecloses the right of appellants to sue is, we think, plain. *On the contrary, the instant case presents the precise antithesis of the circumstances which this Court deemed controlling in the Alabama case, and under that decision the right of appellants to sue is plain and undeniable.* This readily appears from a comparison of the circumstances set forth by this Court as controlling in its

[1] After the decision of this Court in the *Alabama* case was handed down during the course of the trial of this suit, the presiding Judge *sua sponte* announced, without hearing argument upon the point, that her mind was closed on the question. (R. 2165.)

opinion in the *Alabama* case and the factual situation existing in this suit with relation to the same points.

In the *Alabama* case the statute did not authorize the appellees to engage, and the appellees were not engaging or threatening to engage, in competition with the appellants. Here the TVA Act authorizes, if it does not command, the appellees to engage, and they are actually engaging and threatening further to engage on a greatly enlarged scale, in competition with the appellants. (See pp. 159-162, 12-20, 65-90, *supra.*)

In the *Alabama* case there was no effort or purpose to regulate plaintiff's rates or electric rates generally. (loc. cit. 477.) Here the regulation of appellants' rates and of local electric rates generally throughout a vast area is an integral part of both the statutory and administrative schemes. (See pp. 167-169, 14-17, 80-82, *supra.*)

In the *Alabama* case "the expenditures under the statute involved no purchase of, nor contract for, regulation by the United States." (loc. cit. 477.) Here both the statutory and administrative schemes provide expressly for the regulation of the rates and other terms and conditions of service of distributors of TVA power by contract and for regulation of appellants' rates by offering unlimited supplies of federally produced electricity at prices far below the state-regulated rates of appellants. (See pp. 167-169, 14-17, 80-82, *supra.*)

In the *Alabama* case the defendants had "not reserved any right or power to influence or control rates to be charged by the municipal power plants." (loc. cit. 477.) Here the statute requires, and the appellees are in fact exercising, complete federal control of the rates of distributors of TVA power, municipal and otherwise. (See pp. 206-209, 14-17, 80-82, *supra.*)

In the *Alabama* case neither the United States nor the defendants had reserved any right or power under con-

tracts, or in any other way, to eliminate competition or to designate the person or agency from which the municipality should purchase power. (loc. cit. 477.) Here the intended, inevitable and natural effect of the operation of the TVA Act and of the TVA Unified Plan is to eliminate competition,[1] and the United States through the appellees does not merely reserve the right to designate from whom the power shall be purchased but expressly reserves the right to furnish all of the power. (See pp. 207, 80-86, *supra.*)

In the *Alabama* case neither the United States nor the defendants had any power or control over the operation of the projects after construction. Each municipality was "left entirely free from federal control or direction in respect of the management and control of its plant and business." (loc. cit. 478.) Here the United States, through the appellees, has reserved the most minute and complete control over the business and property of distributors of TVA power—a control so complete as to make them mere agents. (See pp. 204-209, *supra.*)

In the *Alabama* case there was no effort or purpose to foster public ownership of public utilities. (loc. cit. 477.) Here the heart of both the statutory and administrative schemes is to establish a policy of having the local electric business carried on by public bodies and non-profit organizations. (See pp. 175-177, 14-17, 70-76, *supra.*)

In the *Alabama* case there was no "effort on the part of the defendants to * * * cause injury or financial loss to the plaintiffs." (loc. cit. 477.) Here the effort of the appellees to seize the markets of the appellants and drive them out of business is undeniable.

---

[1] While there is much other evidence in the record of the purpose and effort of the appellees to eliminate competition by appellants or any other utilities, this purpose and effort is strikingly illustrated by the advice of the appellee Lilienthal to the City officials of Chattanooga to eliminate competition with TVA power in that City by "taxing hell" out of The Tennessee Electric Power Company, one of the appellants. (R. 1048, 1085, 1087.)

In the *Alabama* case "there was no solicitation • • • on the part of any of the defendants, their agents or subordinates." (loc. cit. 477.) Here the record, even though the trial court erroneously excluded the best evidence on the subject, establishes aggressive solicitation of business and of agents to distribute TVA power by the appellees. (See pp. 70-76, *supra.*)

In the *Alabama* case there was no conspiracy. (loc. cit. 477-8.) Here the record, without evidence erroneously excluded, shows confederation between PWA and TVA to secure the business of appellants. (See pp. 76-79, *supra.*)

It is, therefore, apparent that the decision of this Court in the *Alabama* case neither precludes nor limits the right of the appellants to sue, but on the contrary, *sustains their right to sue in every aspect of this case.*

POINT IV.

UNLESS, AS WE BELIEVE, APPELLANTS ARE ENTITLED ON THE RECORD AS MADE TO A REVERSAL OF THE DECREE WITH DIRECTIONS TO ISSUE AN INJUNCTION, THEN THE DECREE OF THE TRIAL COURT SHOULD BE REVERSED FOR SERIOUS ERRORS IN MATTERS OF PROCEDURE AND IN RULINGS ON EVIDENCE.

Erroneous rulings of the trial court respecting the admission and exclusion of evidence, the forms of procedure and the conduct of the trial are so numerous and of such grave import that their cumulative effect was to deprive appellants of a full and fair hearing.

A. The trial court applied generally certain erroneous principles of law which permeated the entire trial and its rulings on matters of evidence and procedure.

The trial court undertook to "expedite" the hearing by limiting the scope and quantum of appellants' evidence, by insisting upon submission of successive phases of the case by successive specified dates, and by requiring that

oral arguments be held immediately upon the completion of the evidence and that proposed findings of fact and final briefs be submitted at the close of the arguments. (R. 1862, 1919-20, 2281-4, 2316, 2370-3.) Subsequently, contrary to its previous rulings, the trial court refused to disregard two fact briefs filed by the appellees, without leave, two days after final argument, and overruled appellants' motion to strike such briefs from the files. (R. 396, 565.)

These rulings are attributable primarily to an erroneous conception by the trial court of the requirements of the Act of Congress of August 24, 1937, (50 Stat. 751-2, Sec. 3; 28 U. S. C. 380a) that the "hearing upon any such application * * * shall be given precedence and shall be in every way *expedited* and be assigned for hearing at the earliest practicable date." Manifestly, the statute only directs that this type of case be brought on for hearing with a minimum of delay and is not susceptible of the interpretation (R. 2282-3, 2390) that the hearing itself shall be rushed to a premature conclusion without due deliberation or regard for accepted rules of evidence and forms of practice and procedure. It cannot be supposed that Congress ever intended by this statute to direct that important constitutional cases should be disposed of on hasty and immature consideration or without receiving all competent and material evidence bearing upon the constitutionality of its acts.

The effect of the trial court's rulings was to deprive appellants of their right to make a full presentation of their case and to deny them the opportunity to examine and reply to the appellees' proposed findings of fact which, with one minor exception, were ultimately adopted by the majority of the trial court. The fact that the findings are incomplete, often irrelevant, and based on erroneous conceptions of law is in no small measure due to this circumstance. As this Court has recently stated, "the requirements of fairness (which are of the essence of due process in a proceed-

ing of a judicial nature) are not exhausted in the taking or consideration of evidence but extend to the concluding parts of the procedure as well as to the beginning and intermediate steps." *Morgan v. United States,* 304 U. S. 1, 19, 20. In the present case, the trial court consistently ignored the essentials of a fair hearing throughout the entire course of the trial and permitted "delusive interests of haste * * * to obscure substantial requirements of orderly procedure." *Duke Power Co. v. Greenwood County,* 299 U. S. 259, 268.

1. Before questions of constitutional law, both novel and of far-reaching importance, are passed upon, the facts essential to their decision should be definitely found by the trial court upon adequate evidence.

The trial court frequently departed from the usual procedure in an important constitutional case (or, for that matter, any case) and undertook, on rulings upon the admissibility or production of evidence, to decide ultimate questions of substantive law in the abstract, and, having prematurely reached its decision on these points of substantive law by anticipation, the trial court would then "adhere" to its previous rulings and hold that the evidence offered or sought to be produced was irrelevant or immaterial. Many of these rulings were announced *sua sponte* before any evidence of the character or on the point involved had been offered.

The most sweeping ruling of this character was announced by the trial court (R. 904-9, discussed at pp. 238-240, *infra*) in denying appellants' application for a subpoena *duces tecum* (Comp. Ex. 1, R. 2441), in which the trial court undertook to limit the scope of the issues made by the pleadings by ruling that it would not receive any evidence relating to (a) certain activities, statements, proposed actions and objectives of TVA and its directors in the development and promotion of its power business; (b) the solicitation of appellants' customers by TVA; (c)

TVA's efforts to undermine and destroy appellants' businesses and property; (d) the confederation between TVA, PWA, REA and other federal agencies to promote public ownership and to supplant State regulation of the electric power industry by federal regulation; and (e) the rates charged by TVA and appellants and the substitution of TVA regulation for State regulation of appellants' rates. All the evidence which appellants later offered, which the trial court recognized as being in support of any of such issues, was excluded.[1]

Rulings of this character are in direct violation of the established doctrine of this Court that before questions of constitutional law, both novel and of far-reaching importance, are passed upon, the facts essential to their decision should be definitely found by the trial court upon adequate evidence. *Chastleton Corp. v. Sinclair*, 264 U. S. 543, 548, 549; *City of Hammond v. Schappi Bus Line, Inc.*, 275 U. S. 164, 171, 172; *Borden Co. v. Baldwin*, 293 U. S. 194, 212, 213. In conformity with this principle the Circuit Court of Appeals on the appeal from the order granting the preliminary injunction in this case stated that "the ultimate rights of the plaintiffs should be decided only when the court is 'in possession of the materials necessary

---

[1] Indeed, the trial court stated (ruling quoted p. 220, *infra*), that it had excluded certain of these issues more than six weeks in advance of the trial when the three-judge court first convened at Nashville to hear three motions that had been filed by appellants, i.e. (1) to produce and permit the inspection before trial of certain documents, drawings and maps of appellees (R. 327); (2) to require certain correspondence between TVA and REA to be produced or in the alternative to extend the time for taking testimony before the Special Master (R. 351); and (3) for leave to take the deposition of PWA Administrator Harold L. Ickes out of rule. (R. 343.) The court's rulings on these motions did not embrace any of the matters upon which the court stated in the above ruling it would receive no evidence (R. 374-6, 379-81) and appellants had no knowledge that any ruling had been made upon these matters until after the trial had commenced.

to enable it to do full and complete justice between the parties.' " (R. 278.)

In thus limiting the scope of the evidence, the trial court failed to recognize that a statute valid as to one set of facts may be invalid as to another (*Nashville, C. & St. L. Ry. v. Walters,* 294 U. S. 405, 415), and that the validity of many types of statutes must be determined by the manner in which they are administered, the facts upon or situation in which they operate and by their effect in actual operation. *Poindexter v. Greenhow,* 114 U. S. 270, 295; *Yick Wo v. Hopkins,* 118 U. S. 356, 373, 374; *Dobbins v. Los Angeles,* 195 U. S. 223, 240; *Norris v. Alabama,* 294 U. S. 587, 589; *Great Northern Ry. Co. v. Washington,* 300 U. S. 154, 161. Thus in *Retirement Board v. Alton R. Co.,* 295 U. S. 330, a full examination was made into the facts upon which the law operated to determine whether the purpose or effect of the statute there in question was to achieve purposes other than those delegated to the Federal Government by the Constitution.

From the discussion on the merits in earlier sections of this brief, it is plain that evidence falling into the five classifications embodied in this premature ruling of the court (see pp. 216-217, *supra*) had a material bearing upon substantial issues in this case. It therefore follows that the ruling, that no evidence falling within these classifications would be received by the court, was not only prematurely made, but also was plainly erroneous and highly prejudicial as excluding evidence, regardless of competency, which was properly admissible under the issues of this case which the court in this preliminary ruling misconceived.

Under well recognized rules of the law, any evidence which tends to support an issue between the parties is admissible. *Nelson v. United States,* 201 U. S. 92, 114; *Wade v. LeRoy,* 20 How. 34, 44. The court, in its attempt

to "expedite" the case, wholly disregarded this elementary principle.

B. The trial court erred in excluding evidence which was relevant and material to substantial issues of fact sought to be proved by appellants in support of their affirmative case on the merits.

To support various allegations in the Bill of Complaint that the generation of power is the primary purpose for which the TVA dams have been and are being constructed and that the method of disposition of the power is unlawful, appellants offered in evidence numerous Press Releases which had been *officially authorized, issued and published by TVA.* (Comp. Exs. 633, 634, R. 3487, 3490; 779-902, inclusive, R. 3673-3924.) Each of such Press Releases dealt with one or more of the following enumerated subjects:

(a) The wholesale, retail and industrial rates adopted and published by TVA applicable to all classes of consumers of TVA power;

(b) The progressive development of the TVA generating, transmission and distribution system;

(c) The purpose of TVA to construct and operate a vast electric generating and transmission system and to utilize the water power of the Tennessee River for that purpose.

(d) The primary purpose of various TVA projects to develop power.

(e) The purpose of TVA to construct and operate a vast federal electric utility system to serve the markets in which the appellant companies are now serving and offering electric service;

(f) The purpose of TVA to regulate the local rates charged by other electric utilities, including appellants, operating in the area;

(g) The assertions by TVA that its rates include all proper costs and that the rates of its competitors

are based upon improper capital write-ups, thereby representing that the rates of appellants are unreasonable;

(h) The assertions by TVA that the rates and practices of existing utilities, including appellants, are unreasonable and unfair, with the necessary and intended effect of destroying the going businesses of appellants and promoting the TVA power business;

(i) The solicitation of business, in areas served by appellants, by advertising the availability of TVA power, by advertising the availability of public funds through PWA, REA and other agencies to finance distribution systems for sale of TVA power, and by advertising the economies and savings to be secured by purchasers of TVA power;

(j) The threat and damage to the appellants and each of them from repeated announcements by appellees of their intended acts; and

(k) The refusal of TVA to submit to State laws or regulations in the conduct of its power business.

Long before any of these official Press Releases was offered in evidence, the trial court announced a ruling that it would not receive a variety of types of evidence, including Press Releases. Such ruling was made in connection with a ruling upon the admissibility of statements made by one of the appellees before a Committee of the House of Representatives in a Hearing upon a TVA appropriation bill.[1]

---

[1] "JUDGE ALLEN: The Court has ruled upon this point at Nashville (i.e. that it would not receive in evidence speeches, releases to the newspapers, circulars or statements of TVA directors or representatives), the Court ruled again upon the point after the meeting at Nashville, the Court ruled upon this point upon arrival in Chattanooga, and the Court now rules upon this point, and it does so *in advance* in order that there may be no misunderstanding on the part of counsel and no waste of time to the inconvenience of all concerned, and you may have your exception." (R. 895.) By "in advance," the trial court meant in advance of the production of the documents in court and their offer in evidence and in advance of any argument. (R. 894-5.)

(R. 894-5.) Subsequently, the trial court excluded two Press Releases offered by appellants which embodied the announcement on August 25, 1933, of the TVA Power Policy (Comp. Ex. 633, R. 3487) and the announcement on September 14, 1933, of the proposed TVA wholesale and retail rates (Comp. Ex. 634, R. 3490). The sole ground for exclusion was that they were Press Releases and hence incompetent. (R. 1511.) Eventually, additional Press Releases (Comp. Exs. 779-902, R. 3673-3924), were offered by appellants and were all excluded by the trial court not as incompetent but as irrelevant and immaterial.[1] (R. 1532.)

When the substance of the things shown by these official Press Releases, as analyzed and enumerated at pp. 219-220, *supra,* is considered in the light of the issues of the case set forth and discussed in the portion of this brief devoted to the merits, it is plain that the relevancy and materiality of these excluded Press Releases appear on their face. Indeed, the ruling that they were irrelevant and immaterial was, significantly, made before the court had seen or examined them. (R. 894-5.) The initial ruling that official Press Releases are *per se* incompetent (R. 1511) appears to have been subsequently abandoned by the court (R. 1532), but in any event is plainly unsound.

The publication of official Press Releases, including those offered in evidence, was expressly authorized by the TVA directors and constitutes the official action of the TVA. (Comp. Ex. 113†, pp. 22-4, R. 2681-3; Comp. Ex. 704, R. 3631; Comp. Ex. 364, excluded, pp. 2022-3, R. 3103-4.) The dissemination of information through the issuance of Press Releases over a period of more than four years from the date of the organization of TVA comes squarely within the holding of this Court in *Xenia Bank v. Stewart,* 114 U. S.

---

[1] All the Press Releases offered had been authenticated by stipulation of the parties and no question of their authenticity is involved. (R. 317.)

224, 229. Cf. *Columbia-Knickerbocker Trust Co. v. Abbot*, 247 Fed. 833, cert. den. 248 U. S. 558. There should be no question whatever as to the competency of these official Press Releases (authorized and published by TVA itself) as admissions against interest. *Chicago v. Greer*, 9 Wall. 726, 733; *Fidelity & Deposit Co. v. Courtney*, 186 U. S. 342, 349, 351; *Hitchman Coal & Coke Co. v. Mitchell*, 245 U. S. 229, 250; *Pan American P. & T. Co. v. United States*, 273 U. S. 456, 499.

The trial court sought to justify its exclusion of this type of evidence in part by the statement in the *Ashwander* case (at p. 324) that "The pronouncements, policies and program of the Tennessee Valley Authority and its directors, their motives and desires, did not give rise to a justiciable controversy save as they had fruition in action of a definite and concrete character constituting an actual or threatened interference with the rights of the persons complaining." The important factors overlooked by the trial court were (1) that this evidence was not offered to show the "motives and desires" of the appellees, but to show what appellees had done, were doing and were threatening to do and the nature, scope and imminence of the irreparable damage with which appellants are confronted, and (2) that the scope of the issues in the *Ashwander* case was expressly limited to the validity of the contract of January 4, 1934, and to the constitutional authority for the construction of Wilson Dam and for the disposition, as provided in the contract, of the electric energy there generated. The distinction between the present case and the *Ashwander* case is well pointed out in the opinion of the Circuit Court of Appeals in this case. (R. 274-7.) To deny appellants the right to show threatened injury by proof of appellees' declarations of the things they were doing and intended to do is to deny the existence of an entire field of equity jurisdiction. In equity, "dam-

age threatened, irremediable by action at law, is equivalent to damage done." *Hitchman Coal & Coke Co. v. Mitchell*, 245 U. S. 229, 256; see also *Vicksburg Waterworks Co. v. Vicksburg*, 185 U. S. 65, 82.

The trial court also attempted to justify its exclusion of this evidence under *Isbrandtsen-Moller Co. v. United States*, 300 U. S. 139, wherein it was held that the motives of an administrative officer are immaterial. That rule has no application here. Appellants were not interested in appellees' motives but rather were attempting to prove, by the appellees' own statements, the appellees' acts and actions that had been performed and which they were intending to perform. The propriety of such evidence was clearly recognized by this Court in *United States v. Rio Grande Dam & Irrigation Co.*, 174 U. S. 690. There the case was remanded for an inquiry into the question whether the *intended acts* of the defendants in constructing an irrigation dam on the Rio Grande would substantially diminish the navigability of the river. (Loc. cit. 709, 710.) Indeed, if proof of a defendant's intended acts were incompetent, the entire jurisdiction of equity to give relief against threatened irreparable injury would disappear.

The Press Releases and other official statements and declarations also illuminate the interpretation placed on the statute by the persons charged by law with its administration. Administrative interpretations of a statute are always relevant as bearing on the proper construction of the statute (*Wisconsin v. Illinois*, 278 U. S. 367, 413), and if the true intent and meaning of a statute is in any way obscure, great weight should be given to the construction placed upon it by the officials charged with its administration. *United States v. Cerecedo Hermanos y Compania*, 209 U. S. 337, 339; *United States v. Minnesota*, 270 U. S. 181, 205; *United States v. Jackson*, 280 U. S. 183, 193;

McCaughn v. Hershey Co., 283 U. S. 488, 492. A typical example of an administrative interpretation of the TVA Act, which was published in a Press Release issued January 5, 1934 (Comp. Ex. 815, R. 3732), is quoted *supra*, pp. 81, 169-170.

Finally, and perhaps most important of all, the official Press Releases and other advertising matter in general are highly relevant to prove solicitation by the TVA of the appellants' customers, its attempts to usurp the market and its unrelenting efforts, at any cost, to build up and promote its electric utility business at the expense of appellants and other utilities. On this issue the very fact of publicity being given the documents was as important as what they said. The very essence of this sort of advertising is the advertisement itself and the refusal to receive the documents in evidence denied to appellants the right to prove a phase of TVA's activities from which they were suffering extensive injury. In the light of the ruling of the trial court excluding all TVA publicity of a purely advertising character and even in the light of the record as it stands, the trial court's finding (Fdg. 228, R. 649) that there was no solicitation by TVA is indefensible. By making a finding on the subject the trial court impliedly admitted its error in holding this evidence to be immaterial.

Furthermore, in advertising and promoting its power business by means of Press Releases and otherwise, TVA has represented that its rates cover all legitimate costs of privately owned utilities, that private ownership and operation of utilities are corrupt, and that the state-regulated rates of appellants and other utilities are unreasonable and exorbitant. In fact the TVA rates do not cover the subsidized costs of promoting and distributing TVA power and much less the costs necessarily incurred by privately owned utilities. It is scarcely necessary to say that there is nothing in the TVA Act purporting to authorize any such

course of action. It falls clearly within the accepted definition of unfair methods of competition. Selling a product below cost while misrepresenting to the public the reasons for the cheap price has been held to be unfair competition. *Sears-Roebuck & Co. v. Federal Trade Commission,* 258 Fed. 307. Again, the publication of untrue statements about the business of another, which are intended or are reasonably likely to produce and in the ordinary course of things do produce a general loss of business, is an actionable wrong. *Ratcliff v. Evans,* [1892] 2 Q. B. 524 (Court of Appeals); *Mississippi Power Co. v. Starkville,* 4 F. Supp. 833. The conclusion is inescapable, there being nothing in the Act which even faintly suggests the contrary, that Congress did not intend to authorize methods of competition which if adopted by a private citizen would be condemned as unfair and unlawful. In addition, the attacks upon the businesses and integrity of appellants, quite apart from being unfair competition and a part of a campaign of misrepresentation and oppression and hence an independent violation of appellants' rights, bear upon the imminence of the threat to appellants and upon the fact that appellees are actually engaged in promoting the establishment of a great federal power business.

The court also ruled that statement of appellees made before Committees of the Congress and in the First TVA Annual Report (Comp. Exs. 108†, 109†, 112-16†, 365†, 366†), and offered as admissions of appellees to show that the primary purpose of appellees was the creation of a vast power supply and the construction and operation of a huge electric utility, the acquisition of appellants' markets for TVA power, the fostering of public ownership of electric distribution facilities and the "yardstick" regulation of electric rates, were not admissible without offering the entire testimony or the entire report, including self-serving

statements and declarations dealing with matters not related to or explanatory of such admissions. (R. 893-4, 910-27, 1236-43, 1530-1.)[1]

1. The trial court erred in excluding competent evidence bearing upon the question whether the water power being created or to be created by TVA is being, and will be, constitutionally created. (See Point I, supra.)

Many of the official TVA Press Releases, the exclusion of which has been already discussed at pp. 219-225, *supra*, were relevant and material upon this issue. The trial court also excluded other competent evidence material to this issue.

The court refused to receive the testimony of a number of qualified witnesses whose testimony was offered to show that the average annual value of agricultural crops on lands which will be permanently flooded by only four of the reservoirs constructed, under construction or proposed to be constructed (and these not the largest of such reservoirs) would be substantially in excess of the total estimated annual flood damages in the entire Tennessee

---

[1] It is clear that extracts from documents may properly be offered and received in evidence. *Davis v. Forrest*, 7 Fed. Cas. No. 3634; *Priest v. Glenn*, 51 Fed. 400; *O'Hara v. M. & O. R. Co.*, 76 Fed. 718; *Crotty v. Chicago G. W. Ry. Co.*, 169 Fed. 593; *Bernhardt v. City & S. Ry. Co.*, 263 Fed. 1009. And, although it is generally recognized that the opposing party may read such additional portions of the document as may be explanatory of the portions offered, there is no rule which makes the explanatory portions affirmative evidence or which authorizes the opposing party to use everything else in the document, however irrelevant to the issue on trial or however it may violate other well-established principles of the law of evidence. *Tappen v. Beardsley*, 10 Wall. 427, 435. The most fundamental of these other well-established principles of the law of evidence is that which rigidly excludes self-serving declarations. *Pennock v. Dialogue*, 19 Fed. Cas. No. 10,941, at p. 174; *American T. & S. Bank v. Zeigler Coal Co.*, 165 Fed. 34.

Valley.[1] (R. 1244-50.) The testimony, as was clearly stated to the trial court, was plainly relevant to show that flood control is a minor purpose of the TVA Act and of the TVA Unified Plan, if not merely pretensive, in that the annual loss resulting from the permanent flooding of valuable farm lands alone by the TVA Unified Plan will greatly exceed the average annual flood damages in the entire Tennessee Basin. (See pp. 47-48, 126-127, *supra*.)

TVA had employed the Bureau of Reclamation to prepare plans for the construction of Norris Dam. (Comp. Ex. 113°, pp. 2, 7.) It appeared in evidence that a report, entitled "The Economic Height of Norris Dam," had been made to TVA by an officer in the Bureau of Reclamation, and further, that this report pointed out that a bona fide flood control dam with more than two and one-half times the genuine flood control storage of Norris Dam could have been built at the site of Norris Dam for approximately $7,150,000, or one-fifth the cost of Norris. (R. 1816.) Upon the request of the appellants and the order of the court, the appellees produced this report and turned it over to the court. The court, however, refused the appellants the opportunity either of examining the report or using it in cross examination of the appellees' witnesses, and further returned the report to the possession of the appellees and would not permit it to be filed as an exhibit for identification to show the prejudicial character of its ruling. (R. 1816-7, 2020-1, 2197, 2286.)

---

[1] This testimony was excluded by the trial court as irrelevant and immaterial and on the curious ground that it would make the proof "multifarious." (R. 1246.) Laying to one side the fact that multifariousness is a rule of equity pleading and not a ground for the exclusion of evidence (*Nelson v. Hill*, 5 How. 127, 132) and is to be determined solely from the allegations of the Bill (*Kilgore v. Norman*, 119 Fed. 1006; *Paridy v. Tractor Co.*, 48 F. (2d) 166; *Bogert v. Southern P. Co.*, 211 Fed. 776), the court did not suggest, and we have been unable to conceive of any legal or factual basis for the suggestion of multifariousness.

2. The trial court erred in excluding competent evidence bearing on the issue whether the statutory and administrative method of disposing of the electricity is within the constitutional power of the Federal Government or violates the Fifth, Ninth and Tenth Amendments. (See Point II, supra.)

a. Evidence supporting the charge that the execution of the TVA Unified Plan will establish the United States in the electric utility business with a virtual monopoly throughout the State of Tennessee and large parts of eight neighboring States.

In order to present the full picture of the vast TVA power system and business, the appellants offered testimony and documentary evidence of the extent of the existing market in the State of Georgia, the fact that such market was then being adequately served, and that all of the municipal and industrial customers proposed to be served by TVA power had been for many years customers of the Georgia Power Company, a non-complainant company. (R. 995-1003, 1098-1101, 1104, 1120-1.) The trial court's ruling excluding such testimony and documentary evidence (which included Comp. Exs. 329*, 330*, 332*, 333†, and 335†) was made on a blanket objection by appellees to the receipt of any evidence of the TVA electric business in the State of Georgia or of the markets in that State served by the Georgia Power Company, for the stated reason that the Georgia Power Company had been enjoined by a Federal District Court of Georgia from further participating in this suit. (See footnote p. 4, *supra.*) It is obvious that such injunction against the Georgia Power Company was not intended to be, and could not lawfully have been, a limitation upon the scope of the evidence submitted in another court by other parties complainant, one of which also does business in Georgia. (R. 995-1003.) No question of competency was involved in either the objection to, or the ruling upon, this evidence other than as to the effect of

the aforesaid injunction, and the exclusion of the evidence was prejudicial error.

The size, nature and effect of the entire unitary scheme of TVA for the construction, development and operation of a huge integrated electric utility may be shown by proving the size, nature and effect of the parts and adding them together. The constitutionality of this unitary scheme and the scope of the injunction to which appellants are entitled may well depend upon its size, nature and effect when viewed as a whole. The importance of these considerations in relation to the effect of the unitary scheme on the reserved powers of the States and the people, the retained rights of the people and our dual system of government is manifest. This principle was recognized in the *Ashwander* case, where the issue before this Court was, under the facts, confined to the validity of the "limited undertaking" expressed in a single contract. (See pp. 140-144, 154-159, 187-190, *supra.*)

b. Evidence supporting the charge that the appellees have adopted and are carrying out a concerted program to take over the markets and businesses of the appellants by direct inducements offered to consumers of electricity throughout the territory served by appellants.

In addition to the excluded Press Releases, hereinbefore discussed, the appellants offered and the trial court excluded a variety of other evidence which plainly supports the charge that TVA has offered direct inducements to consumers and has otherwise carried on a concerted program to take over the markets and businesses of appellants. The excluded evidence bearing upon this issue includes: (1) *TVA corporate minutes* included in the record of the *Ashwander* case which was attached as Exhibit K to appellees' answer (Comp. Exs. 700, 702-720, R. 3628, 3630-3656) relating to things TVA had done, was doing and was

planning to do in the development and conduct of its electric operations and business (R. 1531-2); (2) statements of and admissions made by appellee Lilienthal appearing in his official capacity as a representative of TVA before the House Committee on Interstate and Foreign Commerce (Comp. Ex. 364, pp. 1981-2, 2022-3, R. 3099-3104), relating to the promotional and advertising activities of TVA (R. 1236-9); (3) the testimony of a number of qualified witnesses as to statements made at public meetings by TVA representatives which showed the activities of TVA in promoting its power business in areas served by appellants and related statements of, and admissions by, TVA representatives respecting the same subjects (R. 1087-8, 1129-30, 1321-2, 1325-8, 1330, 1396-7, 1441-2); (4) a memorandum (Comp. Ex. 339, R. 3073) used by a TVA representative in soliciting the business of the Yates Bleachery Company, showing the amount of annual savings under TVA rates which would be secured by substituting TVA service for service of one of the appellants (R. 1141-3); (5) testimony showing TVA's subsidies to municipal customers taking TVA service (R. 1443-7); (6) testimony (offered by deposition) showing TVA's domination, control and promotion of cooperative associations (R. 1329-30, 1337-8, 1355-62); (7) forms of "contingent power contracts" (Comp. Exs. 193, 197, 203 and 377, R. 3003, 3006A, 3016A, 3149), circularized among the people of municipalities who were about to vote on obtaining TVA service, showing the effect of TVA's campaign of advertising and solicitation (R. 951-5, 969-70, 981-3, 1323-4, 1396-7); (8) advertising publications and circulars (Comp. Exs. 187*, 189 and 190, R. 2977, 2985) widely distributed by TVA (R. 941-2, 944, 947-8); (9) a magazine article entitled "The Tennessee Valley Looks to the Future" (Comp. Ex. 635, R. 3493), and written by a man employed by TVA for the purpose (Comp. Ex. 364, pp. 1891-2, R. 3099-3100), of which 50,000

copies were purchased by TVA for circulation, publicizing TVA's power activities, rates, business and plans for extension of its power system (R. 1513-4); (10) a TVA questionnaire (Comp. Ex. 204, R. 3106B) by which TVA circularized municipalities, including those served by appellants, to secure information respecting electric service (R. 982-3); (11) testimony (R. 1434-7) and executive messages of the Governor of Tennessee (Comp. Exs. 686, 687, R. 3605-3617) showing that the TVA had prepared and sponsored special state legislation in Mississippi and Tennessee to promote public ownership of local electric facilities and to facilitate TVA power operations within those states (R. 1435-9, 1520); (12) testimony and letters received from appellants' customers (Comp. Exs. 194, 195, 200, 201, 202, 212, R. 3003, 3004, 3008-15, 3020) stating the reasons for such customers taking TVA service in place of that offered by appellants, or containing threats by municipalities to substitute TVA electricity and showing the adverse effect on the appellants' customer relations and business that resulted from the TVA power activities and its publicity campaign. (R. 950-6, 978-81, 1037-8.)

The trial court excluded all of this evidence as irrelevant and immaterial and excluded items 8 to 12 above and two of the four contracts described in item 7 above on the additional ground that the evidence was incompetent. That all of this evidence was relevant and material appears from its description. The competency of items 7 to 12 likewise appears from their description, with the possible exception of item 12 and the documents in item 7. Item 12 was plainly competent under *Lawlor v. Loewe*, 235 U. S. 522, 536, which sustains the admissibility of letters setting forth the reason given by appellants' customers for severing their connection with appellants in order to obtain power from TVA, or in threatening to sever their connections with appellants unless appellants reduced their rates to a level

equivalent to those of TVA. The appellees' advertising campaign having been made to appear, the excluded items in item 7 were plainly competent to prove the effect of that campaign. While the trial court in these instances used the stereotyped formula "incompetent, irrelevant and immaterial," we think it quite plain that in so far as the court gave any consideration to the question of competency, it really had in mind its erroneous and premature ruling in which it undertook to limit the scope of the issues upon which evidence would be received. (See pp. 216-219, *supra*.)

The trial court further refused to issue a subpoena *duces tecum* (Comp. Ex. 1, R. 2441) to require appellees to produce *TVA corporate minutes* relating to the development of its electric power business (R. 904-9); a subpoena (Comp. Ex. 497, R. 3331) to produce a telegram from TVA to the Governor of Alabama stating the terms of a proposed statute to be submitted to the Alabama legislature (R. 1437); a subpoena (Comp. Ex. 691, R. 3619) to produce surveys made by TVA of the business and customers of appellant companies (R. 1530); and subpoenas (Comp. Exs. 690-1, 693-7, R. 3618-25) to produce TVA correspondence with municipalities and with other federal agencies relating to the TVA power business, the construction of facilities and the securing of federal funds for the carrying out of the TVA Unified Plan. (R. 1528-30.)

This list of evidence excluded or denied is formidable. That it has a material bearing upon the extent of the actual and threatened invasion by TVA of the powers reserved to the States and the people, the rights retained by the people and the solicitation of appellants' markets and businesses is manifest. It plainly establishes that TVA is using every known promotional device to seize the territory of the appellants and destroy their markets. The exclusion of this evidence does not seem explicable even by the erroneous

conceptions of law which pervade the court's findings and conclusions. Thus, while TVA may not take appellants' customers by the "allurement of substantially lower prices" (Opinion R. 551) or otherwise, because TVA is engaged in this business unlawfully, the trial court could not in any event properly exclude this competent and material evidence and find that there was no proof of solicitation by TVA.

c. Evidence supporting the charge that PWA and REA have cooperated and are continuing to cooperate with TVA in financing and promoting the TVA power program and in establishing and placing in operation the purposes of the TVA Act.

That evidence tending to support the above charge bears upon material issues in this case and that the exclusion of competent evidence of this character was prejudicial error sufficiently appears from the discussion in earlier parts of this brief. (See pp. 76-79, 159-163, 166-167, *supra.*) Furthermore, there is nothing in the TVA Act that authorizes a confederation or concert of action between TVA, PWA and REA to promote the TVA power program by forcing appellants to sell their facilities at distress prices on threat of the destruction of their value through duplication by means of loans or grants of federal funds. It is not to be presumed that Congress intended to authorize such a guerilla warfare "upon legitimate creations of the States" in the absence of an express authorization. Cf. *American Bank & Trust Co. v. Federal Reserve Bank*, 256 U. S. 350, 359. However, the Bill charges such a common design and its execution, and appellants offered evidence to sustain the charge.

The trial court excluded a substantial part of this evidence, which included correspondence between TVA and PWA, PWA reports and memoranda in regard to particular projects, and PWA Press Releases and other documents,

showing the cooperation and concert of action between TVA and PWA in promoting the TVA power business and in establishing in operation the purposes of the TVA Act. (Comp. Exs. 418, 428, 429, 446-450, 461-466, 469, 480-483, R. 1405-8; 637-647, R. 1515.) Certain of this evidence consisted of correspondence between TVA and PWA included in "Exhibit K" attached to appellees' answer (Comp. Exs. 770-773, R. 3659-62), tending to establish the cooperation between PWA and TVA to acquire the business of appellants, and also applications to and correspondence with REA, and REA Press Releases, letters and reports (Comp. Exs. 683-685, R. 3599-3604; 385), by which appellants offered to prove the cooperation between TVA and REA in the financing and promotion of rural cooperatives and non-profit membership corporations.[1] (R. 1405-8, 1515-16, 1519-20, 1530-1.) The authenticity of the excluded documentary evidence was stipulated (R. 1403, 1515) and, being offered in connection with other evidence establishing the confederation, no question of competency arises.

The trial court also overruled successive motions by appellants, both before and during the trial, for leave to take the deposition of Harold L. Ickes, Administrator of PWA, in support of these allegations (R. 343, 364, 374-5, 379, 382, 385, 764, 1531), and refused to issue its subpoena (Comp. Ex. 1, R. 2441) to TVA to produce additional documents on this point. (R. 904-9.)

The basis of the trial court's rulings as to all evidence relating to this subject is found in its preliminary ruling denying the appellants' application for a subpoena *duces*

---

[1] As stated by appellee Lilienthal in the Hearings on the Second Deficiency Appropriation Bill for 1937 (Comp. Ex. 116†, p. 485, R. 2720): "We have a very cooperative arrangement with REA by which they are furnishing by far the bulk of the financing through this area."

tecum. (R. 905-6; see pp. 216-219, *supra.*) The basic error underlying the court's ruling was the assumption that no confederation of federal agencies could be unlawful and that no use of federal power by such agencies could be an unlawful abuse of power or an unauthorized exercise of power so that the appellants were not entitled to show the facts with reference to such confederation or exercise of official power for the purpose of having their legality determined. Whether such a confederation existed and its scope, purpose and legality depended upon the facts. The trial court, in its opinion, states that if this confederation had been proved, "grave questions would have been presented" (R. 551); and yet ignored the evidence that was admitted, excluded the balance of the evidence offered and denied process to the appellants for additional evidence to establish the point. (See pp. 90-91, *supra.*)

The trial court also based its ruling on presumptions of the validity of statutes and of official action, but these are rebuttable presumptions of fact and not grounds for the exclusion of evidence. *Borden Co. v. Baldwin,* 293 U. S. 194, 209, 210. Such presumptions may always be overcome by evidence, for if irrebutable, it would never be possible to prove unlawful activities by a public officer or acts in excess of his authority.

In addition, this evidence should have been received because the gift of federal funds by PWA, the making of unsecured loans by PWA and REA and the donation of CWA labor all bear upon the imminence of appellants' damages and the inevitability of the destruction of the powers of State regulation and of the right of the people to engage in the power business.

The same principles apply with equal force to the exclusion of evidence as to cooperation between the TVA and Electric Home & Farm Authority or its predecessor Electric Home & Farm Authority, Inc., a wholly dominated adjunct of TVA. (Comp. Exs. 650-682, R. 1516-8.)

d. Evidence supporting the charge that the appellees have contracted to sell and are now offering for sale electric power and electric service at rates far below the actual cost, and that the inevitable effect of the operation of the TVA Unified Plan will be to regulate the rates of appellants.

Whether TVA is selling electricity below cost and whether the effect of the TVA Unified Plan is to regulate the rates of the appellants are plainly questions of fact. That these questions of fact are relevant appears from the discussion in earlier parts of this brief. (See pp. 79-80, 163-175, *supra.*) No question as to the competency of the testimony or documentary evidence offered on either of these issues is raised or exists. The evidence offered in support of the charge that TVA has contracted to sell electricity for less than cost includes the testimony of Professor Moreland (R. 1463-70), and Complainants' Exhibits 504-506 (R. 3343-6) which were offered to prove that the rates prescribed by TVA, when applied "to the normal capacity of the Authority's power facilities," will result in an annual operating deficit of $9,000,000 over and above the public losses arising out of the statutory subsidies. The court also refused to issue a subpoena *duces tecum* (Comp. Ex. 1, R. 2441) for documents showing the cost factors considered by TVA in fixing its rates. (R. 906.)

The evidence of sales below cost, material as bearing upon the subject of damage to appellants and upon appellees' intent to establish the statutory purpose to regulate electric rates, promote public ownership and take over control of the electric power business, is also material as showing a violation of the TVA Act in contravention of Section 14 thereof, which provides:

> "* * * It is hereby declared to be the policy of this Act that, in order, as soon as practicable, to make the power projects self-supporting and self-liquidating,

the surplus power shall be sold at rates which, in the opinion of the Board, when applied to the normal capacity of the Authority's power facilities, will produce gross revenues in excess of the cost of production of said power * * *."

The court also excluded testimony of the witnesses Lefferson, Newton and Stanley (R. 1412-16, 1419-22, 949-50) and documentary evidence (R. 948-9, 972-3; Comp. Exs. 192, 198, R. 3002, 3007) showing that the inevitable effect of the operation of the TVA Unified Plan will be to regulate the local electric rates of the appellants. Manifestly, the exclusion of this testimony and documentary evidence was prejudicial error.

e. Evidence supporting the charge that the execution of the TVA Unified Plan imminently threatens each of the appellants with irreparable damage.

The trial court stated in its opinion (R. 555) that the appellants are threatened with substantial future damage. However, the trial court declined to receive any direct evidence of the nature, extent or imminence of such damage and subsequently signed Conclusions 55, 56 (R. 663), submitted by appellees, to the effect that damage had not been proved in some aspects of the TVA competition. This excluded evidence, which would have shown the necessary and inevitable effect of TVA sales below cost, includes testimony and tabulations (Comp. Exs. 512-514, R. 3354-5) as to damage to appellants from loss of revenue and from facilities being rendered idle (R. 1424, 1482-3); and testimony and exhibits (Comp. Exs. 487-496*) showing the impairment of appellants' credit by reason of the threat of TVA and their inability to borrow money or secure new capital for the purpose of financing extensions or for refunding. (R. 1264-7, 1427-34.) Much of this evidence was also material and relevant upon the extent of the inter-

ference with State regulation of rates and service. (See pp. 82-85, 144-147, *supra*.)

The court also rejected testimony showing the efforts made by some of the appellants to protect their markets and minimize their damages by absorbing the power generated by TVA. (R. 1504-7.) This testimony was also relevant upon the issue of whether the method of disposal embodied in the TVA Unified Plan is a *bona fide* exercise of the power to dispose of property and whether in any event, the disposal of the property, with maximum financial advantage to the United States and maximum dissemination of benefit to the people, requires or justifies TVA's interference with the powers of the States and the rights of the people. It, therefore, clearly appears that this evidence was material and relevant upon substantial issues in the case and that its exclusion was prejudicial error; for no question of competency is involved.

C. The trial court erred in its rulings on matters of practice and procedure during the conduct of the trial with the effect of denying appellants the opportunity to present their case fully and fairly.

1. The refusal to authorize the issuance of subpoenas duces tecum.

Before the start of the trial, appellants applied for the issuance of a subpoena *duces tecum* (Comp. Ex. 1, R. 2441) addressed to TVA requiring the production, among other things, of certain *corporate minutes of TVA* of certain specified dates in so far as they contained any reference "to the policies, activities, actions or enterprises of said Authority that involved or were related to or were in furtherance of the generation, transmission, distribution or sale of electric energy by said Authority," the production of other *TVA corporate minutes* relating to specified subjects described in the subpoena, all of which embraced

some phase of the TVA's power enterprise, and the production of certain described contracts and other described documents or classes of documents relating to subjects discussed at pp. 219-238, *supra*.

The court did not order the subpoena to issue and at the opening of the trial required appellants to submit verified statements as to the claimed materiality and relevancy of each of the documents described in the subpoena. (See Comp. Exs. 110, 111, R. 2643, 2660.) Thereafter it denied the subpoena, with a few minor exceptions, in an elaborate ruling (R. 904-9) dealing principally with ultimate questions of substantive law. (See pp. 216-219, *supra*.) In this ruling the court undertook to limit drastically the issues and the scope of the evidence *in vacuo*, without an opportunity for the appellants to show its purpose and relevancy when offered in its proper relation to the issues and other evidence as the trial progressed. Thereafter, the subpoena was broken down into separate subpoenas (Comp. Exs. 497, R. 3331; 689-697, R. 3618-25; 931, R. 3982; 954-956, R. 4002-4), and each of these was denied. (R. 1437-9, 1528-30, 2285-6, 2422-38.)

Each of the subpoenas applied for was directed to the TVA as permitted by *Wilson v. United States*, 221 U. S. 361, 372. The documents in each instance were specifically described so as to insure their identification, and although a number of documents were requested, the classes of documents described were more limited than the classes of documents described in the subpoena involved in *Brown v. United States*, 276 U. S. 134, 138, 143. The only requirement in the cases is that the documents be described "with reasonable detail" so as to indicate with sufficient clarity the particular documents desired. *Consolidated Rendering Co. v. Vermont*, 207 U. S. 541, 554; *Wheeler v. United States*, 226 U. S. 478, 483; *Santa Fe Pac. R. Co. v. Davidson*,

149 Fed. 603; *United States v. American Tobacco Co.*, 146 Fed. 557; *In re Storror*, 63 Fed. 564.

The original subpoena applied for (Comp. Ex. 1, R. 2441) was criticized by the trial court as to scope, but such criticism could not be made against the separate subpoenas subsequently presented. The more serious error of the court in attempting to decide fundamental questions of substantive law in ruling upon such an application persisted, however. (See pp. 216-219, *supra*.) Upon such an application the court should not undertake to determine ultimate questions of relevancy and materiality and the court need only be reasonably satisfied that such evidence, when produced, may be relevant and material in order to require its production. *Dancel v. Goodyear Shoe Mach. Co.*, 128 Fed. 753, 762; *United States v. Terminal R. Ass'n.*, 148 Fed. 486, 488, 489; 154 Fed. 268, 272. The ultimate question of admissibility should be determined by the court only with the proposed evidence before it, so that it may act intelligently, and an exception to the rejection of the evidence may be available on appeal. *Consolidated Rendering Co. v. Vermont*, 207 U. S. 541, 553; *Edison E. L. Co. v. United States E. L. Co.*, 44 Fed. 294, 296, 297. Here the trial court would not even order the documents produced for its own inspection so that it might intelligently pass upon their relevancy. That the evidence for which subpoena was sought, was relevant and material upon substantial issues in this case is apparent from its description and the denial of process for its production was plainly prejudicial error. There could, of course, be no question as to the competency of documents to be produced by the appellees and in any event that could not properly be decided in advance of their production and examination.

2. The refusal to limit the scope of cross examination to the subjects of direct examination and the limitation of the cross examination of appellees' witnesses by appellants in other respects.

The trial court early in the hearing (R. 848-9) ruled that it had "*deliberately and unanimously* decided to permit cross examination in this case, even upon matters not connected with the examination of any witness in chief. This right will be available on equal terms to each litigant." This ruling was more than a holding that in particular instances the trial court would exercise its discretion in determining whether cross examination was related to the examination in chief, but amounted to a declaration that the usual rules governing the examination of witnesses would not be applied in any instance whatever. The trial court adhered to this ruling over appellants' objection in the case of subsequent witnesses (R. 974-5, 1065-70) and applied it retroactively to the introduction by appellees of depositions taken by appellants of witnesses hostile to appellants. (R. 1329-34.)

The settled rule in the federal courts is that cross examination must be confined to the subjects of the direct examination; and if the cross examiner wishes to inquire as to other matters, he must make the witness his own. This rule is not discretionary except as to the scope of cross examination designed to affect the credibility of the witness or lay the foundation for his impeachment, and has been uniformly applied by this Court and in the federal courts generally. 2 *Cyc. Fed. Proc.*, 898; *Philadelphia and T. R. Co. v, Stimpson,* 14 Pet. 448, 461; *Houghton v. Jones,* 1 Wall. 702, 706; *Resurrection Gold Min. Co. v. Fortune Gold Min. Co.*, 129 Fed. 668; 674; *Minn. & Ont. Paper Co. v. Swenson Evaporator Co.*, 281 Fed. 622, 627; *Hill v. Wabash Ry. Co.*, 1 F. (2d) 626, 630; *Union E. L. & P. Co. v. Snyder Estate Co.*, 65 F. (2d) 297, 302. It also applies

in the Sixth Circuit where this case was tried. *Hendrey v. United States,* 233 Fed. 5, 15; *American Pub. Co. v. Sloan,* 248 Fed. 251, 254.

The court's ruling seriously prejudiced the appellants by depriving them of the right to call one of the appellees, or a hostile witness, for a limited examination on specific points and in such event to have the cross examination of such witness strictly limited to the subjects upon which he had been examined in chief.[1] Under the rule announced by the trial court, appellees could have "cross examined" without limit and appellants would have been bound by any statements that such hostile witness might have made, without opportunity, in their turn, to cross examine such witness. Normally if appellees had broadened the inquiry on cross examination of a witness hostile to appellants, appellees would have made the witness their own, would have been bound by his testimony, would have been limited in the type of question by the rules governing direct examination, and appellants who originally called the witness would thereafter have had the right to cross examine him on the subjects that had been first developed by appellees.[2]

The trial court also deprived appellants of substantial rights in refusing to permit appellants the right to cross examine expert witnesses called by appellees with reference to opinions expressed by them on direct examination in conflict with opinions expressed on the same subject by

---

[1] None of the individual appellees (constituting the Board of TVA) took the stand and submitted to cross examination. Their actions, programs and plans were defended only by subordinates upon the basis of assertions frequently at variance with TVA's official reports to Congress dealing with the same facts and with no proof that the TVA Board had adopted the personal suggestions or views expressed by these witnesses in this lawsuit.

[2] Cf. New Rules of Civil Procedure for District Courts of U. S., effective Sept. 16, 1938, Rule 43b.

other expert witnesses called by the appellees in this case (R. 1682), or by witnesses called by TVA in the *Ashwander* case (R. 2252), or by officers of the Corps of Engineers of the United States Army in testifying pursuant to their official duties before Committees of the Congress. (R. 1617-8.) In one instance the trial court sustained the objection upon the curious ground that the question was "personal." (R. 1682.) In another instance the court even went so far as to refuse to permit a question to appear in the record for the purpose of showing the prejudicial character of the ruling. (R. 2252.) The prejudicial effect of such a limitation upon the valuable right of cross examination for the purpose of showing the conflicting assumptions, opinions and conclusions upon vital issues of fact is patent.

3. The limitation of the scope of rebuttal.

The appellants' expert witnesses based their opinions in part upon the plans and specifications for the TVA projects and the method of their operation which had been officially reported by TVA to the Congress. During the presentation of appellees' case, various witnesses were permitted, over the objection and exception of appellants, to express personal suggestions for modifications in the design and specifications for certain structures and variations in their method of operation, which testimony was accepted by the court as showing what would ultimately be done by TVA and which was designed to place a somewhat greater emphasis upon the incidental navigation facilities and minor flood control structures than appeared from official TVA reports respecting the same subjects. These variations were, of course, in conflict with the official reports to the Congress and there was no showing that these variations, put forth in the midst of a prolonged litigation, had ever been adopted or approved by the TVA Board.

Appellants then offered evidence to rebut these conclusions (all of which were matters of opinion) and to show (1) that the factual hypotheses of such opinions were in error, and (2) that accepting such factual hypotheses, the conclusions were untenable in that the TVA projects would still be primarily for the production of power, any navigation features incidental and any flood control structures unrelated to the creation of firm water power. In substance, the trial court refused to permit appellants to rebut any of this testimony. In addition to this class of testimony, appellants sought to rebut certain opinion testimony given by appellees' witnesses which related solely to matters of defense, and which had been based in whole or in part upon erroneous assumptions of fact, and upon incomplete and inaccurate technical data or upon fallacious statements or applications of engineering principles, or which involved unfounded or fallacious criticisms of the opinions expressed by appellants' witnesses in chief, or insubstantial, and in some instances fanciful, claimed benefits to navigation and flood control from the TVA Unified Plan. (R. 2286-2331, 2339-60, 2363-70, 2375-6, 2378-86, 2402-13.) The trial court, however, excluded all rebuttal testimony involving any matter of opinion, even though it was limited to the same assumptions of fact and basic data upon which such appellees' witnesses' opinions were based. The trial court thereafter denied appellants' motions to strike from the record testimony of appellees' witnesses constituting new matter which the court had denied appellants the right to rebut. (R. 2350, 2359.)

Elsewhere in this brief, both in the Statement of the Case and in the Argument, we have referred to certain of the evidence that was offered by appellants' witnesses in rebuttal of such testimony of appellees' witnesses (see pp. 24, 26, 32, 33, 34, 38, 41, 50, 51, 57, 58, 109, 112, 123, 124, *supra*). The materiality and relevancy of such evidence

and the prejudicial character of the court's ruling excluding it abundantly appears. The court's ruling denied to appellants the opportunity to point out such errors and inaccuracies or show the trivial, and in some instances wholly unfounded, nature of such claims. The application of such a rule would require a plaintiff to anticipate and negative in advance every conceivable claim that might be advanced by his adversary or be left defenseless to show the fallacies or deny the claims, however unfounded, that the adversary might assert. And the practical impossibility of anticipating such claims or defenses would increase in direct ratio to their unsoundness or impracticability. Obviously, the law has never placed so high a premium on ingenuity.

The admissibility of opinion evidence on rebuttal was recognized by this Court in *Throckmorton v. Holt,* 180 U. S. 552, 564, in which a new trial was granted for failure to receive in rebuttal testimony of handwriting experts as to the genuineness of a signature to a will. The right to introduce expert evidence on rebuttal in a proper case is also recognized (*Limbeck v. Interstate Power Co.,* 69 F. (2d) 249; *Carson v. Jackson,* 281 Fed. 411) and an improper refusal of rebuttal testimony is reversible error. *Stanley v. Beckham,* 153 Fed. 152.

The court's limitation upon the scope of rebuttal evidence was particularly prejudicial to appellants, as the trial court had over objection and exception permitted TVA employees to give evidence and to identify exhibits (Def. Exs. 38-40, 42-48, 50, 52, 66, 87, 98 and 139) concerning the size, type of construction and possible methods of operation of TVA dams without showing that such matters had ever been approved or adopted by the TVA Board of Directors, and which were inconsistent with official statements of TVA to Congress (R. 1698-1704, 1707, 1709-10, 1712-20, 1722-25, 1753-6, 1782-3, 1791, 1823-4, 1841-2, 1848-9,

1949, 2174-77);[1] had permitted the introduction of documentary evidence (Def. Ex. 153†) consisting of self-serving declarations of appellees to the Congress which deprived appellants of the right to cross examine appellees on those subjects (R. 2279-80); had permitted employees of TVA to testify as expert witnesses on matters relating to navigation and flood control upon which subjects such employees had shown no qualifications by training or experience (R. 1705-6, 1708, 1761-2, 1789, 1851-2, 1892-4, 1913-22, 1965, 1971, 1973-8, 2041-4, 2047, 2049-51, 2054-6, 2058-64, 2234-5, 2237-8, 2241-7); had permitted appellees' witnesses to give opinion testimony of the comparative merits of the incidental navigation facilities embodied in the TVA Unified Plan and the Federal Navigation Project based upon an assumption that the Federal Navigation Project did not provide for overdepths beyond the nine-foot depth, which was contrary to the facts (R. 1973-6, 2025, 2029-31); and had permitted one of appellees' witnesses to give testimony by analogy[2] as to flood control and power projects by describing the construction and operation of a project in another part of the country. (R. 1674-81, 1687-9.)

---

[1] The most startling example of this type of inconsistency was the testimony of the witness Bowman that the Gilbertsville Reservoir would provide 900,000 acre-feet more flood control storage than TVA Directors had reported to a Committee of the Congress two days prior to Bowman's testimony in this case. (R. 1726-31, 1735.) In this connection the trial court also excluded as immaterial TVA budget estimates (Comp. Ex. 926, R. 3974A) submitted to the Congress in December, 1937, offered to show such conflicts. (R. 2255-6, 2419-28.)

[2] This type of evidence by analogy, which raises collateral issues and tends to surprise opposing counsel, was clearly inadmissible. *Albany and R. Co. v. Lundberg*, 121 U. S. 451; *Union Pac. Ry. Co. v. O'Brien*, 161 U. S. 451; *Union E. L. & P. Co. v. Snyder Estate Co.*, 65 F. (2d) 297, 310; *Western Ins. Co. v. Tobin*, 32 Ohio St. 77; *Hand v. Catawba P. Co.*, 90 S. C. 267; *Lake Superior Co. v. Huttig L. & Z Co.*, 305 Mo. 130; *Sanitary Dist. v. Johnson*, 343 Ill. 11.

It is the position of the appellants that they are entitled to injunctive relief upon the record as made. But, if that were not so, it is plain that the errors of the trial court in matters of evidence and procedure reviewed in this Point would require a reversal of the decree with directions to take this competent and material evidence and make appropriate findings and conclusions based upon such evidence and the other evidence properly admitted in the record.

CONCLUSION.

Upon a fair consideration of the record and applicable law we submit that:

1. The water power being created and to be created by the main stream projects included in the TVA Unified Plan is not being and will not be constitutionally created.

2. The water power being created and to be created by the tributary projects included in the TVA Unified Plan (which tributary projects will create five-sixths of the water power which will be created by the execution of the TVA Unified Plan) is not being and will not be constitutionally created.

3. Neither the statutory nor administrative method of disposing of the water power (after its conversion into electricity) is within the constitutional power of the Federal Government and each is in contravention of the foundation principles of our dual system of government and violates the Fifth, Ninth and Tenth Amendments.

4. There is no real, substantial or *bona fide* relation between the disposal of federal property and the regulation of local electric rates and service or the establishment within the States of a federal policy of having the local electric business carried on by publicly owned or non-profit organizations.

5. Were any of the water power created or to be created by the execution of the TVA Unified Plan lawfully created or acquired (which it is not), the disposal of such property neither requires nor justifies the intrusion of federal power into a field normally and traditionally reserved to the States, and the destruction of the right of the people to engage in the electric business, all of which is involved in the method of disposal provided in the TVA Act and embodied in the TVA Unified Plan.

For all of the reasons hereinbefore set forth in this brief the decree of the District Court should be reversed and the cause remanded to said Court with directions to enter a decree for appellants permanently enjoining TVA and its Directors:

(1) From generating electricity out of any of the water power, created or to be created by the execution of the TVA Unified Plan or any enlargement or modification thereof, for sale in competition with the appellants or any of them;

(2) From transmitting, distributing, supplying or selling any of the water power (after conversion into electricity), created or to be created by the execution of the TVA Unified Plan or any enlargement or modification thereof, for consumption (other than for use by the Federal Government) in the areas in which the appellants or any of them is supplying, or offering to supply, electric service (and hence, in competition with the appellants or any of them);

(3) From constructing or financing the construction of electric generating stations (either steam or hydro), transmission lines or distribution facilities which would duplicate or compete with the facilities of appellants or any of them;

(4) From regulating the retail rates of the appellants or any of them through contracts or any other scheme or device;

(5) From aiding or abetting in establishing, or directly establishing, within the States in the areas in which the appellants or any of them is supplying, or offering to supply, electric service, the federal statutory policies (embodied in the TVA Act) of substituting federal regulation for State regulation of local electric rates and service and of having the local electric business carried on by publicly owned or non-profit organizations; and

(6) From incorporating in any contracts for the sale of electricity produced by Wilson Dam terms fixing the retail rates or otherwise regulating the operations of purchasers thereof in any of the areas in which appellants or any of them is supplying, or offering to supply, electric service, and thereby establishing within such areas the federal statutory policies (embodied in the TVA Act) of substituting federal regulation for State regulation of local electric rates and service and of having the local electric business carried on by publicly owned or non-profit organizations.

Respectfully submitted,

JOHN C. WEADOCK,
CHARLES C. TRABUE,
CHARLES M. SEYMOUR,
RAYMOND T. JACKSON,
Counsel for Appellants.

APPENDIX F. Excerpts from Argument in the Supreme Court in Ashwander v. Tennessee Valley Authority, 297 U. S. 288..... 67

APPENDIX A.

TENNESSEE VALLEY AUTHORITY ACT OF MAY 18, 1933 (48 STAT. 58) AS AMENDED BY ACT OF AUGUST 31, 1935 (49 STAT. 1075). AMENDMENTS ARE INSERTED FOLLOWING THE SECTIONS OF THE ORIGINAL ACT.

AN ACT

To improve the navigability and to provide for the flood control of the Tennessee River; to provide for reforestation and the proper use of marginal lands in the Tennessee Valley; to provide for the agricultural and industrial development of said valley; to provide for the national defense by the creation of a corporation for the operation of Government properties at and near Muscle Shoals in the State of Alabama, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That for the purpose of maintaining and operating the properties now owned by the United States in the vicinity of Muscle Shoals, Alabama, in the interest of the national defense and for agricultural and industrial development, and to improve navigation in the Tennessee River and to control the destructive flood waters in the Tennessee River and Mississippi River Basins, there is hereby created a body corporate by the name of the "Tennessee Valley Authority" (hereinafter referred to as the "Corporation"). The board of directors first appointed shall be deemed the incorporators, and the incorporation shall be held to have been effected from the date of the first meeting of the board. This Act may be cited as the "Tennessee Valley Authority Act of 1933." (16 U. S. C. §831.)

Sec. 2. (a) The board of directors of the Corporation (hereinafter referred to as the "board") shall be composed of three members, to be appointed by the President, by and with the advice and consent of the Senate. In appointing the members of the board, the President shall

designate the chairman. All other officials, agents, and employees shall be designated and selected by the board.

(b) The terms of office of the members first taking office after the approval of this Act shall expire as designated by the President at the time of nomination, one at the end of the third year, one at the end of the sixth year, and one at the end of the ninth year, after the date of approval of this Act. A successor to a member of the board shall be appointed in the same manner as the original members and shall have a term of office expiring nine years from the date of the expiration of the term for which his predecessor was appointed.

(c) Any member appointed to fill a vacancy in the board occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed for the remainder of such term.

(d) Vacancies in the board so long as there shall be two members in office shall not impair the powers of the board to execute the functions of the Corporation, and two of the members in office shall constitute a quorum for the transaction of the business of the board.

(e) Each of the members of the board shall be a citizen of the United States, and shall receive a salary at the rate of $10,000 a year, to be paid by the Corporation as current expenses. Each member of the board, in addition to his salary, shall be permitted to occupy as his residence one of the dwelling houses owned by the Government in the vicinity of Muscle Shoals, Alabama, the same to be designated by the President of the United States. Members of the board shall be reimbursed by the Corporation for actual expenses (including traveling and subsistence expenses) incurred by them in the performance of the duties vested in the board by this Act. No member of said board shall, during his continuance in office, be engaged in any other business, but each member shall devote himself to the work of the Corporation.

(f) No director shall have financial interest in any public-utility corporation engaged in the business of distributing and selling power to the public nor in any corporation engaged in the manufacture, selling, or distribution

of fixed nitrogen or fertilizer, or any ingredients thereof, nor shall any member have any interest in any business that may be adversely affected by the success of the Corporation as a producer of concentrated fertilizers or as a producer of electric power.

(g) The board shall direct the exercise of all the powers of the Corporation.

(h) All members of the board shall be persons who profess a belief in the feasibility and wisdom of this Act. (16 U. S. C. §831a.)

Sec. 3. The board shall without regard to the provisions of Civil Service laws applicable to officers and employees of the United States, appoint such managers, assistant managers, officers, employees, attorneys, and agents, as are necessary for the transaction of its business, fix their compensation, define their duties, require bonds of such of them as the board may designate, and provide a system of organization to fix responsibility and promote efficiency. Any appointee of the board may be removed in the discretion of the board. No regular officer or employee of the Corporation shall receive a salary in excess of that received by the members of the board.

All contracts to which the Corporation is a party and which require the employment of laborers and mechanics in the construction, alteration, maintenance, or repair of buildings, dams, locks, or other projects shall contain a provision that not less than the prevailing rate of wages for work of a similar nature prevailing in the vicinity shall be paid to such laborers or mechanics.

In the event any dispute arises as to what are the prevailing rates of wages, the question shall be referred to the Secretary of Labor for determination, and his decision shall be final. In the determination of such prevailing rate or rates, due regard shall be given to those rates which have been secured through collective agreement by representatives of employers and employees.

Where such work as is described in the two preceding paragraphs is done directly by the Corporation the prevailing rate of wages shall be paid in the same manner as though such work had been let by contract.

Insofar as applicable, the benefits of the Act entitled "An Act to provide compensation for employees of the United States suffering injuries while in the performance of their duties, and for other purposes," approved September 7, 1916, as amended, shall extend to persons given employment under the provisions of this Act. (16 U. S. C. §831b.)

Sec. 4. Except as otherwise specifically provided in this Act, the Corporation—

(a) Shall have succession in its corporate name.

(b) May sue and be sued in its corporate name.

(c) May adopt and use a corporate seal, which shall be judicially noticed.

(d) May make contracts, as herein authorized.

(e) May adopt, amend, and repeal bylaws.

(f) May purchase or lease and hold such real and personal property as it deems necessary or convenient in the transaction of its business, and may dispose of any such personal property held by it.

The board shall select a treasurer and as many assistant treasurers as it deems proper, which treasurer and assistant treasurers shall give such bonds for the safe-keeping of the securities and moneys of the said Corporation as the board may require: *Provided,* That any member of said board may be removed from office at any time by a concurrent resolution of the Senate and the House of Representatives.

(g) Shall have such powers as may be necessary or appropriate for the exercise of the powers herein specifically conferred upon the Corporation.

(h) Shall have power in the name of the United States of America to exercise the right of eminent domain, and in the purchase of any real estate or the acquisition of real estate by condemnation proceedings, the title to such real estate shall be taken in the name of the United States of America, and thereupon all such real estate shall be entrusted to the Corporation as the agent of the United States to accomplish the purposes of this Act.

(i) Shall have power to acquire real estate for the construction of dams, reservoirs, transmission lines, power houses, and other structures, and navigation projects at any point along the Tennessee River, or any of its tributaries, and in the event that the owner or owners of such property shall fail and refuse to sell to the Corporation at a price deemed fair and reasonable by the board, then the Corporation may proceed to exercise the right of eminent domain, and to condemn all property that it deems necessary for carrying out the purposes of this Act, and all such condemnation proceedings shall be had pursuant to the provisions and requirements hereinafter specified, with reference to any and all condemnation proceedings.

Amended by adding thereto: "*Provided*, That nothing contained herein or elsewhere in this Act shall be construed to deprive the Corporation of the rights conferred by the Act of February 26, 1931 (46 Stat. 1422, ch. 307, secs. 1 to 5, inclusive), as now compiled in section 258a to 258e, inclusive, of Title 40 of the United States Code." [From Sec. 1 of Amendment.]

(j) Shall have power to construct dams, reservoirs, power houses, power structures, transmission lines, navigation projects, and incidental works in the Tennessee River and its tributaries, and to unite the various power installations into one or more systems by transmission lines.

Amended: "(j) Shall have power to construct such dams, and reservoirs, in the Tennessee River and its tributaries, as in conjunction with Wilson Dam, and Norris, Wheeler, and Pickwick Landing Dams, now under construction, will provide a nine-foot channel in the said river and maintain a water supply for the same, from Knoxville to its mouth, and will best serve to promote navigation on the Tennessee River and its tributaries and control destructive flood waters in the Tennessee and Mississippi River drainage basins; and shall have power to acquire or construct power houses, power structures, transmission lines, navigation projects, and incidental works in the Tennessee River and its tributaries, and to unite the various power installations into one or more systems by transmission lines.

The directors of the Authority are hereby directed to report to Congress their recommendations not later than April 1, 1936, for the unified development of the Tennessee River system." [Sec. 2 of Amendment.]

Amended by adding new section: "(k) At any time before the expiration of five years from the date when this section, as amended, becomes law may in the name of and as agent for the United States and subject to approval of the President, dispose of any of such real property as in the judgment of the Board may be no longer necessary in carrying out the purposes of this Act, but no land shall be conveyed on which there is a permanent dam, hydraulic power plant, fertilizer plant or munitions plant, heretofore or hereafter built by or for the United States or for the Authority." [Sec. 3 of Amendment.]

Amended by adding new section: "(l) Shall have power to advise and cooperate in the readjustment of the population displaced by the construction of dams, the acquisition of reservoir areas, the protection of watersheds, the acquisition of rights-of-way, and other necessary acquisitions of land, in order to effectuate the purposes of the Act; and may cooperate with Federal, State, and local agencies to that end." [Sec. 13 of Amendment.] (16 U. S. C. §831c.)

Sec. 5. The board is hereby authorized—

(a) To contract with commercial producers for the production of such fertilizers or fertilizer materials as may be needed in the Government's program of development and introduction in excess of that produced by Government plants. Such contracts may provide either for outright purchase of materials by the board or only for the payment of carrying charges on special materials manufactured at the board's request for its program.

(b) To arrange with farmers and farm organizations for large-scale practical use of the new forms of fertilizers under conditions permitting an accurate measure of the economic return they produce.

(c) To cooperate with National, State, district, or county experimental stations or demonstration farms, for

the use of new forms of fertilizer or fertilizer practices during the initial or experimental period of their introduction.

Amended: "(c) To cooperate with National, State, district, or county experimental stations or demonstration farms, with farmers, landowners, and associations of farmers or landowners, for the use of new forms of fertilizer or fertilizer practices during the initial or experimental period of their introduction, and for promoting the prevention of soil erosion by the use of fertilizers and otherwise." [Sec. 4 of Amendment.]

(d) The board in order to improve and cheapen the production of fertilizer is authorized to manufacture and sell fixed nitrogen, fertilizer, and fertilizer ingredients at Muscle Shoals by the employment of existing facilities, by modernizing existing plants, or by any other process or processes that in its judgment shall appear wise and profitable for the fixation of atmospheric nitrogen or the cheapening of the production of fertilizer.

(e) Under the authority of this Act the board may make donations or sales of the product of the plant or plants operated by it to be fairly and equitably distributed through the agency of county demonstration agents, agricultural colleges, or otherwise as the board may direct, for experimentation, education, and introduction of the use of such products in cooperation with practical farmers so as to obtain information as to the value, effect, and best methods of their use.

(f) The board is authorized to make alterations, modifications, or improvements in existing plants and facilities, and to construct new plants.

(g) In the event it is not used for the fixation of nitrogen for agricultural purposes or leased, then the board shall maintain in stand-by condition nitrate plant numbered 2, or its equivalent, for the fixation of atmospheric nitrogen, for the production of explosives in the event of war or a national emergency, until the Congress shall by joint resolution release the board from this obligation, and if any part thereof be used by the board for the manufac-

ture of phosphoric acid or potash, the balance of nitrate plant numbered 2 shall be kept in stand-by condition.

(h) To establish, maintain, and operate laboratories and experimental plants, and to undertake experiments for the purpose of enabling the Corporation to furnish nitrogen products for military purposes, and nitrogen and other fertilizer products for agricultural purposes in the most economical manner and at the highest standard of efficiency.

(i) To request the assistance and advice of any officer, agent, or employee of any executive department or of any independent office of the United States, to enable the Corporation the better to carry out its powers successfully, and as far as practicable shall utilize the services of such officers, agents, and employees, and the President shall, if in his opinion, the public interest, service, or economy so require, direct that such assistance, advice, and service be rendered to the Corporation, and any individual that may be by the President directed to render such assistance, advice, and service shall be thereafter subject to the orders, rules, and regulations of the board: *Provided,* That any invention or discovery made by virtue of and incidental to such service by an employee of the Government of the United States serving under this section, or by any employee of the Corporation, together with any patents which may be granted thereon, shall be the sole and exclusive property of the Corporation, which is hereby authorized to grant such licenses thereunder as shall be authorized by the board: *Provided further,* That the board may pay to such inventor such sum from the income from sale of licenses as it may deem proper.

(j) Upon the requisition of the Secretary of War or the Secretary of the Navy to manufacture for and sell at cost to the United States explosives or their nitrogenous content.

(k) Upon the requisition of the Secretary of War the Corporation shall allot and deliver without charge to the War Department so much power as shall be necessary in the judgment of said Department for use in operation of all locks, lifts, or other facilities in aid of navigation.

(l) To produce, distribute, and sell electric power, as herein particularly specified.

(m) No products of the Corporation shall be sold for use outside of the United States, its Territories and possessions, except to the United States Government for the use of its Army and Navy, or to its allies in case of war.

(n) The President is authorized, within twelve months after the passage of this Act, to lease to any responsible farm organization or to any corporation organized by it nitrate plant numbered 2 and Waco Quarry, together with the railroad connecting said quarry with nitrate plant numbered 2, for a term not exceeding fifty years at a rental of not less than $1 per year, but such authority shall be subject to the express condition that the lessee shall use said property during the term of said lease exclusively for the manufacture of fertilizer and fertilizer ingredients to be used only in the manufacture of fertilizer by said lessee and sold for use as fertilizer. The said lessee shall covenant to keep said property in first-class condition, but the lessee shall be authorized to modernize said plant numbered 2 by the installation of such machinery as may be necessary, and is authorized to amortize the cost of said machinery and improvements over the term of said lease or any part thereof. Said lease shall also provide that the board shall sell to the lessee power for the operation of said plant at the same schedule of prices that it charges all other customers for power of the same class and quantity. Said lease shall also provide that, if the said lessee does not desire to buy power of the publicly owned plant, it shall have the right to purchase its power for the operation of said plant of the Alabama Power Company or any other publicly or privately owned corporation engaged in the generation and sale of electric power, and in such case the lease shall provide further that the said lessee shall have a free right of way to build a transmission line over Government property to said plant paying the actual expenses and damages, if any, incurred by the Corporation on account of such line. Said lease shall also provide that the said lessee shall covenant that during the term of said lease the said lessee shall not enter into any illegal monopoly, com-

bination, or trust with any privately owned corporation engaged in the manufacture, production, and sale of fertilizer with the object or effect of increasing the price of fertilizer to the farmer. (16 U. S. C. §831d.)

Sec. 6. In the appointment of officials and the selection of employees for said Corporation, and in the promotion of any such employees or officials, no political test or qualification shall be permitted or given consideration, but all such appointments and promotions shall be given and made on the basis of merit and efficiency. Any member of said board who is found by the President of the United States to be guilty of a violation of this section shall be removed from office by the President of the United States, and any appointee of said board who is found by the board to be guilty of a violation of this section shall be removed from office by said board. (16 U. S. C. §831e.)

Sec. 7. In order to enable the Corporation to exercise the powers and duties vested in it by this Act—

(a) The exclusive use, possession, and control of the United States nitrate plants numbered 1 and 2, including steam plants, located, respectively, at Sheffield, Alabama, and Muscle Shoals, Alabama, together with all real estate and buildings connected therewith, all tools and machinery, equipment, accessories, and materials belonging thereto, and all laboratories and plants used as auxiliaries thereto; the fixed-nitrogen research laboratory, the Waco limestone quarry, in Alabama, and Dam Numbered 2, located at Muscle Shoals, its power house, and all hydroelectric and operating appurtenances (except the locks), and all machinery, lands, and buildings in connection therewith, and all appurtenances thereof, and all other property to be acquired by the Corporation in its own name or in the name of the United States of America, are hereby intrusted to the Corporation for the purposes of this Act.

(b) The President of the United States is authorized to provide for the transfer to the Corporation of the use, possession, and control of such other real or personal property of the United States as he may from time to time deem necessary and proper for the purposes of the Corporation as herein stated. (16 U. S. C. §831f.)

Sec. 8. (a) The Corporation shall maintain its principal office in the immediate vicinity of Muscle Shoals, Alabama. The Corporation shall be held to be an inhabitant and resident of the northern judicial district of Alabama within the meaning of the laws of the United States relating to the venue of civil suits.

(b) The Corporation shall at all times maintain complete and accurate books of accounts.

(c) Each member of the board, before entering upon the duties of his office, shall subscribe to an oath (or affirmation) to support the Constitution of the United States and to faithfully and impartially perform the duties imposed upon him by this Act. (16 U. S. C. §831g.)

Sec. 9. (a) The board shall file with the President and with the Congress, in December of each year, a financial statement and a complete report as to the business of the Corporation covering the preceding governmental fiscal year. This report shall include an itemized statement of the cost of power at each power station, the total number of employees and the names, salaries, and duties of those receiving compensation at the rate of more than $1,500 a year.

(b) The Comptroller General of the United States shall audit the transactions of the Corporation at such times as he shall determine, but not less frequently than once each governmental fiscal year, with personnel of his selection. In such connection he and his representatives shall have free and open access to all papers, books, records, files, accounts, plants, warehouses, offices, and all other things, property and places belonging to or under the control of or used or employed by the Corporation, and shall be afforded full facilities for counting all cash and verifying transactions with and balances in depositaries. He shall make report of each such audit in quadruplicate, one copy for the President of the United States, one for the chairman of the board, one for public inspection at the principal office of the corporation, and the other to be retained by him for the uses of the Congress. The expenses for each such audit may be paid from moneys advanced therefor by the Corporation, or from any appropriation or ap-

propriations for the General Accounting Office, and appropriations so used shall be reimbursed promptly by the Corporation as billed by the Comptroller General. All such audit expenses shall be charged to operating expenses of the Corporation. The Comptroller General shall make special report to the President of the United States and to the Congress of any transaction or condition found by him to be in conflict with the powers or duties intrusted to the Corporation by law.

Amended: "(b) All purchases and contracts for supplies or services, except for personal services, made by the Corporation, shall be made after advertising, in such manner and at such times sufficiently in advance of opening bids, as the Board shall determine to be adequate to insure notice and opportunity for competition: *Provided,* That advertisement shall not be required when, (1) an emergency requires immediate delivery of the supplies or performance of the services; or (2) repair parts, accessories, supplemental equipment, or services are required for supplies or services previously furnished or contracted for; or (3) the aggregate amount involved in any purchase of supplies or procurement of services does not exceed $500; in which cases such purchases of supplies or procurement of services may be made in the open market in the manner common among businessmen: *Provided further,* That in comparing bids and in making awards the Board may consider such factors as relative quality and adaptability of supplies or services, the bidder's financial responsibility, skill, experience, record of integrity in dealing, ability to furnish repairs and maintenance services, the time of delivery or performance offered, and whether the bidder has complied with the specifications.

"The Comptroller General of the United States shall audit the transactions of the Corporation at such times as he shall determine, but not less frequently than once each governmental fiscal year, with personnel of his selection. In such connection he and his representatives shall have free and open access to all pa-

pers, books, records, files, accounts, plants, warehouses, offices, and all other things, property, and places belonging to or under the control of or used or employed by the Corporation, and shall be afforded full facilities for counting all cash and verifying transactions with and balances in depositaries. He shall make report of each such audit in quadruplicate, one copy for the President of the United States, one for the chairman of the Board, one for public inspection at the principal office of the Corporation, and the other to be retained by him for the uses of the Congress: *Provided*, That such report shall not be made until the Corporation shall have had reasonable opportunity to examine the exceptions and criticisms of the Comptroller General or the General Accounting Office, to point out errors therein, explain or answer the same, and to file a statement which shall be submitted by the Comptroller General with his report. The expenses for each such audit shall be paid from any appropriation or appropriations for the General Accounting Office, and such part of such expenses as may be allocated to the cost of generating, transmitting, and distributing electric energy shall be reimbursed promptly by the Corporation as billed by the Comptroller General. The Comptroller General shall make special report to the President of the United States and to the Congress of any transaction or condition found by him to be in conflict with the powers or duties entrusted to the Corporation by law." [Sec. 14 of Amendment.] (16 U. S. C. §831h.)

Amended by adding new section: "Sec. 9a. The Board is hereby directed in the operation of any dam or reservoir in its possession and control to regulate the stream flow primarily for the purposes of promoting navigation and controlling floods. So far as may be consistent with such purposes, the Board is authorized to provide and operate facilities for the generation of electric energy at any such dam for the use of the Corporation and for the use of the United States or any agency thereof, and the Board is further authorized, whenever an opportunity is afforded, to provide and operate facilities for the generation of electric

energy in order to avoid the waste of water power, to transmit and market such power as in this act provided, and thereby, so far as may be practicable, to assist in liquidating the cost or aid in the maintenance of the projects of the Authority." [Sec. 5 of Amendment.] (16 U. S. C. §831h-1.)

Sec. 10. The board is hereby empowered and authorized to sell the surplus power not used in its operations, and for operation of locks and other works generated by it, to States, counties, municipalities, corporations, partnerships, or individuals, according to the policies hereinafter set forth; and to carry out said authority, the board is authorized to enter into contracts for such sale for a term not exceeding twenty years, and in the sale of such current by the board it shall give preference to States, counties, municipalities, and cooperative organizations of citizens or farmers, not organized or doing business for profit, but primarily for the purpose of supplying electricity to its own citizens or members: *Provided*, That all contracts made with private companies or individuals for the sale of power, which power is to be resold for a profit, shall contain a provision authorizing the board to cancel said contract upon five years' notice in writing, if the board needs said power to supply the demands of States, counties, or municipalities. In order to promote and encourage the fullest possible use of electric light and power on farms within reasonable distance of any of its transmission lines the board in its discretion shall have power to construct transmission lines to farms and small villages that are not otherwise supplied with electricity at reasonable rates, and to make such rules and regulations governing such sale and distribution of such electric power as in its judgment may be just and equitable: *Provided further*, That the board is hereby authorized and directed to make studies, experiments, and determinations to promote the wider and better use of electric power for agricultural and domestic use, or for small or local industries, and it may cooperate with State governments, or their subdivisions or agencies, with educational or research institutions, and with cooperatives or other organizations, in the applica-

tion of electric power to the fuller and better balanced development of the resources of the region.

Amended by adding thereto: "Provided further That the Board is authorized to include in any contract for the sale of power such terms and conditions, including resale rate schedules, and to provide for such rules and regulations as in its judgment may be necessary or desirable for carrying out the purposes of this Act, and in case the purchaser shall fail to comply with any such terms and conditions, or violate any such rules and regulations, said contract may provide that it shall be voidable at the election of the Board: *Provided further,* That in order to supply farms and small villages with electric power directly as contemplated by this section, the Board in its discretion shall have power to acquire existing electric facilities used in serving such farms and small villages: And *provided further,* That the terms 'States,' 'counties,' and 'municipalities' as used in this Act shall be construed to include the public agencies of any of them unless the context requires a different construction." [Sec. 6 of Amendment.] (16 U. S. C. §831i.)

Sec. 11. It is hereby declared to be the policy of the Government so far as practical to distribute and sell the surplus power generated at Muscle Shoals equitably among the States, counties, and municipalities within transmission distance. This policy is further declared to be that the projects herein provided for shall be considered primarily as for the benefit of the people of the section as a whole and particularly the domestic and rural consumers to whom the power can economically be made available, and accordingly that sale to and use by industry shall be a secondary purpose, to be utilized principally to secure a sufficiently high load factor and revenue returns which will permit domestic and rural use at the lowest possible rates and in such manner as to encourage increased domestic and rural use of electricity. It is further hereby declared to be the policy of the Government to utilize the Muscle Shoals properties so far as may be necessary to im-

prove, increase, and cheapen the production of fertilizer and fertilizer ingredients by carrying out the provisions of this Act. (16 U. S. C. §831j.)

Sec. 12. In order to place the board upon a fair basis for making such contracts and for receiving bids for the sale of such power, it is hereby expressly authorized, either from appropriations made by Congress or from funds secured from the sale of such power, or from funds secured by the sale of bonds hereafter provided for, to construct, lease, purchase, or authorize the construction of transmission lines within transmission distance from the place where generated, and to interconnect with other systems. The board is also authorized to lease to any person, persons, or corporation the use of any transmission line owned by the Government and operated by the board, but no such lease shall be made that in any way interferes with the use of such transmission line by the board: *Provided,* That if any State, county, municipality, or other public or cooperative organization of citizens or farmers, not organized or doing business for profit, but primarily for the purpose of supplying electricity to its own citizens or members, or any two or more of such municipalities or organizations, shall construct or agree to construct and maintain a properly designed and built transmission line to the Government reservation upon which is located a Government generating plant, or to a main transmission line owned by the Government or leased by the board and under the control of the board, the board is hereby authorized and directed to contract with such State, county, municipality, or other organization, or two or more of them, for the sale of electricity for a term not exceeding thirty years; and in any such case the board shall give to such State, county, municipality, or other organization ample time to fully comply with any local law now in existence or hereafter enacted providing for the necessary legal authority for such State, county, municipality, or other organization to contract with the board for such power: *Provided further,* That all contracts entered into between the Corporation and any municipality or other political subdivision or cooperative organization shall provide that

the electric power shall be sold and distributed to the ultimate consumer without discrimination as between consumers of the same class, and such contract shall be voidable at the election of the board if a discriminatory rate, rebate, or other special concession is made or given to any consumer or user by the municipality or other political subdivision or cooperative organization: And *provided further,* That as to any surplus power not so sold as above provided to States, counties, municipalities, or other said organizations, before the board shall sell the same to any person or corporation engaged in the distribution and resale of electricity for profit, it shall require said person or corporation to agree that any resale of such electric power by said person or corporation shall be made to the ultimate consumer of such electric power at prices that shall not exceed a schedule fixed by the board from time to time as reasonable, just, and fair; and in case of any such sale, if an amount is charged the ultimate consumer which is in excess of the price so deemed to be just, reasonable, and fair by the board, the contract for such sale between the board and such distributor of electricity shall be voidable at the election of the board: And *provided further,* That the board is hereby authorized to enter into contracts with other power systems for the mutual exchange of unused excess power upon suitable terms, for the conservation of stored water, and as an emergency or break-down relief. (16 U. S. C. §831k.)

Amended by adding new section: "Sec. 12a. In order (1) to facilitate the disposition of the surplus power of the Corporation according to the policies set forth in this Act; (2) to give effect to the priority herein accorded to States, counties, municipalities, and nonprofit organizations in the purchase of such power by enabling them to acquire facilities for the distribution of such power; and (3) at the same time to preserve existing distribution facilities as going concerns and avoid duplication of such facilities, the Board is authorized to advise and cooperate with and assist, by extending credit for a period of not exceeding five years to, States, Counties, municipalities and nonprofit organizations situated within transmission distance

from any dam where such power is generated by the Corporation in acquiring, improving, and operating (a) existing distribution facilities and incidental works, including generating plants; and (b) interconnecting transmission lines; or in acquiring any interest in such facilities, incidental works, and lines." [Sec. 7 of Amendment.] (§16, U. S. C. §831k-1.)

Sec. 13. Five per centum of the gross proceeds received by the board for the sale of power generated at Dam Numbered 2, or from any other hydropower plant hereafter constructed in the State of Alabama, shall be paid to the State of Alabama; and 5 per centum of the gross proceeds from the sale of power generated at Cove Creek Dam, hereinafter provided for, or any other dam located in the State of Tennessee, shall be paid to the State of Tennessee. Upon the completion of said Cove Creek Dam the board shall ascertain how much additional power is thereby generated at Dam Numbered 2 and at any other dam hereafter constructed by the Government of the United States on the Tennessee River, in the State of Alabama, or in the State of Tennessee, and from the gross proceeds of the sale of such additional power 2½ per centum shall be paid to the State of Alabama and 2½ per centum to the State of Tennessee. These percentages shall apply to any other dam that may hereafter be constructed and controlled and operated by the board on the Tennessee River or any of its tributaries, the main purpose of which is to control flood waters and where the development of electric power is incidental to the operation of such flood-control dam. In ascertaining the gross proceeds from the sale of such power upon which a percentage is paid to the States of Alabama and Tennessee, the board shall not take into consideration the proceeds of any power sold or delivered to the Government of the United States, or any department or agency of the Government of the United States, used in the operation of any locks on the Tennessee River or for any experimental purpose, or for the manufacture of fertilizer or any of the ingredients thereof, or for any other governmental purpose: *Provided*, That the percentages to be paid to the States of Alabama and Tennessee, as provided in this section, shall be subject to revision and change by the board,

and any new percentages established by the board, when approved by the President, shall remain in effect until and unless again changed by the board with the approval of the President. No change of said percentages shall be made more often than once in five years, and no change shall be made without giving to the States of Alabama and Tennessee an opportunity to be heard. (16 U. S. C. §831l.)

Sec. 14. The board shall make a thorough investigation as to the present value of Dam Numbered 2, and the steam plants at nitrate plant numbered 1, and nitrate plant numbered 2, and as to the cost of Cove Creek Dam, for the purpose of ascertaining how much of the value or the cost of said properties shall be allocated and charged up to (1) flood control, (2) navigation, (3) fertilizer, (4) national defense, and (5) the development of power. The findings thus made by the board, when approved by the President of the United States, shall be final, and such findings shall thereafter be used in all allocation of value for the purpose of keeping the book value of said properties. In like manner, the cost and book value of any dams, steam plants, or other similar improvements hereafter constructed and turned over to said board for the purpose of control and management shall be ascertained and allocated.

Amended by adding thereto: "The Board shall, on or before January 1, 1937, file with Congress a statement of its allocation of the value of all such properties turned over to said Board, and which have been completed prior to the end of the preceding fiscal year, and shall thereafter in its annual report to Congress file a statement of its allocation of the value of such properties as have been completed during the preceding fiscal year.

"For the purpose of accumulating data useful to the Congress in the formulation of legislative policy in matters relating to the generation, transmission, and distribution of electric energy and the production of chemicals necessary to national defense and useful in agriculture, and to the Federal Power Commission and other Federal and State agencies, and to the public, the Board shall keep complete accounts of its costs

of generation, transmission, and distribution of electric energy and shall keep a complete account of the total cost of generating and transmission facilities constructed or otherwise acquired by the Corporation, and of producing such chemicals, and a description of the major components of such costs according to such uniform system of accounting for public utilities as the Federal Power Commission has, and if it have none, then it is hereby empowered and directed to prescribe such uniform system of accounting, together with records of such other physical data and operating statistics of the Authority as may be helpful in determining the actual cost and value of services, and the practices, methods, facilities, equipment, appliances, and standards and sizes, types, location, and geographical and economic integration of plants and systems best suited to promote the public interest, efficiency, and the wider and more economical use of electric energy. Such data shall be reported to the Congress by the Board from time to time with appropriate analyses and recommendations, and, so far as practicable, shall be made available to the Federal Power Commission and other Federal and State agencies which may be concerned with the administration of legislation relating to the generation, transmission, or distribution of electric energy and chemicals useful to agriculture. It is hereby declared to be the policy of this Act that, in order, as soon as practicable, to make the power projects self-supporting and self-liquidating, the surplus power shall be sold at rates which, in the opinion of the Board, when applied to the normal capacity of the Authority's power facilities, will produce gross revenues in excess of the cost of production of said power and in addition to the statement of the cost of power at each power station as required by section 9 (a) of the 'Tennessee Valley Act of 1933,' the Board shall file with each annual report, a statement of the total cost of all power generated by it at all power stations during each year, the average cost of such power per kilowatt hour, the rates at which sold, and to whom sold, and copies of

all contracts for the sale of power." [Sec. 8 of Amendment.] (16 U. S. C. §831m.)

Sec. 15. In the construction of any future dam, steam plant, or other facility, to be used in whole or in part for the generation or transmission of electric power the board is hereby authorized and empowered to issue on the credit of the United States and to sell serial bonds not exceeding $50,000,000 in amount, having a maturity not more than fifty years from the date of issue thereof, and bearing interest not exceeding 3½ per centum per annum. Said bonds shall be issued and sold in amounts and prices approved by the Secretary of the Treasury, but all such bonds as may be so issued and sold shall have equal rank. None of said bonds shall be sold below par, and no fee, commission, or compensation whatever shall be paid to any person, firm, or corporation for handling, negotiating the sale, or selling the said bonds. All of such bonds so issued and sold shall have all the rights and privileges accorded by law to Panama Canal bonds, authorized by section 8 of the Act of June 28, 1902, chapter 1302, as amended by the Act of December 21, 1905 (ch. 3, sec. 1, 34 Stat. 5), as now compiled in section 743 of title 31 of the United States Code. All funds derived from the sale of such bonds shall be paid over to the Corporation. (16 U. S. C. §831n.)

Amended by adding new section: "Sec. 15a. With the approval of the Secretary of the Treasury, the Corporation is authorized to issue bonds not to exceed in the aggregate $50,000,000 outstanding at any one time which bonds may be sold by the Corporation to obtain funds to carry out the provisions of section 7 of this amendatory Act. Such bonds shall be in such forms and denominations, shall mature within such periods not more than fifty years from the date of their issue, may be redeemable at the option of the Corporation before maturity in such manner as may be stipulated therein, shall bear such rates of interest not exceeding 3½ per centum per annum, shall be subject to such terms and conditions, shall be issued in such manner and amount, and sold at such prices, as

may be prescribed by the Corporation, with the approval of the Secretary of the Treasury: *Provided*, That such bonds shall not be sold at such prices or on such terms as to afford an investment yield to the holders in excess of 3½ per centum per annum. Such bonds shall be fully and unconditionally guaranteed both as to interest and principal by the United States, and such guaranty shall be expressed on the face thereof, and such bonds shall be lawful investments, and may be accepted as security, for all fiduciary, trust, and public funds, the investment or deposit of which shall be under the authority or control of the United States or any officer or officers thereof. In the event that the Corporation should not pay upon demand, when due, the principal of, or interest on, such bonds, the Secretary of the Treasury shall pay to the holder the amount thereof, which is hereby authorized to be appropriated out of any moneys in the Treasury not otherwise appropriated, and thereupon to the extent of the amount so paid the Secretary of the Treasury shall succeed to all the rights of the holders of such bonds. The Secretary of the Treasury, in his discretion, is authorized to purchase any bonds issued hereunder, and for such purpose the Secretary of the Treasury is authorized to use as a public-debt transaction the proceeds from the sale of any securities hereafter issued under the Second Liberty Bond Act, as amended, and the purposes for which securities may be issued under such Act, as amended, are extended to include any purchases of the Corporation's bonds hereunder. The Secretary of the Treasury may, at any time, sell any of the bonds of the Corporation acquired by him under this section. All redemptions, purchases, and sales by the Secretary of the Treasury of the bonds of the Corporation shall be treated as public-debt transactions of the United States. With the approval of the Secretary of the Treasury, the Corporation shall have power to purchase such bonds in the open market at any time and at any price. No bonds shall be issued hereunder to provide funds or bonds necessary for the performance of any proposed

contract negotiated by the Corporation under the authority of section 7 of this amendatory Act until the proposed contract shall have been submitted to and approved by the Federal Power Commission. When any such proposed contract shall have been submitted to the said Commission, the matter shall be given precedence and shall be in every way expedited and the Commission's determination of the matter shall be final. The authority of the Corporation to issue bonds hereunder shall expire at the end of five years from the date when this section as amended herein becomes law, except that such bonds may be issued at any time after the expiration of said period to provide bonds or funds necessary for the performance of any contract entered into by the Corporation, prior to the expiration of said period, under the authority of section 7 of this amendatory Act." [Sec. 9 of Amendment.] (16 U. S. C. §831n-1.)

Sec. 16. The board, whenever the President deems it advisable, is hereby empowered and directed to complete Dam Numbered 2 at Muscle Shoals, Alabama, and the steam plant at nitrate plant numbered 2, in the vicinity of Muscle Shoals, by installing in Dam Numbered 2 the additional power units according to the plans and specifications of said dam, and the additional power unit in the steam plant at nitrate plant numbered 2. (16 U. S. C. §831o.)

Sec. 17. The Secretary of War, or the Secretary of the Interior, is hereby authorized to construct, either directly or by contract to the lowest responsible bidder, after due advertisement, a dam in and across Clinch River in the State of Tennessee, which has by long custom become known and designated as the Cove Creek Dam, together with a transmission line from Muscle Shoals, according to the latest and most approved designs, including power house and hydroelectric installations and equipment for the generation of power, in order that the waters of the said Clinch River may be impounded and stored above said dam for the purpose of increasing and regulating the flow of the Clinch River and the Tennessee River below, so

that the maximum amount of primary power may be developed at Dam Numbered 2 and at any and all other dams below the said Cove Creek Dam: *Provided, however,* That the President is hereby authorized by appropriate order to direct the employment by the Secretary of War, or by the Secretary of the Interior, of such engineer or engineers as he may designate, to perform such duties and obligations as he may deem proper, either in the drawing of plans and specifications for said dam, or to perform any other work in the building or construction of the same. The President may, by such order, place the control of the construction of said dam in the hands of such engineer or engineers taken from private life as he may desire: And *provided further,* That the President is hereby expressly authorized, without regard to the restriction or limitation of any other statute, to select attorneys and assistants for the purpose of making any investigation he may deem proper to ascertain whether, in the control and management of Dam Numbered 2, or any other dam or property owned by the Government in the Tennessee River Basin, or in the authorization of any improvement therein, there has been any undue or unfair advantage given to private persons, partnerships, or corporations, by any officials or employees of the Government, or whether in any such matters the Government has been injured or unjustly deprived of any of its rights. (16 U. S. C. §831p.)

Sec. 18. In order to enable and empower the Secretary of War, the Secretary of the Interior, or the board to carry out the authority hereby conferred, in the most economical and efficient manner, he or it is hereby authorized and empowered in the exercise of the powers of national defense in aid of navigation, and in the control of the flood waters of the Tennessee and Mississippi Rivers, constituting channels of interstate commerce, to exercise the right of eminent domain for all purposes of this Act, and to condemn all lands, easements, rights of way, and other area necessary in order to obtain a site for said Cove Creek Dam, and the flowage rights for the reservoir of water above said dam, and to negotiate and conclude contracts with States, counties, municipalities, and all State agencies

and with railroads, railroad corporations, common carriers, and all public utility commissions and any other person, firm, or corporation, for the relocation of railroad tracks, highways, highway bridges, mills, ferries, electric-light plants, and any and all other properties, enterprises, and projects whose removal may be necessary in order to carry out the provisions of this Act. When said Cove Creek Dam, transmission line, and power house shall have been completed, the possession, use, and control thereof shall be intrusted to the Corporation for use and operation in connection with the general Tennessee Valley project, and to promote flood control and navigation in the Tennessee River. (16 U. S. C. §831q.)

Sec. 19. The Corporation, as an instrumentality and agency of the Government of the United States for the purpose of executing its constitutional powers, shall have access to the Patent Office of the United States for the purpose of studying, ascertaining, and copying all methods, formulae, and scientific information (not including access to pending applications for patents) necessary to enable the Corporation to use and employ the most efficacious and economical process for the production of fixed nitrogen, or any essential ingredient of fertilizer, or any method of improving and cheapening the production of hydroelectric power, and any owner of a patent whose patent rights may have been thus in any way copied, used, infringed, or employed by the exercise of this authority by the Corporation shall have as the exclusive remedy a cause of action against the Corporation to be instituted and prosecuted on the equity side of the appropriate district court of the United States, for the recovery of reasonable compensation for such infringement. The Commissioner of Patents shall furnish to the Corporation, at its request and without payment of fees, copies of documents on file in his office: *Provided,* That the benefits of this section shall not apply to any art, machine, method of manufacture, or composition of matter, discovered or invented by such employee during the time of his employment or service with the Corporation or with the Government of the United States. (16 U. S. C. §831r.)

Sec. 20. The Government of the United States hereby reserves the right, in case of war or national emergency declared by Congress, to take possession of all or any part of the property described or referred to in this Act for the purpose of manufacturing explosives or for other war purposes; but, if this right is exercised by the Government, it shall pay the reasonable and fair damages that may be suffered by any party whose contract for the purchase of electric power or fixed nitrogen or fertilizer ingredients is hereby violated, after the amount of the damages has been fixed by the United States Court of Claims in proceedings instituted and conducted for that purpose under rules prescribed by the court. (16 U. S. C. §831s.)

Sec. 21. (a) All general penal statutes relating to the larceny, embezzlement, conversion, or to the improper handling, retention, use, or disposal of public moneys or property of the United States, shall apply to the moneys and property of the Corporation and to moneys and properties of the United States intrusted to the Corporation.

(b) Any person who, with intent to defraud the Corporation, or to deceive any director, officer, or employee of the Corporation or any officer or employee of the United States (1) makes any false entry in any book of the Corporation, or (2) makes any false report or statement for the Corporation, shall, upon conviction thereof, be fined not more than $10,000 or imprisoned not more than five years, or both.

(c) Any person who shall receive any compensation, rebate, or reward, or shall enter into any conspiracy, collusion, or agreement, express or implied, with intent to defraud the Corporation or wrongfully and unlawfully to defeat its purposes, shall, on conviction thereof, be fined not more than $5,000 or imprisoned not more than five years, or both. (16 U. S. C. §831t.)

Sec. 22. To aid further the proper use, conservation, and development of the natural resources of the Tennessee River drainage basin and of such adjoining territory as may be related to or materially affected by the development consequent to this Act, and to provide for the gen-

eral welfare of the citizens of said areas, the President is hereby authorized, by such means or methods as he may deem proper within the limits of appropriations made therefor by Congress, to make such surveys of and general plans for said Tennessee basin and adjoining territory as may be useful to the Congress and to the several States in guiding and controlling the extent, sequence, and nature of development that may be equitably and economically advanced through the expenditure of public funds, or through the guidance or control of public authority, all for the general purpose of fostering an orderly and proper physical, economic, and social development of said areas; and the President is further authorized in making said surveys and plans to cooperate with the States affected thereby, or subdivisions or agencies of such States, or with cooperative or other organizations, and to make such studies, experiments, or demonstrations as may be necessary and suitable to that end. (16 U. S. C. §831u.)

Sec. 23. The President shall, from time to time, as the work provided for in the preceding section progresses, recommend to Congress such legislation as he deems proper to carry out the general purposes stated in said section, and for the especial purpose of bringing about in said Tennessee drainage basin and adjoining territory in conformity with said general purposes (1) the maximum amount of flood control; (2) the maximum development of said Tennessee River for navigation purposes; (3) the maximum generation of electric power consistent with flood control and navigation; (4) the proper use of marginal lands; (5) the proper method of reforestation of all lands in said drainage basin suitable or reforestation; and (6) the economic and social well-being of the people living in said river basin. (16 U. S. C. §831v.)

Sec. 24. For the purpose of securing any rights of flowage, or obtaining title to or possession of any property, real or personal, that may be necessary or may become necessary, in the carrying out of any of the provisions of this Act, the President of the United States for a period of three years from the date of the enactment of this Act, is hereby authorized to acquire title in the name of the

United States to such rights or such property, and to provide for the payment for same by directing the board to contract to deliver power generated at any of the plants now owned or hereafter owned or constructed by the Government or by said Corporation, such future delivery of power to continue for a period not exceeding thirty years. Likewise, for one year after the enactment of this Act, the President is further authorized to sell or lease any parcel or part of any vacant real estate now owned by the Government in said Tennessee River Basin, to persons, firms, or corporations who shall contract to erect thereon factories or manufacturing establishments, and who shall contract to purchase of said Corporation electric power for the operation of any such factory or manufacturing establishment. No contract shall be made by the President for the sale of any of such real estate as may be necessary for present or future use on the part of the Government for any of the purposes of this Act. Any such contract made by the President of the United States shall be carried out by the board: *Provided,* That no such contract shall be made that will in any way abridge or take away the preference right to purchase power given in this Act to States, counties, municipalities, or farm organizations: *Provided further,* That no lease shall be for a term to exceed fifty years: *Provided further,* That any sale shall be on condition that said land shall be used for industrial purposes only. (16 U. S. C. §831w.)

Sec. 25. The Corporation may cause proceedings to be instituted for the acquisition by condemnation of any lands, easements, or rights of way which, in the opinion of the Corporation, are necessary to carry out the provisions of this Act. The proceedings shall be instituted in the United States district court for the district in which the land, easement, right of way, or other interest, or any part thereof, is located, and such court shall have full jurisdiction to divest the complete title to the property sought to be acquired out of all persons or claimants and vest the same in the United States in fee simple, and to enter a decree quieting the title thereto in the United States of America.

Upon the filing of a petition for condemnation and for the purpose of ascertaining the value of the property to be acquired, and assessing the compensation to be paid, the court shall appoint three commissioners who shall be disinterested persons and who shall take and subscribe an oath that they do not own any lands, or interest or easement in any lands, which it may be desirable for the United States to acquire in the furtherance of said project, and such commissioners shall not be selected from the locality wherein the land sought to be condemned lies. Such commissioners shall receive a per diem of not to exceed $15 for their services, together with an additional amount of $5 per day for subsistence for time actually spent in performing their duties as commissioners.

It shall be the duty of such commissioners to examine into the value of the lands sought to be condemned, to conduct hearings and receive evidence, and generally to take such appropriate steps as may be proper for the determination of the value of the said lands sought to be condemned, and for such purpose the commissioners are authorized to administer oaths and subpoena witnesses, which said witnesses shall receive the same fees as are provided for witnesses in the Federal courts. The said commissioners shall thereupon file a report setting forth their conclusions as to the value of the said property sought to be condemned, making a separate award and valuation in the premises with respect to each separate parcel involved. Upon the filing of such award in court the clerk of said court shall give notice of the filing of such award to the parties to said proceeding, in manner and form as directed by the judge of said court.

Either or both parties may file exceptions to the award of said commissioners within twenty days from the date of the filing of said award in court. Exceptions filed to such award shall be heard before three Federal district judges unless the parties, in writing, in person, or by their attorneys, stipulate that the exceptions may be heard before a lesser number of judges. On such hearing such judges shall pass *de novo* upon the proceedings had before the commissioners, may view the property, and may take additional evidence. Upon such hearings the said judges

shall file their own award, fixing therein the value of the property sought to be condemned, regardless of the award previously made by the said commissioners.

At any time within thirty days from the filing of the decision of the district judges upon the hearing on exceptions to the award made by the commissioners, either party may appeal from such decision of the said judges to the circuit court of appeals, and the said circuit court of appeals shall upon the hearing on said appeal dispose of the same upon the record, without regard to the awards or findings theretofore made by the commissioners or the district judges, and such circuit court of appeals shall thereupon fix the value of the said property sought to be condemned.

Upon acceptance of an award by the owner of any property herein provided to be appropriated, and the payment of the money awarded or upon the failure of either party to file exceptions to the award of the commissioners within the time specified, or upon the award of the commissioners, and the payment of the money by the United States pursuant thereto, or the payment of the money awarded into the registry of the court by the Corporation, the title to said property and the right to the possession thereof shall pass to the United States, and the United States shall be entitled to a writ in the same proceeding to dispossess the former owner of said property, and all lessees, agents, and attorneys of such former owner, and to put the United States, by its corporate creature and agent, the Corporation, into possession of said property.

In the event of any property owned in whole or in part by minors, or insane persons, or incompetent persons, or estates of deceased persons, then the legal representatives of such minors, insane persons, incompetent persons, or estates shall have power, by and with the consent and approval of the trial judge in whose court said matter is for determination, to consent to or reject the awards of the commissioners herein provided for, and in the event that there be no legal representatives, or that the legal representatives for such minors, insane persons, or incompetent persons shall fail or decline to act, then such trial judge may, upon motion, appoint a guardian ad litem to act for

such minors, insane persons, or incompetent persons, and such guardian ad litem shall act to the full extent and to the same purpose and effect as his ward could act, if competent, and such guardian ad litem shall be deemed to have full power and authority to respond, to conduct, or to maintain any proceeding herein provided for affecting his said ward. (16 U. S. C. §831x.)

Sec. 26. The net proceeds derived by the board from the sale of power and any of the products manufactured by the Corporation, after deducting the cost of operation, maintenance, depreciation, amortization, and an amount deemed by the board as necessary to withhold as operating capital, or devoted by the board to new construction, shall be paid into the Treasury of the United States at the end of each calendar year.

Amended: "Sec. 26. Commencing July 1, 1936, the proceeds for each fiscal year derived by the Board from the sale of power or any other products manufactured by the Corporation, and from any other activities of the Corporation including the disposition of any real or personal property, shall be paid into the Treasury of the United States at the end of each calendar year, save and except such part of such proceeds as in the opinion of the Board shall be necessary for the Corporation in the operation of dams and reservoirs, in conducting its business in generating, transmitting, and distributing electric energy and in manufacturing, selling, and distributing fertilizer and fertilizer ingredients. A continuing fund of $1,000,000 is also excepted from the requirements of this section and may be withheld by the Board to defray emergency expenses and to insure continuous operation: *Provided*, That nothing in this section shall be construed to prevent the use by the Board, after June 30, 1936, of proceeds accruing prior to July 1, 1936, for the payment of obligations lawfully incurred prior to such latter date." [Sec. 10 of Amendment.] (16 U. S. C. §831y.)

Amended by adding new section: "Sec. 26a. The unified development and regulation of the Tennessee River system requires that no dam, appurtenant works, or other obstruction, affecting navigation, flood control, or public lands or reservations shall be constructed, and thereafter operated or maintained across, along, or in the said river or any of its tributaries until plans for such construction, operation, and maintenance shall have been submitted to and approved by the Board; and the construction, commencement of construction, operation, or maintenance of such structures without such approval is hereby prohibited. When such plans shall have been approved, deviation therefrom either before or after completion of such structures is prohibited unless the modification of such plans has previously been submitted to and approved by the Board.

"In the event the Board shall, within sixty days after their formal submission to the Board, fail to approve any plans or modifications, as the case may be, for construction, operation, or maintenance of any such structures on the Little Tennessee River, the above requirements shall be deemed satisfied, if upon application to the Secretary of War, with due notice to the Corporation, and hearing thereon, such plans or modifications are approved by the said Secretary of War as reasonably adequate and effective for the unified development and regulation of the Tennessee River system.

"Such construction, commencement of construction, operation, or maintenance of any structures or parts thereof in violation of the provisions of this section may be prevented, and the removal or discontinuation thereof required by the injunction or order of any district court exercising jurisdiction in any district in which such structures or parts thereof may be situated, and the Corporation is hereby authorized to bring appropriate proceedings to this end.

"The requirements of this section shall not be construed to be a substitute for the requirements of any

other law of the United States or of any State, now in effect or hereafter enacted, but shall be in addition thereto, so that any approval, license, permit, or other sanction now or hereafter required by the provisions of any such law for the construction, operation, or maintenance of any structures whatever, except such as may be constructed, operated, or maintained by the Corporation, shall be required, notwithstanding the provisions of this section." [Sec. 11 of Amendment.] (16 U. S. C. §831y-1.)

Sec. 27. All appropriations necessary to carry out the provisions of this Act are hereby authorized. (16 U. S. C. §831z.)

Sec. 28. That all Acts or parts of Acts in conflict herewith are hereby repealed, so far as they affect the operations contemplated by this Act. (16 U. S. C. §831aa.)

Sec. 29. The right to alter, amend, or repeal this Act is hereby expressly declared and reserved, but no such amendment or repeal shall operate to impair the obligation of any contract made by said Corporation under any power conferred by this Act. (16 U. S. C. §831bb.)

Sec. 30. The sections of this Act are hereby declared to be separable, and in the event any one or more sections of this Act be held to be unconstitutional, the same shall not affect the validity of other sections of this Act. (16 U. S. C. §831cc.)

Approved May 18th, 1933.

Amended by adding new section: "Sec. 31. This Act shall be liberally construed to carry out the purposes of Congress to provide for the disposition of and make needful rules and regulations respecting Government properties entrusted to the Authority, provide for the national defense, improve navigation, control destructive floods, and promote interstate commerce and the general welfare, but no real estate shall be held except what is necessary in the opinion of the Board to carry out plans and projects actually decided upon requiring the use of such land: *Provided,*

That any land purchased by the Authority and not necessary to carry out plans and projects actually decided upon shall be sold by the Authority as agent of the United States, after due advertisement, at public auction to the highest bidder, or at private sale as provided in section 3 of this amendatory Act." [Sec. 12 of Amendment.] (16 U. S. C. §831dd.)

Separability Provision of Amendatory Act of August 31, 1935:

Sec. 15. That the sections of this Act are hereby declared to be separable, and in the event of any one or more sections of this Act, or parts thereof, be held to be unconstitutional, such holding shall not affect the validity of other sections or parts of this Act. (16 U. S. C. §831cc.)

Approved, August 31, 1935.

APPENDIX B.

RIVERS AND HARBORS ACTS.

(1) Rivers and Harbors Act of March 3, 1925, c. 467, 43 Stat. 1186 (1190).

Sec. 3. The Secretary of War, through the Corps of Engineers of the United States Army, and the Federal Power Commission are jointly hereby authorized and directed to prepare and submit to Congress an estimate of the cost of making such examinations, surveys, or other investigations as, in their opinion, may be required of those navigable streams of the United States, and their tributaries, whereon power development appears feasible and practicable, with a view to the formulation of general plans for the most effective improvement of such streams for the purposes of navigation and the prosecution of such improvement in combination with the most efficient development of the potential water power, the control of floods, and the needs of irrigation: *Provided,* That no consideration of the Colorado River and its problems shall be included in the consideration or estimate provided herein.

(2) Rivers and Harbors Act of January 21, 1927, c. 47, 44 Stat. 1010 (1010, 1015).

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the following works of improvement are hereby adopted and authorized, to be prosecuted under the direction of the Secretary of War and supervision of the Chief of Engineers, in accordance with the plans recommended in the reports hereinafter designated:

* * *

Surveys in accordance with House Document Numbered 308, Sixty-ninth Congress, first session, and including in the streams mentioned in said documents[1] the following streams:

---

[1] The streams mentioned in H. D. 308, 69th Congress, 1st session, included the Tennessee River and its tributaries.

(3) Rivers and Harbors Act of July 3, 1930, c. 847, 46 Stat. 918 (918, 927-8).

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the following works of improvement are hereby adopted and authorized, to be prosecuted under the direction of the Secretary of War and supervision of the Chief of Engineers, in accordance with the plans recommended in the reports hereinafter designated.

• • •

The project for the permanent improvement of the main stream of the Tennessee River for a navigable depth of nine feet in accordance with the recommendations of the Chief of Engineers in House Document Numbered 328 of the Seventy-first Congress, second session, is hereby authorized: *Provided,* That an expenditure of $5,000,000 shall be authorized to be appropriated for the prosecution of work under this project: *Provided further,* That the Chief of Engineers is hereby directed to ascertain and report to Congress on the first day of the first regular session of the Seventy-second Congress, advising the prospective cooperation offered by responsible interests, under the Federal Water Power Act, in the program of construction recommended by the Chief of Engineers, providing for the nine-foot project by means of high dams.

APPENDIX C.

THE FEDERAL POWER ACT.

16 U. S. C. §791a et seq.

§803. Conditions of license generally.—All licenses issued under this Part shall be on the following conditions:

• • •

(c) That the licensee shall maintain the project works in a condition of repair adequate for the purposes of navigation and for the efficient operation of said works in the development and transmission of power, shall make all necessary renewals and replacements, shall establish and maintain adequate depreciation reserves for such purposes, shall so maintain and operate said works as not to impair navigation, and shall conform to such rules and regulations as the commission may from time to time prescribe for the protection of life, health, and property. Each licensee hereunder shall be liable for all damages occasioned to the property of others by the construction, maintenance, or operation of the project works or of the works appurtenant or accessory thereto, constructed under the license, and in no event shall the United States be liable therefor. (Act of Congress, June 10, 1920, c. 285 §10(c), 41 Stat. 1068.)

§804. Project works affecting navigable waters; requirements insertable in license.—If the dam or other project works are to be constructed across, along, or in any of the navigable waters of the United States, the commission may, in so far as it deems the same reasonably necessary to promote the present and future needs of navigation and consistent with a reasonable investment cost to the licensee, include in the license any one or more of the following provisions or requirements:

(a) That such licensee shall, to the extent necessary to preserve and improve navigation facilities, construct, in whole or in part, without expense to the United States, in connection with such dam, a lock or locks, booms, sluices, or other structures for navigation purposes, in accordance with plans and specifications approved by the Chief of Engineers and the Secretary of War and made part of such license.

(b) That in case such structures for navigation purposes are not made a part of the original construction at the expense of the licensee, then whenever the United States shall desire to complete such navigation facilities the licensee shall convey to the United States, free of cost, such of its land and its rights of way and such right of passage through its dams or other structures, and permit such control of pools as may be required to complete such navigation facilities.

(c) That such licensee shall furnish free of cost to the United States power for the operation of such navigation facilities, whether constructed by the licensee or by the United States. (Act of Congress, June 10, 1920, c. 285, §11, 41 Stat. 1070.)

§811. Operation of navigation facilities; rules and regulations; penalties.—The Commission shall require the construction, maintenance, and operation by a licensee at its own expense of such lights and signals as may be directed by the Secretary of War, and such fishways as may be prescribed by the Secretary of Commerce. The operation of any navigation facilities which may be constructed as a part of or in connection with any dam or diversion structure built under the provisions of this chapter, whether at the expense of a licensee hereunder or of the United States, shall at all times be controlled by such reasonable rules and regulations in the interest of navigation, including the control of the level of the pool caused by such dam or diversion structure as may be made from time to time by the Secretary of War; and for willful failure to comply with any such rule or regulation such licensee shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punished as provided in section 825o of this chapter. (Act of Congress, June 10, 1920, c. 285, §18, 41 Stat. 1073; Act of Congress, Aug. 26, 1935, c. 687, Title II, §209, 49 Stat. 845.)

APPENDIX D.

STATUTES REGULATING ELECTRIC UTILITIES IN THE STATE OF TENNESSEE.[1]

Section 5447. The railroad and public utilities commission shall have general supervision and regulation of, jurisdiction, and control over, all public utilities, and also over their property, property rights, facilities and franchises, so far as may be necessary for the purpose of carrying out the provisions of this Statute. (1919, Ch. 49, Sec. 3.)

Section 5450. The commission shall have power:

(a) *To Investigate,* upon its own initiative or upon complaint in writing, any matter concerning any public utility as herein defined.

(b) *From Time to Time to Appraise and Value the Property of Any Public Utility* as herein defined, whenever in the judgment of said commission it shall be necessary so to do, for the purpose of carrying out any of the provisions of this law, and in making such valuation the commission may have access to and use any books, documents or records in the possession of any department or board of the state or any political subdivision thereof.

(c) *Rates, etc., Fixed.*—After hearing upon notice, by order in writing, to fix just and reasonable individual rates, joint rates, tolls, fares, charges or schedules thereof, as well as commutation, mileage, and other special rates which shall be imposed, observed, and followed thereafter by any public utility as herein defined, whenever the commission

---

[1] With the exception of Mississippi each of the States in which any of the appellants are now operating has a State regulatory commission with specified powers and duties, as provided by statute, for the control and regulation of the property, facilities and operations of electric and other utility corporations. Many variations exist in the statutory provisions which have been enacted by the various states, but the pertinent statutes of Tennessee are reproduced here as illustrating the general substance and scope of such State regulations. In Mississippi, although there is no State regulatory commission, municipalities are given regulatory powers within their territorial limits.

References herein cited are to the Tennessee Code of 1932.

shall determine any existing individual rate, joint rate, toll, fare, charge, or schedule thereof or commutation, mileage, or other special rates to be unjust, unreasonable, excessive, insufficient, or unjustly discriminatory or preferential, howsoever the same may have heretofore been fixed or established.

(d) *Schedules of Classifications and Rates.*—To require every such public utility to file with it complete schedules of every classification employed and of every individual or joint rate, toll, fare, or charge made or exacted by it for any product supplied or service rendered within this state as specified in such requirement.

(e) *Standards, Classifications, etc.*—After hearing, by order in writing, to fix just and reasonable standards, classifications, regulations, practices or services to be furnished, imposed, observed and followed thereafter by any public utility.

(f) *Standards for Measurements, etc.*—After hearing, by order in writing, to ascertain and fix adequate and serviceable standards for the measurement of quantity, quality, pressure, voltage, or other condition, pertaining to the supply of the product or service rendered by any public utility. And to prescribe reasonable regulations for examination and test of such product or service and for the measurement thereof.

(g) *Accuracy of Meters, etc.*—After hearing, by order in writing, to establish reasonable rules and regulations, specifications and standards, to secure accuracy of all meters and appliances for measurements.

(h) *Examination and Tests of Appliances for Measuring.*—To provide for the examination and test of any appliance used for the measuring of any product or service of public utility, and by its agents or examiners to enter upon any premises occupied by any public utility, for the purpose of making the examinations and tests provided for in this statute. (1919, Ch. 49, Sec. 4.)

• • •

Section 5451. The commission shall have power, after hearing, upon notice, by order in writing, to require every public utility as herein defined:

(a) *Proper Service.*—To furnish safe, adequate, and proper service and to keep and maintain its property and equipment in such condition as to enable it to do so.

(b) *Extensions or Abandonment Thereof.*—To establish, construct, maintain, and operate any reasonable extension of its existing facilities where in the judgment of said commission such extension is reasonable and practicable, and will furnish sufficient business to justify the construction, operation, and maintenance of the same, and when the financial condition of the public utility affected reasonably warrants the original expenditure required in making such extension, or to abandon any service when in the judgment of the commission the public welfare no longer requires the same.

(c) *Depreciation Account for Protection of Stockholders, Bondholders, etc.*—To carry for the protection of stockholders, bondholders or holders of securities a proper and adequate depreciation account in accordance with such rules, regulations, and forms of account, as the commission may prescribe. The commission shall have power to ascertain and determine, and by order in writing, after hearing, fix proper and adequate rates of depreciation of the property of each public utility, and each public utility shall conform its depreciation accounts to the rates so ascertained, determined, and fixed, and shall set aside the moneys so provided for out of earnings and carry the same in a depreciation fund. The income from investments of moneys in such fund shall likewise be carried in such fund. This depreciation fund shall not be expended otherwise than for depreciation, improvements, new constructions, extensions, or additions to the property of such public utility, unless the commission shall by order in writing give permission to the public utility to divert the fund to purposes other than those herein named. (Modified.)

(d) *Change of Rates, Fares, Schedules, Classifications, etc.*—When any public utility shall increase any existing individual rates, joint rates, tolls, fares, charges, or schedules thereof or change or alter any existing classification, the commission shall have power, either upon written complaint, or upon its own initiative, to hear and de-

termine whether the said increase, change or alteration is just and reasonable. The burden of proof to show that the said increase, change, or alteration is just and reasonable shall be upon the public utility making the same. The commission shall have power upon such hearing and determination to order the suspension, not exceeding three months, of said increase, change, or alteration until the said commission shall have approved said increase, change, or alteration; provided, however, that if the investigation cannot be completed within three months the commission shall have power to extend the period of suspension for such further time as will reasonably enable it to complete its investigation of any such increase, change, or alteration. It shall be the duty of the commission to approve any such increase, change or alteration upon being satisfied after full hearing that the same is just and reasonable.

(e) *Uniform System of Accounting.*—To keep its books, records, and accounts so as to afford an intelligent understanding of the conduct of its business, and to that end to require every such public utility of the same class to adopt a uniform system of accounting. Such system shall conform, where applicable to any system adopted or approved by the interstate commerce commission of the United States. And to furnish annually, or at such other times as the commission may require, a detailed report of finances and operations as shown by said system of accounts. (1919, Ch. 49, Sec. 5.)

Section 5452. Public Utilities are prohibited from doing what.—No public utility shall:

(a) *Unjust Rate, Fare Schedule, etc.*—Make, impose, or exact any unreasonable, unjustly discriminatory or unduly preferential individual or joint rate, or special rate, toll, fare, charge, or schedule for any product, or service supplied or rendered by it within this state.

(b) *Unjust Classification, Schedule, etc.*—Adopt or impose any unjust or unreasonable classification in the making or as the basis of any rate, toll, charge, fare, or schedule for any product or service rendered by it within this state.

(c) *Unjust Practice and Unsafe Service.*—Adopt, maintain, or enforce any regulation, practice, or measurement which shall be unjust, unreasonable, unduly preferential or discriminatory, nor shall any public utility provide or maintain any service that is unsafe, improper, or inadequate, or withhold or refuse any service which can reasonably be demanded and furnished when ordered by said commission.

(d) *Issue of Stocks, Bonds, Debentures, Evidences of Indebtedness; Leases.*—Issue any stocks, stock certificates, bonds, debentures, or other evidences of indebtedness payable in more than one year from the date thereof, until it shall have first obtained authority from the commission for such proposed issue. It shall be the duty of the commission after hearing to approve any such proposed issue maturing more than one year from the date thereof upon being satisfied that the proposed issue, sale and delivery is to be made in accordance with law and the purpose of such be approved by the commission. No lease of its property, rights, or franchises, by any such public utility, and no merger or consolidation of its property, rights and franchises by any such public utility with the property rights and franchises of any other such public utility of like character shall be valid until approved by the Commission, even though power to take such action has been conferred on such public utilities by the State of Tennessee or by any political subdivision thereof. (1919, Ch. 49, Sec. 6.)

Section 5453. No privilege or franchise hereafter granted to any public utility by the State of Tennessee or by any political subdivision thereof shall be valid until approved by said commission, such approval to be given when, after hearing, said commission determines that such privilege or franchise is necessary and proper for the public convenience and properly conserves the public interest, and the commission shall have power, if it so approves, to impose such conditions as to construction, equipment, maintenance, service or operation as the public convenience and interest may reasonably require; provided, however, that nothing herein contained shall be construed as applying to the laying of sidings, sidetracks, or switchouts, by any

public utility, and it shall not be necessary for any such public utility to obtain a certificate of convenience from the commission for such purpose. (1919, Ch. 49, Sec. 7.)

Section 5463. Annually every such public utility doing business in this state shall file with the commission a statement under oath, in such form and substance as may be prescribed by said commission, setting forth accurately the amount of its gross receipts from all sources for the preceding calendar year, and any such public utility failing to file such statement as required, or failing to give such other information as may be reasonably required of such public utility, shall be guilty of a misdemeanor and, upon conviction thereof, shall be punished by a fine of not exceeding fifty dollars for each day of such failure to comply therewith. (1919, Ch. 49, Sec. 8.)

Section 5502.* Public Utility Not to Operate a Service Already Being Furnished by Another Public Utility, Nor Commence the Construction of a Plant or System Without a Certificate.—No public utility shall establish or begin the construction of, or operate any line, plant, or system, or route in or into a municipality or other territory already receiving a like service from another public utility, or establish service therein, without first having obtained from the railroad and public utilities commission, after written application and hearing, a certificate that the present or future public convenience and necessity require or will require such construction, establishment, and operation, and no person or corporation not at the time a public utility shall commence the construction of any plant, line, system, or route to be operated as a public utility, or the operation of which would constitute the same, or the owner or operator thereof, a public utility as defined by law without having first obtained, in like manner, a similar certificate: provided, that this section shall not be construed to require any public utility to obtain a certificate for an extension in or about a municipality or territory where it shall there-

---

* Cited by the Supreme Court of Tennessee in *State v. Nashville Railway & Light Co.*, 151 Tenn. 77 (1925) as establishing a state policy in favor of regulation as against competition.

tofore have lawfully commenced operations, or for an extension into territory, whether within or without a municipality, contiguous to its route, plant, line or system, and not theretofore receiving service of a like character from another public utility, or for substitute or additional facilities in or to territory already served by it. (1923, Ch. 87, Sec. 1.)

Section 5503. *Upon Complaint of Interference, Commission May Grant or Refuse Certificate: Forfeiture of Certificate.*—If any public utility, in establishing, constructing, reconstructing, or extending its route, line, plant or system, shall interfere or be about to interfere with the existing route, line, plant, or system of any other public utility, the said commission, on complaint of the public utility claiming to be injuriously affected, may, after hearing, make such order and prescribe such terms and conditions in harmony with this statute as are just and reasonable. Such commission shall have power, after hearing involving the financial ability and good faith of the applicant, the necessity for additional service in the municipality or territory, and such other matters as it deems relevant, to issue a certificate of public necessity and convenience, or to refuse to issue the same or to issue it for the establishment or construction of a portion only of the contemplated plant, route, line, or system or extension thereof, or for the partial exercise only of such right or privilege, and may attach to the exercise of the rights granted by said certificate such terms and conditions as to time or otherwise as in its judgment the public convenience, necessity, and protection may require, and may forfeit such certificate after issuance, for noncompliance with its terms, or provide therein for an *ipso facto* forfeiture of the same for failure to exercise the rights granted within the time fixed by the commission; provided, that nothing in this law shall be construed as requiring such certificate for a municipally owned plant, project, or development. (1923, Ch. 87, Sec. 1.)

Section 5504.* *Certificate Not to be Granted Unless the Existing Plant or System is Inadequate; Notice of Hearing.*—The said commission shall not grant a certificate for a proposed route, plant, line, or system, or extension thereof, which will be in competition with any other route, plant, line or system, unless it shall first determine that the facilities of the existing route, plant, line, or system, are inadequate to meet the reasonable needs of the public, or the public utility operating the same refuses or neglects or is unable to or has refused or neglected, after reasonable opportunity after notice, to make such additions and extensions as may reasonably be required under the provisions of this statute. In all proceedings under this section, the commission shall give at least ten days' notice to the authorities of, and the public utilities operating in, the municipality or territory affected. (1923, Ch. 87, Sec. 2.)

APPENDIX E.

STATE STATUTES PURPORTING TO EXEMPT TVA FROM STATE REGULATION AS A PUBLIC UTILITY OR PURPORTING TO AUTHORIZE MUNICIPALITIES AND COOPERATIVE ASSOCIATIONS TO ENTER INTO CONTRACTS WITH TVA FIXING RETAIL RATES.

Alabama Acts, Regular Session 1935, No. 1.

An Act To further limit and define the authority, powers, and jurisdiction of Alabama Public Service Commission so as to exempt therefrom certain Federal agencies, instrumentalities, and corporations; to define such Federal agencies, instrumentalities, and corporations as nonutilities and to authorize other utilities to sell, lease, or otherwise dispose of their property to such nonutilities.

Be it enacted by the Legislature of Alabama:

SECTION I. All Federal Agencies, instrumentalities or corporations, owned by the United States and all corporations or joint stock companies in which the United States or any of its departments, establishments or agencies own more than fifty per cent (50%), of the voting shares of stocks, are nonutilities within the meaning of this Act.

SECTION II. The Alabama Public Service Commission or like body shall not have any jurisdiction, authority, power, or control in any respect whatsoever, over any of the nonutilities as defined in this Act.

SECTION III. Any utility, as defined by Section 9742 of the Code of Alabama of 1923, may sell, lease, or otherwise dispose of any or all of its property, including without limitations, any franchise, right, contract, business, goodwill, capital stock, and all other assets to any nonutility as defined in this Act, without the approval or consent of the Alabama Public Service Commission, or like body or other agencies of the State of Alabama.

SECTION IV. If any section, clause, or other provision of this Act, or the application thereof, shall, for any reason be invalid, the same shall not affect the validity of any other section, sentence, or clause of this Act.

SECTION V. All the provisions of this Act shall become effective immediately upon the approval of the Governor.

SECTION VI. All laws or parts of laws in conflict with any provisions of this Act are hereby expressly repealed.

Approved January 24, 1935. (General Acts 1935, p. 1.)

Alabama Acts, Regular Session 1935, No. 155.

An Act to authorize Municipal Corporations, Counties, Towns, Cities, Public Power Districts, or Improvement Authorities owning and/or operating or authorized to acquire and/or operate, electric generation, transmission, and/or distribution systems to enter contracts with certain governmental agencies for the acquisition of such systems and/or for the purchase and sale of electric energy, providing for the covenants, terms, and conditions which may be stipulated or agreed to in any such contract, and validating any such contracts heretofore entered and any such covenants, terms, and conditions heretofore stipulated or agreed to.

Be it enacted by the Legislature of Alabama:

SECTION I. Any Municipal Corporation, County, City, Town, Power District, or Improvement Authority within the State, hereinafter called "Municipality," owning and/or operating or heretofore or hereafter authorized to acquire and/or operate any electric generation, transmission, and/or distribution system is hereby authorized to contract with any federal agency, or authority, or with any corporation owned by the United States for the acquisition of any such system or part thereof and/or the purchase or sale of electric energy, and in any such contract to stipulate and agree to such covenants, terms, and conditions as the governing body or board of the municipality may deem appropriate, including but without limitation, covenants, terms, and conditions in respect to the resale rates, financial and accounting methods, services, operation and maintenance practices and the manner of disposing of the revenues of any such system, and to comply therewith, and any such contract heretofore entered, and any such covenants,

terms, or conditions heretofore stipulated or agreed to are hereby expressly validated.

SECTION II. Nothing herein contained shall be construed as a restriction or limitation upon any authority, power, or right which any municipality may have in the absence hereof; this Act shall be construed as cumulative and shall be in addition and supplemental to any power, authority, or right conferred by any other law.

SECTION III. This Act is remedial in nature, and any power, authority, or right hereby conferred shall be liberally construed; and to this end every municipality shall have the power, authority, and right, in addition to those expressly conferred hereby, to do all things necessary or convenient in carrying out the purposes hereof.

SECTION IV. If any section, sentence, clause, or provision of this Act or any application thereof shall be held invalid, the validity of any other section, sentence, clause, or provision hereof or of any other application shall not be affected.

SECTION V. This Act shall become effective immediately upon its passage and approval.

Approved June 26, 1935. (General Acts 1935, p. 201.)

Alabama Acts, Regular Session 1935, No. 45.

An Act, providing For The Formation Of Non-Profit Membership Corporations To Be Known As Electric Membership Corporations For The Purpose Of Promoting And Encouraging The Fullest Possible Use of Electric Energy In The State By Making Electric Energy Available To The Inhabitants Of The State At The Lowest Cost Consistent With Sound Economy And Prudent Management Of The Business Of Such Corporation; Providing For The Rights, Powers And Duties Of Such Corporations; Authorizing And Regulating The Issuance Of Revenue Obligations By Such Corporations; And Providing For the Payment Of Such Obligations And The Rights Of The Holders Thereof.

* * * * *

SECTION 11. A corporation created under the provisions of this Act shall have power to do any and all acts or things necessary or convenient for carrying out the purpose for which it was formed, including, but not limited to: * * * (h) To make any and all contracts necessary and/or convenient for the full exercise of the powers in this Act granted, including, without limiting the generality of the foregoing, contracts with any person, federal agency, or municipality for the purchase or sale of energy; for the management and conduct of the business of the corporation, including the regulation of the rates, fees or charges for service rendered by the corporation.

* * * * *

Approved February 7, 1935. (General Acts 1935, pp. 100, 103.)

Alabama Acts, Regular Session 1935, No. 47.

An Act to authorize the creation of the Rural Electrification Authority of Alabama for the purpose of promoting and encouraging the fullest possible use of electric energy in the State by making electric energy available to certain inhabitants of the State at the lowest cost consistent with sound economy and prudent management; authorizing the Authority to sell and distribute electric energy and to construct or otherwise acquire a system or systems for the generation, transmission and distribution of electric energy to carry out the purposes of this Act; providing for the rights, powers and duties of the Authority; authorizing and regulating the issuance of bonds by the Authority; and providing for the payment of such bonds and the rights of the holders thereof.

* * * * *

SECTION 12: *Grant of Specific Powers.* Subject only to the constitution of the State of Alabama, the authority shall have power: * * * (12) To make any and all contracts necessary or convenient for the full exercise of the powers herein granted, including, but not limited to: (a) Contracts with any person, federal agency, or municipality for the purchase or sale of energy at wholesale. (b) Contracts

with any person, federal agency or municipality for the management and conduct of the business of the authority or any part thereof. (c) Contracts with any person, federal agency, municipality or bondholders, notwithstanding such contract may operate as limits on the right of the authority to exercise any of the powers herein granted.

• • • • •

Approved February 7, 1935. (General Acts 1935, pp. 110, 112-3.)

Georgia Laws, 1937, No. 503, p. 644.

An Act providing for the formation of cooperative nonprofit membership corporations to be known as Electric Membership Corporations for the purpose of engaging in rural electrification by furnishing electrical energy, wiring assistance and facilities, electrical and plumbing equipment and services, to its members; Providing for the rights, powers and duties of such corporations, including their classification with regard to the jurisdiction of the Public Service Commission; authorizing and regulating the issuance of obligations by such corporations; Providing for the payments of such obligations and the rights of the holders thereof, the classifications of such obligations and the membership certificates of such corporations with respect to regulation; authorizing existing corporations organized for the same general purpose to re-incorporate hereunder, and validating certain acts, covenants, contracts, and obligations of such corporations; and for other purposes.

• • • • •

SECTION 4. *Powers of Corporation.* Be it further enacted, That each corporation shall have power:

• • •

(13) To make any and all contracts necessary or convenient for the exercise of the powers granted in this Act; including, but not limited to, contracts with any person, federal agency, or municipality for the purchase or sale of energy, and in connection with any such contract to stipulate and agree to such covenants, terms, and conditions as

the board may deem appropriate, including covenants, terms, and conditions with respect to the resale rates, financial and accounting methods, services, operation and maintenance practices, and the manner of disposing of the revenues of the system operated and maintained by the corporation.

• • • • •

SECTION 19. *Classification of Corporation With Respect to Jurisdiction of the Public Service Commission.* Be it further enacted that, corporations organized under this act shall not be deemed to be subject to the jurisdiction and control of the Public Service Commission of this State.

• • • • •

Approved March 30, 1937.

Mississippi Laws, 1936, Chapter 183, p. 335.

An Act creating the rural electrification authority of Mississippi for the purpose of promoting and encouraging the fullest possible use of electric energy in the state by making electric energy available to certain inhabitants of the state at the lowest cost consistent with sound economy and prudent management; authorizing the authority to sell and distribute electric energy and to construct or otherwise acquire a system or systems for the generation, transmission and distribution of electric energy to carry out the purposes of this Act; providing for the rights, powers and duties of the authority; authorizing and regulating the issuance of bonds by the authority; and providing for the payment of such bonds and the rights of the holders thereof.

Specific grants of powers.

SEC. 12. A corporation created under the provisions of this act shall have power to do any and all acts or things necessary or convenient for carrying out the purposes for which it was formed, including, but not limited to:

• • •

(8) To make any and all contracts necessary or convenient for the full exercise of the powers in this act granted, including, but not limited to, contracts with any person, federal agency or municipality for the purchase or sale of energy and/or the acquisition of all or any part of any system, and in connection with any such contract to stipulate and agree to such covenants, terms and conditions as the board may deem appropriate, including covenants, terms and conditions with respect to the resale rates, financial and accounting methods, services, operation and maintenance practices and the manner of disposing of the revenues of the system operated and maintained by the corporation.

• • • • •

Approved March 26, 1936. (Reenacted, Mississippi Laws, 1938, Chapter 251.)

Mississippi Laws, 1936, Chapter 185, p. 354.

An Act to authorize counties, incorporated cities and towns in the State of Mississippi to construct, purchase or otherwise acquire, and to operate and maintain electric generating or distribution systems, within or without the county or corporate limits, to construct, purchase or otherwise acquire, to operate, maintain or use, individually or jointly, an electric generating system or systems or a transmission line or lines, within or without the corporate or county limits, to make improvements, extensions, betterments or additions to such electric systems, and such transmission line or lines, to furnish electric power and energy to any consumer or consumers, to finance such acquisition, improvement, extension, betterment, or addition by the issuance of bonds and the acceptance of federal grants, or otherwise, without respect to present indebtedness, to provide for the supervision, management and control of such electric systems and such lines, to provide by contract, or otherwise, rules and policies to govern resale rates, disposition of revenue, and other operating and management practices of such systems, in order to promote the increased domestic use of electricity in rural and urban areas by enabling such counties, incorporated cities and towns to utilize the surplus power generated by the Tennessee valley authority, or the power generated by any other works or dams.

* * * * *

Definitions.

SEC. 2 (h) The term "federal agency" shall include the United States of America, the president of the United States of America, or the federal emergency administrator of public works, reconstruction finance corporation, Tennessee valley authority, the administrator of the rural electrification administration or any other similar agency, instrumentality or corporation of the United States of America, which has heretofore been or may hereafter be created by or pursuant to any act or acts or joint resolution of the congress of the United States of America.

* * * * *

Powers of Municipalities.

SEC. 3. Every municipality shall have power and is hereby authorized:

• • •

(j) To make any and all contracts necessary or convenient for the full exercise of the powers herein granted with any natural person, firm, association, corporation, business trust, partnership, body politic, federal agency, or municipality, including, but not limited to (a) contracts for the purchase or sale of electric energy or power, and (b) contracts for the acquisition or improvement of all or any part of an electric plant or plants. And in connection with any such contract the municipality may stipulate and agree to such covenants, terms and conditions as the governing body may deem appropriate, including, but without limitation, covenants, terms and conditions with respect to the resale rates, financial and accounting methods, services, operation and maintenance practices, and the manner of disposing of the revenues of the system or systems conducted and operated by the municipality.

• • • • •

Approved March 26, 1936.

Mississippi Laws, 1936, Chapter 187, p. 370.

An Act providing for the creation of power districts; prescribing powers and duties of such districts; and authorizing such districts to conduct and operate utilities for the production, transmission or distribution of electric energy, and to issue bonds and providing for the payment of such bonds.

• • • • • •

SEC. 14. The board of directors of any district shall have power and authority:

• • •

(6) To make any and all contracts necessary or convenient for the full exercise of the powers in this act granted, including, but not limited to, contracts with any municipality, the United States of America, the President of the United States of America, Tennessee valley author-

ity, the federal emergency administrator of public works and any and all other authorities, agencies, and instrumentalities of the United States of America, (a) for the purchase or sale of electric energy, and (b) for the acquisition of all or any part of any utility or utilities. In connection with any such contract, the board may stipulate and agree to such covenants, terms and conditions as the board may deem appropriate including, but without limitation, covenants, terms and conditions with respect to the resale rates, financial and accounting methods, services, operation and maintenance practices, and the manner of disposing of the revenues of the utility operated and maintained by the district.

* * * * *

Approved March 26, 1936.

Mississippi Laws, 1936, Chapter 271, p. 531.

An Act to authorize municipal corporations, counties, towns, cities, public power districts or immediate authorities owning and/or operating or authorized to acquire and/or operate electric generation, transmission and/or distribution systems, to enter into contracts with certain governmental agencies for the acquisition of such systems and/or for the purchase and sale of electric energy, providing for the covenants, terms and conditions which may be stipulated or agreed to in any such contract and validating any such contracts heretofore entered into and any such covenants, terms and conditions heretofore stipulated or agreed to.

SECTION 1. Be it enacted by the Legislature of the State of Mississippi, That any municipal corporation, county, city, town, or village, power district or improvement authority, hereinafter called "municipality," owning and/or operating or hereafter authorized to acquire and/or operate any electric generation, transmission and/or distribution system, is hereby authorized to contract with the United States of America, any agency thereof, or with any corporation owned by the United States for the acquisition of any such system or part thereof and/or the purchase or

sale of electric energy, and in any such contract to stipulate and agree to such covenants, terms, and conditions as the governing body or board of the municipality may deem appropriate, including but without limitation, covenants, terms and conditions with respect to the resale rates, financial and accounting methods, service, operation and maintenance practices, and the manner of disposing of the revenues, of any such system, and to comply therewith, and any such contract heretofore entered into and any such covenants, terms or conditions heretofore stipulated or agreed to are hereby expressly validated.

* * * * *

Approved March 26, 1936.

Kentucky Acts, Fourth Extraordinary Session, 1936-1937, Chapter 6, p. 25.

An Act relating to non-profit cooperative corporations and providing, but not by way of limitation, for the formation, operation, consolidation, and dissolution of non-profit cooperative corporations to be known as "Rural Electric Cooperative Corporations" for the purpose of manufacturing, purchasing, selling, distributing, and encouraging the fullest use of electric energy in the Commonwealth of Kentucky and for the purpose of making electric energy, services, and appliances and property operated by electricity available to the inhabitants of rural areas in the Commonwealth of Kentucky at the lowest cost consistent with sound business methods and prudent management; and providing for the rights, powers and duties of such corporations; and providing for the government of such corporations; and providing for the issuance of stock and membership in and by such corporations; and providing for the issuance of obligations by such corporations; and providing for the number of persons that may organize such corporations and the form of the articles of incorporation and the corporate charter and the respective fees therefor; and providing that said corporations may use a corporate seal, sue and be sued, contract and be contracted with and purchase and hold

property, real and personal, as may be proper and necessary for carryin on its legitimate business, and mortgage, sell or lease same; and providing that said corporations may receive property, including cash, and may charge fees, rates, tolls, or rentals for energy, services or appliances and property; and providing for the issuance of stocks or bonds or memberships and the purchase of corporate stock by said corporations; and providing for the transfer of stock and the payment of patronage dividends; and providing that stockholders or members shall not be liable for the debts of the corporations; and providing for penalties for refusal to supply electric energy to said corporations; and exempting said corporations from all state, county, municipal or local taxation other than an annual tax of $10.00 on each corporation formed hereunder; and providing that such corporations shall be subject to the general jurisdiction of the Public Service Commission of Kentucky; and exempting said corporations and the securities issued by them from the Act of March 23, 1926, known as the "Blue Sky Law," together with all amendments thereto; and conferring upon said corporations the power of eminent domain; and providing that if any provision of this Act is held invalid, it shall not affect the other provisions hereof; and repealing any and all acts or parts of acts and any and all laws or parts of laws in conflict herewith, and declaring an emergency to exist.

Be it enacted by the General Assembly of the Commonwealth of Kentucky:

* * * * *

§2.—(f) "Federal Agency" shall mean and include, but not by way of limitation, the United States of America, the President of the United States of America, the Federal Emergency Administrator of Public Works, the Rural Electrification Administration, the Tennessee Valley Authority, the Farm Credit Administration, the Central Bank for Cooperatives, any district bank for cooperatives formed under that Act of Congress known as the Farm Credit Act of 1933 (and any amendment thereto) including any suc-

cessor to any existing bank for cooperatives, and any and all other authorities, agencies and instrumentalities of the United States of America, heretofore or hereafter created, by whatsoever title designated.

* * * * *

§7. *Powers.*—

9. To make any and all contracts necessary or convenient for the full exercise of the powers in this act granted, including, without limiting the generality of the foregoing, contracts with any person, including, but not by way of limitation, any federal agency or instrumentality, the Tennessee Valley Authority, any corporation formed under this act, any cooperative association as defined in the Farm Credit Act of 1935, any municipality and/or the Commonwealth of Kentucky, including, but not by way of limitation, contracts for the purchase and sale of property of all kinds and character whatsoever, for the purchase and sale of energy and/or for the purchase and/or use of electrical devices, equipment, appliances, fixtures and supplies of all kinds and/or all kinds of tools, equipment and machinery operated by electricity or electric energy and deemed desirable by the corporation for its use or the use of its members; any accounting services, forms and supplies, bargaining services, business counsel and advice, engineering services, supervisory services, investment counsel, general purchasing services of all kinds, and any other service or services which may be requested, deemed advisable or desirable in the conduct of its business by any corporation formed under and for the purposes provided by subsection (a) of Section 3 of this act, for the management and conducting of the business of the corporation; for the fixing of rates, fees, or charges for service rendered or to be rendered by the corporation, subject, however, to the limitations provided in this act as to the fixing of rates; for any other corporate purpose.

* * * * *

Approved January 18, 1937.

Public Laws of North Carolina, 1935, Chapter 291, p. 312.

An Act providing for the formation of non-profit membership corporations to be known as electric membership corporations for the purpose of promoting and encouraging the fullest possible use of electric energy in the state by making electric energy available to the inhabitants of the state at the lowest cost consistent with sound economy and prudent management of the business of such corporations; providing for the rights, powers and duties of such corporations; authorizing and regulating the issuance of bonds by such corporations; and providing for the payment of such bonds.

The General Assembly of North Carolina do enact:

SEC. 2. (e) "Federal agency" shall mean and include the United States of America, the president of the United States of America, the federal emergency administrator of public works and any and all other authorities, agencies, and instrumentalities of the United States of America, heretofore or hereafter created.

* * * * *

SEC. 13. *Specific grant of powers.* Subject only to the Constitution of the State, a corporation created under the provisions of this Act shall have power to do any and all acts or things necessary or convenient for carrying out the purpose for which it was formed, including, but not limited to:

* * *

(h) To make any and all contracts necessary or convenient for the full exercise of the powers in this Act granted, including, but not limited to, contracts with any person or federal agency, for the purchase or sale of energy; for the management and conduct of the business of the corporation, including the regulation of the rates, fees or charges for service rendered by the corporation.

* * * * *

Ratified May 4, 1935.

Public Acts of Tennessee, 1935, Chapter 37, p. 78.

An Act to authorize municipal corporations, counties, towns and cities owning and/or operating or authorized to acquire and/or operate, electric generation, transmission and/or distribution systems, in contracts with certain governmental agencies for the acquisition of such systems or for the purchase of electric power and energy to stipulate and agree to certain covenants, terms and conditions; and to validate any such covenants, terms and conditions heretofore stipulated or agreed to.

SEC. 1. *Be it enacted by the General Assembly of the State of Tennessee,* That any municipal corporation, county, city or town, hereinafter called "municipality," owning and/or operating or heretofore or hereafter authorized to acquire and/or operate any electric generation, transmission and/or distribution system, is hereby authorized, in any contract or arrangement with the Tennessee Valley Authority or any similar governmental agency for the acquisition of any such system or part thereof and/or the purchase of electric power and energy, to stipulate and agree to such covenants, terms, and conditions as the governing body thereof may deem appropriate, including but without limitation, covenants, terms and conditions in respect to the resale rates, financial and accounting methods, services, operation and maintenance practices and the manner of disposing of the revenues, of any such system, and to comply therewith, and any such covenants, terms or conditions heretofore stipulated or agreed to are hereby expressly validated.

SEC. 2. *Be it further enacted,* That nothing herein contained shall be construed as a restriction or limitation upon any authority, power or right which any municipality may have in the absence hereof; this Act shall be construed as cumulative and shall be in addition and supplemental to any power, authority or right conferred by any other law.

SEC. 3. *Be it further enacted,* That this Act is remedial in nature and any power, authority or right hereby conferred shall be liberally construed, and to this end every municipality shall have the power, authority and right, in

addition to those expressly conferred hereby, to do all things necessary or convenient in carrying out the purposes hereof.

SEC. 4. *Be it further enacted,* That if any section, sentence, clause or provision of this Act or any application thereof shall be held invalid, the validity of any other section, sentence, clause or provision hereof or of any other application shall not be affected.

SEC. 5. *Be it further enacted,* That this Act shall take effect from and after its passage, public welfare requiring it.

Approved February 14, 1935.

Public Acts of Tennessee, 1937, Chapter 231, p. 882.

An Act providing for the formation of general welfare nonprofit membership corporations to be known as electric membership corporations for the purpose of promoting and encouraging the fullest possible use of electric energy by making electric energy available at the lowest cost consistent with sound economy and prudent management of the business of such corporations; providing for the rights, powers, and duties of such corporations, including their definition as a "nonutility" within the meaning of the laws of this state; authorizing and regulating issuance of obligations by such corporations; providing for the payments of such obligations and the rights of the holders thereof; authorizing existing corporations organized for the same general purpose to re-incorporate hereunder, and validating certain acts, covenants, contracts, and obligations of such corporations; and to repeal Chapter 32 of the Public Acts of the Extraordinary Session of 1935, and grant to and impose upon the corporations formed thereunder all the benefits, privileges, duties and obligations granted to or imposed upon any corporation organized under this Act, and validating certain acts, covenants, contracts, obligations, mortgages, deeds of trust, property rights, franchises, consents, and easements of such corporations.

* * * * *

SEC. 2. Formation authorized. *Be it further enacted,* That three or more natural persons may, by executing, filing, and recording a certificate as hereinafter provided, form a corporation not organized for pecuniary profit for the purpose of promoting and encouraging the fullest possible use of electric energy by making electric energy available at the lowest cost consistent with sound economy and prudent management of the business of such corporations. Any corporation created hereunder shall be held to be a general welfare corporation, not organized or doing business for profit and a non-utility within the meaning of the laws of this State. Provided that nothing herein contained shall be construed to exempt such corporation from the general property taxes, and assessment schedules for such property shall be filed with the appropriate county officials of the county in which such property is located, and the payment of such taxes shall be in lieu of all other taxes unless the legislature specifically provides that such tax or taxes shall be applicable to Electric Membership Corporations.

SEC. 3. *Definitions.*

(8) "Federal agency" shall mean and include the United States of America, the president of the United States of America, Tennessee Valley Authority, the Rural Electrification Administration, the Federal Emergency Administrator of Public Works, and any and all other authorities, agencies and instrumentalities of the United States of America, heretofore or hereafter created.

* * * * *

SEC. 12. *Specific grants of powers.* Be it further enacted, That each corporation shall have power to do any and all acts or things necessary or convenient for carrying out the purpose for which it was formed, including, but not limited to, though subject always to limitations contained in other sections of this Act:

* * *

(12) To make any and all contracts necessary or convenient for the full exercise of the powers in this Act granted, including, but not limited to, contracts with any person, federal agency or municipality, for the purchase

or sale of energy and/or the acquisition of all or any part of any system, and in connection with any such contract to stipulate and agree to such covenants, terms, and conditions as the board may deem appropriate, including covenants, terms, and conditions with respect to the resale rates, financial and accounting methods, services, operation and maintenance practices, and the manner of disposing of the revenues of the system operated and maintained by the corporation.

* * * * *

Approved May 21, 1937.

Public Acts of Tennessee, 1935, Chapter 42, p. 98.

An Act to define and limit the authority, powers and jurisdiction of the Railroad and Public Utilities Commission so as to exempt therefrom certain Federal and State Corporations, Agencies, Instrumentalities, and other public bodies and certain non-profit organizations herein defined as non-utilities; to authorize utilities to sell, lease or otherwise dispose of their property to non-utilities; and as a part hereof to amend Sections 5380 to 5508, inclusive, of the official Code of Tennessee, passed at the regular session of the General Assembly of the State of Tennessee in 1931, known as the Code of Tennessee of 1932, said section of the code defining the term "Public Utility."

SEC. 1. *Be it enacted by the General Assembly of the State of Tennessee,* That Section 5448 of the Code of Tennessee, passed by the regular session of the Legislature of Tennessee of 1931, known as the Code of Tennessee of 1932, which section defines the term "public utility" be, and the same is hereby amended by making said Section 5448 read, as follows:

SECTION 5448:

Public utilities are defined—The term "public utility" is defined to include every individual, copartnership, association, corporation, or joint stock company, their lessees, trustees, or receivers, appointed by any court whatsoever, that own, operate, manage or control, within the State of Tennessee, any street railway, interurban electric railway,

traction company, all other common carriers, express, gas, electric light, heat, power, water, telephone, telegraph, or any other like system, plant or equipment, affected by and dedicated to the public use, under privileges, franchises, licenses, or agreements, granted by the state or by any political subdivision thereof; provided, however, that the term "public utility" as herein defined shall not be construed to include the following (hereinafter called non-utilities): (a) any corporation owned by or any agency or instrumentality of the United States; (b) any county, municipal corporation or other subdivision of the State of Tennessee; (c) any corporation owned by or any agency or instrumentality of the State of Tennessee; (d) any corporation or joint stock company more than fifty per cent of the voting stock or shares of which is owned by the United States, the State of Tennessee or by any non-utility referred to in (a), (b) and (c) hereof; (e) any cooperative organization, association or corporation not organized or doing business for profit; (f) any of the foregoing non-utilities acting jointly or in combination or through a joint agency or instrumentality.

SEC. 2. *Be it further enacted,* That any public utility as defined in Section 1 of this Act, may, without the approval or consent of the State of Tennessee, or of the Railroad and Public Utilities Commission, or any other agency of the State of Tennessee, sell, lease, or otherwise dispose of any of its property, including but without limitation, franchises, rights, facilities, and other assets, and its capital stock, to any of the foregoing non-utilities.

SEC. 3. *Be it further enacted,* That if any section, sentence, clause or provision of this Act or any application thereof shall be held invalid, the same shall not affect the validity of any other section, sentence, clause or provision of this Act, or of any other application thereof.

SEC. 4. *Be it further enacted,* That this Act shall continue in force until expressly repealed by the specific provisions of a subsequent enactment.

SEC. 5. *Be it further enacted,* That this Act shall take effect from and after its passage, the public welfare requiring it.

Approved February 19, 1935.

APPENDIX F.

EXCERPTS FROM ARGUMENT IN THE SUPREME COURT IN ASHWANDER v. TENNESSEE VALLEY AUTHORITY, 297 U. S. 288.

"Mr. Justice Van Devanter: You are saying that we have a limited case before us, not one that is so broad as is contended. Do you mean by that that we should in this case consider what the purposes of the Wilson Dam were, as declared in the legislation under which it was constructed, and then that we should proceed upon the idea that the Government owned that property, and it may take some steps to realize on that property, to make it productive, and that that is all that is involved in this case so far as any concrete case is concerned? Is that your point?

Mr. Reed: No; I would not make that contention, because the TVA Act of course speaks of other dams. The point we make is that this contract does not take electricity from any place except Wilson Dam; that that produces sufficient electricity for this contract; and that if you will look at this contract as something for which the power is to be drawn from Wilson Dam, it is well within the limits of what Congress may produce in electricity, incidentally.

Now, it may be that Congress would produce electricity in the limitless amount that has been referred to, and then other questions would arise; but here we have only the question of disposing of a limited amount of this electricity that was produced at Wilson Dam.

Mr. Justice Van Devanter: My question was, what is the concrete case that you understand is before us, and to which you would suggest that we should confine our decision. Now I understand you to indicate that there are some things under this Tennessee Valley Authority which as yet have not come into being, and there is not a present concrete case about them.

Mr. Reed: That is correct.

Mr. Justice Van Devanter: That this contract, as I understood you, relates only to Wilson Dam, and that this contract would be fully maintained and carried out by resorting to nothing except Wilson Dam. Is that true?

Mr. Reed: That is correct. The latter statement is correct; and when you say that this contract relates only to

Wilson Dam, of course it is a contract for the purchase of transmission lines.

Mr. Justice Van Devanter: I understand that, but transmission lines to be supplied from the Wilson Dam.

Mr. Reed: Solely from the Wilson Dam."

"Mr. O'Brian: These transmission lines which are referred to repeatedly in the opinions of the lower courts and the findings are eight relatively short transmission lines. They extend from Wilson Dam and its substation at the nitrate plant to various municipalities in northern Alabama, and the farthest municipality away is 51 miles from the dam. So these are short transmission lines."

Plaintiffs-Appellants,

vs.

TENNESSEE VALLEY AUTHORITY, and
ARTHUR E. MORGAN, HARCOURT A. MORGAN and
DAVID E. LILIENTHAL, each individually and as an Executive
Officer and Director of Tennessee Valley Authority,

Defendants-Appellees.

On Direct Appeal from the United States District Court
For the Eastern District of Tennessee.

REPLY BRIEF FOR APPELLANTS.

John C. Wradock,
Charles C. Trabue,
Charles M. Seymour,
Raymond T. Jackson,
Counsel for Appellants.

The Gilbert Legal Publishing Co., Cleveland, Ohio

INDEX.

I.

PRELIMINARY MATTERS RAISED BY APPELLEES... 1

1. Change in Parties Appellant and Its Significance 1
2. Prayer for Relief..... 4
3. Statutory Construction..... 4
4. Procedure Below..... 5
5. Effect of the Findings..... 6

II.

THE APPELLEES WHOLLY FAIL TO SHOW THAT THE WATER POWER WILL BE INCIDENTALLY CREATED IN THE DISCHARGE OF ANY CONSTITUTIONAL FUNCTION, AND IN EFFECT CONCEDE THAT IT IS SEPARATELY AND PURPOSEFULLY CREATED UNDER THE CLAIMED RIGHT TO DEVELOP ALL OF THE ECONOMIC RESOURCES OF INLAND WATERS, NO MATTER HOW UNRELATED TO ANY FEDERAL FUNCTION. (Answering Appellees' Br. 12-53; 72-106).... 8

A. The Appellees' Contention that the Constitutional Authority of the Federal Government to Create Water Power Is Not Limited to that Incidentally Produced in the Discharge of a Federal Function Is Unsupported by Principle or Authority..... 11

1. The Reports of the Federal Waterways and Conservation Commissions, relied upon by appellees, did not contemplate a federal development of the non-federal resources of inland waters such as water power..... 22

2. The appellees' attempt to construe the TVA Act so as to limit the scope of the power development authorized by that Act is unsound..... 25

B. The Appellees Wholly Fail to Meet the Issue that None of the Firm Water Power Will Be Created by the Constitutional Exercise of the Implied Power to Improve Navigable Streams..... 27

1. The appellees fail to show even an incidental relation between their tributary power projects and the improvement of navigation..... 27

2. The appellees fail to show any constitutional relation between the improvement of navigation and the creation of the water power at the TVA projects overall..... 32

C. The Appellees Wholly Fail to Meet the Issues that None of the Firm Water Power Is Created by Flood Control Structures and that any Flood Control Features Are a Minor Part of the TVA Unified Plan... 43

1. The appellees concede that the TVA Unified Plan provides no adequate flood protection for the Tennessee Basin and the record establishes that none of the firm water power is created by flood control structures..... 49

2. The appellees' contentions that the flood control reservoirs superimposed on the TVA power projects make any material or consequential contribution to flood protection on the lower Mississippi is contrary to the great weight of the evidence; and in any event, appellees in no way show that the firm power is created by any flood control structures 52

3. The appellees' contentions with respect to the extent of federal constitutional power in the matter of flood control are erroneous..... 60

D. Neither the Facts nor the Law Support Appellees' Claim that any of the Water Power Is Created in the Exercise of the War Power..... 62

III.

THE APPELLEES GROSSLY UNDERSTATE THE SCOPE OF THE TVA ACT AND OF THE TVA POWER PROJECT, AND MISINTERPRET THE POWER OF THE FEDERAL GOVERNMENT TO DISPOSE OF PROPERTY. (Answering Appellees' Br. 53-58; 106-160)..... 63

A. The Appellees' Analysis of the TVA Act. (Answering Appellees' Br. 106-109) 63

B. In Contravention of the Undisputed Facts in the Record, Appellees Systematically Understate the Scope of Their Power Business Developed and in Current Process of Development. (Answering Appellees' Br. 53-58, 109-112) 64

1. The firm-power capacity created by the execution of the TVA Unified Plan 64

2. The TVA power pool and transmission system .. 71

3. The competitive and duplicating character of TVA's power system 73

(a) Unserved rural markets 73

(b) New industrial consumers 74

(c) Previously unserved municipalities 75

(d) Prospective increases in power demand on the part of appellants' customers 76

(e) Duplication of facilities 79

C. The Appellees' Contention that the Federal Power to Dispose of Property Is in Effect Unlimited and Subject to No Restriction Under the Express Provisions of the Constitution, or Under the Inherent Limitations of Our Constitutional System, Is Plainly Unsound. (Answering Appellees' Br. 113-127; 134-160) 80

1. Appellees misinterpret the scope of the previous decisions relating to TVA 81

2. Appellees misconstrue the cases relating to the power to dispose of government property as they apply to the utility business of TVA 82

3. The power to dispose of government property does not authorize the entry into permanent commercial businesses unrelated to any governmental function 86

4. The power to dispose of government property does not authorize the supplanting of the State police power over electric rates and service 89

IV.

THE APPELLEES' CONTENTIONS THAT APPELLANTS HAVE NO RIGHT TO SUE ARE UNFOUNDED. (Answering Appellees' Br. 160-192; 127-134) 93

A. Appellees' Contentions (1) That Appellants Do Not Possess Non-Exclusive Franchises to Carry on the Business of Supplying Electricity to the Public and (2) That TVA Has Been Granted Valid Franchises or Exemptions Under State Law, Are Without Substance 94

B. Appellees Have Made No Answer to the Right of Appellants to Sue Under the Ninth and Tenth Amendments 100

C. Appellees' Contention that Some of Appellants Are Not Threatened with Direct and Special Damage Is In the Teeth of the Findings and of the Undisputed Facts in the Record 101

D. Appellees' Contention that Certain of the Appellants Are Estopped to Maintain This Suit Is Untenable 104

E. Appellees' Contention that the Distribution of TVA Power through Municipalities and Cooperatives Does Not Constitute Competition with Appellants and Involves No Legal Injury Is Without Merit 108

F. Appellees' Contention that Appellants Have No Standing to Challenge the Validity of the Regulation of Retail Rates of Distributors of TVA Power as an Integral Part of the Statutory and Administrative Scheme to Regulate Local Electric Rates (Including those of Appellants), Is Unsound 110

V.

THE RULINGS OF THE TRIAL COURT ON MATTERS OF EVIDENCE AND PROCEDURE CONSTITUTE PREJUDICIAL ERROR. (Answering Appellees' Br. 192-260) ... 111

1. The trial court's refusal to require production of TVA minutes and other documents. (Answering Appellees' Br. 201-7, 235-40) 111

2. The trial court's ruling in excluding all official TVA press releases and published advertising. (Answering Appellees' Br. 208-216) 115

3. The several rulings of the trial court concerning various types of rate testimony. (Answering Appellees' Br. 221-229) 117

4. The rulings of the trial court in excluding rebuttal evidence. (Answering Appellees' Br. 254-260) 119

5. The rulings of the trial court on other matters of evidence and procedure. (Answering Appellees' Br. 212-21, 229-33, 234-5, 240-254) 120

ALL PLEADINGS, MOTIONS, ORDERS AND DECISIONS ARE PRINTED IN VOLUME I OF THE RECORD.

ALL TESTIMONY OF WITNESSES FOR APPELLANTS IS PRINTED IN VOLUME II, PAGES 769 TO 1533, AND VOLUME III, PAGES 2284 TO 2439, OF THE RECORD.

ALL TESTIMONY OF WITNESSES FOR APPELLEES IS PRINTED IN VOLUME II, PAGES 1534 TO 1600, AND VOLUME III, PAGES 1601 TO 2284, OF THE RECORD.

ALL EXHIBITS ARE PRINTED IN VOLUMES IV TO VII OF THE RECORD EXCEPT EXHIBITS WHICH ARE INDICATED IN THIS BRIEF BY THE FOLLOWING SYMBOLS:

* Original exhibit reproduced by appellants or appellees in two separately bound volumes of maps and charts, nine copies of which have been supplied to the Court.

° Original exhibit, nine copies of which have been supplied to the Court.

† Original exhibit not reproduced or printed except when followed by a record reference, cited for the convenience of the Court, which indicates that the portion of the original exhibit referred to was also offered and excluded as an excerpt, and as such is printed in the record.

In the Supreme Court of the United States

OCTOBER TERM, 1938.

No. 27.

TENNESSEE ELECTRIC POWER COMPANY, *et al.*,
Plaintiffs-Appellants,

vs.

TENNESSEE VALLEY AUTHORITY, *et al.*,
Defendants-Appellees.

ON DIRECT APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE EASTERN DISTRICT OF TENNESSEE.

REPLY BRIEF FOR APPELLANTS.

I.

PRELIMINARY MATTERS RAISED BY APPELLEES.

1. Change in Parties Appellant and Its Significance. In our original brief we stated the fact and the circumstances of the dismissal of the Georgia Power Company as a party below and of Tennessee Public Service Company and Holston River Electric Company as parties appellant. (Appellants' Br. 4.) The appellees state in their brief that since appellants' main brief was filed, the appellants Kentucky-Tennessee Light & Power Company and Memphis Power & Light Company have applied, or will apply before argument, for leave to withdraw as parties to this suit and to this appeal without prejudice to the rights of the remaining appellants. The circumstances of the withdrawal of these parties from this appeal are of great significance and are inadequately stated by appellees. (Appellees' Br. 5, 110.)

TVA is the sole purchaser of all of the facilities of Holston River Electric Company, which served Hawkins and Hamblen Counties, Tennessee, (see map, Comp. Ex. 29*) and TVA now owns and operates the distribution systems in one incorporated town and seven villages in these Counties. In general, the distribution facilities of the Tennessee Public Service Company located in Knoxville were conveyed to that city and the distribution facilities outside the corporate limits of the city were conveyed to TVA. (See map, Comp. Ex. 27*.) An examination of the maps (Comp. Exs. 327*, 27*, 29*) discloses these further areas now served by TVA, and that these rapidly expanding TVA power operations have now been extended to the edge of the market areas of appellants Kingsport Utilities, Incorporated, Carolina Power & Light Company, Tennessee Eastern Electric Company and Appalachian Electric Power Company.

Under two contracts all of the distribution facilities of Kentucky-Tennessee Light & Power Company in the service area, shown on the map (Comp. Ex. 327*) lying in Kentucky and Tennessee immediately north of Norris, are to be conveyed to the City of Clarksville "or its nominee" and all transmission lines, substations and similar property are to be conveyed to TVA. All other electric facilities used by this company in supplying electricity to the public in the remaining area served by it in Tennessee (except in one isolated municipality in which negotiations for sale to the municipality are pending) are to be conveyed to the Cities of Paris, Huntington and McKenzie, Tennessee, the incorporated town of Ridgely, Tennessee and Weakley County, Tennessee, *or to TVA* under a contract reciting that TVA and these political subdivisions "are sometimes herein collectively designated as 'the purchaser.'" TVA purchased directly transmission lines, substations and like facilities and also "all electrical distribution facilities located within and without the limits of the following com-

munities: Puryear, Whitlock, Cottage Grove, McKenzie, Henry, Huntington, Trezevant, Atwood, McLemoresville, Dyer, Rutherford, Kenton, Mason Hall, Bradford, Rives, Troy, Obion, Trimble, Newbern, Tiptonville, Wynneburg and Ridgely, Tennessee." An examination of the maps (Comp. Ex. 327*, 205*) discloses the scope of this extension of TVA operations. Both of these contracts provide that such property as is ostensibly to be transferred to the cities, towns and counties shall be transferable to their "nominee," but do not disclose whether the nominee may be TVA.

In addition TVA, and certain cities and towns, have made an agreement for the purchase of the electric properties of the West Tennessee Power & Light Company and we are informed that TVA and the City of Memphis are negotiating for the purchase of the electric properties of the Memphis Power & Light Company. The extent of the service area and market involved in this expansion of TVA power operations likewise appears from an examination of the map. (Comp. Ex. 327*.)

At the date of the trial TVA reported no contracts with any of these towns, cities or counties except the Cities of Knoxville, Memphis and Paris. (Fdg. 210, R. 646.) At the time of the trial, Memphis, Knoxville, Clarksville, Paris and Newbern had been allotted loans and grants by PWA for the construction of duplicate distribution systems to distribute TVA power. (R. 3327.) Whether PWA allotments had been made to other of the towns and cities involved during the intervening period is unknown to these appellants.

It is plain that these utilities are not suddenly retiring voluntarily from the businesses which they have created over a period of many years. It is plain that these appellants have retired from their businesses because their destruction threatened to become a *fait accompli* before this

appeal could be heard and determined. This has all taken place while the TVA power system is only fractionally developed. It has taken place in service areas where appellees assert no threat from TVA exists because at the date of trial the distribution of TVA power, although being rapidly extended, had not yet reached the market areas of certain of the appellants and had not yet inflicted the damages which this suit was brought to prevent. (Appellees' Br. 175-177; see pp. 101-103, *infra.*) It has brought the area of actual TVA operations to the doorstep of every appellant in whose service area the distribution of TVA power is not yet an accomplished fact. (See map, Comp. Ex. 327*.) Nothing could more eloquently illustrate the truth of appellants' position that TVA is actively engaged in taking over the electric business within transmission distance of its partially completed and constantly expanding power system, and that unless relief is secured from this Court the appellants speedily will be driven out of business by TVA.

2. Prayer for Relief. The appellees, after an inadequate summary of the Bill, assert that appellants, among other things, sought a "sweeping injunction" against the "national power policy" and against the construction of "dams in the Tennessee River and its tributaries." (Appellees' Br. 6.) No such relief was sought in the prayer. (R. 67-71.) The appellants have stated the relief which they seek and to which they believe they are entitled on this record at pp. 248-249 of their main brief.

3. Statutory Construction. The appellees assert that no question of statutory construction is involved. (Appellees' Br. 2-3.) While it is true that the scope of the TVA Act is so broad with respect to the development of the power resources of the Tennessee River and its tributaries and the establishment of a great federally owned

and operated electric utility system that it is difficult to conceive of any actions of that character which would be in excess of the terms of the statute, it is not true that no questions of statutory construction are raised in the record. The appellants do assert that the appellees are violating the statute (1) by selling electricity below subsidized cost (TVA Act, Sec. 14); (2) by confederating with the Public Works Administration, Rural Electrification Administration and Civil Works Administration to take over the businesses of appellants or to force appellants to sell electric distribution systems at distress prices on penalty of duplication with loans and gifts of federal funds; and (3) by engaging in a systematic campaign of misrepresentation, slander and libel of the businesses of the appellants for the purpose, and with the necessary effect, of destroying and appropriating their going businesses. Since the trial court excluded practically all evidence offered to support these charges and denied appellants the benefit of process to procure other evidence for the same purpose, they have been discussed only in connection with the errors of the trial court in excluding evidence. (Appellants' Br. 214-247.)

4. Procedure Below. Appellees seek to excuse the failure of the trial court to afford adequate time for preparation and submission of requested findings and its denial of an opportunity to examine and point out the errors in requested findings submitted by the appellees by asserting that the court had stated some time in advance of the close of the case that it would follow such a course. (Appellees' Br. 7-11.) Laying to one side the practical impossibility of preparing findings while counsel are fully occupied with a complicated trial, it is difficult to understand how proper findings could be prepared in advance of the presentation of the evidence. And if that impossibility were disregarded, it would not excuse the failure to afford an

opportunity to examine requested findings of appellees and point out their erroneous character, nor the subsequent *ex parte* acceptance of briefs thereafter filed by appellees criticizing and attacking the suggested findings filed by the appellants. This one-sided deviation from the announced procedure of the court only aggravated its prejudicial character. Cf. *Morgan v. United States,* 304 U. S. 1, 19.

5. Effect of the Findings. The appellees contend that findings, whether made unanimously or rejected by one of the three members of the trial court, are unassailable. (Appellees' Br. 11.) The effect of the findings will be more appropriately considered in our discussion of the contentions of appellees to which particular findings are claimed to apply. However, the rule in cases where findings have been previously sustained by two courts (*Alabama Power Co. v. Ickes,* 302 U. S. 464) has no application here. Here the appeal is direct to this Court. The findings have not been reviewed by any appellate court and, as we shall hereinafter point out more particularly, they fail to touch the controlling issues of fact, they are based upon erroneous conceptions of law, they are in some instances bare conclusions unsupported by findings of essential underlying facts, they are in some instances unsupported by any evidence and in other instances against the clear weight of the evidence. It is a settled rule that in equity cases the first reviewing court will examine the evidence and set aside findings of the trial court where they are against the weight of the evidence, based upon erroneous interpretations of documentary evidence, dependent upon the persuasive effect of facts not turning on the credibility of witnesses or based upon an erroneous conception of law. *Adamson v. Gilliland,* 242 U. S. 350, 352-3; *Laursen v. Lowe,* 46 F. (2d) 303, 304; *Uihlein v. General Electric Co.,* 47 F. (2d) 997, 1002-4; *Ins. Co. v.*

Simons, 60 F. (2d) 30, 32. The reviewing court will also disregard incomplete findings and bare conclusions unsupported by findings of essential underlying facts. *Interstate Circuit v. United States*, 304 U. S. 55.

In addition, it should be observed that the findings upon which the appellees principally rely in their brief are of a character and were made in a manner which is aptly described in *Process Engineers v. Container Corp.*, 70 F. (2d) 487, cert. den. 293 U. S. 588, where the court said:

> "It is urged that the court's findings should be sustained because supported by some evidence. The weakness of this argument lies in the fact that *the findings were not made by the court, but are the work of industrious counsel* who combined his argument and a partisan and unfair statement of facts into one and called it, 'Findings of Fact.' *It is difficult to distinguish these findings from the brief of counsel for appellee.*
>
> Such so-called findings do not help an appellate court. They reflect the views of counsel who submitted them and detract from the force and effect which are ordinarily given to findings made by the trial judge. When the abuse is aggravated (and the objectionable practice is growing), the assistance to the appellate court, which findings when carefully made by the trial court afford, is lost, and it becomes necessary for us to study the evidence as though no findings had been made by the District Court." (loc. cit. 489.)[1]

Moreover, it will be observed that the majority of the findings chiefly relied upon by the appellees were rejected or modified by Judge Gore, who made findings of evidentiary facts (R. 669-713) which squarely contradict the bare, and frequently confusing, conclusions upon which appellees rely. Under such circumstances, it is futile to say

---

[1] Unless otherwise noted, throughout this brief, emphasis has been supplied.

that a few bare conclusions, not supported by adequate findings of evidentiary facts and against the clear weight of the evidence, should be determinative of questions involving the very foundations of our constitutional system—that findings of such a character should be given conclusive effect where finality of fact may be finality of law. If such were the rule, our constitutional system would depend wholly upon the industry, judgment or prejudice of a trial judge and the function of this Court in preserving our constitutional system and the constitutional liberties of the people would be substantially destroyed.

II.

THE APPELLEES WHOLLY FAIL TO SHOW THAT THE WATER POWER WILL BE INCIDENTALLY CREATED IN THE DISCHARGE OF ANY CONSTITUTIONAL FUNCTION, AND IN EFFECT CONCEDE THAT IT IS SEPARATELY AND PURPOSEFULLY CREATED UNDER THE CLAIMED RIGHT TO DEVELOP ALL OF THE ECONOMIC RESOURCES OF INLAND WATERS, NO MATTER HOW UNRELATED TO ANY FEDERAL FUNCTION. (Answering Appellees' Br. 12-53; 72-106.)

Stated most favorably to appellees, the TVA Unified Plan involves three objectives, that is, some navigation improvement, some flood control and the creation of a vast quantity of water power. At least one of these objectives, the creation of water power, is not within the field of federal power except to the extent that it is incidentally and necessarily created by the operation of structures built for, and having a real, substantial and *bona fide* relation to, the discharge of some constitutional function. That the creation of water power is a separate and independent objective, and not merely an incidental result, of the TVA Unified Plan is conceded by appellees:

> "If the improvement of navigation and control of floods *were the only ends in view,* appellants would not be here to object." (Appellees' Br. 104.)

An examination of the facts and applicable law makes plain that this concession is not improvident.

The issue is not, as appellees chiefly argue, whether the TVA Unified Plan includes any navigation or flood control facilities. The precise questions involved are (1) whether the water power is being, or will be, incidentally and necessarily created by the operation of structures (a) having a real, substantial and *bona fide* relation to the improvement of navigation, (b) having a real, substantial and *bona fide* relation to flood control so far as flood control falls within the field of federal power, or (c) in a *bona fide* and constitutional exercise of the war power; and (2) whether even if the structures creating the water power are in some degree related to navigation, flood control or national defense, the creation of the water power under the facts disclosed in this record is not an attempt to achieve a prohibited end in the guise of exercising a granted power.

We do not contend that the TVA Unified Plan includes no navigation or flood control features, although they are a very minor part of that Plan. We do contend that the main stream projects are primarily power reservoirs with incidental navigation facilities upon which flood control reservoirs (creating no firm water power) are superimposed and that the TVA tributary projects are large power reservoirs without any incidental navigation facilities, and without any relation to navigation, upon *some* of which relatively small flood control reservoirs are superimposed. We also contend that the gross disparity between the size, type and cost of the structures for the creation of water power (as distinguished from facilities for converting water power into electricity) and the size, type and cost of such naviga-

tion and flood control facilities as are included in the TVA Unified Plan emphasizes not only the lack of relation between the creation of water power and the functions of navigation or flood control, but also the attempt to achieve a prohibited end in the guise of exercising granted powers. (Appellants' Br. 115-121.)

The appellees do not meet these issues and attempt to obscure and screen them by intermingling a discussion of navigation, flood control and national defense in inextricable confusion. Indeed, they even seek to evade the whole question of the creation of water power. This is clear from the opening sentence at page 12 of their brief where they omit any reference to power and insist that the TVA Act contemplates a project only for the purposes of navigation, flood control and national defense. If, as we have shown, none of the firm water power is created as the incidental result of the exercise of any one of the constitutional powers invoked, it can not logically be said that, in some nebulous and undisclosed fashion, the creation of the water power may be sustained, by confused and unanalyzed references to these federal powers generally. The summation of three zeros is still zero. It is in fact obvious, as hereinafter shown, that the appellees' argument rests upon the erroneous conception of law that if *any part* of the statutory or administrative scheme or *any part* of a federal power structure or a series of power structures has any relation to a federal function, then the Federal Government may purposefully and deliberately create water power which is not the incidental result of the exercise of any constitutional function.

A. THE APPELLEES' CONTENTION THAT THE CONSTITUTIONAL AUTHORITY OF THE FEDERAL GOVERNMENT TO CREATE WATER POWER IS NOT LIMITED TO THAT INCIDENTALLY PRODUCED IN THE DISCHARGE OF A FEDERAL FUNCTION IS UNSUPPORTED BY PRINCIPLE OR AUTHORITY.

The appellees contend that the Federal Government has constitutional authority to create water power in unlimited amounts, so long as the statutory or administrative scheme at some point touches the periphery of some constitutional power, and that the Federal Government may create water power by building separate structures or enlarging structures for the purpose of creating water power, although such additional structures or enlargements are not reasonably adapted nor incidental to the discharge of a federal function. This contention is variously stated as coming within the "choice of means," as being a matter of congressional discretion, and finally as a bald right to develop all resources (that is, to make all uses of property, private or governmental and federal or non-federal) which could be achieved by any sort of structures which the Federal Government might choose to erect at the site of any federal undertaking.[1] (Appellees' Br. 74, 75, 95-106.)

These claims overlook the well-settled principle that "to a constitutional end many ways are open, but to an end not within the terms of the Constitution *all ways are closed,*" and that constitutional power is not a matter of congressional or administrative discretion. *Carter v.*

---

[1] The appellees state (Appellees' Br. 103):

"The projects of the Authority are the only projects which adequately develop the available sites to conserve the water resources of the Tennessee River system for navigation, flood control, *power,* and *other beneficial uses* (fdg. 93, r. 621, app. I, 51). The Congress, we submit, *may authorize the full utilization* of the necessary *sites* wherever the projects are reasonably required for navigation and flood control. * * *"

Carter Coal Co., 298 U. S. 238, 291. They overlook the fact that means adopted under the constitutional power over navigable waters must have "some positive relation to the control of navigation and not otherwise (be) inconsistent with the Constitution," and that such means must have "a real or substantial relation to the control of navigation or appropriateness to that end." *Wisconsin v. Illinois*, 278 U. S. 367, 415.

In support of their novel propositions the appellees erroneously rely upon *Green Bay & Miss. Canal Co. v. Patten Paper Co.*, 172 U. S. 58; *United States v. Chandler-Dunbar Water Power Co.*, 229 U. S. 53; *Arizona v. California*, 283 U. S. 423, 456; and *Buchanan v. United States*, 78 Ct. Cl. 791. (Appellees' Br. 96, 74, 90.) The appellees' fundamental misconception of these cases is sharply brought out by their discussion of *Green Bay & Miss. Canal Co. v. Patten Paper Co.*, and *United States v. Chandler-Dunbar Water Power Co.*, at pp. 96-97 of their brief.

The navigation works involved in *Green Bay & Miss. Canal Co. v. Patten Paper Co.* were the same navigation works which were before this Court in *Kaukauna Co. v. Green Bay & Miss. Canal Co.*, 142 U. S. 254, on appeal from 90 Wis. 370. In the *Kaukauna* case this Court held that the "surplus of water" (that is, surplus water power) was "necessarily" created by the dam and sustained its validity by a decision in which it condemned the creation of "a wholly unnecessary excess of water" and confined its approval to "cases where the surplus is a mere incident to the public improvement" (loc. cit. 275). In the same case the Supreme Court of Wisconsin had expressly held that the water power created was "in a true sense incidental to the erection of the dam" (loc. cit. 401).

There was no suggestion that the dam had been enlarged for the purpose of providing a power reservoir and thus creating additional water power. The fact that only

one per cent of the flow of the water thus necessarily impounded to create the navigation level was needed for the operation of the navigation facilities in no way affected the fact that the remaining 99 per cent was incidentally and necessarily created by a *bona fide* navigation dam. When these navigation works passed to the United States, it naturally acquired the water power which was incidentally created, and that is all that was held by *Green Bay & Miss. Canal Co. v. Patten Paper Co., supra.* These cases plainly support the position of appellants. They could be apposite from the standpoint of appellees only if the appellants were contending (as appears to have been contended in the *Ashwander* case) that even in the case of a *bona fide* navigation dam the Federal Government does not own and can not develop any of the water power created by the dam beyond that used or reasonably anticipated to be required for navigation purposes. That such is not the issue here is too plain for misunderstanding. (Appellants' Br. 94-122.)

Similarly, appellees argue (Appellees' Br. 97) that because in the *Chandler-Dunbar* case only a small portion of the total flow of the river was necessary to operate the navigation facilities, that decision sustains the power of the Federal Government separately and purposefully to create water power not incidentally brought into being by the operation of *bona fide* navigation structures, and sustains a right in the Federal Government to create water power quite apart from the discharge of any constitutional function. In the *Chandler-Dunbar* case this Court quoted from and reaffirmed the principles laid down in the *Kaukauna* case and no claim was made, or could have been made, that the navigation works in the St. Mary's River had been built higher than necessary or appropriate for navigation purposes, or that any structures had been built for the creation of water power. All of the water power which was to be leased in the *Chandler-Dunbar*

case was incidentally created by the navigation works which had been built across the St. Mary's River. All the water used for power purposes was to be, and is, withdrawn from the waters impounded by the *bona fide* navigation structures. (See map opposite page 36, Statistical Report of Lake Commerce Passing Through Canals at Sault Ste. Marie During the Season of 1937, issued by the Corps of Engineers, United States Army.) Naturally the full flow of the St. Mary's River was not required to supply and operate the locks. If the dam involved in the *Chandler-Dunbar* case had been built so as to provide a power reservoir on top of a navigation project, or if that project had included large power reservoirs on tributaries, then the case might be cited by the appellees with some shadow of appositeness to the suit at bar. Under the facts of the case and the holding of this Court the decision plainly supports appellants and negatives the pretensions of power asserted by the appellees.

Appellees erroneously state (Appellees' Br. 98) that in *Buchanan v. United States* the navigation dam (Ohio River Dam No. 41) "had been constructed *several feet higher* than required for navigation" and that "compensation was sought for the taking of lands to the extent they were *overflowed* by the excess taking." The facts, however, are that "none of the plaintiff's fast lands" had been overflowed (which shows that the dam was not high enough to create a pool overflowing the banks even at the dam site), that the alleged excess height was only *two feet*, and that the plaintiff did not challenge the power of the United States in the premises but only sought to recover compensation upon the theory that the project exceeded the natural servitude of riparian property in favor of navigation on navigable streams. (loc. cit. 794.) Of course if, as stated in appellees' brief, any lands of the plaintiff had been "overflowed," he could have recovered compensa-

tion regardless of the validity of the federal project. *United States v. Cress*, 243 U. S. 316. The inappositeness of this case to support the contentions of appellees is manifest.

In *Arizona v. California*, 283 U. S. 423, the only two challenges as to the validity of the federal action were that the Federal Government had no power to proceed with the construction of the dam in the Colorado River because (1) the river was non-navigable and (2) even if the river were navigable, the dam would not be built in the exercise of any federal power to improve navigation as it was to be subject to the Colorado River Compact, which made navigation subordinate to the local uses of irrigation and water power. These two contentions were disposed of by this Court on motion to dismiss (1) by taking judical notice that the river was navigable, and (2) by holding that it was immaterial what the Compact provided as the Compact could not overrule the contrary provisions of the Boulder Canyon Project Act.

Therefore, on the state of the pleadings no further question as to the constitutionality of the construction of the dam was presented. In addition, as pointed out in the opinion, the Court had before it Congressional Documents and Reports of the Army Engineers which showed that the principal obstacles to navigation were the enormous amounts of silt brought down by the river (due to its great slope and location in a semi-arid region with little cover) and the insufficiency of the low water flow, which obstacles could only be removed by the construction of a dam with enormous capacity for storing silt and with sufficient capacity to store the entire flow of the river so as to provide necessary low water releases to make possible navigation.[1]

---

[1] The Colorado River system carried more silt per square mile of drainage area than any other river in the United States, —more than 161 million cubic yards annually being carried past Yuma. (U. S. Water Supply Paper No. 234, pp. 78-98; H. Rep.

(Continued on page 16)

It was on that basis, with no evidence and indeed no claim to the contrary, that this Court in passing observed that the dam was not unrelated to the improvement of navigation and that any determination as to whether the particular structures were reasonably necessary was not before the Court for consideration.

It is not to be supposed that this Court in that decision intended to reverse the settled principle that the Federal Government has no constitutional authority to create water power except that which comes into being through the oper-

---

(Continued from page 15)

918, 70th Cong. 1st Sess., p. 4.) Successive deposits of this silt caused the river bed to rise higher and higher each year and resulted in an extremely unstable channel. (S. Rep. 592, 70th Cong. 1st Sess., p. 6.) The low water flow of the river was only 1300 cubic feet per second, all of which was frequently diverted for irrigation, leaving no flow in the channel for periods as long as ninety days. (H. Rep. 918, 70th Cong. 1st Sess., p. 4; Report of Major R. R. Raymond in H. Doc. 1141, 63d Cong. 2d Sess.; S. Rep. 592, 70th Cong. 1st Sess., p. 23.) This unique situation could not be corrected either by open channel improvement or by canalization, for silt deposits would still destroy the channel and the low water problem would not have been solved. Only by the construction of a huge storage reservoir such as Boulder, with provision for the accumulation of silt for many years and with reservoir capacity sufficient to store the entire annual flow of the river, could a navigable channel be provided. (H. Rep. 918, 70th Cong. 1st Sess., pp. 17, 22.)

The conditions on the Tennessee River are precisely opposite. The only satisfactory method of improving the Tennessee for navigation is by canalization and its satisfactory improvement by tributary reservoirs is impossible. (H. Doc. 328, 71st Cong. 2d Sess., pp. 23, 65.) The Tennessee carries only about 2.2 per cent as much silt as does the Colorado, and has no silt problem. (H. Doc. 328, pp. 26, 39, 40.) Its low flow is more than three times that of the Colorado and none of it is diverted for irrigation. (H. Doc. 328, p. 31; H. Rep. 918, 70th Cong. 1st Sess., p. 4.) A 9-foot navigable channel could be provided only by canalization. (H. Doc. 328, p. 23.) Regulation of flow even by controlling all of the principal tributaries would not provide such a channel. (H. Doc. 328, p. 65.) Thus the Tennessee River may be improved for navigation only by canalization and the effect of storage projects on its tributaries, if any, is unfavorable to navigation. (Appellants' Br. 25.)

ation of structures having a real, substantial and *bona fide* relation to the discharge of some constitutional function. Appellees' contrary contention is negatived by the fact that the opinion in *Arizona v. California* cites *United States v. River Rouge Improvement Co.*, 269 U. S. 411, 419, and by the express holding of this Court in *Ashwander v. Tennessee Valley Authority*, 297 U. S. 288, 340.

As before pointed out, the existence of a constitutional power is not a matter of congressional discretion, nor is it a matter of choice of means to an end. If the principle urged by appellees and their construction of *Arizona v. California* were sound, then it would follow that any purported regulation of interstate commerce which in any way touched interstate commerce would be constitutional and immune from judicial review even though it undertook plainly to regulate matters of intrastate concern having no relation to, or effect upon, interstate commerce. It is familiar law that regulations of interstate commerce which include subjects not properly falling within that power may not escape constitutional condemnation because *in part* they deal with matters falling within that field. The power to improve navigable streams is merely implied from the power to regulate interstate commerce. It would be a strange situation indeed if it were the law that this implied power is free from all restraint and may be made to include subjects outside the scope of that power, upon the ground that they are immune from judicial review as mere matters of choice of means to an end or of congressional discretion.

The Federal Government undoubtedly has the power to provide, and in some cases does provide, Diesel or steam power to generate electricity for the operation of navigation locks. If the principles advanced by the appellees are sound, the Federal Government as a choice of means to an end may build at any navigation lock a steam generating plant sufficient in capacity to serve several States and,

so long as it devotes some fraction of the power to operating navigation locks, use the surplus to engage in a public utility business as a federal monopoly, regulate local electric rates and service, and establish a federal policy of public or non-profit operation of the electric business throughout the States within transmission distance.

A recognition of the appellees' claim would vest the Federal Government with the right to appropriate all beneficial uses, if not with the ownership, of all of the water resources in the United States, federal or non-federal and navigable or non-navigable.[1] In the last analysis, the appellees' claim rests upon an alleged necessity to prevent waste of potential water power resources. They state at page 106 of their brief that the "sole question is whether the resources of the Tennessee River may be developed by the Federal Government or not at all." While this circumstance would not furnish a substitute for constitutional power, it is without basis in fact.

The Reports of the National Waterways Commission and of the Inland Waterways Commission (upon which appellees place so much reliance), the history of the "308 Surveys" (reviewed at pp. 6-7 of our main brief), the his-

---

[1] The scope and effect of appellees' claims are overwhelming. The total electric sales to ultimate consumers in the United States, as reported by the Edison Electric Institute, was approximately 95,000,000,000 kilowatt-hours for the year ending June 30, 1938. The Federal Power Commission has reported that the undeveloped hydro-electric resources of the United States will produce over 275,000,000,000 kilowatt-hours annually. (Fed. Power Comm. Interim Report, Power Series No. 1, 1935, p. 33, Table 14.) If, as appellees claim, the Federal Government has the authority to construct storage reservoirs upon any waters which ultimately drain through navigable channels to the sea upon the ground that low water releases for power operation will increase low water flow, and may deliberately develop all of the power resources at such sites "to avoid waste of potential water power," then it is plain that the Federal Government may at any time take over the entire business of supplying electricity to the public as a federal monopoly. Manifestly, the claims of the appellees prove far too much.

tory and form of the Federal Water Power Act, H. D. 328 and the provisions of the Rivers & Harbors Act of July 3, 1930, adopting the Federal Navigation Project for the Tennessee River (discussed in our main brief, pp. 6-10), all show *not* that the Federal Government owns and has the power to develop all of the water resources of the United States, *but a recognition of the fact that Congress should exercise its paramount power over navigation with due regard for the right of the States and their people to develop the water power and other non-federal resources of navigable streams.* That such cooperation is impossible, or even difficult and burdensome, is belied by the terms of the Rivers & Harbors Act of July 3, 1930 (see Appellants' Br. 7-10), by the report of the Corps of Engineers in H. D. 328 (Comp. Ex. 105°), by the Federal Power Act and by the fact that the State of New York has entered into an agreement with the Corps of Engineers pursuant to the policy declared in N. Y. Laws of 1931, ch. 772, sec. 1, under which all of the potential water power of the St. Lawrence River will be developed by the State of New York in the event of a federal improvement of that river for navigation. (Third Annual Report, N. Y. Power Authority, N. Y. Leg. Doc. (1934) No. 92, p. 62.) The quotation from the Federal Water Power Act at p. 100 of appellees' brief shows how the Federal Government may regulate the development of other water uses by the States and their people so far as necessary to preserve legitimate interests of navigation which is the source and limit of any constitutional concern of the Federal Government.

Whether the States and their people will develop the potential water power resources of the Tennessee basin, or of any other basin, depends upon economic feasibility. But their action or inaction in this respect, whether wise or unwise, does not vest any constitutional power in the Federal Government. If there is any potential water

power "wasted" by reason of failure of the States and the people to develop hydro-electric resources, that potential water power is not the property of the Federal Government and with it the Federal Government has no constitutional concern. Indeed, an economically unsound development of water power or a development of water power in the absence of any market is itself an economic waste.

The claim that the Federal Government may create water power, build power reservoirs and engage in the power business merely to defray the cost of some federal undertaking is plainly absurd. The Federal Government is granted power to raise money *by taxation and by borrowing* to carry out the functions of government. It has been granted no power to engage in businesses for the purpose or with the hope of making money either to build federal structures or to carry on the functions of government. Nor do the appellees take anything by referring to the power of the Federal Government to spend for the general welfare. We are not here concerned with an expenditure for the general welfare, but with the power of the Federal Government directly to engage in a continuous undertaking; and the power to spend for the general welfare is not a grant of power for the Federal Government directly to undertake anything, and much less to engage in undertakings not related to its powers, merely because they involve the expenditure of money. *United States v. Butler,* 297 U. S. 1; *Carter v. Carter Coal Co.,* 298 U. S. 238.

Appellees rely upon an alleged "intimate relation" between navigation and power development. (Appellees' Br. 99, 51, 52.) This is supposed in some fashion to extend the power of the Federal Government to create water power beyond that which is incidentally created by the operation of a *bona fide* constitutional structure. Under such circumstances there is no "intimate relation" beyond the fact that

both water power and navigation depend upon water but in decidedly different ways.[1] There is an intimate relation between the production of primary commodities or of goods and the flow of interstate commerce, but the Government could hardly engage in the production of primary commodities or the manufacture of goods upon the ground that there is an "intimate relation" between such production or manufacture and the flow of interstate commerce.

The appellees further assert that the Federal Government, having once constitutionally established a structure at which some water power is constitutionally created, may build power reservoirs in order to "maintain" and "improve" the property of the United States. (Appellees' Br. 95, 30.) This supposed principle is said to apply with peculiar force where the Federal Government has installed generating capacity or even provided emplacements for generators in excess of the amount of firm water power lawfully created. Every hydro-electric project has generating capacity which exceeds the low water flow and is less than high water flow; and the ratio between installed generating capacity and high flow is a matter of economic judgment. But the argument of appellees (Appellees' Br. 30, 95) comes to this. In a constitutional structure, such as Wilson Dam under the National Defense Act of 1916, the Government may not only install sufficient generators to utilize the water power created, but if it installs or even provides emplacements for more generators, then it may

---

[1] Navigation attempts to overcome the fall of water by the creation of slack-water pools, by dredging, or by other means. Power seeks to increase, or concentrate, and to utilize the fall of water. Navigation is chiefly concerned with depths and widths of channels and is most benefited by the minimum low water discharge which will fill the channel and supply lockage. Power is not related to channel dimensions, and the development of firm or commercial power requires the maximum low water discharge obtainable.

build other power reservoirs to create enough water power to utilize the excess generating capacity; and then, if it makes another mistake and creates more water power than can be converted by the generating capacity already installed, the Government may install more generators; and if the Government happens to install too many additional generators, it may then build more power reservoirs in order to develop and maintain its property. In other words, the greater and more numerous the mistakes, the greater is the constitutional power.

The inappositeness of cases dealing with the power of the Federal Government to irrigate arid public lands to make them habitable and place them in condition for sale is manifest. Appellees rely upon such cases as *Irwin v. Wright*, 258 U. S. 219, 231; *United States v. Hanson*, 167 Fed. 881; *Kansas v. Colorado*, 206 U. S. 46, 92. At a constitutional dam the property, if any, which the Government has for sale is water power. The building of power reservoirs or other structures to create *other* water power (we are not here dealing with the conversion of water power into electricity) can not possibly be said to be an improvement of the property which the Government had for sale.

1. The Reports of the Federal Waterways and Conservation Commissions, relied upon by appellees, did not contemplate a federal development of the non-federal resources of inland waters such as water power.

The Reports of the National Waterways Commission, the Inland Waterways Commission and the National Conservation Commission did not contemplate a federal development of the resources of inland waters for power, navigation and flood control. (Appellees' Br. 99-100.) An examination of these reports discloses that the primary consideration was that federal navigation improvements should be made with due regard for the non-federal, private and

local purposes of power and flood control in exactly the same manner as H. D. 328 recommended that States, municipalities and private individuals be permitted to construct high power dams so long as they did not lessen the capacity of the waterway for navigation. (Appellants' Br. 6-10.)

The Preliminary Report of the National Waterways Commission (S. Doc. 469, 62nd Cong., 2nd Sess.) states:

> *"That improvements not essential to navigation should not be undertaken by the Federal Government."* (p. 82.)
>
> *"* * * It should always be borne in mind that the waterway improvements made by the Federal Government under the exercise of its authority should be restricted to navigation.* Whenever bank protection or flood prevention or the clarification of water is the sole object of improvements, the question presents little difficulty in its solution. Such projects are not a proper charge upon the Federal Treasury. A more difficult problem, however, is presented where the improvements just mentioned have as their object both navigation and the protection of private property. In such cases, in the opinion of the commission, the expense should be apportioned between the Federal Government and communities directly interested. In many instances proposed improvements have as their main object the protection or benefit of private property. In such cases there is a distinct benefit conferred upon individuals or localities which is only of a remote or very indirect benefit to the country as a whole. Lands subject to periodical overflow or lands of uncertain value because of the danger of erosion, when improved, are multiplied many times in value, and there is a constant danger that such improvements will be advocated under the guise of river and harbor legislation framed to benefit navigation, when the real object is the benefit which will accrue to individuals or localities." (p. 83.)
>
> *"* * * The commission would, however, repeat in this connection the recommendation made in No. IV,*

that improvements by the Federal Government be restricted to those essential to navigation." (p. 83.)

"*The control of the Federal Government over navigable streams has to do with navigation only.*" (p. 86.)

The final report of the National Waterways Commission (S. Doc. 469, 62nd Cong., 2nd Sess.) states:

"4. *The Federal Government has no constitutional authority to engage in works intended primarily for flood prevention or power development. Its activities are limited to the control and promotion of navigation and works incident thereto.* The commission is of the opinion that flood prevention is primarily a local problem, and the work of controlling floods should in the first instance be undertaken by the minor political subdivisions, but that the Federal Government may very properly participate with the localities in carrying out such works *on navigable streams, where a substantial and necessary improvement to navigation will result.* Unless some such policy as this is adopted and adhered to, there is grave danger that the *Federal Government may go outside its proper jurisdiction* and become involved in enormous expenditures which are for local benefit. It has sometimes been urged that the Federal Government should undertake works for flood prevention on non-navigable streams which happen to cross a State boundary line. *It is clear that in such a case, if navigation is not concerned, the Federal Government should have nothing to do with flood prevention. A method is provided in the Constitution by which the States may cooperate for this purpose.*

"5. The extent to which the Federal Government should *participate* in the expense of constructing a reservoir system at the headwaters of a navigable stream should be determined in each particular case by an investigation of Government experts possessing the necessary training and facilities for undertaking a study of this nature. If such investigation shows that the promotion of navigation will require the reenforcement of the flow of a stream during the dry season through the aid of storage reservoirs and shows the

number and cost of reservoirs necessary for this purpose, the Federal Government will have a satisfactory basis for sharing in the expense of constructing a larger system intended also for preventing floods. *In this connection it should be noted that the prevention of floods will indirectly benefit navigation, but this alone is not sufficient reason for the participation of the Federal Government in reservoir projects.*" (pp. 27-28.)

The Preliminary Report of the Inland Waterways Commission (S. Doc. 325, 60th Cong. 1st Sess. p. 25) and the Report of the National Conservation Commission (S. Doc. 676, 60th Cong. 2nd Sess. pp. 479) recognized the same principle and recommended that the Federal Government cooperate with States, municipalities, corporations, and individuals where navigation was also involved, but that the developments for power and flood control be undertaken only by States, municipalities and private agencies and not by the Federal Government.

2. The appellees' attempt to construe the TVA Act so as to limit the scope of the power development authorized by that Act is unsound.

The appellants have analyzed the nature, purposes and scope of the TVA Act in their principal brief. (Appellants' Br. 6-20.) In general the appellees have not challenged this construction of the Act. However, the appellees do attempt to minimize the scope of the Act with reference to the development of the power resources of the Tennessee River and its tributaries. (Appellees' Br. 34-72.) While the stage in the execution of the TVA Act, known as the TVA Unified Plan and comprising the current construction schedule of TVA, is far more than sufficient to bring it within the condemnation of the *Ashwander* case and applicable constitutional principles, the construction of the Act urged by the appellees is plainly untenable.

It is not open to debate that the TVA Act, prior to the amendments procured by TVA in 1935 after the decision of the lower court in the *Ashwander* case, did clearly and explicitly authorize TVA to develop all of the power resources of the Tennessee River and its tributaries. (See Appendix, p. 5, Appellants' Br.) Appellees now assert that this blanket power was curtailed by the amendment of 1935 and quote the first part of Section 4(j) as amended in support of their contention. (Appellees' Br. 34.) They omit the *cumulative* grant of power contained in Section 4(j) as amended, which reads:

> "; and shall have power to acquire or construct power houses, *power structures,* transmission lines, *navigation projects,* and *incidental works in the Tennessee River and its tributaries,* and to unite the various power installations into one or more systems by transmission lines." (Appendix, p. 5, Appellants' Br.)

Manifestly these "power structures" and "navigation projects" which may be constructed anywhere in the Tennessee River and its tributaries are in addition to those authorized in the portion of Section 4(j) as amended, to which appellees limit their quotation at page 34 of their brief. Manifestly this cumulative grant will permit the construction of any power development desired by the appellees at any point in the Tennessee River and its tributaries. But even the portion of Section 4(j) as amended, which is quoted by the appellees, will, if measured by appellees' theories of statutory and constitutional construction, include authority to construct power projects "not unrelated to navigation" upon every creek and up to every spring house in the Tennessee basin, upon the theory that the power operations may increase the low water flow with either no benefit to, or trifling effect upon, navigation.

It is also argued that the incidental character of power development under the Act is established by the direction

that the operation of the power projects shall be subordinate to the paramount right of navigation and of flood control so far as it falls within the field of federal power. (TVA Act, Sec. 9(a); Appellees' Br. 88.) *This is precisely the same kind of a provision which is included in the Federal Power Act for the regulation of the development by private interests of non-federal water resources in such a way as to prevent interference with the paramount right of navigation.* (Appellants' Br. 11.)

B. THE APPELLEES WHOLLY FAIL TO MEET THE ISSUE THAT NONE OF THE FIRM WATER POWER WILL BE CREATED BY THE CONSTITUTIONAL EXERCISE OF THE IMPLIED POWER TO IMPROVE NAVIGABLE STREAMS.

The arguments of the appellees are devoted to the proposition that these incidental navigation facilities will benefit navigation and consequently are entirely beside the point. Nowhere do they meet the controlling issue. This is apparent from an examination of their principal contentions in so far as they have not already been covered in our opening brief.

1. The appellees fail to show even an incidental relation between their tributary power projects and the improvement of navigation.

We have previously examined and shown untenable the appellees' contentions (Appellees' Br. 42, 49-50), that constitutional authority for the construction of their large tributary power projects may be rested upon the ground that low water releases incident to power operations will during the construction period to some extent temporarily increase the depths in portions of the main river where TVA has postponed navigation improvement in the interests of power development. (Appellants' Br. 25-6, 111-113.) The appellees apparently recognize the

untenable character of this claim and now for the first time boldly assert that low water releases which are incident to power operations, would provide the channel essential for navigation below Pickwick without canalization. (Appellees' Br. 16-17, 82.) Since both the Federal Navigation Project and the TVA Unified Plan provide for complete canalization of the Tennessee River, it is plain that *this alleged temporary benefit,* even if in accord with the facts, could not afford constitutional authority for the construction of large power projects on the tributaries at a cost of approximately $120,000,000. But the contention is not in accord with the facts.

Appellees in support of this contention rely solely upon a hypothetical question put to the witness Putnam, in which he in effect said that if the extravagant claims advanced by the appellees with reference to the enrichment of low water flows were true (for which, of course, he did not vouch), there would be no reason for the construction of the Gilbertsville Project. (Putnam R. 2312-3.) Any contention that the project depths could thus be created below Pickwick is refuted by the entire record.

Appellees' witness Barker testified that the Tennessee River could not be improved for 9-foot navigation except by canalization. (R. 1493.) In H. D. 328 (Comp. Ex. 105°), it is stated at page 12: "Improvement of the main river solely by regulation of flow by means of reservoirs would not be satisfactory, *because sufficient navigable depths can not be secured.*" And at page 33, the District Engineer, a witness for appellees, said: "The only satisfactory method of dev opment of the main stream and its tributaries is by canalization," and the same District Engineer shows in a Table, appearing at page 65 of H. D. 328, that with the construction of all reservoirs which he found possible on the entire Tennessee River system at an estimated cost of $1,200,000,000, the navigable depths in this portion

of the Tennessee River (Riverton to Paducah) would only be 8 feet. This falls four feet short of the depth required for a 9-foot waterway; for the evidence is uncontradicted that under the standard practice of the Corps of Engineers a 9-foot waterway is constructed with over-depths of 3 feet in order to provide adequate 9-foot navigation. (Putnam R. 1169, 1173-4; Watkins R. 1604-5; Barker R. 2009.)

In a further effort to find some relation between the tributary power projects and navigation, appellees assert in a footnote (Appellees' Br. 88) that the dead storage behind Norris Dam, plainly and solely adapted to the creation of water power, was necessary "to preserve existing navigation on the Clinch River," citing Finding 68. The fact is that there has been no navigation on the Clinch River since 1930 and such insignificant navigation as existed on the Clinch before that time was confined to a 2 to 1½ foot project on the portion of the river between its mouth and the head of navigation, 13 miles below the site of Norris Dam. (Annual Report of the Chief of Engineers, 1936, Part 2, p. 777; Fdg. 40.) Moreover, the testimony of appellees' witness Barker shows that the river was not practically navigable below Norris Dam and that barges could neither be brought to that point nor loaded at that point. (R. 1998.) The further assertion that the dead storage behind the dam was necessary "to prevent foreclosure of the river's future improvement for navigation" is answered by the fact that the dam 265 feet high has no navigation facilities, and by the further fact that it would not be practicable to provide any navigation facilities (Fdg. 80, R. 619) so that the dam itself constitutes a complete barrier to any possibility of creating navigability on that portion of the Clinch River.

In their search for some excuse other than power for the huge Hiwassee project and especially its dead storage, appellees assert that the maintenance of the dead storage

at Hiwassee (euphoniously termed "slack water pool") "would be of value for the preservation of *its* level by affording a capacity for the deposit of silt." (Appellees' Br. footnote, p. 88.) This claim (based upon Finding 68, rejected in this particular by Judge Gore) is fanciful. There is no evidence that silting creates any navigation problem on the Tennessee River or its tributaries, and much less that there is any silting problem on the Hiwassee with its headwaters in the timbered regions of the Great Smoky Mountains. In fact, silting in the Tennessee River Basin is relatively small (H. D. 328, p. 39) and it would be untenable to suggest that such a negligible matter might afford a constitutional basis for the construction of large power developments by the Federal Government. Manifestly this dead storage can have no value for flood control or low water regulation. Appellees do not, and can not, assert that this dead storage has any navigation value.

Finally, appellees try to minimize the dead storage in the Hiwassee project by making the obviously misleading comparison between the capacity of its dead storage and the capacity of the total storage (dead storage, power storage and flood storage) in all of the reservoirs of the TVA Unified Plan on the Tennessee River and its tributaries. In fact, the lower 135 feet of the Hiwassee reservoir, or from elevation 1280 to 1415, constitutes dead storage upon which is superimposed 111 feet of power storage. (Fdg. 43, R. 605; Def. Ex. 50.) No credible purpose for the creation of this dead storage, utilizing over one-half of the useful height of the dam, can be found except the creation of water power. An examination of Finding 43 (cf. Columns 5, 6, 10 and 11) also shows that the balance of the Hiwassee reservoir is entirely taken up with power storage (there called "low water regulation") and that *this project does not even have a small superimposed flood control reservoir.* It is wholly a power reservoir.

The attempt of appellees to deny that five-sixths of the firm or commercial power is created by the TVA tributary projects is wholly indefensible. (Appellees' Br. 51.) The testimony that five-sixths of the firm water power to be created under the TVA Unified Plan will be created by the tributary projects is uncontradicted in the record. (Appellants' Br. 28, 45-46.) The amount of firm or commercial water power is dependent upon low water flow. The effort of the appellees to cloud this issue by saying that at times (which are, of course, during periods of ample flow in the main river when the tributary reservoirs are filling up their power storage) the generators at the tributary projects may not be in operation and that the tributaries merely provide an increased water supply from which electricity is generated during the low water season is sheer quibbling. The short and simple answer is that if the tributary projects are eliminated from the TVA Unified Plan, the quantity of firm or commercial power to be created by that Plan will be reduced five-sixths.

Appellees assert that low water releases, which are the incident of power operations, would benefit navigation on the Mississippi through increasing low water flows. (Appellees' Br. 81.) Appellees concede that their authority under the Act, in so far as it has any relation to navigation, is limited to improvement of navigation on the Tennessee River or its tributaries. (Appellees' Br. 34.) Appellees rely upon Finding 52, which was rejected by Judge Gore and is contrary to the clear weight of the evidence. (Appellants' Br. 26.) Moreover, any suggestion that the construction of a huge power development costing hundreds of millions of dollars on the Tennessee River and its tributaries could be sustained as a constitutional choice of means for a trifling increase in low water flow on the Mississippi plainly falls of its own weight. (Appellants' Br. 113.) Thus, General Ferguson, President of the Mis-

sissippi River Commission, testifying with respect to the lower Mississippi River in the recent Hearings Before the House Flood Control Committee, said:

> "Mr. Chason. In that reach what do you do in order to keep a sufficient depth for navigation throughout that entire system? Is the river naturally of such a depth that you do not have to do any local works?
>
> General Ferguson. Very few. We have to confine the river in one channel that is sufficient to give the depth required." (Hearings, H. R. Com. on Flood Control, 75th Cong., 3rd Sess., p. 63.)

2. The appellees fail to show any constitutional relation between the improvement of navigation and the creation of the water power at the TVA projects over-all.

Most of appellees' claims do not relate to whether any of the water power is created by structures having a real, substantial, *bona fide* and primary relation to the improvement of navigation, but to whether the incidental navigation facilities do benefit navigation. Other claims relate to alleged benefits of no practical significance which, if they existed, would merely be incidental results of the construction and operation of a large power system which by no possibility could be regarded as falling within the range of constitutional choice of means for improvement of navigation.

The appellees' principal claim is that the waterway incidentally resulting from the construction of the TVA power project will be "superior" to the Federal Navigation Project adopted in the Rivers and Harbors Act of July 3, 1930. (Appellees' Br. 24, 76.) In our main brief, we have reviewed the evidence and shown that the advantage from the standpoint of navigation lies with the Federal Navigation Project costing substantially less than one-sixth of the estimated cost of the TVA Power Project. (Appellants' Br. 22-36.) The appellees rely upon Finding 52 (R. 610) which

was rejected by Judge Gore and upon Finding 54, which enumerates alleged superiorities of the TVA incidental navigation channel and facilities and which was modified by Judge Gore to a simple statement that the TVA channel would have greater depths and widths and fewer lockages than the Federal Navigation Project. (R. 666.) Judge Gore then made additional findings of evidentiary facts (not contradicted by findings of evidentiary facts by the majority), which plainly establish that the Federal Navigation Project would produce navigation facilities at least equal, if not superior, to the incidental TVA navigation facilities. (Add. Fdgs. 16-18, 20-22, 24, 26-28, 30, 34-38, 40, 44, 45, R. 674-9.)[1]

The statement in Finding 54 and in the opinion (R. 548-9) is that the superiority of the navigation channel resulting from the high dams was recognized by the Board of Engineers for Rivers and Harbors in H. D. 328, 71st Congress, 2nd Session, and rests upon a quotation from pages 11-13 to the effect that "such a waterway (with low dams) would be inferior to the high dam developments and would not permit the economical development of power." The appellees and the trial court overlooked the fact that this statement was embodied in that part of the Report of the Board of Engineers containing its summary of the Report of the District Engineer and constituted no part of the discussion or recommendations of the Board

---

[1] The purpose of comparing the physical and functional characteristics and the costs of the projects in the TVA Unified Plan with the physical and functional characteristics in the case of the Federal Navigation Project is not, as appellees well know, to show that a comparable navigation improvement could have been obtained by the construction of a less expensive system of dams (as asserted in Appellees' Br. 75-6) but to demonstrate that the TVA projects are merely power projects with some incidental navigation facilities and an attempt purposefully to create a great federal power project in the guise of exercising power to improve navigation.

(H. D. 328, pp. 8-19), and the further fact that the Board of Engineers in its own analysis makes no statement to support such a conclusion. It seems apparent that the Board of Engineers made an error in attributing this statement to the District Engineer. No such statement appears in his Report. Indeed, the District Engineer stated:

> "The plan (referring to the Federal Navigation Project adopted in the Rivers & Harbors Act of July 3, 1930) however, will provide a waterway comparable in every way with the improved Ohio and adapted to incorporation with a consolidated inland waterway system of 9-foot depth. * * *
>
> The district engineer believes that no lesser project will provide an adequate waterway for modern barge traffic and therefore believes that *if there be any modification of the plan* by the substitution for any two or more low dams of *a high dam to develop power* or provide flood protection, *that the capacity of the waterway for the economical movement of modern barge traffic, should not thereby in any way be lessened.*" (H. D. 328, p. 100.)

At page 25 of their brief, appellees again quote *part* of a paragraph in the Report of the Chief of Engineers which again merely summarizes *part* of the Report of the District Engineer and does not express any opinion of the Chief of Engineers; and at the same time they omit the Chief's summary of the definitive recommendation of the District Engineer (H. D. 328, p. 5, par. 17) that the low dam plan should be adopted, which plainly shows that this truncated quotation is not subject to the construction sought to be placed upon it by appellees.

On page 26 of their brief, appellees quote an excerpt from the Report of the District Engineer as "the final recommendation in the Report." The final recommendation in the report and the one incorporated in the Rivers & Harbors Act of July 3, 1930 was, of course, the Report of the Chief of

Engineers (quoted, Appellants' Br. 9.) But appellees' quotation is not even the final recommendation of the District Engineer. Even the sentence quoted significantly omits the words "and subject further to such modifications as may be found necessary *in carrying out the provisions of the Federal Water Power Act.*" Obviously, a federal navigation project as distinguished from power developments to be made by States and private interests did not involve action under the Federal Water Power Act. But more inexcusable still, the appellees' quotation omits the final and definitive recommendation of the District Engineer *which expressly recommends the adoption of the low dam navigation project* with a proviso that other interests might construct high dams under the Federal Water Power Act, *provided that "the capacity of the waterway for the economical movement of modern barge traffic will not be in any way lessened."* (H. D. 328, pp. 100-101.) This recommendation of the Federal Navigation Project by the District Engineer is repeated by the Board of Engineers, p. 14, par. 15, and by the Chief of Engineers, p. 5, par. 17.

Any careful reading of the Reports of the Board of Engineers and the District Engineer in H. D. 328 makes perfectly plain (1) that the Federal Navigation Project adopted in the Rivers & Harbors Act of July 3, 1930 is equal, if not superior, to any navigation channel which might incidentally result from the construction of high power dams with incidental navigation facilities, and that it would "afford navigation facilities on a par with those now existing on the Ohio River" (H. D. 328, p. 97); (2) that the system of projects described in the report as essential or proper to the development of the maximum resources of the Tennessee River and its tributaries included non-federal development for the non-federal purpose of power development; (3) that all such plans "require the coopera-

tion of power companies" (H. D. 328, p. 97); (4) that such developments lay outside the field of federal power (H. D. 328, p. 2, par. 8; p. 19, par. 33); and (5) that the proviso in the final recommendation of the Chief of Engineers relating to the construction of power dams by private interests and States, which was embodied in the Act adopting the project, was in recognition of the policy, evidenced by the Federal Water Power Act and the Reports of the Waterways Commissions upon which appellees rely, that the Federal Government should exercise its paramount power over navigable streams for the benefit of navigation with due regard to the development and utilization of non-federal uses by States and private interests.

The statement that the recommendation was based "on fiscal considerations" (Appellees' Br. 26) is utterly without support in H. D. 328. That the high power dams are not better for navigation and that they can only be justified, with their great cost, for power development was stated in 1935 by General Pillsbury, Assistant Chief of Engineers, when testifying before the House Committee on Military Affairs with respect to proposed amendments of the TVA Act. (Appellants' Br. 35-36.) Appellees inexcusably attempt to create the impression that the testimony of General Pillsbury before this Committee was not received in evidence. (Appellees' Br. 80.) This is in the teeth of the record. (R. 3121.)

Apart from their misinterpretation of H. D. 328, appellees rely upon alleged advantages of an inconsequential character which, if they existed, would be mere incidental results of the construction and operation of a huge power project and ignore the clear superiority of the Federal Navigation Project in the important practical characteristics of an inland waterway, such as capacity for carrying commerce, cost or economic justification, prompt pro-

vision of a continuous nine foot channel and the advantages of open river navigation during a large part of the year. (Appellants' Br. 22-31, 108-9.)

The appellees do not deny that the TVA incidental navigation facilities will have overdepths of only 2 feet but assert that the Federal Navigation Project adopted in the Rivers and Harbors Act of July 3, 1930 made no provisions for overdepths. (Appellees' Br. 79.) They cite no finding in support of this statement and it is squarely contradicted by Additional Finding 4 made by Judge Gore, by the testimony of appellees' witness Watkins (R. 1604-5) and by the testimony of Major Putnam. (R. 1174-5.) They refer to a statement made by appellees' witness Barker on direct. On cross examination the witness Barker admitted that 3-foot overdepths are provided on 9-foot projects under the standard practice of the Corps of Engineers and that they had been provided on exactly similar 9-foot projects adopted and in part constructed on the Illinois, Ohio and Kanawha Rivers prior to the submission of H. D. 328 to Congress. (R. 2009.)

As to the hazard from wind and waves on the wide TVA lakes (Appellants' Br. 22, 26), the appellees do not attempt to make any answer other than that one of their witnesses stated that he preferred the wide TVA lakes (which he had never navigated) to the low dam channel. (Appellees' Br. 77-8.) The record, however, clearly discloses from the testimony of Col. Willson, based on his experience as a navigator on the Tennessee River and on the Wheeler and Wilson lakes, and from the testimony of Major Putnam, operator of commercial barge lines on the Green, Illinois and Ohio Rivers (R. 1150), that there would be a great hazard to the type of equipment with a low free-board normally operating on the inland waterways. (Appellants' Br. 22-26.) Finding 42, cited by the appellees, is clearly inapplicable, and Finding 54, to the extent

that it finds that the wide lakes of the high dams are preferred to the channels of the low dams by the practical navigator, and that craft normally operating on inland waterways will be able to navigate the Tennessee River without change of design or extent of loading, is contrary to the clear weight of the evidence and was rejected by Judge Gore, who specifically found that the wide TVA lakes would require a different type of transportation equipment from that commonly used on the Ohio and Mississippi Rivers. (Add. Fdg. 22.)

The statement in appellees' brief and in Finding 56 that the improvement of the Tennessee for modern commercial navigation would result in annual transportation savings of approximately $10,000,000 is plainly irrelevant because both the estimates in H. D. 328 and those made by appellees' witness Alldredge were entirely independent of whether the river was canalized by high or low dams. (R. 2055.) As bearing upon the reliability of these Findings, it should be noted that the actual estimate of savings was really a little over $7,000,000, that even this estimate was only the estimate of the District Engineer and although stated in the Finding as the estimate "of the Army Engineers," the Division Engineer and the Board of Engineers both expressed the opinion that the savings "would be much less" and that the estimates of the District Engineer were "excessively optimistic." (H. D. 328, p. 5, pars. 18, 19; p. 19, par. 31; p. 20, par. 34; see also Putnam R. 2322-3.)

The appellees' claim that the TVA projects are located at or near the sites selected for high (power) dams by the Army Engineers in H. D. 328, if true, merely confirms the fact, overwhelmingly shown by the entire record, that they are power dams. (Appellees' Br. 38.) These were the high dams outlined by the Corps of Engineers as necessary or appropriate for the maximum development of the

power resources of the Tennessee River and its tributaries and were in direct contrast with the navigation dams recommended by the Chief of Engineers, and indeed by the District Engineer, which were adopted in the Federal Navigation Project of July 3, 1930.

The appellees' claim that the sequence of construction has been determined according to the requirements of navigation and flood control and not of power (Appellees' Br. 38) would, if true, in no way establish that the projects do not include separate and independent power developments. However, the claim is unfounded. (Appellants' Br. 29-31.) After 5½ years of construction activity, TVA has failed to improve the lower part of the river below Pickwick or the section between Chattanooga and Knoxville, the two largest cities. (Appellants' Br. 30.) The appellees rely upon the testimony of the witness Crane. Mr. Crane testified that in his opinion the sequence of construction of the TVA projects was primarily for power. (R. 1283-4.) The appellees also cite Finding 75, which was rejected by Judge Gore and is contrary to the great weight of the evidence reviewed in appellants' brief.[1] (pp. 29-31.) Judge Gore found that the TVA

---

[1] Dr. A. E. Morgan testified before the House Committee on Military Affairs, 74th Cong. 1st Sess. (Comp. Ex. 365†):

"Mr. May: What is the distance between Pickwick Dam and Wilson Dam?

"Dr. Morgan: Fifty miles, approximately. So that the possibilities of the present Government property at Wilson Dam cannot be realized until this Pickwick Dam is built below.

"Mr. Faddis: You mean the possibilities for navigation?

"Dr. Morgan: *The possibilities for power.* The possibilities for navigation of Wilson Dam can be realized." (p. 94.)

"Dr. Morgan: * * * The Wheeler Dam has storage for 2 weeks. It can take care there of a drop in power use over the week-end by storing the unneeded water, and if a little

(Continued on page 40)

Unified Plan is not primarily designed to promote navigation (Add. Fdg. 21), that it is being operated primarily for the purpose of power (Add. Fdg. 73), and that the TVA dams and their order of construction are designed primarily to produce a large amount of firm power for use on a utility system. (Add. Fdgs. 75, 76.)

The appellees' claim that each project has appropriate elements of design for navigation (patently untrue as to the tributary projects, see pp. 29-30, *supra*) and flood control and that each project will result in substantial benefit to navigation (Appellees' Br. 39-40) in no way shows that the creation of water power is incidental to navigation and flood control and the examination of the physical and functional characteristics of the projects in appellants' main brief shows that it is not. (Appellants' Br. 22-60.) Indeed, *Finding 93 makes it very clear that the creation of water power is an entirely independent objective and function of the TVA projects* and it is there sought to justify the provision for the maximum development of water power by the assumption that the use of the sites for navigation or flood control would waste the power resources of the river system, which is, of course, shown to be untrue by the Report of the Chief of Engineers in H. D. 328 and by his recommendations incorporated in the Rivers & Harbors Act of July 3, 1930.

(Continued from page 39)

freshet puts a lot of water into that reservoir, it can take care of such fluctuations in flow.

"So Wheeler Dam can regulate the flow for 2- or 3-week periods; Wilson Dam can regulate it day by day, and Pickwick Dam can be handled to let water out for navigation below.

"Taking the three dams together, we can smooth out that flow and save all of the fluctuations that are not longer than 2 or 3 weeks, and then the storage dams on the reservoirs can take care of the greater fluctuation between winter and summer. *Taking them all together, we will not have any secondary power. It will all be turned into prime power.*" (p. 101.)

In support of a similar proposition at pages 41-42 of their brief, appellees cite Findings 51, 53, 54, 56 and 57. Finding 51 is plainly irrelevant. Finding 53 simply states that each of the projects will result in improvement for navigation. Assuming this were true, it would in no way bear upon the question whether the power development is separate from and not incidental to navigation improvement. It is plainly untrue as to the tributary dams, already discussed, and Judge Gore modified the finding by excluding the tributary projects. (R. 665.) Finding 54 enumerates supposed elements of advantage in the incidental TVA channel and has been previously discussed. (See pp. 37-38, *supra.*) As there pointed out, it was modified by Judge Gore (R. 666) and the inference sought to be drawn by appellees is completely negatived by the findings of evidentiary facts made by Judge Gore and not controverted by any findings of evidentiary facts made by the majority. Finding 56 has been previously discussed and has been shown to be both irrelevant and erroneous. (See p. 38, *supra.*) Finding 57, while probably an overstatement, has no relevancy to the issue. The intangible benefits, whatever they are, would flow from a *bona fide* navigation project as well.

The appellants' assertion that "there is no basis for the contention that the projects have been enlarged beyond the needs of navigation and flood control" (Appellees' Br. 50) involves both a fallacy and a misstatement. The comparison of the Federal Navigation Project and the TVA Unified Plan shows that there is no relation between the size of the TVA projects and the requirements of navigation. There is no contention that the relatively small flood control reservoirs superimposed on the TVA power projects are too large for flood control purposes. The constitutional vice in the TVA Unified Plan is that the major part of the TVA projects are power reservoirs and we not

only assert, but appellees concede, that they do not provide adequate flood control. (See p. 49, *infra.*)

The appellees assert that the projects so far constructed have been operated primarily for navigation and flood control. (Appellees' Br. 47-8.) Even under normal conditions this would amount to nothing more than a statement that the power projects have been operated in recognition of the paramount rights of navigation, just as any private power project must be operated under the terms of the Federal Power Act. Finding 76, relied upon by appellees, is, therefore, without significance on the issue under examination. But the fact is that the operations of TVA up to the time of trial were wholly without significance. As testified by appellees' witness Karr (their Power Superintendent, whom the appellees forgot to identify in their brief), at all times prior to the date of trial the capacity of the TVA power system had so far exceeded any markets which the appellees had been able to wrest from utilities that no problem of regulation of water for power production was involved. (R. 2214, 2217-19.) Of like character is the statement in Finding 74, that approximately 85% of the water released from Norris during the year 1937 was not required or useful for the production of power. As Mr. Karr stated, the water would not have been wasted had there been any market for the sale of power. (R. 2217-18.) These findings still leave at large the question whether the TVA project is, or includes, a separate power development not incidental to navigation improvement.

Upon the basis of Finding 68 the appellees assert that the TVA projects are the only ones which will provide flood control for the Tennessee and Mississippi Rivers in combination with a 9 foot navigation channel on the main stream of the Tennessee. (Appellees' Br. 40, 88.) The portion of the finding here relied upon was rejected by Judge Gore and is plainly contrary to the clear weight of the evi-

dence. (R. 666.) The TVA projects include incidental navigation facilities (except at the tributary projects), superimposed flood control reservoirs (except at Hiwassee) and large power reservoirs which are separately and purposefully constructed and neither essential nor appropriate to navigation or to flood control; and manifestly it is unnecessary to construct these power projects, separately and deliberately included, to provide either navigation or flood control. (Appellants' Br. 36-60.)

C. THE APPELLEES WHOLLY FAIL TO MEET THE ISSUES THAT NONE OF THE FIRM WATER POWER IS CREATED BY FLOOD CONTROL STRUCTURES AND THAT ANY FLOOD CONTROL FEATURES ARE A MINOR PART OF THE TVA UNIFIED PLAN.

We do not contend that the TVA Unified Plan contains no flood control features, although they are a very minor part of that Plan. In our main brief we have shown that none of the firm or commercial power will be produced by any flood control structures incorporated in the TVA Unified Plan, and that in fact the projects in the TVA Unified Plan consist of large power reservoirs, purposefully and separately built, upon which are superimposed relatively small flood control reservoirs. (Appellants' Br. 38-44, 49-53.) It is a matter of common knowledge that flood control and water power development may not be attained at the same site (1) unless the storage capacity available at the site is sufficient to permit the construction of a power reservoir upon which is superimposed a flood control reservoir of sufficient capacity to meet the needs of flood control, or (2) unless, in cases where the storage capacity available at the site does not exceed the requirements for flood control storage, part of such storage capacity is deliberately appropriated for a power project at the expense, and in diminution, of necessary flood storage. Obviously in either situation, the power development is separate and

purposeful. The present Chief of Engineers, General Schley, stated this principle before the House Flood Control Committee in 1938, as follows:

> "Mr. Jarrett. Do you think an hydroelectric dam negatives flood control or helps it?
>
> General Schley. The two are essentially in conflict to this extent, that the flood control reservoir should be emptied as promptly as possible to make capacity for the next flood. For power or for irrigation, the water is impounded and the reservoir is kept full to the greatest possible extent, and for that reason the two are in conflict. *However, it is not at all uncommon to have one reservoir superimposed on the other, flood control capacity on top, impounding capacity below, where you have such a suitable site. You have so much impounded up to a certain plane for power and keep it full at all times, and on top of that you have space which is emptied down to that plane as rapidly as possible so that it will have capacity for the next flood—then you have a multiple purpose or two-purpose reservoir.* In some cases, the two reservoirs had better be separate where local conditions fit that plan best—one reservoir being kept full as much of the time as possible for power or for irrigation, its spillway being ample to let the flood pass on without damage to the structure, the other reservoir being operated to stay empty and retard the flood and prevent it doing damage to the valley below." (Hearings, H. R. Com. on Flood Control, 75th Cong. 3rd Sess., p. 24.)

General Tyler, Assistant Chief of Engineers, testified to the same effect in these hearings. (*Ibid.*, pp. 27-29.)

With the exception of the astonishing contention that the dead storage at Norris and Hiwassee is not an important issue (Appellees' Br. 89, 49; see pp. 29-30, *supra*) the appellees have avoided any discussion of the physical and functional characteristics of the TVA projects, their dead storage and power storage, the wide differences between the costs, physical aspects and effectiveness for

flood control of the TVA projects and the costs, physical aspects and effectiveness of a genuine flood control system. (Appellants' Br. 38-44.) They rely upon references to generalities constituting bare conclusions in findings which, although often erroneous, could have been made with reference to any power project upon which was superimposed a small flood control reservoir. The findings on this subject relied upon by appellees were prepared by them and signed verbatim by the court or a majority of the court. They reflect the infirmities of that procedure and of the erroneous conception of law that the Federal Government may create water power as a separate and independent objective. But even under these circumstances, the generalities and bare conclusions in the findings, upon which appellees rely, do not conflict with the conclusions established by appellants' review of the basic facts.

Finding 39 is in substance that the TVA projects provide some navigation improvement and some flood control and will create water power. This finding could be made with reference to any power project having incidental navigation facilities and a small superimposed flood control reservoir and is entirely consistent with the fact that water power is separately and purposefully developed. Finding 41 is that the TVA projects are like the high (power) dams outlined in H. D. 328; and when it is recalled that this reference is not to the navigation projects but to the projects there outlined for the *maximum development of the power resources* of the Tennessee River and its tributaries, it is plain that the finding is in accord with the fact that power development is a separate and primary objective of the TVA Unified Plan. The finding includes the statement that the projects in H. D. 328 were designed primarily for navigation and flood control, but this part of the finding was rejected by Judge Gore and an examination of the document makes plain that the majority fell into

grave error in accepting the interpretation provided for them by appellees. (See pp. 35-36, 60, herein.)

Finding 42 is in substance that each of the projects has properly designed facilities for navigation, flood control and generation of power. While, as previously shown, the tributary projects have no relation whatever to navigation and no navigation facilities, the finding is in no way inconsistent with the obvious fact that the TVA projects are primarily power developments and that the firm power is separately and purposefully created. While Finding 43 (rejected by Judge Gore) overstates the extent of the flood storage, it does not negative the separate power development and, in spite of the overstatement of flood storage, shows over 4,000,000 acre feet for low water regulation, which is the euphonious name the appellees use for power storage. Manifestly the release of water during periods of low flow is not for the purpose of flood control. We have previously shown that its effect upon navigation, if any, is detrimental. It is plainly a power operation.

While Findings 44 and 45, signed verbatim as submitted by the appellees, contain many statements contrary to the clear weight of the evidence, the filling of the tributary reservoirs during the high water season is a typical power operation and not a flood control operation. It is not the ambition of a flood control operator to achieve a full reservoir. Finding 47, signed verbatim as submitted by the appellees and rejected by Judge Gore, is not supported by the evidence, and is in the teeth of common knowledge.[1] (See pp. 43-44, 47, herein.) General Ferguson, Presi-

---

[1] When the dams of the Miami Conservancy District, whose sole function was flood protection in the Miami Valley, were built under the direction of Dr. A. E. Morgan, a tablet was erected at each dam, which reads:

> "The dams of the Miami Conservancy District are for flood prevention purposes. Their use for power development or for storage would be a menace to the cities below." (R. 1804.)

dent of the Mississippi River Commission, in the recent Hearings before the House Flood Control Committee, stated:

> "Mr. Jarrett. Should reservoirs be empty or full when flood projects?
>
> General Ferguson. Empty.
>
> Mr. Jarrett. *Would that apply to the Tennessee Valley Authority?*
>
> General Ferguson. *The reservoirs designed for flood relief* would be covered by that." (Hearings, H. R. Com. on Flood Control, 75th Cong., 3rd Sess., p. 60.)

Indeed, Finding 47 recognizes that there is a conflict between the use of a reservoir for flood control for local protection and its use for power development. The weasel-worded reference in that finding to navigation is plainly irrelevant to the question of flood control storage and the latter part of the finding leaves one quite bewildered as to how a full reservoir can impound flood waters even though owned by TVA.

Finding 59 (rejected by Judge Gore) has no bearing on the issue. Finding 60 (rejected by Judge Gore) in no way shows that the TVA projects are not power reservoirs upon which are superimposed relatively small flood control reservoirs. While obviously flood control dams must be built high enough to provide the storage necessary for flood control, they need not, and should not, be built on top of power reservoirs. Thus Norris Dam might be much lower (as it obviously would have been under the design of the dam for flood control only by the Bureau of Reclamation, Appellants' Br. 45) if it did not consist of a 200 foot power reservoir upon which is built a 14 foot flood control reservoir. Whether the discharge of a flood control dam shall be automatically controlled or controlled by manual operations is irrelevant to the point at issue. (See pp.

50-52, *infra.*) Finding 65 can, of course, be made with respect to any power reservoir which has a small flood control reservoir superimposed upon it. Thus these and other findings, signed verbatim by the majority as submitted by the appellees, are entirely consistent with the fact, overwhelmingly established by indisputable evidentiary facts, that none of the water power is created by the relatively minor flood control structures included in the TVA Unified Plan. Indeed, *Finding 93 expressly states that the creation of water power is one of the separate objectives of the TVA Unified Plan* and seeks to justify its creation upon the untenable and constitutionally irrelevant claim that the use of the sites for constitutional functions alone would prevent the creation of water power.

Finding 94 does not show (as appellees assert at p. 89 of their brief) that the water power is created by the construction and operation of projects for navigation and flood control. The TVA projects are power projects with incidental navigation facilities (except at the tributary dams) and with small superimposed flood control reservoirs. The navigation facilities and the small flood control reservoirs superimposed on the large power reservoirs can, of course, be operated without interfering with the power development. That the appellees' construction of the finding is erroneous is further shown by the fact that Judge Gore, who joined in Finding 94, expressly found that the TVA Unified Plan is not primarily designed to promote navigation on the Tennessee River and its tributaries (Add. Fdg. 21), and that the proposed method of operation is primarily for power. (Add. Fdg. 73.)

It is thus plain that even the findings relied upon by appellees in no way negative, and in a large measure support, the fact that the water power is separately and purposefully created.

1. The appellees concede that the TVA Unified Plan provides no adequate flood protection for the Tennessee Basin; and the record establishes that none of the firm water power is created by flood control structures.

The appellees concede, and the court found, that the principal flood damages in the Tennessee Basin occur at and above Chattanooga and that a flood control program to achieve the maximum practicable flood protection upon the Tennessee River and its tributaries should be directed primarily to providing protection at Chattanooga and above. (Fdgs. 81, 83, 84, 85, 86; Appellees' Br. 17.)

The appellees concede that the TVA projects will not eliminate flood hazards at and above Chattanooga or reduce floods sufficiently to make feasible the construction of local flood protection works (Appellees' Br. 45) and, for another purpose, they assert that they do not intend to build any more projects. (Appellees' Br. 37.) They do not deny that a system of genuine flood control reservoirs on the tributaries above Chattanooga would achieve the greatest practical flood protection at Chattanooga and above and make feasible the construction of local flood protection works. They merely say that such a plan was never recommended "by any public authority" and does not "appear ever to have been proposed for the Tennessee by any one outside the present trial." (Appellees' Br. 87.)

The appellees overlook the fact that practically all of the sites selected by the witness Kurtz, after careful study in the field, were at or near the sites selected by the Army Engineers for genuine, i.e. empty, flood control reservoirs for local flood protection in House Document 259, 74th Cong. 1st Sess., and the fact that the court found that such a system could achieve flood control on the Tennessee.[1]

---

[1] Appellees make the astonishing assertion that "the system of detention basins would preempt for the single purpose of

(Continued on page 50)

(Fdg. 70, rejected by Judge Gore obviously because it contains other statements plainly erroneous.)

The appellees also make the astonishing objection that such a system of genuine flood control projects on the tributaries would have no value for flood protection on the Tennessee River below Chattanooga. (Appellees' Br. 46.) Of course such a system would have some benefit even on the lower Tennessee. But, more importantly, it is uncontroverted that flood damages on the Tennessee River below Chattanooga are negligible (Fdgs. 81, 82, 83, 84), and that it is not practicable to relieve them beyond the extent that they would be relieved by such a system of flood control reservoirs on the tributaries. On the other hand the huge TVA power reservoirs on the Tennessee River below Chattanooga will permanently flood and destroy thousands of acres more land than is occasionally flooded in a state of nature, and will permanently destroy the usefulness of lands producing annually crops with a value from 30 to 50 times greater than the entire flood damages on that section of the river. (Appellants' Br. 54, 127; Fdg. 84.)

Appellees seek to cloud the issue by the claim that detention reservoirs may not be as effective as manually controlled flood reservoirs. (Appellees' Br. 87.) A detention flood reservoir may be constructed so that its discharge is regulated automatically or manually, the latter method being what appellees call "controlled storage." In either

---

(Continued from page 49)

local flood protection the limited number of available sites and thus foreclose the development of the river for any other uses." (Appellees' Br. 87.) The only other uses for the available sites upon the tributaries is for the development of power, and appellees are therefore in the peculiar position of objecting to the construction of genuine flood control reservoirs because such reservoirs will not permit the non-federal function of purposefully and separately creating water power. This contention of appellees is also peculiarly inconsistent with their assertion that there is no conflict in the operation of projects for power and flood control. (Appellees' Br. 51.)

case a genuine flood control reservoir is kept empty except at time of flood and it is a matter of indifference (either from the standpoint of the practicability of providing flood protection on the Tennessee by genuine flood control reservoirs or from the standpoint of whether such flood storage creates water power), whether the genuine flood control reservoirs are constructed to operate automatically or by manual control at times of flood. In either case the genuine flood control reservoir produces no firm water power and the contention of the appellees on this point is an inconsequential quibble. (Offer to Prove, Justin R. 2383, 2385.)

The appellees are entirely silent upon the point that if flood protection on the Tennessee River had been a primary objective of the TVA Unified Plan, that objective could have been attained for a fraction of the cost of the Unified Plan. Nor do they explain the fact that two years after TVA had adopted a plan for the construction of projects costing over $473,000,000 the Congress in the Act of June 28, 1938, directed the Corps of Engineers to make a survey and report for flood control at Chattanooga. The professed concern of appellees for protection of life has a hollow sound in view of the fact that the only instance of loss of life in the Tennessee Valley from floods shown on this record occurred on the Emory River where appellees neither provide, nor plan to provide, any protection whatever. (Kurtz R. 1209.) The power possibilities on that river are small. (H. D. 328, pp. 51-2, 61-2.)

Of like character is appellees' reliance upon Finding 60 (rejected by Judge Gore) that for most effective flood control it is desirable to "provide high dams with controlled storage." The question of "controlled storage" from the standpoint of flood control has been shown to be a mere quibble. Proper flood control dams on the tributaries would of course be high enough to provide the necessary flood storage, but they would not be built higher in

order to create power storage, nor would any part of the storage necessary for flood control be diverted to a power reservoir, and if such dams are built higher to create a power reservoir, the water power thus created is separately and purposefully created and is in no sense incidental to flood control. (See pp. 43-45, 47-48, *supra.*)

2. The appellees' contentions that the flood control reservoirs superimposed on the TVA power projects make any material or consequential contribution to flood protection on the lower Mississippi is contrary to the great weight of the evidence; and in any event, appellees in no way show that the firm power is created by any flood control structures.

The appellees principally rely upon the claim that certain Government Reports, chiefly those of the Corps of Engineers, show that tributary flood control reservoirs have long been recognized as an essential part of a system to control floods on the lower Mississippi and on the basis of this claim they assert that the TVA projects (although only a small part of each project consists of a superimposed flood control reservoir) make a substantial contribution to flood control on the lower Mississippi. (Appellees' Br. 19, 21, 86, 28, 85, 43, 46.) Were this true it would in no way show that the firm power is created by flood control structures. But the claim is unfounded. It rests largely upon a misinterpretation of official documents incorporated in a requested finding of appellees which was adopted verbatim by the trial court. (Fdg. 67.)

It will be recalled that H. D. 328, 71st Cong., 1st Sess. (Comp. Ex. 105°) not only described the system of navigation dams (which was adopted in the Rivers & Harbors Act of July 3, 1930) but also a vast system of projects for the maximum development of the resources of the

Tennessee River and its tributaries for power, flood control and navigation, which might be constructed in its non-federal parts by State and private interests and in its federal parts by the United States at a total cost of $1,200,000,000. Of this grandiose combination of projects (containing immensely more flood storage than the TVA projects) the Mississippi River Commission said that *"Benefits to the lower Mississippi may be considered as practically immaterial."* (Comp. Ex. 105°, p. 101.) The Board of Engineers and the Chief of Engineers concurred with this conclusion of the Mississippi River Commission. (Comp. Ex. 105°, p. 19, par. 32, p. 23, par. 47.)

The following statement of General Ferguson, for the past 5½ years President of the Mississippi River Commission, shows that the construction of the Gilbertsville Project (the only TVA project which by location and size of its superimposed flood control reservoir could conceivably affect Mississippi River floods) would have no effect upon the Mississippi flood control system:

> "Mr. De Muth. Do your plans for the protection of the lower Mississippi take into consideration the fact that we are going to build the Gilbertsville Dam? Will that make any change in your plans?
>
> General Ferguson. No." (Hearings, H. R. Com. on Flood Control, 75th Cong. 3rd Sess., p. 57.)

After the great Mississippi flood of 1927, a Board of officers of the Corps of Engineers under the Chairmanship of Colonel Kelly (a witness for appellants) was appointed to study the problem of Mississippi flood control, and this Board in recommending against the inclusion of tributary reservoirs in the Mississippi flood control system, said:

> "The desirability of a system of reservoirs for use in controlling or assisting in the control of floods of the Mississippi has been discussed from many viewpoints since it was first proposed eighty-five years ago. The question was considered by Humphreys and Abbot in

> connection with their general Mississippi study in the late fifties of the last century and by the Engineering Commission of 1874. Since the establishment of the Mississippi River Commission, that body has several times given consideration to the desirability of incorporating a system of reservoirs into the general plans for the improvement of the river and the control of its floods. *In each of these former cases the final determination has been unfavorable,* * * *" (Com. Doc. 2, H. R. Com. on Flood Control, 70th Cong., 1st Sess., p. 1.)

This conclusion was based upon a system of genuine flood control reservoirs and not upon a system of power reservoirs with small flood control reservoirs superimposed.

H. D. 259, 74th Cong., 1st Sess., cited frequently in appellees' brief, was an exhaustive study of the effect of the construction of tributary flood control reservoirs at all available sites on all of the tributaries of the Mississippi River. It was found possible to provide approximately 100,000,000 acre-feet of genuine flood control storage and the effect of this vast system of reservoirs was considered under Plan I, whereby they were to be operated to secure the maximum benefits on the Mississippi at the expense of local flood protection, and under Plan II, whereby they would be operated primarily for local flood protection. The Corps of Engineers rejected Plan I and, with respect to Plan II, found:

> "The Commission finds that the direct benefits from the entire reservoir system set forth in Plan II at the present time are not commensurate with the cost." (H. D. 259, 74th Cong. 1st Sess. p. 5.)

This, of course, referred not merely to any indirect or incidental benefits to the Mississippi but to the local benefits as well. And it should not be overlooked that this was a system of genuine flood control reservoirs without any dead storage for power or power storage as clearly appears from

pp. 19, 20 and 29, of the Report, where it is shown that such reservoirs were only to be operated at certain times, and from pp. 32-3, where it is shown that the reservoir capacities provided in the plans were the minimum required to give the flood control benefits stated, but that at some sites it would be practicable to provide additional storage for navigation, water power, or local water supply uses.

H. D. 306, 74th Cong., 1st Sess., is a "308 Report" on the water resources of the Ohio River for navigation, water power and flood control. With reference to the possible effect of the reservoir system, the Chief of Engineers said:

> "These reservoirs control so relatively small a part of the total drainage area of the basin that they would have but small effect upon the Mississippi, * * *" (H. D. 306, 74th Cong. 1st Sess., p. 6.)

Committee Document 1 (H. R. Com. on Flood Control, 75th Cong. 1st Sess.) is a report made by the Chief of Engineers in the light of the experiences obtained in the great 1937 flood. *The Chief of Engineers does not recommend any reservoirs on the Tennessee River and does not even suggest that there will be any benefit to flood control on the Mississippi from the TVA system of power reservoirs on the Tennessee River and its tributaries.* The Chief of Engineers does recommend the construction of certain reservoirs on the tributaries of the Ohio, but concerning their effect on the Mississippi, says:

> "The reservoirs set up in this report *may* reduce to some degree the frequency with which they (floodways) must be used, but the floodways will still be requisite to assure the safety of the areas to be protected." (*ibid.* p. 10.)

And concerning their effect for local flood protection on the Ohio, which was their primary purpose, the Chief of Engineers said:

> "Despite their great cost, the reservoirs contemplated will not afford adequate protection to communities in the valley against such a flood as has just been experienced." (*ibid.* p. 5.)

It is thus plain that the official documents, relied upon by the appellees, negative the contention of the appellees and fully support the position of appellants.

Appellees' statement that the Tennessee River is one of the best rivers upon which to construct reservoirs for the reduction of floods in the lower Mississippi is misleading in so far as it implies that the TVA reservoirs on the Tennessee River are valuable for reduction of floods on the lower Mississippi. Appellees rely on a reference to part of the cross-examination of appellants' witness Kelly (Appellees' Br. 19, 21, 86) which does not support their statement. (R. 1382.) Colonel Kelly testified that storage reservoirs "are not practical or effective for the control of floods on the lower Mississippi" (R. 1370) and, with reference to the TVA Unified Plan, that "no expenditure is justified on the Tennessee River for flood protection on the Mississippi River at and below Cairo." (R. 1374.)

Appellees state that the TVA projects would have reduced the height of all floods since 1897 by two feet at Cairo on the Mississippi. (Appellees' Br. 43, 85.) This statement is not supported by any finding of the court. An examination of the record references of appellees will disclose that in practically every case, they are based upon hypothetical questions which were allowed frequently over the objection that there was no basis in the record for the hypothesis. (Kelly R. 1383; Clemens R. 1651.) It also appears that none of these witnesses had taken into consideration the fact that the TVA projects are largely power reservoirs, that most of the storage is dead and power storage and that under the official reports of TVA to Congress relative to the size of

its power projects, this storage could not be available for flood control purposes. (Watkins R. 1633; Clemens R. 1665; Sargent R. 1686; Bowman R. 1751; Woodward R. 1805; Kimball R. 1859; Floyd R. 1902.) In addition, the appellees' witnesses assumed a theoretical but practically impossible operation. (R. 1902; Appellants' Br. 55.)

The untenable character of the claim plainly appears from the fact that the Corps of Engineers reported that even the grandiose scheme described in H. D. 328 and involving about 200 dams would have no appreciable effect upon the Mississippi. (See pp. 52-53, *supra.*) Moreover, floodways are an essential part of any system for Mississippi flood control; and appellees' witness Clemens testified that with an expenditure of approximately $6,000,000 for right of way in addition to the levee, the Birds Point-New Madrid Floodway, practically completed since the 1937 flood, will reduce the flood stages in the Mississippi River at Cairo between 6 and 7 feet, which represents a cost of approximately one million dollars a foot. (Clemens R. 1669.) Hence, the claim of the appellees comes to a contention that the Federal Government might, as a choice of means, resort to the construction of a huge power system upon the ground that it would reduce Mississippi flood heights by two feet at a cost of over $235,000,000 a foot.

On page 21 of their brief appellees misquote a statement in appellants' brief by substituting the words "the existing levee system" for the words "the completed Jadwin-Markham Plan" in the following statement (Appellants' Br. 58):

> "The completed Jadwin-Markham Plan would have been sufficient to control the Mississippi floods of 1912, 1913 and 1927 and will be sufficient to control the maximum flood to be anticipated on the Mississippi River."

Nowhere in their brief do the appellees deny the truth of that statement or even consider it. They have deliberately

confined their consideration to the *present* levee system, whereas appellees' and appellants' witnesses agree that the completed Jadwin-Markham Plan on the Mississippi River, which is now nearing completion, will be sufficient to provide for any Mississippi River flood. (Kelly R. 1373-4; Clemens R. 1672.) Appellees' witness Clemens testified concerning the 1937 flood:

> "Jadwin Plan levees and recent cut-offs function perfectly under severe test. It is surprising that there should have been so much hysteria as the flood approached the lower Mississippi Valley. The country had enough confidence in the engineers to give them over $300,000,000 for the Mississippi River Flood plan. Why then did people become unstrung when the floods descended upon that plan? Now that the flood has subsided it is clear that the plan worked about as expected—and that the flood was considerably less than the protection provided against it." (R. 1672.)

Appellees also contend that the levees on the lower Mississippi have reached the practical limits of height. (Appellees' Br. 21.) However, the reports of the Army Engineers disclose that this would be immaterial if true, because the channel rectification has greatly lowered flood heights for given volumes in the Mississippi and the flood by-passes purchased by the Government are essential under any system and sufficient to meet any situation. (Com. Doc. 1, H. R. Com. on Flood Control, 75th Cong. 1st Sess. p. 11.)

Dr. A. E. Morgan, Chairman of TVA, testified before a Subcommittee of the House of Representatives, 75th Cong., 1st Sess., that Norris reservoir would be filled to elevation 1010 in January and would be at elevation 1020 (the top of the power storage) on or about April 1st. (Comp. Ex. 116†, pp. 374-5.) In the only year of actual operation of Norris reservoir before the trial (when TVA had surplus power capacity) Norris reservoir was filled to elevation 1010 or higher at all times from January 17th

at least up to the summer low water season. (Woodward R. 1815; Add. Fdg. 72, R. 684.) Even the program of filling, submitted by the witness Kimball on Def. Ex. 90 and never in fact used, showed that Norris reservoir would be filled yearly to elevation 1010 early in April and to elevation 1020 (the top of the power storage) late in April. (R. 1848.) It is conceded that, to have any effect on the control of Mississippi floods, the water from the Tennessee basin must be withheld from Mississippi floods at least during the period from February 15th to May 15th each year (passing for the moment that floods may occur and have occurred at any time in the year). (Comp. Ex. 105°, p. 78, par. 52; Kelly R. 1386-7.) This confirms the obvious fact that TVA has built at Norris (as elsewhere) a power reservoir upon which is superimposed a relatively small flood control reservoir and it is equally plain that any pretense that this power storage provides even incidental flood protection for the Mississippi is untenable.[1]

The appellees also assert that their method of operations conforms to the method of operation for navigation and flood control contemplated in H. D. 328 and H. D. 259. This argument is based upon Finding 46, which was rejected by Judge Gore but adopted verbatim by the majority as submitted by the appellees, and is a plain misinterpretation of these official documents. H. D. 328 in fact recommended no method of operation. It recommended the construction of a navigation improvement (adopted in the Rivers and Harbors Act of July 3, 1930) which was in no way similar to the TVA projects. The project, described in the report of the District Engineer as necessary or appropriate

---

[1] The 1934 Annual Report of TVA to Congress states:

"The *power storage* between the minimum pool elevation of 948 and the spillway crest at elevation 1020, the maximum elevation for *power storage*, will be 1,700,000 acre feet." (Comp. Ex. 113°, p. 8.)

for the maximum development of the power resources of the Tennessee River and its tributaries, was in large part to be constructed by private interests, if at all, and the Chief of Engineers made no recommendation for its adoption, and much less any recommendation as to its operation. (See pp. 34-36, *supra.*) But the method of operation for this non-federal development was for maximum power development. To that extent it may be said that TVA methods resemble the methods described in the District Engineers' report for maximum development of the power resources of the Tennessee River. The Chief of Engineers stated:

> "The system (referring to a plan to develop 'the ultimate use that may be made of the waters of the Tennessee basin by the United States *and its citizens*') includes 149 hydroelectric *power developments*, together with certain auxiliary steam stations. The district engineer has worked out very completely the methods by which all these plans could be operated as a single system so as to effect the utmost economy and *produce the maximum amount of power.*" (Comp. Ex. 105°, p. 3, par. 10. See p. 2, par. 8 for parenthetical insertion.)

The "methods of operation" considered in H. D. 259 related to genuine flood control reservoirs with no power storage and have no relation to the operation of the TVA power projects. (See pp. 54-55, *supra.*)

3. The appellees' contentions with respect to the extent of federal constitutional power in the matter of flood control are erroneous.

In our principal brief we have pointed out that the scope of any power of the Federal Government in the matter of flood control is not presented for determination in this case, but that, if it were, the power of the Federal Government over flood control would not extend beyond the power

directly to improve or protect navigable channels of interstate navigable streams. (Appellants' Br. 122, 124-7, 128-130.) However, appellees suggest that the power of the Federal Government in the matter of flood control extends generally to the protection of private property and the safety, comfort and convenience of the people in their places of abode within the several States. This is upon the theory that the protection of property and the means of production and the promotion of safety and convenience of the people in their dwelling places will contribute to the flow of interstate commerce. (Appellees' Br. 84.)

While appellees cite *Jackson v. United States,* 230 U. S. 1, and *Cubbins v. Mississippi River Comm.,* 241 U. S. 351, those cases do not support appellees' claim for the only relation between those cases and any claimed advantage from TVA projects to navigation on the Tennessee and Mississippi Rivers relates to appellees' claim that low water releases from their power operations will benefit navigation through enrichment of low water flows (Appellees' Br. 81, 83), a contention examined elsewhere and shown to be both without substance and, as to the Mississippi, outside the scope of the TVA statute. In the *Jackson* and *Cubbins* cases, the flood control structures (levees) had an immediate, direct and obvious relation to the maintenance and improvement of the navigation channels in the Mississippi River along which they were constructed. Indeed, they might reasonably be said to constitute part of those navigation channels.

Appellees suggest that a sufficiently direct relationship to interstate commerce may be found to exist from the circumstance that agricultural products, commodities in course of being processed and goods in process of manufacture in areas subject to occasional floods may eventually find their way into interstate commerce. (Fdg. 58.) If such indirect and remote relations will sustain the exercise of the in-

terstate commerce power, then that power may be extended over all of the processes of production and manufacture within the several States and may be made to embrace all of the subjects of State police power to promote the health, prosperity and general welfare of the people of the States. Like so many other claims of the appellees, the result would be the complete centralization of government and the destruction of the States. Undoubtedly the Federal Government may appropriate money in suitable cases to aid works undertaken by a State or a group of States under its power to spend for the general welfare, but the Federal Government may not under its power to spend extend the scope of its own direct activities. This limitation upon the proper activities of the Federal Government is plainly stated in the final Report of the National Waterways Commission (S. Doc. 469, 62nd Cong. 2nd Sess.) upon which appellees so strongly rely. (See pp. 22-25, *supra.*)

Finding 59 (rejected by Judge Gore) in no way shows that the alleged flood control features of the TVA Unified Plan have any real or substantial relation to the preservation or improvement of navigation channels and the evidence shows otherwise. (Appellants' Br. 36-37.)

D. NEITHER THE FACTS NOR THE LAW SUPPORT APPELLEES' CLAIM THAT ANY OF THE WATER POWER IS CREATED IN THE EXERCISE OF THE WAR POWER.

The only ground upon which appellees base their contention that "the power produced *at the tributary dams*" rests upon an exercise of the war power is that the court found that Norris Dam, by storing water during the high water season and releasing it during the low water season (i.e. by the typical operation of a power reservoir) will create additional firm water power at Wilson Dam. (Appellees' Br. 94.) That neither the TVA Act nor the TVA Unified Plan provide for, or permit, the development of

power for national defense is plain. (Appellants' Br. 60-1, 130-3.) The appellees not only ignore the facts, but cite no law to support their contention and seek to invoke an alleged right of the Government to improve its property—a proposition quite distinct from an exercise of the war power and which has been examined and shown to be unfounded in fact and in law on this record at pp. 21-22, *supra*.

III.

THE APPELLEES GROSSLY UNDERSTATE THE SCOPE OF THE TVA ACT AND OF THE TVA POWER PROJECT, AND MISINTERPRET THE POWER OF THE FEDERAL GOVERNMENT TO DISPOSE OF PROPERTY. (Answering Appellees' Br. 53-58; 106-160.)

A. THE APPELLEES' ANALYSIS OF THE TVA ACT. (Answering Appellees' Br. 106-109.)

In our analysis of the TVA Act, we have shown that the TVA Act authorizes the development of all of the hydro-electric resources of the Tennessee River and its tributaries, the construction of steam generating plants and the creation of a vast electric utility system and that it affirmatively and in detail provides for the carrying on of the electric business within the States as a federal monopoly, for the regulation of matters of intrastate concern, including local electric rates, services and practices, and for the establishment of a federal policy within the States of having the local electric business carried on by public bodies or non-profit organizations. (Appellants' Br. 12-17, 154, 159-160, 163, 175-177.) Apart from appellees' attempt to restrict the scope of the power project authorized by the TVA Act (discussed and shown to be erroneous at pp. 25-27, *supra*), appellees merely refer to a few isolated sections of the statute (Appellees' Br. 107-109) and in no way attempt to controvert the plain meaning and effect of the Act set forth in appellants' brief.

B. IN CONTRAVENTION OF THE UNDISPUTED FACTS IN THE RECORD, APPELLEES SYSTEMATICALLY UNDERSTATE THE SCOPE OF THEIR POWER BUSINESS DEVELOPED AND IN CURRENT PROCESS OF DEVELOPMENT. (Answering Appellees' Br. 53-58, 109-112.)

1. The firm-power capacity created by the execution of the TVA Unified Plan. In our main brief (pp. 66-69) we have set forth the facts with reference to the power capacity of the TVA system under the Unified Plan. As was there pointed out these facts were not embodied in any findings made by the majority of the trial court although they stand undisputed in the record. Appellees repeatedly state (Appellees' Br. 54, 57, 109) that the firm-power capacity of all the dams of the Authority "now constructed or authorized for construction" is 570,000 kw. at 60% load factor with all the generating units installed or "authorized" for installation. In fact this statement merely refers to a stage in the execution of the TVA Unified Plan, has no meaning in relation to the firm power capacity which will be created by the execution of the TVA Unified Plan and is patently irrelevant in a suit for preventive relief. The statement is grossly misleading as to vital facts not open to dispute, and it is coupled with the charge that in our presentation of the facts we have misrepresented "the scope of the Authority's undertaking in so far as it relates to power" by assuming "unauthorized installations at unauthorized dams and unauthorized interconnections with privately owned plants." (Appellees' Br. 57, 109.) That there may be no misunderstanding as to what projects are embraced in the current TVA Unified Plan or as to what power will be produced by the operation of such projects, we review the facts as they have been publicly and officially reported by appellees themselves and as the record shows them.

The projects embraced in the current TVA program *with construction schedules* and provisions made for power

installations are shown in the statements filed by TVA with the Sub-committee of the House Committee on Appropriations on December 13, 1937, during the course of the trial of this case (Def. Ex. 153†, pp. 919, 948):

Completed Dams	*Date of Completion*		*Power Installation Provided For*
Wilson	By U. S. Army Engineers in 1925		444,000 kw.
Norris	Aug. 1, 1937		100,000 kw.
Wheeler	Sept. 1, 1937		256,000 kw.
Dams Under Construction	*Beginning Date*	*Proposed Date of Completion*	
Pickwick Landing	Dec. 1934	Jan. 1, 1939	216,000 kw.
Guntersville	Jan. 1, 1936	June 1, 1940	96,000 kw.
Chickamauga	Jan. 1, 1936	Jan. 1, 1941	108,000 kw.
Hiwassee	July 1, 1936	July 1, 1941	120,000 kw.
Proposed Dams	*Scheduled Starting Date*	*Scheduled Date of Completion*	
Gilbertsville	July 1, 1938	July 1, 1945	192,000 kw.
Watts Bar	July 1, 1939	July 1, 1943	150,000 kw.
Coulter Shoals	July 1, 1940	July 1, 1944	60,000 kw.
Fontana	July 1, 1942	July 1, 1946	180,000 kw.
		Total Installed Capacity:	1,922,000 kw.

The so-called "*unauthorized dams*" referred to in appellees' brief are those dams listed above as dams upon which construction has not yet been begun. None of these dams are included in appellees' figure of maximum firm power capacity. The first question is, do appellees intend to build them? The intention to do so is explicit in the whole defense that these structures are valuable if not indispensable to the purpose of Congress as expressed in the TVA Act. All of these dams have been listed in every report made to Congress since the adoption of the report of the Unified Plan. Each is an integral and inseparable part of the TVA development. Furthermore, Gilbertsville is now actually under construction with funds provided by Congress subsequent to the decision of the trial court. (Appellees' Br. 37.) Watts Bar and Coulter Shoals are main stream dams without which even an incidental navigable

channel could not be provided between Chattanooga and Knoxville under the TVA Unified Plan. So far as Fontana is concerned, the desire of appellees to eliminate it from consideration is understandable since it lacks even a pretextuous relation to navigation and is valuable only for power and power regulation, but the fact that it is definitely scheduled to be built nevertheless remains. In answer to a direct question on that subject Director Lilienthal stated before the House Appropriations Committee in April, 1937, (Comp. Ex. 116†, pp. 516, 518):

> "The Board's decision, as indicated by the minutes of the Board, which I think ought to be inserted in the record at this point, is that the position taken by the Board in the report called Unified Development of the Tennessee River System, filed last March, is that the Fontana Dam should be a part of the unified system, and that is still the position of the Board. • • •
>
> The Board still is of the opinion that Fontana should be a part of the unified development, and in its annual report filed as for the fiscal year ending June 30, 1936, and signed in November, 1936, reiterated that position, and that still is the position of the Board, as shown by its action of March 16, 1937.
>
> On page 27 of the report designated 'Unified Development of the Tennessee River System,' you will find table 3. That table shows a suggested program of dam construction which had the approval of the Board then, and, so far as I know, still has the approval of the Board. That schedule proposed the construction of the Fontana Dam on the Little Tennessee River, the construction to begin in the middle of 1938 and to be completed in 1941.[1]

---

[1] Fontana was originally scheduled for construction ahead of Gilbertsville, Watts Bar and Coulter Shoals, which will incidentally provide a navigation channel at either end of the Tennessee River. Sometime later, for reasons described as "budgetary" its scheduled construction was postponed and precedence given to the main river dams. (See p. 760, United States Government budget for fiscal year 1939, submitted to Congress Jan. 3, 1938.)

There is no change in the Board's disposition as to the ultimate construction of that dam. Obviously, since the dam site is owned by the Aluminum Co. of America, it may be built by that company, but it definitely should be a part of the unified system.'"[1]

The so-called *"unauthorized installations"* (Appellees' Br. 57) applies to all generating units for which provision is made in the design and construction of the dams, excepting such units as had been actually installed or ordered, or for the purchase of which TVA had made provision in its last budget request to Congress. Under this definition a substation, constructed or purchased since the date of the trial for the service of Knoxville, would be an unauthorized substation. Accordingly, the second question is, do appellees intend to limit the installation of generating capacity to those units which had been installed or ordered for the service of TVA's existing market, or do they intend to make additional installations as rapidly as they can expand their business? Appellees themselves concede that each of the dams, both main stream and tributary, will produce a very large amount of water power (Appellees' Br. 36), and it is argued throughout their brief that this power will be forever lost unless it is converted into electricity and consumed. Under Section 9(a) of the TVA Act, appellees contend that they are authorized, if not required, "to provide for the generation and marketing of electric energy in order

[1] It may be assumed that Mr. Lilienthal was not suggesting seriously that Fontana might be constructed by the Aluminum Company of America for navigation or flood control. Its construction will greatly increase the firm power capacity at the lower dams which the Aluminum Company owns on the Little Tennessee River, as well as the firm capacity of the main stream dams in the TVA system. Therein lies its value and the explanation of Mr. Lilienthal's statement that whether built by the Aluminum Company or by TVA *"it definitely should be a part of the unified system."*

to avoid the waste of water power and * * * to assist in liquidating the cost or aid in the maintenance of the projects." (Appellees' Br. 54.)

It is true that TVA has not as yet installed in all dams which are in operation the full number of generating units for which they are designed. However, under the TVA method of operation certain things must precede the delivery of power. Markets must be acquired. Contracts must be negotiated with the municipalities and cooperatives. Arrangements must be made for financing and acquiring distribution facilities for such distributing agencies. High tension transmission lines, substations and other facilities must be designed and constructed and such facilities must be designed with the view to their use in serving other possible markets not yet acquired, in order to make an efficiently functioning system comparable to the systems of other integrated utilities serving in a wide area. The evidence establishes that TVA has been installing generating capacity not merely as rapidly as it could wrest, but in advance of wresting, markets from existing utilities. The number of generators actually installed or on order at the date of the trial is of no more significance in fixing the power capacity of the TVA system under the Unified Plan than would be the corresponding figures for the year 1936 or 1935.

This brings us to the ultimately vital question as to the productive capacity of this system as it is designed and is intended to be used. In the TVA report to Congress on the Unified Plan the statement is made that the system of dams recommended in that report, embracing Wilson, Wheeler, Norris, Pickwick, Guntersville, Chickamauga, Fowler Bend, Fontana, Watts Bar, Coulter Shoals and Gilbertsville, with full economical installation of generating capacity, will produce 660,000 kw. continuous power without the use of the Sheffield steam plant. (Comp. Ex. 328°,

p. 62.) This is the equivalent of 1,100,000 kw. at 60% load factor.

In the financial statement submitted to Congress in March, 1936 (Comp. Ex. 115†, p. 279, R. 2697), Director Lilienthal presented the following figures:

"Continuous capacity of integrated system .....kilowatts 660,000
Annual primary output...kilowatt hours 5,780,000,000
Estimated gross annual wholesale power revenue..... $23,120,000"

Appellees' witness Wessenauer testified (R. 2172 *et seq.*) that the figures given in the TVA Unified Plan were the result of calculations made by him, in the making of which he assumed integrated operation with the plants of the Aluminum Company on the Little Tennessee River below Fontana but deducted 90,000 kw. as being power which belonged to the Aluminum Company, and obtained a remainder of 660,000 kw. Referring to these calculations appellees' witness said:

> "This figure of 660,000 kw. represents, as I understand it, the power that would be available to the TVA if they constructed the particular plants listed in table 6 on p. 62 (of the Unified Plan)." (R. 2184.)

Appellants' witness Kurtz (R. 1215) testified that the eleven dams in the Unified Plan, with regulation only by the tributary dams, would have a prime capacity of 660,000 kw. at 100% load factor and 1,100,000 kw. at a utility load factor of 60% and that when supplemented by the Sheffield steam plant they would have a prime capacity of 1,200,000 kw. at a 60% load factor.

It will be noted that the figure of 660,000 kw. continuous power represents TVA's own estimate, officially adopted and reported to Congress, and is not, as baselessly asserted at p. 109 of appellees' brief, a "fanciful assump-

tion'' based upon an ultimate development of *''all possible dams at any of the 149 sites located on the Tennessee River system by the Corps of Engineers in House Document No. 328.''* As shown by H. D. 328 (Comp. Ex. 105°, pp. 14, 16, 67) the complete ultimate development of the Tennessee system will produce 5,000,000 kw. at 60% load factor and 25,000,000,000 kilowatt hours annually.

From this review of the record it is seen that the uncontradicted evidence fully corroborates the statements made in our original brief that the TVA hydro-electric system under the Unified Plan will have a firm capacity at 60% load factor of 1,100,000 kw. and will be capable of producing 5,780,000,000 kilowatt hours of firm energy annually. It is seen further that these figures do not represent an ultimate potential maximum of a theoretical development but the authoritative estimates as to the capacity of definite structures included in a definitely scheduled construction program. It is also seen that *appellees'* figure of 570,000 kw. at 60% load factor, taken from Finding 94 (R. 621), is, as that Finding on its face shows, *merely the capacity of an intermediate stage of the execution of the present construction program,* omitting completely the capacity of Gilbertsville, Watts Bar, Coulter Shoals and Fontana, and also the capacity of the additional generating units for which provision has been made at Wilson, Wheeler, Guntersville, Chickamauga, Pickwick and Hiwassee.

Thus to limit the consideration of the scope of TVA's undertaking with respect to the generation and disposal of power to the particular stage as it happened to exist at the time of trial puts the appellees in the position of contending that the claimed value of all of the above dams for navigation and flood control is a proper and indeed necessary subject for this Court to consider, but that the use and value of the very same dams for the production of

power is not. Further, to confine the scope of inquiry in an action for injunctive relief to the things which have already been done, may well mean that the determination of grave and important questions are made to depend upon whether the taking of particular proof occurred on Wednesday or Friday, and as applied to the facts in this case, that the right to challenge unconstitutional acts and the unlawful deprivation of property may not be exercised until the injury has been consummated, which is in effect a denial of the jurisdiction of equity and of the remedies of equitable relief.

2. The TVA power pool and transmission system. The principles just discussed apply with equal force to the TVA transmission system. At p. 56 of their brief appellees state: "In order to serve its purchasers, the Authority has constructed or acquired about 1,100 miles of marketing transmission lines, the largest of which is about 100 miles in length." Since no mention is made of any possible future construction of transmission lines, this statement conveys the misleading impression that the present 1,100 miles of so-called marketing transmission lines represent the completed TVA transmission system.

TVA's policy with reference to the construction of transmission facilities is set forth in its report to Congress:

> "The number of additional transmission lines required must be determined from time to time, as opportunities to secure revenues by 'conveying to market' arise and as contracts for sale to public and private agencies are negotiated." (Comp. Ex. 328°, p. 60.)

It is thus plain that appellees recognize no limitation upon the expansion of their power system other than the size of the market which they are able to acquire and supply.

The recent taking over of the businesses of several utilities by TVA, to which appellees invite the Court's attention in their brief, is an impressive illustration of the rapidity with which the TVA transmission system may be, and the extent to which it must be, extended to complete the TVA power system. The extent of the area over which the TVA transmission system must be extended to dispose of the commercial power created by the TVA Unified Plan establishes beyond dispute the size of the TVA transmission system which is an integral part of the TVA Unified Plan. (Appellants' Br. 65-70.)

Under the TVA Unified Plan all of the dams will be interconnected so that the power generated at each dam will flow into one vast pool and will be available at any point upon the interconnected system for convenient transmission to the nearest market. Some 400 miles of this primary grid system have already been built and these lines are not included in the 1100 mile figure mentioned in appellees' brief which merely represents the high tension "marketing" lines which have already been built as a part of the ultimate network to be supplied from the power pool.

The completion of the primary grid system necessarily means the construction of lines to Gilbertsville, Hiwassee and Fontana, in order to bring them into the power pool, and as soon as that has been done, the pool from which power is to be drawn will extend from western Kentucky to northern Alabama and across Tennessee to the western end of North Carolina. Thus the 400 miles of "inter-plant tie lines," so far constructed, represent only the beginning of a primary system which has for its object not "conveying to market" but the pooling of a vast supply of electric power, the whole justification of which involves the construction of a great network of transmission lines

extending from this grid system to the markets within economic reach of the pool itself.

Professor Moreland testified that the marketing of the power to be produced under the Unified Plan will require a transmission system of from 12,000 to 15,000 miles of high tension transmission lines. (R. 1453.) This testimony was not rebutted by appellees and its authoritative character is not questioned in appellees' brief, unless that intention may be inferred from the slighting reference to the witness himself as "prophet Moreland." (Appellees' Br. 112.) It is an engineering fact that to supply the markets which are capable of absorbing 5,780,000,000 kilowatt hours of firm power annually will require a vast, interconnected high tension transmission system, corresponding to the transmission systems now serving the area, and if there is any need for the assistance of occult science, it is on the part of those who claim that such a result may be accomplished without it.

3. The competitive and duplicating character of TVA's power system. Since, as pointed out in our main brief (p. 71), TVA rates are from 25% to 60% lower than the State-regulated rates of other electric utilities operating in this area, no serious doubt can exist but that the development of TVA's definitely scheduled program will engulf the markets and destroy the efficiency and value of every electric utility system serving any substantial area within economic transmission distance of the TVA power pool. That there is nothing in appellees' brief which seriously challenges that conclusion may be briefly pointed out.

(a) Unserved rural markets. Appellees state that there are unserved rural areas in this section which furnish an "obvious market" for TVA power. (Appellees' Br. 108, 116-17.) It is thus apparently argued that the un-

served rural market will absorb some substantial part of TVA's surplus power capacity. There is no substantial unserved rural demand in the territories served by the appellants which meets the minimum recommended requirements of TVA itself. (Appellants' Br. 64.) Although TVA has constructed and is now serving through cooperatives more than 2,230 miles of distribution lines in rural areas not previously served, the present demand of that entire system comes to the insignificant total of 7,000 kw.[1] (Comp Ex. 919, R. 3947, 3950.) Even by 1942, according to TVA's own optimistic estimate, this demand will not exceed 17,100 kw. (Def. Ex. 153†, p. 1001) which is about 1½% of the 1,100,000 kw. which will be produced by the TVA power system under the Unified Plan. As the record shows, and as anyone familiar with this region knows, electrification of the unserved rural areas is a practical objective only as the ultimate stage of an integrated system, interconnecting all of the cities, villages and communities in the area (Stanley R. 937-8; Longley R. 973) and even then the total demand represented by such rural markets will be an insignificant part of the total power demand essential to support such a system.

(b) New industrial consumers. Appellees also stress the claim that TVA's large industrial contracts represent a new demand not previously served by appellants and that

---

[1] These rural systems, fostered, subsidized and served by TVA, have been made the excuse for extension of TVA transmission to or near the larger towns which are the load centers of appellants' systems (see Comp. Exs. 332-A*, 199*, 205* to 210* and 326*), and although such lines could be served by appellants without substantial changes in appellants' present facilities (Add. Fdg. 119, R. 706), their principal significance arises not from their importance as a market for power but from their effect in restricting the normal development of efficient and economical electric service in the areas involved (Add. Fdg. 122, R. 707) and from the damage caused through the establishment of subsidized rates throughout appellants' territories.

to have served these customers appellants would have had to provide additional generating and transmission capacity.[1] (Appellees' Br. 111, 117-119.) Ignoring the unwarranted assumption that appellants are not damaged by competition for new or unattached business, a matter discussed in our main brief (p. 199) and unanswered by appellees, the fact remains that such sales do not assist either in making the benefits of TVA power "widely available" or in preventing its exploitation by a privileged few, and unless it is intended to be argued that the major part of the power to be produced in the future is going to be consumed by large corporations which move into this area for the purpose of securing subsidized TVA rates, the contention has no significance.

(c) Previously unserved municipalities. Again, appellees argue (Appellees' Br. 110) that a number of the present TVA municipal distributors previously owned and operated their own distribution or generating and distribution facilities. The record shows that at the present time there are only a few small municipalities which are still operating municipally-owned facilities with local power generation. For example, in the territory of The Tennessee Electric Power Company there is now only one such municipality (R. 781-2) as against 450 towns taking Company service. (Fdg. 6, R. 585.) In the territory of the Alabama Power Company there are three such towns (R. 864) as against 594 towns taking Company service. (Fdg. 16, R. 592.)

Naturally towns having their own distribution systems were among the first to enter into contracts to secure cheap

---

[1] It is not true, as claimed, that appellants did not previously serve some of this industrial load. (Add. Fdg. 117, R. 704.) In any efficiently operated system to avoid the cost and maintenance of idle capacity, it is always the practice to provide for the requirements of any large new industrial load after it is known where and when the customer will require it. (Miller R. 1119.)

TVA power, but the total present demand of all such TVA customers is only 11,461 kw. (Comp. Ex. 919, R. 3947), and it will not be claimed even by appellees that the scattered and relatively unimportant markets represented by the few remaining towns which still generate their own electric power would absorb more than a fraction of the power capacity of any *one* of the eleven TVA dams.

(d) Prospective increases in power demand on the part of appellants' customers. Another suggested source of demand for TVA power is the predicted increase in electric consumption on the part of appellants' present customers. Thus appellees state:

> "As shown by the evidence and found by the court, it is to be anticipated that the utilities within ready transmission distance of the Authority's run-of-river plants will require 310,000 kw. of additional capacity in 1939 and 787,500 kw. by 1943." (Appellees' Br. 54.)

The above figures are taken from Finding 231 (R. 650), based upon the testimony of appellees' witness Thomas, and the statement quoted from appellees' brief, as well as the use to which it is put, is a flagrant example of compounded errors.

No testimony was offered by appellees as to any existing or prospective power shortage within transmission distance of any of the TVA dams. The testimony of the witness Thomas was predicated upon an alleged study of four groups of affiliated electric utility companies operating in the Southeast, including not only the properties of the appellants which lie beyond a radius of 250 miles from any TVA dam, but also the properties of eight non-complainant companies, many of which lie partially or wholly outside of such area. (Def. Ex. 133, R. 4150.) In reaching the conclusion that there will be a power shortage of the magnitude referred to in the territories served by these complainant and non-complainant companies (and hence a power short-

age of an obviously lesser but unestimated magnitude in the territory capable of being served by the TVA power system), the appellees' witness made the following omissions and patently absurd assumptions. The witness omitted:

> All generating capacity added by any of the companies since 1936 (R. 2122) as well as all generating units now under construction or on order (R. 2120); all run-of-river hydro plants, without regard to firm capacity and existing regulation of stream flow, including such plants as Hales Bar on the Tennessee River between Guntersville and Chickamauga (R. 2112), and all stand-by steam plants, used only as reserve capacity and maintained for the very purpose of emergency use. (R. 2099, 2111.)

Having made the foregoing omissions the witness then assumed:

> That the companies under consideration, whether operating within the area threatened with TVA competition or operating wholly outside of that area, will not construct any additional generating capacity for the next six years (R. 2098, 2119-20); that electric demand would increase at the average rate of 7½% per year (R. 2119) and that the increase for 1937 would be 9½% although the demand for 1937 actually showed a decrease of 9% (R. 2118); that at the time of maximum peak demand, in an extreme dry year, there would be an outage of 1½ times the largest generating unit in each of the interconnected systems (R. 2128); that at the same time, all of the remaining steam plants could only be operated at 85% of their normal load carrying ability (R. 2099, 2128); that concurrently there would be a failure equivalent to 5% of the systems' transmission capacity (R. 2128), and that all of these coincidences would come at a time when all neighboring systems were also at peak and could not be required to deliver power over established interchange connections. (R. 2122-24.)

The witness did not say that it would be prudent or permissible under existing regulations for any operating company to maintain as a part of its rate base the surplus generating capacity suggested by the above omissions and assumptions, and the necessity for doing so is belied by the experience of all of the appellants, as shown by the testimony of those actually in charge of the operation of appellants' generating facilities. (Sporn R. 1259, 1252-3, 1257; Rankin R. 1296; Middlemiss R. 1271.) To that extent the court's finding as to future inadequacy is in direct conflict with its further finding that appellants have never refused additional business due to lack of facilities and that in the past appellants' facilities have always been adequate to meet their load requirements. (Fdg. 116, R. 627.)

These glaring errors of fact, assumption and interpretation are now sought to be turned to advantage by a pretended showing that as a result of the alleged impending power shortage the appellants will in some way be benefited, or at least will not be injured, by the TVA power program. In the absence of TVA competition and under normal business conditions, it is to be assumed that there may be some normal increases in the electric power demand within the systems of the appellants and that under such normal conditions, as in the past, additions and extensions will be provided to take care of such additional business. However, the repeated suggestion that the increased customer demand within the systems of the appellant companies is a factor to be considered as bearing upon the practical or legal questions involved in this suit, is irrational and specious, as a brief analysis will show.

The future power demands, represented by rural areas, new business enterprises and normal increases in customer consumption, are scattered over an area which is coextensive with the territories served by the appellants. If these power demands are to be served directly by TVA or its

distributors, TVA must construct a transmission system which duplicates and competes with the transmission facilities of the appellant companies themselves. If, on the other hand, these power demands are not to be served directly by TVA or its distributors, their significance depends upon the untenable assumption that TVA proposes to sell to the appellants the power now being generated and to be generated by it. No suggestion of that possibility could be made in good faith in view of TVA's competitive policy and the terms of the Act. (Appellants' Br. 177.)

It is thus seen that the court's findings with reference to potential power demands and unserved markets are only material in connection with the fact, confirmed thereby, that in order to dispose of the power which will be produced by TVA and in order to reach the markets where these demands exist, TVA must construct a competitive transmission system comparable with the combined systems of the appellants and extending over a large part of their territories. Certainly these findings have no relation to the subject of damages. It does not mitigate appellants' damages to say that since TVA will deprive appellants of a part or all of their present business, appellants will thereby be "saved" from the necessity otherwise arising of extending and enlarging their facilities to provide for the growth of the business so appropriated.

(e) Duplication of facilities. Appellees say that the existing TVA transmission lines do not duplicate transmission facilities of appellants (Appellees' Br. 111), which the majority of the trial court found (Fdg. 184, R. 640), upon the grounds that TVA's competitive facilities "*constitute useful and valuable additions to those (appellants') facilities.*" That they are neither useful nor valuable to appellants, whose facilities will be thereby displaced, is self-evident. (Add. Fdg. 121, R. 706.) By way of illustration,

the record shows that over one-third of the business of The Tennessee Electric Power Company is represented by the City of Chattanooga. The Company now has five high tension transmission lines serving it, and the loss of the business in Chattanooga will result in the destruction of over one-third of the usefulness of the Company's electric property. (Add. Fdg. 113, R. 701; Miller R. 1105-6.)

C. THE APPELLEES' CONTENTION THAT THE FEDERAL POWER TO DISPOSE OF PROPERTY IS IN EFFECT UNLIMITED AND SUBJECT TO NO RESTRICTION UNDER THE EXPRESS PROVISIONS OF THE CONSTITUTION, OR UNDER THE INHERENT LIMITATIONS OF OUR CONSTITUTIONAL SYSTEM, IS PLAINLY UNSOUND. (Answering Appellees' Br. 113-127; 134-160.)

The appellees do not discuss the meaning of the grant of power to dispose of property in the light of its history, in the light of its plain language or in the light of our constitutional system. They recognize no limitations upon this power either by virtue of its language, the express provisions of the Constitution or the inherent limitations of our constitutional system. They can not do so and still argue that the method of disposal authorized by the TVA Act and embodied in the TVA Unified Plan is within the constitutional power of the Federal Government. The effect of appellees' contentions is (a) that the power to dispose of federal property includes the power to engage in the conduct and management of any competitive commercial business so long as it in some degree utilizes Government property; (b) that in the conduct and management of such a business, it may enter the domain of the States and not only set aside, but itself affirmatively exercise, such State police powers as it chooses; (c) that engaging in such businesses and regulating intrastate concerns are not only within the scope of this federal power, but that the exercise of this authority and of these State police powers are not in any

degree circumscribed or controlled by the express or inherent limitations of our constitutional system or by the rights of the States and of the people under the Ninth and Tenth Amendments; (d) that it may take over as a federal monopoly the businesses in which the people have a right to engage and earn a livelihood within the States; and (e) finally, that in any event the consent of a State, whether purchased with *quasi* gifts of federal property or otherwise, confers powers on the Federal Government to engage in such businesses within State domain, condones the violation of the inherent limitations of our dual system of government, and sets at naught the rights which were retained by the people under the Ninth Amendment.

1. Appellees misinterpret the scope of the previous decisions relating to TVA. Notwithstanding the limited scope of the decision in the *Ashwander* case (a limitation insisted upon by the Solicitor General and counsel for TVA in argument before this Court) and the explicit statement of this Court that it expressed no opinion as to the status of any other dam or power development in the Tennessee Valley, whether connected with or apart from the Wilson Dam, or as to the validity of the Tennessee Valley Authority Act, or as to the power development promulgated by the Authority, appellees now insist that the *Ashwander* decision supports their revolutionary position. (Appellees' Br. 113-116, 139-141.) This contention is not based upon any principle laid down in the *Ashwander* case. Indeed, appellees ignore the limitations on the power to dispose of property pointed out in that opinion. They rest their contention solely upon the claim that the contract under examination in the *Ashwander* case involved every *kind* of electrical facilities and that such facilities were useful to serve a local market in which might be found customers falling within the usual classifications of utility service.

The unsoundness of this contention both in fact and law has been shown in our principal brief, pp. 187-190.

Appellees repeatedly cite the decision on motion for preliminary injunction in *Georgia Power Co. v. Tennessee Valley Authority,* 14 F. Supp. 673, to the effect that the disposal of electricity in new markets is "most considerate of existing interests." (Appellees' Br. 117, 119, 138.) Judge Sibley's remarks concerned a small rural line extended into an area not previously served. The attempted inference that the vast quantity of power being created and to be created by TVA is to be, or can be, sold to new markets, is indefensible. (See pp. 73-79, *supra.*) And if it were possible, as it is not, to market the TVA power by depriving appellants of all increment of business growth in their service areas for the next fifty years, it would not add a jot to the power of the Federal Government, nor would it avoid the irreparable injury to appellants. The opportunity for growth is the very life blood of any business and this is particularly true in the case of a natural monopoly such as the business of supplying electricity to the public.

2. Appellees misconstrue the cases relating to the power to dispose of government property as they apply to the utility business of TVA. The principal argument advanced by appellees to support the method of disposal authorized by the TVA Act and embodied in the TVA Unified Plan is that such method of disposal is necessary to avoid monopoly, to prevent waste and to secure wide distribution of the benefits of public property. (Appellees' Br. 120, 121, 122, 135, 137, 145.) In support of this proposition appellees cite *United States v. Trinidad Coal Co.,* 137 U. S. 160; *Camfield v. United States,* 167 U. S. 518; *United States v. Shryock,* 162 Fed. 790; *United States v. Hanson,* 167 Fed. 881; *United States v. Munday,* 222 U. S. 175;

Morton v. Nebraska, 21 Wall. 660; *United States v. Sweet*, 245 U. S. 563.

The *Trinidad Coal* case dealt with fraud in the entry of coal lands. The *Camfield* case dealt with the power of the United States to prevent individuals, not purchasers, from taking exclusive possession of unsold public lands "so long as such power is directed solely to its (the Government's) own protection." (loc. cit. 525-6.) The *Shryock* case dealt with liability of the defendant for rental on a lease of water power at a navigation dam. The *Hanson* case dealt with the power of the Federal Government to cooperate with private owners in a project involving the irrigation of public lands and held that this was valid "so long as it (the Federal Government) does not interfere with State legislation over waters of the State." (loc. cit. 884.) The *Morton* and *Sweet* cases merely illustrate the fact that the Federal Government in disposing of public lands has followed the policy of reserving known mineral deposits.

We have found, and appellees cite, no case which holds that a desire of the Federal Government to prevent monopoly, to avoid waste or to secure widespread distribution of actual or supposed benefits of federal property constitutes authority for the Federal Government to engage within State domain in business inconsistent with the functions of Government, to displace the police powers of the States in the regulation of local businesses affected with a public interest, or to establish within the States a federal policy of having such businesses carried on by public or nonprofit organizations. No case holds that such a desire authorizes the Federal Government to establish a federal province which is neither State nor nation, and in which the Federal Government exercises all of the powers of the nation, the States and the reserved powers of the people as the ultimate sovereign.

But the whole contention is patently unreal. "Don Quixote never waged battle against as unreal a foe as is this ghost" of monopoly of the State-regulated business of supplying electricity to the public. The business of supplying electricity to the public is a natural monopoly; and duplication of facilities and competition is inimical to the public interest. (Pond, *Public Utilities*, Secs. 271, 903; *State v. Kansas City Gas Co.*, 254 Mo. 515; *State v. Interstate Power Co.*, 118 Neb. 756.) And not only is the business a natural monopoly and necessarily so in the interests of the public, but it is a regulated business. It is primer law that a utility purchasing all or part of a utility commodity supplied to the public, whether electricity or other, may only include in its operating expenses the price which it paid for the commodity and may collect no profit upon its purchase. Its charges are limited to its operating expenses plus a fair return on the property used and useful in serving the public. The plain result is that if the electricity were sold to a utility, the advantages of the purchase price, if any, would necessarily be passed on to the consumers. It is further obvious that the benefits of the power, if any, would be distributed most widely by sale to existing public utility systems. There is no analogy between the sale of a commodity like electricity to a regulated public utility, which may make no more than a fair return for its services in transmission and distribution, and the sale of public lands or mineral deposits which are not natural monopolies and the benefits of which are not passed on to the public without profit. The argument is specious and utterly divorced from realities. Indeed, the TVA Act should be entitled: A Bill to Establish a Federal Monopoly of the Business of Supplying Electricity to the Public in the States touching the Tennessee River Basin.

There is no rational explanation of the method of disposal provided in the Act and in the TVA Unified Plan

except a desire to substitute federal regulation and federal operation of the electric business for private operation and State regulation. Unlike matters involving the sale of public lands, this is a permanent federal undertaking. The property does not pass into the domain of State control and the normal current of business within the States. On the contrary, the TVA Act provides for a continuing and permanent interference with the functions of the State. If, in the cases cited by appellees, the Federal Government had undertaken to say that public lands once owned by the United States should never be held within the States in larger tracts than 160 acres, that they should never be sold at a price exceeding that paid to the Government and that they should never be subject to the debts of the owner, they might with some plausibility be urged as bearing on the instant case. But if the Government had attempted to impose such a continuing and permanent interference with the powers of the States, the attempt would plainly have been unconstitutional.

The appellees also cite fragmentary phrases from various cases in which this Court has remarked that federal property is held in trust. (Appellees' Br. 120.) *United States v. Trinidad Coal Co.*, 137 U. S. 160, 170; cf. *Light v. United States*, 220 U. S. 523, 537; *United States v. Beebe*, 127 U. S. 338, 342; *Camfield v. United States*, 167 U. S. 518; *Ruddy v. Rossi*, 248 U. S. 104, 106-107; *United States v. Gratiot*, 14 Pet. 526, 538.

These cases plainly afford no legal precedents for the validity of the TVA enterprise. The fact that the Federal Government holds property in trust and not like a private individual or an absolute monarch, adds nothing to the things which it may do under its power of disposal. The Federal Government holds property in trust for the performance of governmental functions and for disposal when no longer needed for those purposes. A trustee for the

disposal of property is not a trustee for the establishment and management of a business and the United States is not a trustee for establishing and carrying on commercial enterprises at the risk and expense of the people of the United States. Moreover, the appellees insisted in the court below and now insist in their brief (p. 222) that they are authorized to sell electricity below the costs of production. If this property is "held in trust for *all* of the people," it is a peculiar innovation of the law of trusts which authorizes the trustee permanently to carry on a business at a loss for the benefit of part of the *cestuis* at the expense of the remainder. Among the people which the appellees contend the Federal Government is entitled, as trustee, to supply with electricity produced at a loss and at the expense of the taxpayers generally are the Aluminum Company of America, the Monsanto Chemical Company, the Electro-Metallurgical Company, Volunteer-Portland Cement Company and the Victor Chemical Company. The trial court, on the objection of appellees, excluded proof that the TVA power could have been sold to utilities for distribution over existing systems with the greatest possible financial advantage to the Government and the widest distribution of the benefits, if any, among the people. (Appellants' Br. 177.)

3. The power to dispose of government property does not authorize the entry into permanent commercial businesses unrelated to any governmental function. The appellees argue that the Federal Government can not be denied the right to engage in a competitive commercial business, citing cases involving the utilization of privately owned or government owned corporations for the purpose of carrying out some affirmative function of the Federal Government. (Appellees' Br. 124-5.) This manifestly is no answer to appellants' conten-

tion that the power to dispose of property in terms does not authorize the Federal Government to enter into competitive commercial businesses within the States, to exercise regulatory powers over matters of intrastate concern, or to control and regulate matters of State policy. None of the cases cited by appellees involved the establishment of the Federal Government in permanent commercial businesses within various States in competition with their citizens.[1] Here, as elsewhere, the appellees cite statutes which have never been the subject of judicial examination. While these may or may not be proper exercises of constitutional power, it is plain that the existence of statutes on the books, which have not been challenged either for lack of incentive or lack of a party to raise the question, can not be construed as destroying the constitutional rights of citizens under a proper interpretation of the Constitution.[2] *Myers v. United States*, 272 U. S. 52, 170-171; *United States v. Boyer*, 85 Fed. 425, 432.

---

[1] *McCulloch v. Maryland*, 4 Wheat. 316; *First National Bank v. Fellows*, 244 U. S. 416; *Smith v. Kansas City Title & Trust Co.*, 255 U. S. 180, merely sustained the power of the Federal Government to charter banks as fiscal agencies of the Federal Government and in no way involved the entry of the Federal Government into a permanent commercial business and much less one unrelated to its constitutional functions. *King County v. Fleet Corp.*, 282 Fed. 950; *Sloan Shipyards v. Fleet Corp.*, 272 Fed. 132; *Fleet Corp. v. Western Union*, 275 U. S. 415 and *New Brunswick v. United States*, 276 U. S. 547, dealt merely with emergency exercises of the national defense powers in time of war or the *bona fide* liquidation of a *bona fide* war enterprise. *Wilson v. Shaw*, 204 U. S. 24, involved the construction and operation of the Panama Railroad in exclusive federal domain under the foreign commerce and national defense powers and involved no possible conflict with the reserved rights of the States. *Standard Oil Co. v. Lincoln*, 144 Neb. 243, involving the power of a municipality to establish a gasoline station obviously has no application to any power of the Federal Government.

[2] Appellees in particular assert that the method of disposition of power at Boulder Dam does not differ materially from

(Continued on page 88)

The appellees pass over the fact (pointed out in Appellants' Br. 136-7) that under appellees' contention the Federal Government could make its ownership of oil, coal, natural gas, forests and agricultural lands the basis of establishing nation-wide competitive commercial businesses free from State taxation, regulation and control and in displacement of the rights of the people to engage in such businesses with the statement that "it is unnecessary to elaborate the obvious distinctions (still concealed in the hearts of the appellees) between the instant case and those suggested by appellants." (Appellees' Br. 126.) The fact is that if the appellees' contentions are sound, the mere implementing power to dispose of federal property has substantially destroyed our dual system of Government. Thus, water power (before conversion into electricity) is merely mechanical energy. Coal is likewise merely energy which may be converted into electricity. If the appellees' contentions are sound, the Government by virtue of its ownership of coal deposits in the public domain may install equipment to convert the energy of the coal into electricity just as it may install generators to convert the water power into electricity, and having converted the energy of the coal into electricity, it may engage in the business of supplying electricity to the public throughout the nation.

In this connection, it should be observed that the appellees seek to create the impression that appellants merely argue that the power to dispose of property is limited only

---

(Continued from page 87)

that involved in the instant case. (Appellees' Br. 141-145.) Were this true, it would be clearly irrelevant in view of the fact that this Court has never passed upon the validity of provisions of the Boulder Canyon Project Act (45 Stat. 1057) with respect to the disposition of power. However, a comparison of that Act with the analysis of the TVA Act (Appellants' Br. 14-17) discloses that appellees' contention is untrue; and a comparison of the TVA Unified Plan with the administrative action under the Boulder Canyon Project Act will disclose a similar lack of analogy.

by the Tenth Amendment. (Appellees' Br. 126.) The appellants have made clear in their main brief that they contend, *first*, that the grant of power to dispose of property according to its terms does not include any power to engage in a commercial competitive business within the States or to regulate matters of intrastate concern; and *second*, that regardless of the language of the power, it, like all granted powers, is subject to the limitations not only of the Tenth and other Amendments, but to the inherent limitations of our dual constitutional system. (Appellants' Br. 133-144.)

4. The power to dispose of government property does not authorize the supplanting of the State police power over electric rates and service. The appellees say that their control over the distribution of TVA electricity by municipalities and cooperatives, and their fixing of resale rates are a proper activity of the Federal Government because indirectly it increases the demand for TVA electricity. (Appellees' Br. 132.) The federal desire to regulate local rates can only be based upon either the assumption that State regulation of local electric rates is inadequate or does not suit the views of the federal agency, or upon the circumstance that the appellees are requiring distribution of their power at less than cost. But obviously the relationship is too remote to permit the intrusion of the Federal Government into State domain. On the oral argument in the *Ashwander* case, Mr. O'Brian, then and now counsel for the Tennessee Valley Authority, said:

> "Mr. Justice Butler: And how about the sale of appliances in order to provide a market for the electricity so incidentally produced?
>
> Mr. O'Brian: I do not think that is constitutional, your Honor." (Transcript of Argument 135-6.)

In support of this contention, appellees also cite *Oregon & California R. R. v. United States*, 238 U. S. 393 and *United States v. Gratiot*, 26 Fed. Cas. 12, aff'd. 14 Pet. 526.

The *Oregon & California Railroad* case involved a grant of land to promote the construction of a railroad and the settlement of an uninhabited area. The restrictions on the size of the tracts in which and price at which the donee might sell the land was a condition which could have been imposed by any private owner. It involved no continuing interference with the powers of the States and bears no colorable analogy to the TVA enterprise involving a permanent commercial business and permanent interference with the rights of the States and the people. *United States v. Gratiot* was a suit upon a bond securing a lease. The question certified to this Court was whether the President had power to make the lease, and the bond and the lease are accordingly printed in full in the report of the case in this Court. Neither contains any provision with reference to resale price and it seems quite obvious that the statement of Mr. Justice McLean on circuit was a dictum responsive to some argument made below. But in any event, it is plain that Mr. Justice McLean did not lay down the principle that the United States in the exercise of its power to dispose of property could engage in the business of regulating matters reserved to the States. Mr. Justice McLean said:

> "The argument is not sustainable, that if the United States may do this, they may engage in any other traffic, within a state, and regulate prices at pleasure. This consequence does by no means follow." (loc. cit. 13.)

Appellees also argue that the powers reserved to the States are not invaded because the distributors of TVA power, but not TVA, are subject to State control. (Appellees' Br. 134-139.)[1] But to the extent that TVA has the

---

[1] Appellees' contention that appellants have no standing to challenge the validity of the resale rate provisions in the contracts between TVA and municipalities and cooperatives (Appellees' Br. 127-134) is answered in the section dealing with the right to sue at pp. 110-111, *infra*.

constitutional authority to engage in this business and in these activities, it is immune from State control. (Appellants' Br. 151-152; *Arizona v. California*, 283 U. S. 423, 451.) In *United States v. Butler*, 297 U. S. 1, substantially the same argument was advanced, that federal control of local crop production was proper because the States might forbid the farmers to enter into the contracts for crop restriction (p. 74), or that the farmers might voluntarily decline to enter into such contracts (p. 70), and the argument was rejected by this Court. In *Savings & Loan Association v. Cleary*, 296 U. S. 315, the Federal Government was not permitted to convert a State agency into a federal agency in contravention of State laws. In that case, the power of the Federal Government to establish such an agency was unquestionable. In this case, the Federal Government is plainly without power to do the thing it seeks to do; and it is immaterial whether or not State agencies might refuse to become an instrumentality of its unconstitutional enterprise. The appellees apparently concede that TVA, after creating a state of complete public dependence upon its service and facilities, may withdraw from the State and that the State is powerless to protect its citizens in the premises. (Appellees' Br. 136.) The only answer appellees are able to make is that in their judgment they have spent so much money, or will spend so much money, in the Tennessee Valley that they will permanently commit the Federal Government to carrying on the electric utility business.

Appellees also argue that their control of retail rates raises no constitutional question. (Appellees' Br. 146-154.) The real basis of their argument is that State consent, claimed to have been procured by various State Acts, cures this objection. In our principal brief we have examined this question and shown, *first*, that no State consent can grant power to the Federal Government; and *second*, no State

may waive the inherent limitations of our constitutional system in matters such as these which involve the very essence of Statehood. (Appellants' Br. 144-147, 180-186.) The appellees do not discuss these questions; they refer to the right of municipalities, under State authority, to make binding contracts with utilities for a reasonable time. (Appellees' Br. 151.) The obvious and controlling distinction is that if the United States is acting constitutionally, its power is paramount and not subject to State regulation, that the State may not delegate its power of regulation to another government (I *Cooley's Constitutional Limitations* (8th ed.) 224), and that the political agencies of the States, like the States themselves, may not contract away the inherent limitations of our constitutional system or grant constitutional power to the Federal Government.

In *Steward Machine Co. v. Davis,* 301 U. S. 548, the Federal Government had power to provide the social security benefits without regard to the States. The statute provided a method of State cooperation within State constitutional power. Here the Federal Government has no constitutional power to carry on the TVA enterprise, the TVA Act is not conditioned upon any action by the States, and contrary to the situation in that case (see quotation, Appellees' Br. 151), the restrictions are imposed by contract.

At page 153 of their brief, appellees argue that the statutory and administrative purpose to regulate appellants' rates is negatived by the fact that they have made contracts with consumers not served by appellants. Laying to one side the fact that in most cases this represents a taking of prospective customers of the appellants, the fact that the appellees' regulatory activities extend over a wider area than the service areas of appellants and include the service areas of other utilities in no way

negatives the plain and obvious fact that the purpose of both the Act and the administrative plan is to regulate appellants' rates. The fact that they also regulate other rates and that their ambitions are wider than the operations of appellants confirms rather than negatives the statutory and administrative purpose.

IV.

THE APPELLEES' CONTENTIONS THAT APPELLANTS HAVE NO RIGHT TO SUE ARE UNFOUNDED. (Answering Appellees' Br. 160-192; 127-134.)

Appellees challenge appellants' right to sue in all, or some, aspects of this suit upon the grounds (1) that appellants do not possess non-exclusive franchises to carry on the business of supplying electricity to the public; (2) that TVA has been granted valid franchises or exemptions under State law in *some* of the States in which appellants operate; (3) that the extension of the TVA power operations into the service areas of some of the appellants, inevitably involved in the execution of the unitary TVA Unified Plan, has not yet become a *fait accompli*; (4) that some of the appellants are estopped; (5) that appellants' damages flow from the legal competition of municipalities and cooperatives; and (6) that appellants have no standing to challenge the validity of the regulation of the retail rates of distributors of TVA power as an integral part of the statutory and administrative scheme to regulate local electric rates, including those of appellants. (Appellees' Br. 160-192, 127-134.)

We shall briefly examine these contentions in the order stated, but we here invite attention to the fact that appellees have made no attempt to deny the right of appellants to sue to vindicate their right to engage in and carry on the business of supplying electricity to the public within

the States free from displacement by the Federal Government and free from federal interference, regulation or control. (Appellants' Br. 148-150, 210-211.) Nor have they challenged the analogous right of appellants to sue to prevent destruction of their businesses through the establishment of a federal policy within the States of having the local electric business carried on by publicly owned and nonprofit bodies. (Appellants' Br. 175-177.)

A. APPELLEES' CONTENTIONS (1) THAT APPELLANTS DO NOT POSSESS NON-EXCLUSIVE FRANCHISES TO CARRY ON THE BUSINESS OF SUPPLYING ELECTRICITY TO THE PUBLIC AND (2) THAT TVA HAS BEEN GRANTED VALID FRANCHISES OR EXEMPTIONS UNDER STATE LAW, ARE WITHOUT SUBSTANCE.

1. *Each of the appellants is a public utility corporation duly qualified to engage as a public utility* in the business of generating, transmitting, distributing and selling electricity, or distributing and selling electricity, or transmitting and selling electricity as a public utility in the State or States in which it operates. (Fdgs. 1, 6-23; R. 585-598; Comp. Ex. 2, R. 2450.) These State franchises do not confer merely the right to do business as a corporation, as appellees assert at page 170 of their brief, but *they confer the right to do business "as a public utility."* In addition, each of the appellants holds franchises, licenses or easements (conceded for the purpose of this suit to be nonexclusive) for the distribution and sale of electric energy within the corporate limits of municipalities and, where required, within substantially all the counties in which it operates. (Fdg. 28, R. 599; Comp. Ex. 3, R. 2453.)

Appellees argue that municipal and county franchises confer only the privilege of occupying the streets and highways with electric facilities. (Appellees' Br. 166-170.) This is an utter misconception of the rights which appel-

lants enjoy. The power to grant local franchises resides primarily in the State and may be exercised directly [1] or delegated to political subdivisions of the State.[2] In the latter case, two things are essential to the local operation of an electric utility business: (a) a franchise from the State to engage in business "as a public utility" and (b) the consent of local authorities to the use of the streets and highways for facilities to carry on such business. *Owensboro v. Cumberland Telephone Co.*, 230 U. S. 58, 65; *Mayor of Knoxville v. Africa*, 77 Fed. 501, 507-8. In either case, that the franchise to carry on a public business is a property right, capable of assignment, sale and mortgage, and entitled to the guarantee of protection afforded property rights and contracts under the Constitution, has been sustained by an unbroken line of authorities in the federal courts[3] and in the courts of the States in which TVA is operating or threatening to extend its operations.[4]

---

[1] Thus, while appellants operating in Mississipp. and Alabama have local franchises, both States have granted d: ectly the right to occupy streets and highways and such lo franchises are unnecessary. Miss. Code (1930) §§ 1505, 1506; Ala. Code (1923) § 7197.

(Continued on page 96)

In *Owensboro v. Cumberland Telephone Co., supra,* this Court said:

> "That the grant in the present case was not a mere license is evident from the fact that it was upon its face neither personal, nor for a temporary purpose. The right conferred came from the State through delegated power to the city. *The grantee was clothed with the franchise to be a corporation and to conduct a public business, which required the use of the streets, that it might have access to the people it was to serve.* Its charges were subject to regulation by law and it was subject to all of the police power of the city.
>
> "* * * As a property right it (the franchise) was assignable, taxable and alienable. Generally it is an asset of great value to such utility companies and a principal basis for credit." (loc. cit. 65.)

Appellees argue that appellants do not come under *Frost v. Corporation Commission,* 278 U. S. 515, because the non-exclusive franchise there involved took the form of a certificate of convenience and necessity and that the application of the *Frost* case depends upon a matter of terminology and not upon the substantive question whether the plaintiff has a non-exclusive franchise to carry on a public service. (Appellees' Br. 164.) But this Court in the *Frost* case took pains to demonstrate that a certificate of convenience and necessity was a form of franchise equivalent to franchises such as those of appellants, which had been recognized as property rights long before certificates of convenience and necessity originated. (loc. cit. 520.) The suggestion that a non-exclusive franchise expressed in

---

(Continued from page 95)

524; *Princeton Power Co. v. Calloway,* 99 W. Va. 157; *McInnis v. Pace,* 78 Miss. 550; *Harrison v. Big Four Bus Lines,* 217 Ky. 119; *Harrell & Croft v. Ellsworth,* 17 Ala. 576; *Alabama Power Co. v. Cullman County Electric Membership Corp.,* 234 Ala. 396; *Smith v. Harkins,* 38 N. C. 613; *Bridge Co. v. Flowers,* 110 N. C. 382; *Commonwealth v. Portsmouth Gas Co.,* 132 Va. 480.

the terms of a certificate of convenience and necessity is a property right, but that a non-exclusive franchise for public service expressed in other terminology is not a property right, is plainly absurd. See *Louisville v. Cumberland Telephone Co.*, 224 U. S. 649, 661.

While immaterial for the reasons above stated, appellants which operate in Alabama, Tennessee, Kentucky, North Carolina, South Carolina and West Virginia do have what amount to certificates of convenience and necessity. There are statutes in those States which require certificates of convenience and necessity for the initiation or extension of utility service into municipalities or other areas served by another utility. (Alabama Code (1923) § 9795; Tennessee Code (1932) §§ 5502-04; Carroll's Kentucky Statutes (1936) §§ 3952-25; Michie's North Carolina Code (1935) § 1037(d); Acts of South Carolina, 1932, c. 871, § 2(w); Michie's West Virginia Code (1935) § 2562 (1). (11).) The effect of those statutes was to confer upon appellants and other utilities operating in those States at the date of passage of the respective Acts, protection against the invasion of their territory by anyone not holding a valid certificate of convenience and necessity for that purpose.[1] There is and can be no claim that since the passage of these statutes any of the appellants operating in these States have failed to procure any necessary certificates of convenience and necessity for any subsequent extension of their lines or expansion of their businesses (R. 833, 862; Comp. Ex. 88); nor can it be claimed that any of the appellants have failed to comply with the applicable statutory provisions neces-

---

[1] In addition, the approval of a franchise by the Tennessee Commission under §5453 of the Tennessee Code of 1932 constitutes a certificate of convenience and necessity (*Tennessee Eastern Electric Co. v. Hannah*, 157 Tenn. 582), and all franchises granted to appellants operating in Tennessee subsequent to the enactment of this statute have received the requisite approval. (R. 767-8, 797, 810, 833, 845, 851-2.)

sary to engage in and carry on the electric utility business in the territories in which they are operating. (R. 767-8, 788-9, 797, 806, 810, 83[illegible] 845, 851-2, 862; Comp. Ex. 3, R. 2453.)

2. We now deal with appellees' contention that TVA has been granted valid franchises or exemptions under State law.[1] Appellees erroneously assert that appellants do not contend that such alleged franchises or exemptions are invalid and imply that the only question is whether the alleged exemptions constitute a denial of equal protection of law under the Fourteenth Amendment. (Appellees' Br. 170, 172.) To the extent that such purported franchises or exemptions exist,[2] appellants challenge their validity upon even more fundamental grounds. Under our constitutional system, the States are without power to grant and the Federal Government is without power to accept a franchise or permit in the form of an exemption to engage in an undertaking within the States which is both unauthorized and forbidden by the Federal Constitution, which destroys the rights reserved to the people (and not the States) under the Ninth and Tenth Amendments, which is in violation of our dual constitutional system of government and which involves the surrender of the essence of Statehood. (Appellants' Br. 180-186.) These alleged franchises and exemptions are therefore void, just as was the exemption invoked by the defendants in the *Frost* case.

---

[1] There is no pretense that TVA has acquired franchises or has any statutory exemptions in Virginia, West Virginia, Kentucky, North Carolina or South Carolina.

[2] Appellees claim to have franchises in certain of the municipalities and counties in which they operate. (Comp. Exs. 214-223, 225-264, R. 3022-3026, 3026-3037.) There is no evidence, however, that TVA has a municipal franchise in any of the municipalities outside the so-called "ceded area" with which it has contracts for the sale of power except Fayetteville. The rights of appellants to challenge competition by TVA in these municipalities is discussed at Appellants' Br. 201-209 and at pp. 108-109, *infra*.

The appellees can not plead alleged franchises and exemptions in justification of their invasion of the non-exclusive franchises of the appellants and then successfully assert that the appellants have no standing to invoke a judicial determination whether such alleged franchises and exemptions are valid or void. Yet that is precisely what appellees have attempted to do.

Manifestly *Railroad Co. v. Ellerman*, 105 U. S. 166, is inapposite. In that case the plaintiff was the operator of a wharf who sought to enjoin the execution of a lease of a rival wharf by the railroad company on the ground that the use proposed by the lease was beyond the corporate power of the railroad company to grant. It appears from the report of the case that the plaintiff, who was an individual, had no property right, in the form of a franchise or otherwise, which could be protected in a court of equity. He had acquired only such rights as had been assigned to him by the city, whose right to build wharves and collect tolls on the land of the railroad company had been revoked by the State legislature from which all rights of the city were derived. Such being the facts, the Court inquired whether the plaintiff had any "legal interest" which would entitle him to enjoin the railroad company from the consummation of an *ultra vires* act, and the Court merely held that since Ellerman had no legal interest to protect, he could not question the powers of the corporation, as only a stockholder or the State had sufficient legal interest to raise the question of *ultra vires* under these circumstances. The case is only one of many which hold that only the State, stockholders and, in some instances, creditors may question the violation of powers contained in a corporate charter. It plainly does not apply in a case where appellants have non-exclusive franchises which are entitled to protection from unlawful competition.

That *Alabama Power Co. v. Ickes*, 302 U. S. 464, lends no support and is indeed irrelevant to this contention of appellees is too clear to warrant discussion. Appellants' analysis of the *Alabama* case in their main brief, which appellees have not even attempted to answer, plainly sustains appellants' right to sue in all aspects of this case. (Appellants' Br. 211-214.)

B. APPELLEES HAVE MADE NO ANSWER TO THE RIGHT OF APPELLANTS TO SUE UNDER THE NINTH AND TENTH AMENDMENTS.

This right is discussed in our main brief at pp. 148-150, 210-211. It is an entirely separate right which does not depend upon the existence or validity of franchises, although franchises are one of the property rights which individuals are entitled to protect. It depends upon a direct invasion by the Federal Government of the right of the people to be protected in the rights of local self government and to engage in and carry on intrastate businesses free from being displaced by the Federal Government taking over the business as a federal monopoly and free from federal regulation or control. These rights were reserved to the people and not to the States under the Ninth and Tenth Amendments. The right to sue in these circumstances is supported by a long line of authorities in this Court which has sustained the right of individuals to sue to enjoin unconstitutional federal interference with, or regulation of, the rights and property of the people. No more here than in those cases can it be said that the individual is without right to sue because a State which has jurisdiction in the premises might conceivably impose regulations similar to those sought to be imposed by the Federal Government without jurisdiction and without constitutional authority.

C. APPELLEES' CONTENTION THAT SOME OF APPELLANTS ARE NOT THREATENED WITH DIRECT AND SPECIAL DAMAGE IS IN THE TEETH OF THE FINDINGS AND OF THE UNDISPUTED FACTS IN THE RECORD.

Appellees' contention (Appellees' Br. 175-177) that nine of the appellants are not threatened with direct and special damage is based on the circumstance that the extension of the TVA power operations into the service areas of some of the appellants, although inevitably involved in the execution of the TVA Unified Plan (Appellants' Br. 65-70; pp. 1-4, 71-80, *supra*), had not yet become a *fait accompli* at the time of the trial. The trial court expressly found that *"Substantial future damage to complainants will result from competition with TVA."* (Fdg. 125, R. 628.) Appellees have not appealed from this finding, and it makes clear (a) that the future damage will be substantial, (b) that the damage extends to all appellants and (c) that the damage will result from competition with TVA. Similar statements of the trial court in its opinion (R. 552, 555) are referred to at p. 191 of appellants' brief. (See also Add. Fdg. 120, R. 706.)

The size of this unitary enterprise, the vast quantity of power to be created, and the limits of the available market incontestably establish that the power can not be marketed, as directed by the TVA Act and as being administered by appellees, without invading substantial parts of the market areas of all of these appellants. The very purpose of this suit is to prevent this threatened invasion. The suggestion that the scope of the right to sue and the scope of the right to relief are to be measured by the extent to which the wrongdoer has accomplished the wrong at the date of trial of a suit for anticipatory relief is manifestly untenable.

The appellees can not in good conscience make this contention. One of the companies named in the finding

upon which appellees rely, Holston River Electric Company (Appellees' Br. 175), had had its entire facilities and business taken over directly by TVA before the TVA brief was written. If this company had not been so taken over, we may assume that appellees would have made the same claim as to it. Since the date of trial, TVA and the City of Knoxville have acquired all the facilities of the Tennessee Public Service Company and TVA has extended its existing operations to the very edge of the market area of every other appellant. (See pp. 2-4, *supra.*)

As another illustration, appellees are engaged in constructing the Hiwassee power project and have scheduled for construction the Fontana power project, both of which are located in the service area of the Carolina Power & Light Company, one of the appellants with respect to which this claim is made. It is conceded that all of the TVA power projects are to be interconnected into one large grid system or power pool, a part of which will lie in the service area of the Carolina Power & Light Company. Do the appellees intend to ask this Court to believe that the extension of this vast grid system into the very service area of the Carolina Power & Light Company is for some undisclosed purpose but not to market any power in that area? This is apart from the fact that TVA has already taken away business of the Carolina Power & Light Company through taking over the supplying of electricity to the Volunteer Portland Cement Company and to the entire area formerly served by the Tennessee Public Service Company, which obtained its electricity at wholesale from the Carolina Power & Light Company. (Yoder R. 824-5; Comp. Exs. 118, 157, 158, R. 2808, 2891-2.)

The court below, without protest or objection by appellees, sought to restrict not only the scope but also the quantum of the proof offered by appellants on any issue and in

particular pressed the appellants not to offer any further proof of damage, on the ground that the court thought the threat of irreparable damage obvious and would assume damage to the appellants (R. 1259-60, 1266, 1414, 1470, 1483), and in their brief appellees strongly urge that the trial court properly excluded evidence as to the extent of damage to particular appellants on the ground that it was purely cumulative. (Appellees' Br. 224, 225, 240-244.) This is clearly an admission of damage.

Finally, special counsel for the TVA in his final argument before the trial court expressly stated: "We have conceded that a continuance of those lower (TVA) rates will work in competition a degree of damage to the Complainants" (Tr. 6366) and that "We differ (with appellants) as to the amount and extent of that damage (to appellants), but we have frankly conceded that damage will result." (Tr. 6367.)

There can be no question upon the basis of the foregoing that each of the appellants is threatened with direct and special damage from TVA competition and that appellees' contrary contention is wholly without substance. It is firmly established that in equity, "damage threatened, irremediable by action at law, is equivalent to damage done" (*Hitchman Coal & Coke Co. v. Mitchell*, 245 U. S. 229, 256; see also *Vicksburg Waterworks Co. v. Vicksburg*, 185 U. S. 65, 82), and that a threat of competition is a threat of irreparable damage. *Walla Walla v. Walla Walla Water Co.*, 172 U. S. 1, 12; *Frost v. Corporation*, 278 U. S. 515, 521.

D. APPELLEES' CONTENTION THAT CERTAIN OF THE APPELLANTS ARE ESTOPPED TO MAINTAIN THIS SUIT IS UNTENABLE.

Appellees' contention (Appellees' Br. 177-182) that appellants Alabama Power Company, Mississippi Power Company, The Tennessee Electric Power Company and Southern Tennessee Power Company [1] are estopped to challenge the validity of the huge unitary scheme known as the TVA Unified Plan for the creation of a vast quantity of firm or commercial power and its utilization to establish and operate the largest unitary public utility system in the United States is plainly untenable.

The fact is that since January 4, 1934, no power has been purchased from TVA by any of these appellants except under the January 4 contract (Def. Ex. 143A, R. 4195) and the closing agreement hereinafter referred to. (Def. Ex. 150, R. 4255-8.)

In the *Ashwander* case it appeared that the Alabama Power Company had purchased large quantities of power at Wilson Dam both before and after the passage of the TVA Act, during the period extending from 1925 to 1935. This Court held that the Alabama Power Company was not estopped and proceeded to determine that Wilson Dam was a constitutional structure as it then existed under the National Defense Act of 1916. The appellees insisted before this Court that the contract of January 4, 1934, to which three of these appellants were parties and upon which appellees rely as a basis for an estoppel, involved only Wilson Dam power. (Appellants' Br., App. pp. 67-8.) This Court so construed the contract and Alabama Power Com-

---

[1] Southern Tennessee Power Company is only a transmission company (Fdg. 112, R. 626) and was not a party to the January 4 contract. There is no evidence in the record to support appellees' assertion (Appellees' Br. 177) that it is an instrumentality of The Tennessee Electric Power Company.

pany necessarily accepted that construction. (Barry R. 873; Def. Ex. 150, R. 4258, 4261.) Both before and under the January 4 contract, the power taken by these appellants was taken at the dam [1] and involved no question of the validity of any other dam or of the method of disposal authorized by the TVA Act and now embodied in the TVA Unified Plan under which appellees are setting up a vast federally owned and operated electric utility system with the numerous invasions of the rights of the States and the people hereinbefore more particularly described. The absence of any relation between these transactions concerning Wilson Dam power delivered at the dam and the vast activities embraced in the TVA Unified Plan now in process of execution, is manifest.

The claimed excess in the quantity of power delivered to these appellants during the last 7 months of 1936 over the capacity of Wilson Dam as it was sustained by this Court is inconsequential (Def. Ex. 148, R. 4254), and moreover, if in accord with the facts, it is entirely due to conduct of appellees, over which these appellants had no control, in wrongfully increasing the capacity of Wilson Dam by the use of Norris storage and consequently forcing additional power over the inter-connection of these appellants at Wilson Dam. There is no evidence and not even a suggestion that these appellants ever consented, and much less requested, that TVA should use Norris storage to increase the capacity of Wilson Dam or should put Norris Dam power on the line. (Def. Ex. 150, R. 4258, 4261.)

Since the termination of the January 4 contract on February 3, 1937, the Alabama Power Company has been

---

[1] The amount of power purchased prior to January 4, 1934, was 2,899,728,786 kwh. and the amount purchased under the January 4 contract to December 31, 1936, was 946,412,788 kwh. (Def. Ex. 150, R. 4256, 4257.) From January 1 to February 3, 1937, the date of the termination of the contract, the amount was 13,325,083 kwh. (Def. Ex. 147, R. 4243.)

purchasing an insignificant amount of power from TVA at Wilson Dam, *in accordance with the closing agreement under the contract of January 4,* in order to supply urban properties in the so-called "ceded area" supplied by the secondary or marketing transmission lines sold to TVA under the contract. (R. 4258.) This power was supplied on a free interchange basis until November 3, 1937, since which time, also pursuant to the closing agreement, it has been purchased at the standard TVA rate for municipalities. This represents a clear case of necessity, as the Alabama Power Company, because of conditions beyond its control, had no choice but to make the arrangement. Cf. *Abie State Bank v. Bryan,* 282 U. S. 765, 776; *Union Pac. R. R. Co. v. Public Service Commission,* 248 U. S. 67, 70.

Appellees assert that these appellants "have affirmatively contributed to the execution of many of the acts of the Authority now complained of." (Appellees' Br. 178.) What activities the TVA has been induced to undertake by the action of any of these appellants is not disclosed. Surely the appellees do not intend to tell this Court that despite their efforts throughout 175 pages of their brief, to create the impression that the TVA Unified Plan is solely a navigation and flood control project, they in fact were induced and misled into embarking on that project solely because the Alabama Power Company, under the pressure of circumstances created by TVA, had been compelled to purchase a small quantity of TVA power to serve the isolated communities which the January 4 contract would otherwise have left without any electric service. As this Court stated in the *Ashwander* case, "estoppel in equity must rest on substantial grounds of prejudice or change of position, not on technicalities." (loc. cit. 323.)

The fact is that the primary benefits under the January 4 contract were derived by TVA and not by appellants.

The power required to be taken under the contract was "surplus" power (R. 4201) and the record is clear that TVA had no other market for the power and that it would otherwise have gone to waste. (Fdg. 172, R. 638.) Certainly, appellees will not be so bold as to claim that they have reserved power for these appellants or any other utility at the expense of any opportunity to go into the business directly or through their controlled distributors.

It is clear, as the trial court stated in its opinion (R. 544), that "the record presents no essential difference from the situation covered by the ruling as to estoppel in the *Ashwander* case," and that that decision effectively disposes of appellees' attempt to renew the point in this Court. As in the *Ashwander* case the contract in suit manifestly had a "broader range" than the earlier transactions, so in this case the scope of the challenged activities of TVA has an immensely "broader range" than the "limited undertaking" expressed in that contract, and it can not be said that there was anything in the contract which precludes the contention that such activities "go beyond the constitutional power of the Authority." *Ashwander v. Tennessee Valley Authority*, 297 U. S. 288, 323; *cf. Frost v. Corporation Commission*, 278 U. S. 515, 527-528.

Appellees cite *Great Falls Mfg. Co. v. Attorney General*, 124 U. S. 581; *Wall v. Parrot Silver & Copper Co.*, 244 U. S. 407; *St. Louis Co. v. Prendergast Co.*, 260 U. S. 469; but these cases are plainly not applicable here. *Ashwander v. Tennessee Valley Authority*, loc. cit. 323.

E. APPELLEES' CONTENTION THAT THE DISTRIBUTION OF TVA POWER THROUGH MUNICIPALITIES AND CO-OPERATIVES DOES NOT CONSTITUTE COMPETITION WITH APPELLANTS AND INVOLVES NO LEGAL INJURY IS WITHOUT MERIT.

That sales through municipalities are not only direct competition for wholesale business but also direct competition in the distribution of electricity within the municipalities is not open to debate. *Citizens El. Ill. Co. v. Lackawanna & W. P. Co.*, 255 Pa. 145; *Chicago v. Mutual Electric Light Co.*, 55 Ill. App. 429; see Appellants' Br. 201-203; *Holston River Electric Co. v. Hydro Electric Corp.*, 17 Tenn. App. 122, cert. den. Tenn. Sup. Ct., 66 S. W. (2d) 217; cf. *Holston River Electric Co. v. Hydro Electric Corp.*, 166 Tenn. 662.

Indeed, the Government brief in *Alabama Power Co. v. Ickes, supra,* signed by the Attorney General and Mr. Freund, of counsel in the instant case, stated with reference to the *Citizens El. Ill. Co.* case:

> "• • • There the defendant, a utility company, with a franchise limited to a particular area, proposed to sell power, at wholesale, in a township in which it had no franchise to operate, and in direct unlawful competition therein with the plaintiff utility company which had a valid franchise covering that township. Plaintiff was granted an injunction. It happened that the proposed purchaser of the power from defendant was a third utility company which had a valid franchise to sell, at retail, in competition in that township with plaintiff. But the wrong complained of was the illegality of the *direct competition,* at wholesale, between plaintiff, having a valid franchise covering that territory and defendant, which had no such franchise."

Precisely the same principles apply to the distribution of TVA power through rural cooperatives. Hence the right to sue in this aspect exists apart from the fact that, while

the existence of such a relationship is not an essential of appellants' right to sue, the municipalities and cooperatives are in reality mere agents for the distribution of TVA power; and that in any event, TVA so far controls and participates in sales by distributors that the validity of its participation may be tested at the suit of an injured party. (Appellants' Br. 204-209.)

There is no need to elaborate upon the obvious fact that competition for industrial business is clear and direct. (Appellants' Br. 76, 192-193, 200.) The suggestion that the holder of a non-exclusive franchise may not enjoin illegal competition without showing that, but for the intervention of the illegal competitor, he could already have secured the business of each and every customer secured by the illegal competitor, is manifestly absurd and without support in any of the cases.

It is thus obvious that such cases as *Alabama Power Co. v. Ickes, supra; Duke Power Co. v. Greenwood County,* 302 U. S. 485; *United States v. Dern,* 68 F. (2d) 773; *Milwaukee Horse & Cow Commission Co. v. Hill,* 207 Wis. 420, have no application. There was no federal competition or direct invasion of the property or other rights of the complainants in those cases. Thus in the *Alabama* case the municipal competition was conceded to be lawful and the Court merely held that the relation between the alleged illegal action of PWA and the damage suffered by petitioner from the activities of PWA was too indirect and remote to be regarded as a proximate cause of the damage and hence to permit the examination of the validity of the PWA action.

F. APPELLEES' CONTENTION THAT APPELLANTS HAVE NO STANDING TO CHALLENGE THE VALIDITY OF THE REGULATION OF RETAIL RATES OF DISTRIBUTORS OF TVA POWER AS AN INTEGRAL PART OF THE STATUTORY AND ADMINISTRATIVE SCHEME TO REGULATE LOCAL ELECTRIC RATES (INCLUDING THOSE OF APPELLANTS), IS UNSOUND.

The fact that the regulation of local electric rates, including those of appellants, is not only the natural and inevitable but also the intended effect of the statutory and administrative scheme and that the regulation of retail rates of TVA distributors is an integral and essential part of that statutory scheme has been shown at pages 163-175 of appellants' brief. Indeed, appellees now assert that, to the extent that TVA power is made available in the service areas of appellants, the fact that appellants' rates would be regulated is "a self-evident conclusion" so that no exclusion of evidence on that point could be error. (Appellees' Br. 224.) Appellees assert that appellants nevertheless can not be heard upon the authority of *Hines Trustees v. United States,* 263 U. S. 143, and *Sprunt & Son v. United States,* 281 U. S. 249. (Appellees' Br. 127-134.) The cases are plainly inapplicable. They dealt with a subject matter falling within the field of federal power. The orders of the Interstate Commerce Commission amounted to a mere consent to voluntary action by the railroads and such orders were in no way the proximate cause of any damage suffered by the complainants.

Here we have *affirmative action by the Government itself,* which includes (1) direct competition by the Government or full participation by the Government in, and control over, the retailing of the power (Appellants' Br. 201-9); and (2) a statutory and administrative scheme of which these contracts are an integral and essential part to regulate all local electric rates in the TVA area, including those of appellants. (Appellants' Br. 167-175.) Appellees further claim that this conceded regulation in fact is not

regulation in law, citing *Standard Scale Co. v. Farrell,* 249 U. S. 571; *Pennsylvania R. R. Co. v. Labor Board,* 261 U. S. 72; *United States v. Los Angeles R. R.,* 273 U. S. 299. (Appellees' Br. 154.) These cases are also plainly inapplicable. The situation in the case at bar is governed not by those cases but by the principle enunciated in *United States v. Butler,* 297 U. S. 1, 70-1, and *Frost v. Railroad Commission,* 271 U. S. 583, 593, as shown in appellants' main brief. (Appellants' Br. 170-174.)

V.

THE RULINGS OF THE TRIAL COURT ON MATTERS OF EVIDENCE AND PROCEDURE CONSTITUTE PREJUDICIAL ERROR. (Answering Appellees' Br. 192-260.)

The trial court's procedure in the conduct of the trial has already been discussed in part at pp. 5-6, *supra.* For the most part the contentions in appellees' brief relating to the trial court's rulings on evidence are directed to the claim that the exclusion of evidence was not prejudicial, and as to that claim no extended answer is required. Although appellees' brief contains a number of misstatements and misinterpretations, to avoid undue extension of the argument they are discussed only in so far as they affect the contentions made by appellees which we now consider.

1. The trial court's refusal to require production of TVA minutes and other documents. (Answering Appellees' Br. 201-7, 235-40.)

Appellees' brief undertakes to justify the trial court's refusal to issue any subpoenas for the production of TVA corporate minutes on the grounds (a) that the error, if any, was largely cured by the voluntary production of TVA con-

tracts and Board resolutions (Appellees' Br. 203); (b) that appellants had numerous other sources of information including reports and data submitted to Congress (Appellees' Br. 202, 197); and (c) that since the resolutions voluntarily produced embodied, according to appellees' contentions, the only official acts of the Board, the information upon which they were based and the considerations upon which such acts were taken would be *prima facie* incompetent and immaterial. (Appellees' Br. 204, 235-39.)

(a) The first of these claims, that *all resolutions* were furnished, is contrary to the record. The resolutions actually furnished merely show Board approval of contracts, expenditures and other like matters of a routine and formal character. (Comp. Exs. 516-627, R. 3357-3476.) That appellees never proposed or intended to furnish anything more than the material which is set forth in these exhibits, appears from the statements made by counsel following the court's ruling refusing appellants' application for the production of TVA minutes.

> "Mr. Fly: May I add, your Honor, that it will be our attitude to enable complainants to get any and everything that pertains to the concrete facts which *we feel are within any bounds of reason, at issue here*, and we will be glad to confer with them to that end.
>
> "Mr. R. T. Jackson: We will of course be glad to confer with counsel for defendants. We, of course, will not be willing to substitute their judgment for the judgment of the Court as to what is competent and relevant. • • •
>
> "Mr. Fly: We are willing to give them the resolutions authorizing these contracts, and any other pertinent transactions of a concrete character. I cannot state with any degree of precision now, but I don't think there will be any difficulty on that.

"Judge Allen: It was the understanding of the Court that he offered, had offered to tender the resolutions enacted by the Authority. Was that not correct?

"Mr. Fly: *No, your Honor.* We do not endeavor to turn over to them all of the resolutions on any and every subject, but as to any transaction which *could properly be brought in issue here,* yes, without limitation as to those resolutions. We can give you all of the resolutions authorizing the contracts, transmission lines, sales and construction contracts and everything of that type." (R. 766-7.)

For the trial court to condition the denial of its subpoena upon any such offer as set forth above amounts to a delegation of the trial court's judicial duties to the partisan and unreviewable judgment of adverse counsel. No authority is cited in appellees' brief in support of any such procedure and the prejudicial effect of it can best be judged by the unwillingness of the appellees to produce even its formal resolutions other than those which in appellees' view related to "*pertinent transactions of a concrete character.*"

(b) Appellees' second contention is that appellants were not prejudiced because they had access to reports and data furnished to Congress. All appellees say by this argument is that appellants are not entitled either to controvert or supplement the statements which TVA has seen fit to make to Congress, but that appellees themselves are entitled to produce and use from their own official records any material of a self-serving nature which happens to serve their purposes in the present litigation,[1] even though such material controverts reports to Congress upon which they insist appellants are forced to rely.

---

[1] On August 25, 1933 TVA publicly announced its "Power Policy." (Comp. Ex. 633, excluded, R. 3487.) Such policy was set forth in the TVA Annual Report to Congress in December,

(Continued on page 114)

(c) While appellees contend that the TVA corporate minutes, other than the mere formal resolutions relating to authorizations of contracts and authorizations of construction work, are not shown to be prima facie relevant or material, they do not consider the showing made as to relevancy in the applications for subpoenas and accompanying statements (Comp. Exs. 1, 110, 111; R. 2441, 2643, 2660), but rely upon the contention that such minutes constitute "intradepartmental" discussions and reports [1] and therefore are prima facie inadmissible as a matter of law. This contention leads to the result that even as to resolutions concededly relevant and material, explanatory discussions which may be recorded in the minutes, showing the facts and considerations upon which the Board action was taken, are irrelevant and immaterial. In other words, a resolution authorizing the construction of a high tension transmission line with a voltage of 220 kv. to be operated for the present at 154 kv. (practically all "marketing" lines are designed for higher voltage than present operation) would be relevant, but any statements in the minutes showing that the larger capacity was recommended and approved

---

[1] Although none of appellants' assignments of error relate to the exclusion or production by subpoena of any "intradepartmental discussions, considerations, recommendations or reports" appellees have included in their brief a section so labelled (Appellees' Br. 235-9) and it is under that section that their discussion on this subject is found.

(Continued from page 113)

1934. (Comp. Ex. 113°, pp. 22-5.) Despite its refusal to require the production of TVA minutes, the trial court nevertheless received in evidence a certified copy of a resolution purporting to rescind the statement of the Power Policy. (Def. Ex. 29, R. 4061.) This claimed rescission had never been reported to Congress or otherwise publicly announced, and was introduced by TVA for the purpose of providing a colorable basis for Fdg. 215 (R. 647), prepared by TVA and adopted verbatim by a majority of the trial court.

to take care of certain prospective customers now served by appellants would be irrelevant.

Appellees offer no legal authority in support of this contention. So far as our examination of the cases has disclosed, it has never been applied in any suit against a private corporation and no principle of public policy justifies its application here.

> "* * * The responsibility of officials to explain and to justify their acts is the chief safeguard against oppression and corruption. Whether it is the relations of the Treasury to the Stock Exchange, or the dealings of the Interior Department with government lands, the facts must constitutionally be demandable, sooner or later on the floor of Congress. To concede to them a sacrosanct secrecy in a court of justice is to attribute to them a character which for other purposes is never maintained,—a character which appears to have been advanced only when it happens to have served the interest of some individual to obstruct investigation into facts which might fix him with a liability." 5 *Wigmore on Evidence,* 2nd Ed. 1923 § 2378.

None of the arguments of appellees justify the court's ruling in denying the production of TVA corporate minutes either as they relate to the resolutions voluntarily produced as relevant by appellees themselves or as they relate to the pertinent subjects set forth in the subpoena which the trial court denied.

2. The trial court's ruling in excluding all official TVA press releases and published advertising. (Answering Appellees' Br. 208-216.)

Appellees contend that in so far as the official press releases set forth facts, there is no prejudicial error in their exclusion because the facts are otherwise in the record, and that in so far as the press releases relate to "expressions of policies" and possible plans, they are incompetent as lack-

ing any authoritative or probative value. (Appellees' Br. 208-9.)

The objection to evidence as cumulative presupposes two things—first, that the facts for which the evidence is offered are otherwise in evidence, and second, that the additional evidence is unnecessary because the facts in question are sufficiently established. Throughout their brief appellees repeatedly make the argument that excluded evidence was merely cumulative, without considering either of these fundamentals. In claiming that press releases were merely cumulative, appellees entirely ignore our discussion of them in appellants' main brief. As there pointed out, the press releases show among other things that TVA has pursued unfair methods of competition (pp. 224-25), that TVA refused to submit to State regulation of its power business (pp. 220, 82), that TVA proposes and intends to regulate local electric rates of other utilities including appellants (pp. 219, 81) and that the primary object and purpose of the TVA projects is the production of power (p. 219, Comp. Ex. 846, R. 3803, Comp. Ex. 879, R. 3867). Upon all of these issues the trial court either failed to make any finding or made findings adverse to appellants. It is a curious version of the rule of cumulative proof that where evidence is offered to establish a particular contention but is insufficient to convince the trial court, the exclusion of other competent evidence upon the same subject will not be considered prejudicial error.

The claim that the press releases have to do with the subject of motives, personal opinions and views is an unsupported assertion not borne out by an examination of the releases themselves. The scope of their subject matter is set forth in our main brief (p. 219, footnote p. 73) and is therefore not repeated here. As also pointed out in our main brief, these press releases were expressly authorized and approved and their distribution to the press was made

an official function of the corporation itself. Further, there can be no basis for the contention that repeatedly published statements relating to TVA's plans and objectives, coming from official sources and never publicly denied, have no probative or evidential value.

The same contentions considered above are also made in appellees' brief (p. 213) with reference to certain excluded advertising pamphlets and circulars. (Comp. Exs. 187°, 189, 190.) In addition to the claim that these exhibits were merely cumulative (a ground of objection now made for the first time and not mentioned by the trial court in its rulings), appellees assert that "no proof was offered to show that the Authority had any connection with the distribution of the circulars and pamphlets referred to." This latter contention cannot be taken seriously in view of the fact that their authenticity is conceded under the stipulation filed August 14, 1937 (R. 317) and in view of the fact that appellants offered and the trial court excluded evidence relating to their circulation and use by TVA. (R. 947, 1008-09.)

3. The several rulings of the trial court concerning various types of rate testimony. (Answering Appellees' Br. 221-229.)

The appellants offered various types of evidence involving the subject of rates. None of this evidence, however, required the court to consider the reasonableness of the rates of State-regulated utilities, and that issue is not presented here.

(a) The first type of evidence relating to rates mentioned in appellees' brief involved comparisons between TVA rates and appellant company rates in the various classes of service. (Assignment of Error 13, R. 720.) This evidence was offered to show the differential between TVA rates and the corresponding rates under State regulation,

and it was clearly material for the purpose of showing that the difference in rates is so substantial as imminently to threaten the complete loss of appellants' customers and the financial ruin of their businesses, as well as the extent of TVA's regulation of appellants' rates. Appellees argue that such proof was merely cumulative. The error in that argument has been pointed out in another connection, p. 116, *supra*. Appellees also contend that the trial court properly ruled in excluding this evidence upon the sole ground that it was multifarious. As pointed out in our main brief (p. 227, footnote), multifariousness is a ground of objection to the pleadings and not to the admissibility of evidence.

(b) A second type of evidence dealt with in appellees' brief involved the presentation of the economic factors in rate making which, irrespective of competition, compel substantial rate uniformity in any given territory and which, where actual competition exists, result in the securing of all of the business by the company offering the lower rates. (Assignment of Error 16, R. 720.) As stated to the trial court, this evidence was offered to show the regulatory effect of the method of disposal under the TVA power program. (R. 1413-14.) Appellees contend that the exclusion of this evidence was not prejudicial for the reason that where competition exists the effect of regulation is "merely a self-evident conclusion." (Appellees' Br. 224.) Since the trial court found that competition does exist between TVA and the appellants (Fdg. 125, R. 628) but wholly failed to find that there was any regulation of appellants' rates, the statement referred to seems to be merely an admission that the court erred rather than a valid argument that the exclusion of self-evident facts was not prejudicial.

(c) A third type of evidence relating to rates mentioned in appellees' brief is the excluded evidence of TVA subsidies. (Assignment of Error 14, R. 720.) Such evidence, discussed in our main brief (p. 79), showed that, assuming

the sale of all the power to be produced by TVA under the TVA Unified Plan at TVA rates, there will still be an annual operating deficit of more than $9,000,000. As stated to the trial court, this proof was offered for the purpose of showing the violation of the TVA Act, as well as for the purposes which we have hereinabove discussed. (R. 1463-4.) With reference to this additional purpose, appellees call attention to Section 14 of the TVA Act (Appellees' Br. 226) which declares it to be the policy of the Act that—

> "power shall be sold at rates which, in the opinion of the board, when applied to the normal capacity of the Authority's power facilities, will produce gross revenues in excess of the cost of production of said power."

The argument of appellees is that the language of the above provision vests unqualified discretion in the TVA Board, but even accepting this narrow interpretation which not only misconstrues Section 14 but also ignores other provisions of the Act, there must at least be some showing that the TVA Board actually exercised discretion in the establishment of its rates and that to the end specified in Section 14 itself. By stressing the significance of the qualifying phrase "in the opinion of the board" appellees merely emphasize the error of the court in refusing to require the production of the TVA minutes which could only establish that the TVA rates were adopted without any knowledge or consideration of costs. (Appellants' Br. 71.) Appellees' further contention that it would not be a violation of the TVA Act for the Board to give away all of the electric power now being generated or which may in the future be generated is manifestly absurd.

4. The rulings of the trial court in excluding rebuttal evidence. (Answering Appellees' Br. 254-260.)

Appellees do not attempt to justify the grounds upon which substantially all rebuttal evidence offered by ap-

pellants was excluded by the trial court, namely, that it involved matters of opinion or of mixed fact and opinion on the part of the rebuttal witnesses and was therefore inadmissible as rebuttal evidence. They now rely upon the contention that all of the rebuttal evidence which was excluded related to matters which were a part of appellants' case in chief, and as a basis for that contention undertake to show that the evidence sought to be rebutted was related to certain general issues upon which evidence had been offered as a part of appellants' main case. Any such rule would effectively bar the introduction of any rebuttal proof except in a suit where affirmative defenses had been made, would substantially limit the function of cross examination, and, as pointed out in our main brief (pp. 243-246), would deprive the complainants in this case of the opportunity (which was afforded to the defendants) of showing any errors of fact and errors of assumption in their opponents' case. The claim that any such limitations, as applied to rebuttal evidence, come within the discretion of the trial court is plainly erroneous.

5. The rulings of the trial court on other matters of evidence and procedure. (Answering Appellees' Br. 212-21, 229-33, 234-5, 240-254.)

(a) *Conspiracy and cooperation with PWA and other federal agencies.* (Answering Appellees' Br. 216-21.) Appellees' contention that evidence on this subject was properly excluded and subpoenas properly denied because such evidence involved the activities of agencies not parties to the case, operating under valid statutes, entirely ignores appellants' main brief (pp. 233-5) and the significance of the evidence sought to be introduced. The financial assistance which has been and is being rendered by PWA and REA represents a concert of action to promote the un-

lawful objectives of TVA and directly bears upon the imminency of their fruition.

With reference to the propriety of the court's refusal to allow appellants to take the deposition of Harold L. Ickes, the claim that appellants had every reasonable opportunity to take that deposition is contrary to fact (R. 344); the claim that the evidence sought from Administrator Ickes was immaterial and irrelevant is manifestly erroneous as appears from a mere reading of the proposed testimony (R. 364); and the fact that the deposition of a subordinate was taken obviously does not cure the error.

(b) *TVA solicitation by press releases.* (Answering Appellees' Br. 212-16.) Appellees devote an entire section of their brief to the claimed cumulative character and irrelevancy of press releases as constituting solicitation of appellants' present customers. The attempted application of the rule of cumulative evidence completely overlooks the effect of *repeated* publication of TVA rates and activities; and the entire burden of the argument concerning the relevancy of the press releases is that instances of solicitation of individual customers are relevant, but that, for reasons not explained, wholesale solicitation of all of the consumers in the area through continuous advertising and publicity is irrelevant and immaterial.

(c) *Flood damages resulting from TVA power dams.* (Answering Appellees' Br. 243-4.) The trial court excluded as irrelevant and immaterial evidence that the average annual value of farm crops on the land which will be flooded by TVA upon the completion of only four of the TVA dams now under construction amounts to far more than the average flood damage in the entire Tennessee River basin. (Appellants' Br. 126-127.) Appellees seek to justify the exclusion of this evidence upon the ground that it calls for a comparison of the detailed costs of the TVA projects

with the benefits to be derived from one particular function. Since the testimony was offered for the purpose, as was clearly stated to the trial court (R. 1245), of showing the absence of merit in the claim that the TVA power dams have for their purpose, except as a pretext, the prevention of damage from floods, it is clear that appellees' attempted justification of the court's exclusion of this evidence is without substance.

(d) All other assignments of error relating to rulings on evidence and procedure are, we think, sufficiently covered in our main brief, to which we refer without further discussion.

Respectfully submitted,

JOHN C. WEADOCK,
CHARLES C. TRABUE,
CHARLES M. SEYMOUR,
RAYMOND T. JACKSON,
Counsel for Appellants.

APPENDIX TO REPLY BRIEF FOR APPELLANTS.

Appellants have printed herein those state statutes either conferring authority to occupy streets and highways, or requiring certificates of convenience and necessity for extensions into territories already served by another utility, which state statutes are referred to on pages 95 and 97 of appellants' reply brief.

Alabama Code, 1923, Sections 7193, 7197.[1]

SEC. 7193. *Power companies; additional powers conferred.*—All corporations organized under the general laws of this state, or heretofore under a special act of the legislature, and all corporations organized under the laws of any other of the United States, and which have complied with the constitution and laws of the State of Alabama as to foreign corporations, and which by their charter have the right to manufacture, supply, and sell to the public, power produced by water as a motive force, shall, after acquiring by purchase or otherwise than by condemnation, a dam site or power site comprising not less than one acre of land upon each and opposite sides of any watercourse, or after acquiring by purchase or otherwise than by condemnation a dam site comprising not less than one acre of land upon one side of any watercourse and (where the dam site on the other side of such watercourse is owned or controlled by the United States) shall have acquired this permission of the United States to attach to or use the lock, dam, or other property owned or controlled by the United States for an abutment site on the other side of such watercourse, in addition to other powers conferred by law, have the following rights, powers and authority.

* * * * *

SEC. 7197. *Use of public roads.*—Such corporations shall have the right and authority to erect and operate

---

[1] These sections of the code are a codification of an act approved March 12, 1907 (Alabama Acts, 1907, pp. 439 *et seq.*) which amended the act of October 1, 1903 (Alabama Acts, 1903, pp. 365 *et seq.*).

tower, pole and wire lines across, along, and on public roads, subject to the regulation of the court of county commissioners or board of revenue of the counties in which said roads are located.

Alabama Code, 1923, Section 9795.

9795. *Certificate of convenience and necessity.*—No plant, property or facility for the production, transmission, delivery, or furnishing of gas, electricity, water or steam, and no street or interurban railway shall be constructed except ordinary extensions of existing systems in the usual course of business, and no jitneys within the jurisdiction of the commission licensed, until written application is first made to the commission for the issuance of a certificate of convenience and necessity, and the issuance by the commission of such certificate. Upon the filing of any such application, and after a public hearing of all parties interested, the commission may, or may not in its discretion, issue such a certificate of convenience and necessity, and if issued, may prescribe such conditions upon the issuance as it may deem advisable. (1920, p. 38, §49.)

Carroll's Kentucky Statutes, 1936, Section 3952-25.

§3952-25. *Public convenience and necessity.*—No utility, person or corporation shall begin the construction, of any plant, equipment. property or facility for furnishing to the public any of the services enumerated in Section 1 of this act, except ordinary extensions of existing systems in the usual course of business, unless and until it shall have obtained from the commission a certificate that public convenience and necessity require such construction. Upon the filing of any application for such a certificate, and after a public hearing of all parties interested, the commission may, in its discretion, issue or refuse to issue, or issue in part and refuse in part, such a certificate of convenience and necessity. * * * Any person or group of persons may come before the commission and by petition ask that any utility be compelled to make any reasonable extensions, and the commission shall proceed to hear and determine the reasonableness of such an extension and whether the peti-

tion should be sustained either in whole or in part. * * * (1934, c. 145, §4(1).)

Mississippi Code, 1930, Sections 1505, 1506, 1508.

SEC. 1505. *Hydro-Electric Companies Authorized to Exercise Eminent Domain:*—All companies or associations of persons incorporated or organized for the purpose of improving and developing the water power of rivers and streams for generating, distributing and selling electricity and electro-mechanical power for any purpose for which electricity or electro-mechanical power is now or may hereafter be used or applied, are empowered and authorized to exercise the right of eminent domain as provided in the chapter on that subject to condemn and take such lands as may be necessary for the establishment of their reservoirs, ponds, dams, and works, and the right of way through all lands between such reservoirs, ponds, dams and works and cities, towns and other points where light, heat or power may be consumed, to place and extend their electric wires and conductors, either under ground or on poles overhead and to keep same in repair; provided that such wires, and conductors shall be so constructed and placed as not to be dangerous to persons or property, and to do as little injury as possible. (1924, Ch. 179.)

SEC. 1506. *Erect and Maintain Poles, Along, On, and Across Highways:*—All companies or associations of persons incorporated or organized for such purposes are authorized and empowered to erect, place, and maintain their posts, wires and conductors along and across any of the public highways, streets or waters and along and across all turnpikes, railroads and canals, and also through any of the public lands; but the same shall be so constructed and placed as not to be dangerous to persons or property; nor interfere with the common use of such roads, streets, or waters; nor with the use of the wires of other wire-using companies; or more than is necessary with the convenience of any landowner. (1926, Ch. 233.)

SEC. 1508. *Right of Eminent Domain Granted to Pipe Lines:*—All companies or associations of persons, incorporated or organized, for the purpose of building or con-

structing pipe lines and appliances for the conveying and distribution of oil or gas or for the purpose of constructing, maintaining and operating lines for transmitting electricity for lighting, heating and power purposes, are hereby empowered to exercise the right of eminent domain in the manner now provided by law, to build and construct the said pipe lines and appliances along or across highways, waters, railroads, canals, and public lands, above or below grounds, but not in a manner to be dangerous to persons or property, nor to interfere with the common use of such roads, waters, railroads, canals and public lands. The board of supervisors of any county through which any such line may pass, shall have the power to regulate, within their respective limits, the manner in which such lines and appliances shall be constructed and maintained on and above the highways and bridges of the county and all such companies or associations shall be responsible in damages for any injuries caused by such construction or use thereof. (1922, Ch. 291.)

Michie's North Carolina Code, 1935, Section 1037(d).

SEC. 1037(d) *Certificate of Convenience and Necessity.* That no person, no corporation, their lessees, trustees or receivers shall hereafter begin the construction or operation of any public utility plant or system or acquire ownership or control of, either directly or indirectly, without first obtaining from the Commissioner a certificate that public convenience and necessity requires, or will require, such construction, acquisition, or operation: Provided, that this section shall not apply to new construction in progress at the time of the ratification of this act, nor to construction into territory contiguous to that already occupied and not receiving similar service from another utility, nor to construction in the ordinary conduct of business.

The Commissioner is hereby empowered to make rules governing the application for, and the issuance of such certificates of public convenience and necessity. (P. L. 1931, c. 455.)

Acts of South Carolina, 1932, c. 871, Sections 2(j) and 2(w).

§2. *Duties and Restrictions Imposed Upon Electrical Utilities.*—

* * * * *

(j) When ordered by the Commission after due hearing any electrical utility may be required to establish, construct, maintain and operate any reasonable extension of its existing facilities. If any such extension, however, by any electrical utility of its existing facilities will interfere with the service or system of any other electrical utility, the Commission may on complaint and after hearing either order the discontinuance of such extension or prescribe such terms and conditions with respect thereto as may be just and reasonable.

* * * * *

(w) No electrical utility, except a municipality within its corporate limits, shall hereafter begin the construction or operation of any electrical utility plant or system, or of any extension thereof, except those ordered by the Commission under the provisions of subdivision (j) of this Section, without first obtaining from the Commission a certificate that public convenience and necessity require or will require such construction or operation: *Provided, however,* That unless such construction or operation has been commenced under a limited or conditional certificate or authority as hereinafter provided this subdivision shall not be construed to require any such electrical utility to secure a certificate for an extension within any municipality or district within which it has heretofore lawfully commenced operations, or for an extension within or to territory already served by it, necessary in the ordinary course of its business, or for an extension into territory contiguous to that already occupied by it and not receiving similar service from another electrical utility; but, if any electrical utility in constructing or extending its lines, plant or system unreasonably interferes or is about to unreasonably interfere with the service or system of any other electrical utility, the Commission on complaint of the electrical utility claiming to be injuriously affected may after hearing make such order and prescribe such terms and conditions in harmony with this Act as are just and reasonable. * * *

Tennessee Code, 1932, Sections 5502-5504, 5453.

SECTION 5502. *Public Utility Not to Operate a Service Already Being Furnished by Another Public Utility, Nor Commence the Construction of a Plant or System Without a Certificate.*—No public utility shall establish or begin the construction of, or operate any line, plant, or system, or route in or into a municipality or other territory already receiving a like service from another public utility, or establish service therein, without first having obtained from the railroad and public utilities commission, after written application and hearing, a certificate that the present or future public convenience and necessity require or will require such construction, establishment, and operation, and no person or corporation not at the time a public utility shall commence the construction of any plant, line, system, or route to be operated as a public utility, or the operation of which would constitute the same, or the owner or operator thereof, a public utility as defined by law without having first obtained, in like manner, a similar certificate; provided, that this section shall not be construed to require any public utility to obtain a certificate for an extension in or about a municipality or territory where it shall theretofore have lawfully commenced operations, or for an extension into territory, whether within or without a municipality, contiguous to its route, plant, line or system, and not theretofore receiving service of a like character from another public utility, or for substitute or additional facilities in or to territory already served by it. (1923, Ch. 87, Sec. 1.)

SECTION 5503. *Upon Complaint of Interference, Commission May Grant or Refuse Certificate: Forfeiture of Certificate.*—If any public utility, in establishing, constructing, reconstructing, or extending its route, line, plant or system, shall interfere or be about to interfere with the existing route, line, plant, or system of any other public utility, the said commission, on complaint of the public utility claiming to be injuriously affected, may, after hearing, make such order and prescribe such terms and conditions in harmony with this statute as are just and reasonable. Such commission shall have power, after hearing involving the financial ability and good faith of the appli-

cant, the necessity for additional service in the municipality or territory, and such other matters as it deems relevant, to issue a certificate of public necessity and convenience, or to refuse to issue the same or to issue it for the establishment or construction of a portion only of the contemplated plant, route, line, or system or extension thereof, or for the partial exercise only of such right or privilege, and may attach to the exercise of the rights granted by said certificate such terms and conditions as to time or otherwise as in its judgment the public convenience, necessity, and protection may require, and may forfeit such certificate after issuance, for noncompliance with its terms, or provide therein for an *ipso facto* forfeiture of the same for failure to exercise the rights granted within the time fixed by the commission; provided, that nothing in this law shall be construed as requiring such certificate for a municipally owned plant, project, or development. (1923, Ch. 87, Sec. 1.)

Section 5504. *Certificate Not to be Granted Unless the Existing Plant or System is Inadequate: Notice of Hearing.*—The said commission shall not grant a certificate for a proposed route, plant, line, or system, or extension thereof, which will be in competition with any other route, plant, line or system, unless it shall first determine that the facilities of the existing route, plant, line, or system, are inadequate to meet the reasonable needs of the public, or the public utility operating the same refuses or neglects or is unable to or has refused or neglected, after reasonable opportunity after notice, to make such additions and extensions as may reasonably be required under the provisions of this statute. In all proceedings under this section, the commission shall give at least ten days' notice to the authorities of, and the public utilities operating in, the municipality or territory affected. (1923, Ch. 87, Sec. 2.)

Section 5453. No privilege or franchise hereafter granted to any public utility by the State of Tennessee or by any political subdivision thereof shall be valid until approved by said commission, such approval to be given when, after hearing, said commission determines that such privilege or franchise is necessary and proper for the public

convenience and properly conserves the public interest, and the commission shall have power, if it so approves, to impose such conditions as to construction, equipment, maintenance, service or operation as the public convenience and interest may reasonably require; provided, however, that nothing herein contained shall be construed as applying to the laying of sidings, sidetracks, or switchouts, by any public utility, and it shall not be necessary for any such public utility to obtain a certificate of convenience from the commission for such purpose. (1919, Ch. 49, Sec. 7.)

Michie's Virginia Code, 1936, Sections 4057(24), 3716, 3774c, 4072, 4066.

SEC. 4057(24). *Extension in territory now being served.*—If, from any rural territory not now being served, application be made to the State Corporation Commission by a group of five or more persons, natural or artificial, to require an extension of electric service to such territory, the Commission shall, if necessary to accomplish the purposes sought, fix a time for hearing said application, on such terms and conditions as the Commission may prescribe, and, if it be established to the satisfaction of the Commission that a proper guaranteed revenue for a sufficient number of years will accrue to any company which may be required to construct the desired extension, and that a reasonable investment will accrue to the company constructing said extension, then the Commission is hereby authorized and empowered to require the nearest, or most advantageously located electric utility company to such territory to construct such extension to such point or points in such territory and to serve such customer or customers therein, as in its judgment is right and proper. (1936, p. 1056.)

SEC. 3716. *Powers of the Commission.*—The Commission shall have power and authority to require, by its rules, regulations, and requirements, all corporations chartered under the laws of this State, and all foreign corporations doing business in this State, and all persons, partnerships and associations exercising and performing the functions of public service corporations as defined in section thirty-

eight hundred and eighty-one of the Code of Virginia, to perform and discharge any public duty or requirement imposed upon such corporations, persons, partnerships and associations by the Constitution.

SEC. 3774c. *Certain contracts must be approved by Commission.*—No contract or arrangement providing for the furnishing of management, supervisory, construction, engineering, accounting, legal, financial, or similar services, and no contract or arrangement for the purchase, sale, lease or exchange of any property right or thing other than those above enumerated, or for the purchase and/or sale of treasury bonds and/or treasury capital stock hereafter made or entered into between a public service company and any affiliated interest as defined in this act shall be valid or effective unless and until it shall have been filed with and approved by the Commission. It shall be the duty of every public service company to file with the Commission a verified copy of any such contract and arrangements hereinabove described, regardless of amount, and said general rule herein referred to shall remain in full force and effect as to all other public service companies. (1934, p. 744.)

SEC. 4072. *The State Corporation Commission may change regulations, measurements, practices, services, or acts.*—If upon investigation it shall be found that any regulation, measurement, practice, act or service of any public utility operating in this State, complained of, is unjust, unreasonable, insufficient, preferential, unjustly discriminatory or otherwise in violation of law or if it be found that any service is inadequate or that any reasonable service cannot be obtained, the State Corporation Commission shall have power to substitute therefor such other regulations, measurements, practices, service or acts and to make such order respecting, and such changes in, such regulations, measurements, practices, service or acts as shall be just and reasonable. (1914, p. 673.)

SEC. 4066. *Public utilities required to file schedules of rates and charges; changes in schedules; appeal to Supreme Court of Appeals from ruling of State Corporation Commission; unless Commission suspends schedules when*

same effective; public utilities must furnish reasonably adequate service and facilities; further as to appeals.

* * * * *

It shall be the duty of every public utility to furnish reasonably adequate service and facilities at reasonable and just rates to any person, firm or corporation along its lines desiring same and not engaged in a similar business, and to charge uniformly therefor all persons or corporations using such product under like conditions, and not in competition with such furnishing company. * * *

Michie's West Virginia Code, 1935, Section 2562 (1). (11)

SEC. 2562-(1). (11) *Application for Certificate of Public Convenience and Necessity.*—No public utility, person or corporation shall begin the construction of any plant, equipment, property or facility for furnishing to the public any of the services enumerated in section one, article two (Sec. 2553) of this chapter, nor apply for, nor obtain any franchise, license or permit from any municipality or other governmental agency except ordinary extensions of existing systems in the usual course of business, unless and until it shall obtain from the public service commission a certificate of public convenience and necessity requiring such construction, franchise, license or permit. Upon the filing of any application for such certificate, and after hearing, the commission may, in its discretion, issue or refuse to issue, or issue in part and refuse in part, such certificate of convenience and necessity. The commission shall prescribe such rules and regulations as it may deem proper for the enforcement of the provisions of this section, and in establishing that public convenience and necessity do exist the burden of proof shall be upon the applicant. (1935, c. 115.)

JURISDICTION	1
QUESTIONS PRESENTED	2
SCOPE OF THE ISSUES	2
STATUTES INVOLVED	5
STATEMENT OF THE CASE	5
A. The Parties and Proceedings Below	5
B. The Basic Facts	12
1. The problem of improving navigation on the Tennessee River and controlling destructive floods in the Tennessee and Mississippi River basins	14
2. Recommendations and prior efforts to secure a coordinated development of the water resources of the Tennessee River in the interest of navigation and flood control	22
3. The problem of improving the usefulness of Wilson Dam	29
4. The Tennessee Valley Authority Act: its purposes and relevant provisions	31
5. The projects of the Authority: their location, design, and order of construction	36
6. The benefits secured by the projects	40
7. The operation of the projects for navigation and flood control and the production of power	47
8. The method of disposal of the power	53
SUMMARY OF ARGUMENT	59

PAGE

ARGUMENT..... 72

I. The Power Generated by the Authority is Acquired in the Operation of Projects Constructed Pursuant to the Constitutional Powers of Congress and is the Lawful Property of the United States..... 72

1. The projects of the Authority are substantially related to the improvement of navigation..... 75

2. The projects of the Authority are substantially related to the federal function of the control of destructive floods in the Tennessee and Mississippi River valleys and are the only projects which will provide such flood control in combination with a nine-foot navigation channel on the Tennessee River..... 82

3. The power produced at the projects of the Authority is necessarily acquired in the construction and operation of works lawfully constructed for the improvement of navigation and the control of destructive floods..... 88

4. The power produced at the tributary dams is lawfully acquired in the construction of works for the national defense and the improvement of Government-owned property..... 94

5. Apart from the foregoing considerations, the water power is lawfully acquired; Congress may determine the size of the projects required for navigation and flood control and the mode and manner of their use; and any water power acquired in the operation of such projects is the property of the United States..... 95

PAGE

II. The Means Chosen by Congress in the Tennessee Valley Authority Act for the Disposition of Power are Valid 106

1. The Congress may lawfully authorize the sale of Government-owned power to municipalities, rural cooperatives, and industrials, as well as to private utilities, and may lawfully authorize the acquisition of the necessary facilities for the generation, transmission, and sale of such power 107

2. The appellants have no standing to challenge the validity of the resale-rate provisions contained in the contracts between the Authority and municipalities and cooperatives; but in any event, these provisions are valid 127

3. The powers reserved to the States under the tenth amendment are not invaded by the statute or the activities authorized thereunder 134

(a) The sale of power to municipalities, cooperatives, and industries is not invalid under the tenth amendment 135

(b) The size of the Authority's projects presents no question under the tenth amendment 139

(c) The resale-rate provisions of the contracts present no question under the tenth amendment 146

4. There is no merit in the charge that the Authority's method of disposition constitutes "unfair competition" in excess of statutory powers or in violation of the fifth amendment 154

PAGE

III. APPELLANTS HAVE NO STANDING TO MAINTAIN THIS SUIT 160

1. Appellants' "franchises," if any, afford no basis for the maintenance of this suit.. 161

2. Most of the appellants lack standing to maintain this suit either because they are estopped or because the Authority is not engaged in or threatening any activities in their claimed territories 174

(a) Complainants in whose claimed territory the Authority is not carrying on or does not threaten to carry on any activity 175

(b) Complainants who are estopped to challenge the legality of activities of the Authority in their claimed territories 177

3. The only competition which will cause damage to any of the complainants is the competition of the municipalities and cooperatives, and such competition does not involve legal injury 182

IV. THERE IS NO REVERSIBLE ERROR IN THE RULINGS OF THE TRIAL COURT ON EVIDENCE AND PROCEDURE 192

IN THE

Supreme Court of the United States

OCTOBER TERM, 1938

No. 27

THE TENNESSEE ELECTRIC POWER COMPANY ET AL.

APPELLANTS

v.

TENNESSEE VALLEY AUTHORITY ET AL.

APPELLEES

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE EASTERN DISTRICT OF TENNESSEE NORTHERN DIVISION

BRIEF FOR APPELLEES TENNESSEE VALLEY AUTHORITY ET AL.

OPINION BELOW

The opinion of the district court (r. 542, app. I, 113) was filed on January 24, 1938, and is reported in 21 F.Supp. at 947.

JURISDICTION

The judgment sought to be reviewed was entered on January 25, 1938. The jurisdiction of this Court rests on section 3 of the act of August 24, 1937 (50 Stat. 751).

QUESTIONS PRESENTED

1. Whether the complainant utility companies have standing to challenge the construction and operation by the Tennessee Valley Authority of certain dams in the Tennessee River and its tributaries, and the transmission and sale of the electric energy created by those dams.

2. If the first question is answered in the affirmative, then whether the construction of certain dams in the Tennessee River and its tributaries, as authorized by the Tennessee Valley Authority Act of 1933, as amended, and various appropriation acts subsequent thereto, is valid under the Federal Constitution; and whether the transmission and sale of the electric energy acquired in the operation of dams so constructed is valid under the Federal Constitution.

3. Whether the trial court committed reversible error in rulings on questions of evidence and procedure.

SCOPE OF THE ISSUES

In our view the above questions are the only ones presented for decision. The constitutional power of Congress in authorizing and directing the challenged activities is not affected by evidence submitted on the diverse allegations of the bill relating to charges of coercion and duress exerted upon complainants, of conspiracy and unfair propaganda against them, of solicitation of their customers, and of unfair competition generally. Upon analysis it will appear that these

charges amount to no more than a general claim of a right to be free from competition. All these charges will, of course, be treated in the argument, *infra*, but the basic constitutional questions in the case will not be confused with these collateral issues.

It is also important to note that no substantial question of statutory authority is raised. Although want of statutory power to engage in the challenged activities is alleged in general terms in the bill (r. 64), complainants have never specified what acts are in excess of statutory authority, nor have they seriously pressed this general claim of the bill (*cf.* r. 289).

If any doubt existed as to the statutory authority to perform the acts challenged in this case, such doubt would be removed by reference to the extensive annual congressional hearings and the committee reports pursuant thereto, upon the basis of which the Congress has enacted the annual appropriation measures dealing with the Authority. The history of these measures reflects the detailed supervision which the Congress has exercised over the Authority. For example, not only have the appropriation acts specified the particular dams upon which work should go forward, but they have also stated whether the work should be construction or merely preliminary investigation,[1] and they have specified the extent to which construction

(See app. II, 71, 76, 83, 92.)

should go forward on particular projects;[2] and the committee reports[3] which accompanied the measures have earmarked, for the various activities, the total amounts appropriated for the Authority.

The same close supervision by the Congress over the work of the Authority is reflected in the history of the amendments to the Tennessee Valley Authority Act enacted in 1935.[4] The Authority's report of March 31, 1936, entitled *The Unified Development of the Tennessee River System* (comp. ex. 328 (original), r. 3068), submitted pursuant to a provision of these amendments, served further to define for the Congress the projects of the Authority both in progress and contemplated.

Perhaps no agency of the Government has given the Congress a fuller account of its activities, nor has any other agency been the subject of such direct and continuing supervision by the Congress. In a very real sense, therefore, it must be recognized that appellants' challenge of the Tennessee Valley Authority involves but one fundamental issue—the validity of congressional action.

STATUTES INVOLVED

The statutes involved are the Tennessee Valley Authority Act of 1933, as amended (hereafter referred to as the "act"), and the several acts making appropriations for the Tennessee Valley Authority. These statutes will be found in appendix II, separately printed.

STATEMENT OF THE CASE

A. THE PARTIES AND PROCEEDINGS BELOW

The bill of complaint was originally filed in the Chancery Court of Knox County, Tennessee, on May 29, 1936, and was removed by the defendants to the United States District Court for the Eastern District of Tennessee, Northern Division (r. 136). The appellants are fourteen[5] privately owned corporations engaged in some phase of the business of generating, transmitting, and selling electricity as public utilities in the States of Tennessee, Mississippi, Alabama, Georgia, Kentucky, North Carolina, Virginia, and West Virginia (fdg. 1, r. 585, app. I, 1). As discussed below (see *infra* pp. 175-177), the Authority has contracts or facilities in the claimed territory of only five of these complainants, namely, the four Commonwealth and Southern com-

[5] The bill was originally filed by nineteen complainants. One of them, however, was enjoined from maintaining this action. *Georgia Power Co.* v. *Tennessee Valley Authority*, 17 F.Supp. 769 (N.D.Ga., 1937), *aff'd*, 89 F. (2d) 218 (C.C.A. 5th, 1937), *cert. denied*, 302 U.S. 692. Three other complainants, Tennessee Public Service Company, Holston River Electric Company, and Kentucky-Tennessee Light & Power Company, have sold or arranged to sell certain of their facilities to municipalities or, in lesser degree, to the Tennessee Valley Authority, and have voluntarily withdrawn from this litigation. Memphis Power & Light Company is now negotiating the details of a similar transaction and will probably move to dismiss prior to argument.

panies and the West Tennessee Power & Light Company (fdgs. 99, 111, r. 623, 625, app. I, 54, 57). The bill joined as defendants the Tennessee Valley Authority and the individual members of its board of directors.

While the bill contained numerous allegations, many of which related to a so-called "national power policy" and an alleged "power program" of the Authority, its main claims were: (1) that the complainants were threatened with imminent destruction or serious injury from alleged competition in the sale of power by the Tennessee Valley Authority; (2) that the electric energy sold by the Authority was acquired by the construction and operation of dams unrelated to any federal function, and that to the extent that these dams were stated to be constructed for the improvement of navigation, the control of destructive floods, and the national defense, the declared purpose was "a sham and pretense" (r. 55); and (3) that even if the electric energy were lawfully acquired by the Authority, the method of disposition was in violation of the Federal Constitution. The prayer of the bill sought a sweeping injunction against the "national power policy" and "power program" of the Authority. Essentially, however, the relief sought was an injunction to restrain the Authority and its directors from constructing dams in the Tennessee River and its tributaries, from generating electric energy at the dams, and from marketing such energy in the claimed territory of the complainants (r. 67-71).

A motion to quash for want of jurisdiction (r. 139) and a motion to dismiss for misjoinder of causes and

parties and for want of a justiciable controversy (r. 156) having been overruled (r. 155, 159), defendants answered (r. 160). A preliminary injunction granted by the district court on motion of the complainants (r. 260) was reversed on appeal to the Circuit Court of Appeals for the Sixth Circuit, and the case was remanded for trial (90 F. (2d) 885; r. 267).[6]

In accordance with section 3 of the act of Congress of August 24, 1937, Senior Circuit Judge Moorman designated Circuit Judge Allen and District Judge Martin to sit with District Judge Gore to try the case. After a complete trial, the district court, on January 21, 1938, rendered its decision upholding the constitutionality of the Tennessee Valley Authority Act and the validity of the activities pursuant thereto challenged in the bill (r. 542, app. I, 113). The decision was unanimous.

Appellants have devoted a considerable portion of their brief to the claim that they were denied a fair trial by the rulings of the court below on the admission of evidence and on matters of procedure. The particular rulings of the court upon which this claim is based

[6] On appeal from the order of injunction the defendants requested the Circuit Court of Appeals not only to dissolve the injunction but also to dismiss the bill upon the grounds urged in the motion to quash and the motion to dismiss which had been overruled by the district court. The Circuit Court of Appeals, however, sustained the district court's rulings on these motions (r. 267), Judge Moorman dissenting on the ground that the bill should have been dismissed for lack of a justiciable controversy (r. 284). Defendants' petition for writ of certiorari to review the Circuit Court of Appeals' rulings insofar as they affirmed the district court's orders was denied (301 U.S. 710).

are discussed in detail in a separate section of this brief (*infra* pp. 192-260). In view of the appellants' effort to create a general impression of an atmosphere of prejudice and unfairness in the conduct of the trial, however, it seems in order to give a general description of the prior proceedings at this point.

At the time the case came on for final hearing, it had been in litigation for a year and a half. The several motions were extensively briefed and argued. At the hearing before the district court on the motion for preliminary injunction, scores of affidavits were presented and all of the questions of fact and issues of law were elaborately briefed and argued. This was necessarily true since the application for preliminary injunction depended upon the determination of whether the complainants had made a reasonable showing of probability of ultimate success on the merits. Again, on appeal to the Circuit Court of Appeals for the Sixth Circuit, the same questions of fact and of law were covered by the briefs and argument of counsel. An application for writ of certiorari was made to this Court and denied (301 U.S. 710). Several procedural motions calling attention to the scope of the issues immediately preceded the trial (r. 156, 263, 264, 288, 327).

It is thus apparent that by the time the cause was ready for final hearing, counsel were thoroughly familiar with the opposing theories and contentions, and no element of surprise was possible. The trial itself commenced on November 15, 1937, and closed on January 15, 1938. The presentation of testimony and

arguments of counsel upon rulings at the trial consumed approximately seven weeks of court time. Eighty-two witnesses testified on behalf of complainants and 957 exhibits were introduced. The presentation of their testimony consumed four and a half weeks of court time and occupied approximately 3,590 pages of the typewritten transcript, exclusive of exhibits. Fifteen witnesses testified for the Government. One hundred fifty-eight exhibits were introduced, two and a half weeks of court time were consumed in the presentation of the defenses, and the defense proof covered approximately 2,540 pages of the typewritten transcript, exclusive of exhibits. In addition to the court time consumed, extensive additional evidence on behalf of complainants was covered by long stipulations prepared outside of court and by depositions taken, in advance of trial, in Alabama, Georgia, Tennessee, and the District of Columbia.

Throughout the trial the court heard extensive arguments and received numerous briefs filed by both parties regarding the admissibility of evidence. Argument was heard and briefs were filed on every important ruling. Complainants filed seventeen lengthy briefs during the trial, defendants twelve. The record shows that the court gave these briefs careful study and attention (r. 1492). Weeks of advance notice were given as to the closing argument and the presentation of findings (r. 1861-1862, 1919). Argument began on the day after the conclusion of testimony.

On January 24, 1938, the trial court entered an order making findings of fact pursuant to Equity Rule

70½ (r. 566, 583-584). The findings are reprinted for this Court's convenience in appendix I hereto, separately printed, together with citations to the supporting evidence in the record. The decision and the opinion of the trial court were unanimous. The entire court joined in 205 of the findings and Judge Gore concurred with modifications in seventeen others, rejecting less than thirty (r. 664-669). In addition, in its opinion filed the same day upholding the constitutionality of the Tennessee Valley Authority Act (r. 542, app. I, 113), the court analyzed the record in detail and set forth the facts in regard to material questions in the case.

Each of the findings is supported by substantial evidence in the record, as will appear from an examination of the record references cited in support thereof in appendix I hereto. They were entered only after careful consideration of all the evidence. The extensive evidence was studied and sifted by the entire court in daily conferences throughout the period of the trial (r. 2439). As an aid to the court, counsel were advised and requested, prior to the Christmas recess, to submit suggested findings of fact, together with all supporting record references, on the day of the final argument, then set for January 15, 1938 (r. 1861-1862, 1919, 2281-2284, 2370, 2439, 398, 477). Nine days after the close of the final arguments, the trial court, consistently with its decision, adopted many of the findings requested by the Government and a considerable number requested by complainants (r. 566). In addition, Judge Gore stated his "opinion" that there "should also be adopted" other findings as suggested by the

complainants (r. 669). These are repeatedly cited by appellants as "Additional Findings," despite the fact that they were rejected by the trial court (r. 567).

The appellants have attacked all the contested findings of the court below without argument and by mere assertions that the trial court's findings are either unsupported by the evidence or contrary to the great weight of the evidence. (See, e.g., br. 20, 21, 38 (n. 1), 60 (n. 1).) Appellants choose to ignore all of the evidence in support of the findings, disregarding the elementary principle that the findings of the trial court will not be set aside by this Court whenever supported by any substantial evidence (*Alabama Power Co.* v. *Ickes*, 302 U.S. 464). The only "findings" which appellants cite on contested issues are the so-called "additional findings" which were suggested by Judge Gore. In the same spirit, appellants rely indiscriminately on both admitted and excluded evidence throughout their brief.

In the statement which follows, all statements of fact are supported by references to the findings of the court and to evidence in this record. Where findings are referred to they are the findings of the court and not the individual views of one judge. Where evidence is cited the reference is to testimony or exhibits admitted in evidence and not to material excluded by the court.

B. THE BASIC FACTS

The Tennessee Valley Authority Act contemplates a coordinated project for the combined purposes of creating and maintaining a nine-foot navigable waterway throughout the 650-mile length of the Tennessee River, the promotion of navigation on the Tennessee and its tributaries, the control of destructive floodwaters in both the Tennessee and the Mississippi River basins, and the improvement of the Wilson Dam properties in the interest of national defense (sec. 1, app. II, 1). Each of these functions has a background which illuminates the purposes and provisions of the act. Before recounting that background and describing the projects of the Authority in relation thereto, it should be pointed out that the nature of the navigation and flood-control problems concerning the Tennessee River system and the character of these projects as navigation and flood-control structures in design and operation were the subject of extensive testimony by experts uniquely qualified.

The witnesses for the Authority included Colonel Lewis H. Watkins, of the Corps of Engineers of the Army, who was the district engineer in charge of the studies of the Tennessee River system published in House Document No. 328, 71st Congress, 2d session (comp. ex. 105 (original), r. 2615; r. 1534-1536), hereinafter referred to as House Document No. 328, concerning which the Chief of Engineers said, "there has never been presented to Congress a more thorough and exhaustive study" (r. 1634);

George R. Clemens, senior engineer of the Mississippi River Commission, who was in charge of the preparation of the *Comprehensive Report on Reservoirs in the Mississippi River Basin*, published in 1936 as House Document No. 259, 74th Congress, 1st session (def. ex. 32 (original), r. 4062), made pursuant to section 10 of the Flood Control Act of 1928 (r. 1646-1647); Edward H. Sargent, chief engineer of the Hudson River Regulating District, who is in charge of the operations of the Sacandaga Reservoir, an outstanding multiple-use dam successfully operated for flood control and power (r. 1673-1679); O. N. Floyd, consulting engineer for the Army Engineers on a number of flood-control projects having relation to the lower Mississippi (r. 1887-1890); James S. Brodie, chief engineer and superintendent of maintenance of the Federal Barge Lines, the operating agency of the Inland Waterways Corporation, who is an expert on the practical aspects of inland waterway navigation (r. 2021-2023); Sherman M. Woodward, chief of the Authority's water-control division and in charge of the planning and operations of the Authority's projects, a distinguished hydraulic engineer of forty years' experience in teaching and practice (r. 1772-1775).

In addition, testimony was given by a number of the Authority's engineers who were particularly qualified to explain the studies undertaken in relation to navigation and flood control and the design and operation of the projects: J. S. Bowman, at one time construction engineer with the Miami Conservancy District, Dayton, Ohio, now head project-planning engi-

neer for the Authority (r. 1689-1690); J. H. Kimball, at one time assistant chief engineer with the Miami Conservancy District and later associated with Metcalf & Eddy, Boston, who is now in charge of the flood-control section of the planning department of the Authority (r. 1822-1823); and C. T. Barker, for eight years engaged by the Army Engineers, four years of which were spent in studying all aspects of navigation on the Tennessee and its tributaries and preparing data for the report in House Document No. 328, now engineer in charge of the navigation section of the Authority (r. 1940-1941).

1. THE PROBLEM OF IMPROVING NAVIGATION ON THE TENNESSEE RIVER AND CONTROLLING DESTRUCTIVE FLOODS IN THE TENNESSEE AND MISSISSIPPI RIVER BASINS

Navigation: The Tennessee River, a navigable river approximately 652 miles long, is formed by the junction of the French Broad River and the Holston River at Knoxville, Tennessee, and enters the Ohio River near Paducah, Kentucky. In its unimproved state there were numerous obstacles to commercial navigation, including shoals and bars, steep slopes, high velocities, and floods in many months of the year, and inadequate depths in a great portion of the river (fdg. 48, r. 609, app. I, 32).

The improvement of navigation on the Tennessee River, as this Court observed in the *Ashwander* case, has been a matter of national concern for over a century (*Ashwander* v. *Tennessee Valley Authority*, 297 U.S. 288, 328). It was there pointed out and has been

found herein that from 1852 Congress had repeatedly authorized projects to develop navigation on all portions of the river, both by open-channel improvements and by canalization (297 U.S. at 329; fdg. 49, r. 609, app. I, 32). From 1852 to 1933 Congress had expended on these surveys and projects approximately eighteen million dollars, exclusive of the amounts expended for Wilson Dam (fdg. 49, r. 609, app. I, 32).

Despite the unsatisfactory condition of its improvement, the traffic on the river over the last 40 years has varied between one and two million tons annually, necessarily confined in the main to short hauls over the improved sections (fdg. 56, r. 611, app. I, 36). It was estimated by the district engineer in House Document No. 328 that the improvement on the Tennessee for modern commercial navigation would result in transportation savings of approximately ten million dollars annually (H.Doc. 328, *supra*, comp. ex. 105 (original) pp. 496-497, r. 2615, 4274-4275), and this estimate was confirmed by his testimony in the present case (Watkins, r. 1551-1556). Subsequent studies by the Authority, as the court found, have shown this estimate to be reasonable and conservative (fdg. 56, r. 611, app. I, 36).

The importance of this navigation improvement to the national commerce is evident from the following facts as found by the trial court:

> The Tennessee River, as a tributary of the Ohio River, is interconnected with the inland waterway system of the Mississippi River, which connects the Gulf and the Great Lakes and taps the territory of about 15 States, including many important

traffic-producing industrial, commercial, and agricultural centers, and extends as far east as Pittsburgh, Pennsylvania, as far west as Kansas City, Missouri, and as far north as Minneapolis and St. Paul, Minnesota. Interstate railroads and highways interconnect with the waterway at numerous points, permitting joint land and water transportation. There are varied and substantial agricultural, mineral, and forest resources located in the Tennessee Valley within reach of the waterway. About 18.2% of the population of the United States, based on the 1930 census, is located within 25 miles of the banks of this interconnected waterway. This inland waterway system includes 5,700 miles of improved waterway of 9-foot depth or over, an additional 3,200 miles of 6- to 9-foot depth, and an additional 1,000 miles of 4- to 6-foot depth [fdg. 51, r. 610, app. I, 33; see def. exs. 116, 118, 119, 120, 121, 122, 123, 125 in *Reproductions of Certain Original Exhibits Submitted by Appellees*].

At the date of the passage of the Tennessee Valley Authority Act, however, the river had not been adequately improved for modern commercial navigation except for a few short stretches, the controlling depth at that time ranging from four and a half feet in the lower part of the river to one foot in the upper section (fdg. 50, r. 609, app. I, 32). The Tennessee River can be improved for modern nine-foot navigation by means of a series of seven high dams, or a system of thirty-two low dams, or a combination of the two. The lower 200-mile (and controlling) stretch of the river can also be improved to the same depth by means of

low-water releases in the dry season from storage projects (fdg. 71, r. 616, app. I, 44; Putnam, r. 2312-2313), an important fact overlooked by appellants in their attack on the Authority's tributary projects.

Flood control: The court below found, and indeed judicial notice could be taken of the fact, that the recurrent great floods on the Tennessee and Mississippi Rivers have long presented a grave flood menace of national importance:

> Thousands of miles of interstate railways and highways, and 20,000,000 acres of the richest cotton lands in the United States, the products of which are normally marketed in interstate and foreign commerce, lie within the flood plain of the Mississippi Valley. Located in the path of Mississippi floods also are the important commercial cities of Memphis, Cairo, and New Orleans, and other smaller communities, in which are located large cotton warehousing, compressing, and processing plants, and woodworking plants, engaged in the production, processing, and distribution of goods normally marketed in interstate and foreign commerce [fdg. 58, r. 612, app. I, 37].

The principal point of danger on the Tennessee River is the city of Chattanooga (def. exs. 72, 73, 81 in *Reproductions of Certain Original Exhibits Submitted by Appellees*), which is an important center of interstate railways and highways and a principal distributing center throughout the Southeast for commodities produced in other States (fdg. 58, r. 612, app. I, 37; def. ex. 66 in *Reproductions of Certain Original*

Exhibits Submitted by Appellees). The estimated annual damage of a tangible character caused by past floods to property at and above Chattanooga is $1,356,063 (fdg. 84, r. 619, app. I, 49). This amount does not include losses due to interruption of business and to disease and death and various other losses of an intangible character (Kimball, r. 1833-1834; Kurtz, r. 1230). Appellants take the average annual amount of physical damage to property along the Tennessee River alone and capitalize it to secure what is asserted to be the maximum amount of expenditure permissible for Tennessee flood control, on the ground that it is a "fundamental principle" that expenditures for flood-control structures may not exceed the capitalized value of the flood damages eliminated by those structures (br. 126-127). Without pausing unduly to inquire as to the constitutional source of this "fundamental principle," it should at least be pointed out that the figures employed ignore completely the more important losses due to interruption of business, deterioration, dispossession, insecurity, disease, and death, and, of course, wholly ignore the great losses from Mississippi floods.

In order to provide effective flood control on the Tennessee River, it is necessary to construct reservoirs to reduce maximum flood heights sufficiently to make feasible the construction of local protection works. There is no dispute between the parties on this point (Kurtz, r. 1208-1209; comp. ex. 328 (original)

p. 19, r. 3068). For most effective flood control on the Tennessee it is desirable to provide high dams with controlled storage on the main stream and on the tributaries (fdg. 60, r. 613, app. I, 38).

The gravity of the flood problem in the Mississippi Valley is too well known to require elaboration. The Tennessee River has always been a substantial factor in Mississippi River floods (fdg. 61, r. 613, app. I, 39). The Ohio River and its tributaries, of which the Tennessee is the largest, are the greatest contributors to such floods, accounting for from 52% to 90% of the total flood flows between Cairo, Illinois, and Helena, Arkansas (*ibid.*). Because it is the largest tributary of the Ohio and its mouth is closer to Cairo and the lower Mississippi than any other major tributary of the Ohio system, the Tennessee is one of the best rivers upon which to construct reservoirs for the reduction of floods on the lower Mississippi (fdg. 63, r. 613, app. I, 40). All of these facts were substantially conceded by the appellants' witness Kelly, who qualified as their expert on Mississippi flood control (r. 1381-1383).

The value of reservoirs for Mississippi flood control has been recognized for the better part of a century. In the past, however, the Army Engineers had hesitated to recommend proposals for flood-control reservoirs on the ground that construction of reservoirs for flood control alone would involve a prohibitive cost and would preëmpt the sites necessary for the development of the rivers for other economic uses. See *Final Re-*

port of National Waterways Commission, S.Doc. 469, 62d Cong., 2d sess., pp. 135, 185.[7]

It is now recognized that the present levee system on the Mississippi, supplemented by floodways and cut-offs, is inadequate to pass a flood which is reasonably probable without disastrous overtopping of the levees (fdg. 62, r. 613, app. I, 39). The levees on the lower Mississippi have reached the practical limits of height (*ibid.*). Additional protection must include the construction of reservoirs on the tributaries of the Mississippi (*ibid.*). Not only are these the facts found by the court and established by the testimony of George R. Clemens, senior engineer for the Mississippi River Commission, unquestionably the best-informed witness on the present flood situation in the Mississippi Valley to appear in this case (r. 1646), but they are also identical with the conclusions reached by the Chief of Engineers of the United States Army after the disastrous floods of 1937 (fdg. 67, r. 614, app. I, 41). This report states that the existing levee system was designed to pass a flood of only 2,250,000 c.f.s. at Cairo,[8] and concludes:

> A review of all data indicates, however, that due prudence should provide for a flood which without reservoir control would reach 2,600,000 cubic feet per second in the Mississippi between Cairo and the Arkansas. . . .

---

[7] It was partly on these grounds that the Reservoir Board for Mississippi Flood Control of 1927 recommended against reservoirs for Mississippi flood control. Com. Doc. 2, H.R.Com. on Flood Control, 70th Cong., 1st sess. These considerations explain why so few flood-control reservoirs have been built in this country notwithstanding the great need for them in many sections. (See app. II, 106.)

[8] See also H.Doc. 259, *supra*, def. ex. 32 (original) pp. 6-7, r. 4062.

> The present levees on the Mississippi are about as high as it is desirable to construct them. An increase in the height accentuates the danger of a crevasse and its consequences, besides presenting a serious hazard of subsidence in the soft ground which they must occasionally cross. Additional safety should be sought rather in the continuation of the program for improving the flood discharge capacity of the river channel, and in reducing peak discharge by the construction of reservoirs [Com. Doc. 1, H.R.Com. on Flood Control, 75th Cong., 1st sess., p. 6].

These facts are confirmed by the testimony of appellants' own expert, Colonel Kelly (r. 1379-1382). In the face of this record appellants make the flat statement, on page 58 of their brief, that the existing levee system "will be sufficient to control the maximum flood to be anticipated on the Mississippi River" and cite in support thereof a so-called "additional finding."

That the best sites for flood-control reservoirs for the protection of the Mississippi are located on the lower tributaries of the Ohio, including the Tennessee, was explicitly recognized in the comprehensive report of the Army Engineers set forth in House Document No. 306, 74th Congress, 1st session, page 127 (r. 1382). This view was fully confirmed by the testimony of the experts Clemens, Kimball, Floyd, and Kelly (r. 1650, 1825-1826, 1891, 1381-1382), and was adopted by the trial court in its findings (fdg. 63, r. 613, app. I, 40).

A similar recommendation was made by the Mississippi River Commission, a body created by Con-

gress in 1879 and charged continuously thereafter with the duty of making recommendations for Mississippi River flood control. That Commission, in a comprehensive report to Congress, recommended that the Federal Government adopt a policy of encouraging the construction of reservoirs on the tributaries of the Mississippi for increased flood protection on the lower Mississippi (H.Doc. 259, *supra*, def. ex. 32 (original) p. 33, r. 4062; fdg. 67, r. 614, app. I, 41). The projects suggested in the report as "best suited for control of Mississippi River floods," included ten million acre-feet of storage located on the main stream of the Tennessee and on its tributaries, including the Clinch and Hiwassee Rivers (*ibid.*; r. 1384-1386). This recommendation was confirmed in detail by the witness Clemens, senior engineer of the Commission (r. 1647-1652).

2. RECOMMENDATIONS AND PRIOR EFFORTS TO SECURE A COORDINATED DEVELOPMENT OF THE WATER RESOURCES OF THE TENNESSEE RIVER IN THE INTEREST OF NAVIGATION AND FLOOD CONTROL

The problems of navigation improvement and flood control discussed above received intensive study by the Army Engineers and by Congress. In 1925 Congress directed the Secretary of War to prepare and submit to it estimates of the cost of detailed surveys of the navigable streams of the United States and their tributaries. The surveys contemplated were such as

> . . . may be required of those navigable streams of the United States, and their tributaries, whereon power development appears feasible and prac-

> ticable, with a view to the formulation of general plans for the most effective improvement of such streams for the purposes of navigation and the prosecution of such improvement *in combination* with the most efficient development of the potential water power, the control of floods, and the needs of irrigation . . . [43 Stat. 1186, 1190; app. appellants' br., 35].[9]

The obvious purpose was to provide for surveys in which all possible methods of conserving and utilizing all of the resources of the navigable rivers of the United States would be considered, to the end that plans might be devised under which all such resources would be conserved instead of wasted.[10] As stated by appellants, a report published as House Document No. 308, 69th Congress, 1st session, was made pursuant to the provisions of this statute. This report outlined a plan for making the surveys contemplated by the original statute, and those surveys shortly thereafter were authorized by the act of January 21, 1927 (44 Stat. 1010; see app. appellants' br., 35).

The survey of the Tennessee River, begun in 1922 (r. 1534) and continued pursuant to this authority, was completed in 1930 after five years of investigation, and the results were embodied in a report published as House Document No. 328, *supra* (comp. ex. 105 (original) pp. 1, 27-30, r. 2615). The report

---

[9] Throughout this brief, emphasis supplied unless otherwise indicated.

[10] See app. II, 98-112. For a more extensive collection of historical materials on this subject, see Fly, *The Role of the Federal Government in the Conservation and Utilization of Water Resources*, 86 Pa.L.Rev. 274.

described a number of possible systems of structures for the Tennessee River, some of them capable of improving the river for navigation alone, others designed for flood control, and others for navigation improvement, flood control, and the conservation of water power. It was possible, the report showed, to secure a measure of navigation improvement by means of releases from storage reservoirs; a continuous nine-foot channel on the main stream could be secured through a series of thirty-two low movable-wicket dams; and a superior waterway could be secured through a series of seven high dams (H.Doc. 328, *supra*, comp. ex. 105 (original) pp. 11-13, r. 4272). The high-dam system would be more costly, but its superiority even for navigation alone was recognized in the report by the Board of Engineers for Rivers and Harbors, as the court below found (fdg. 54, r. 610, app. I, 34; comp. ex. 105 (original) pp. 11-13, r. 4272). The superiority of the high-dam system even for navigation alone was confirmed in detail at the trial by the testimony of Colonel Watkins, the district engineer in charge of the survey (r. 1536-1539, 1556, 1581-1582); of Barker, engaged for four years in studying navigation problems for the survey (r. 1958-1973); and of Brodie, chief engineer of the Federal Barge Lines (r. 2024-2031). The superiorities are summarized in finding 54 (r. 610, app. I, 34)—superior channel depths and widths; substantially fewer lockages; substantially less current

velocity; smaller pool fluctuations; less interruption from floods.[11]

But apart from the advantages for navigation alone, the salient fact is that the high-dam system provided substantial flood control for the Tennessee, while the low-dam system did not. This point is clearly made in the report and is not subject to dispute (comp. ex. 105 (original) pp. 64, 100, r. 4274; fdg. 70, r. 616, app. I, 44). The testimony of Colonel Watkins leaves no doubt that of the two systems the high-dam project was regarded as far preferable from every standpoint except that of original cost (r. 1536-1539, 1581-1582, 1620).

The report itself states, referring to the low-dam project:

> The district engineer does not think that such a project should be built. However, he uses the cost of such a project as a measure of the benefits to navigation which are secured by the construction of the high dams and locks, and considers that a series of low dams might be adopted as an alternative *in any section of the river on which, for some reason, the construction of a high dam was found to be impracticable at the present time* [comp. ex. 105 (original) pp. 4-5 (par. 16)].

And again:

> It is possible to provide a 9-foot waterway by means of low-lift dams, but such a waterway would

[11] The attempt of appellants to suggest offsetting disadvantages is renewed in this Court (br. 20-26), apparently in the view that the findings and the testimony of the best-qualified experts will be disregarded. Appellants' suggestions are answered more fully in the argument, *infra* pp. 76-77.

> be inferior to the high-dam developments and would not permit the economical development of power [*id.*, pp. 12-13 (par. 13), r. 4272].

The final recommendation in the report was stated thus:

> It is recommended that the general plan proposed for the combined development of the Tennessee River and its tributaries for navigation, power, and flood control be adopted as a general guide, subject to such modifications as may be found necessary and approved by the Chief of Engineers and Secretary of War, for navigation and flood control on the Tennessee River and its tributaries . . . [*id.*, pp. 100-101 (par. 80)].

It was concluded, on the basis of fiscal considerations, that a plan should be adopted providing for the creation of a nine-foot navigable channel throughout the length of the Tennessee River by a series of low movable-wicket dams to be constructed at the sole expense of the Federal Government or by a series of fixed high dams to be constructed by cooperation between private interests and the Federal Government. This recommendation was adopted in the Rivers and Harbors Act of 1930 (46 Stat. 918; app. appellants' br., 36).

The alternative plans thus embodied in the act of 1930 have been treated at some length because of the emphasis placed in appellants' brief on the low-dam alternative system, as if it were the *ultima thule* of engineering and constitutional endeavor on the part of the Federal Government. Nothing could be more misleading. "The Federal Navigation Project," as ap-

pellants term it, is little more than a slogan coined by appellants, with the aid of the definite article and capital letters, to describe what was in fact a hypothetical alternative method of improving the Tennessee River for navigation alone, which would preëmpt 32 sites on the main stream and would concededly provide an inferior waterway and no flood control. Appellants, in a remarkable statement, lament that these nonexistent "dams" will be "flooded out and destroyed" (br. 106-107). The hypothetical character of the low-dam alternative and the preference of the Army Engineers for the high-dam plan are demonstrated by the fact that, prior to the enactment of the Tennessee Valley Authority Act, the Army Engineers had already begun construction of a lock for a high dam at the site of the present Wheeler Dam, with provision for subsequent installation of power facilities (fdg. 41, r. 604, app. I, 25; Bowman, r. 1762-1766; Putnam, r. 1172-1173; Crane, r. 1285).

Prior to the act of 1930 and following the great Mississippi flood of 1927, Congress had passed a comprehensive act for further investigation of flood-control measures for the Mississippi basin (act of May 15, 1928, 45 Stat. 534). Section 10 of that act directed the Secretary of War, through the Corps of Engineers, to prepare reports on a number of relevant topics, including

> . . . the effect on the subject of further flood control of the lower Mississippi River to be attained through the control of the flood waters in

> the drainage basins of the tributaries by the establishment of a reservoir system . . . [p. 538].

Intensive investigation of the subject was undertaken for the Chief of Engineers by the Mississippi River Commission, the studies being under the direction of the witness Clemens (r. 1647-1648). The report of the Commission recommended a series of reservoirs on tributaries of the Mississippi, including some 10,000,000 acre-feet of storage on the Tennessee system (Clemens, r. 1649; H.Doc. 259, *supra*, def. ex. 32 (original) pp. 33, 46, r. 4062).[12] The subsequent recognition by the Chief of Engineers of the need for tributary reservoirs to reduce Mississippi floods has already been pointed out (see p. 20, *supra*).

The act of 1930, as has been observed, contemplated the possibility of cooperation between private interests and the Federal Government in the construction of the high dams on the Tennessee. Accordingly, the district engineer and the division engineer approached all the power companies that might be interested in the project. These efforts met with failure, as the district engineer testified (Watkins, r. 1541-1542). It is true, as appellants state (br. 9-10), that some of the companies acquired property holdings that enabled them to control certain of the tentative dam sites, but in the face of failure to begin construction, the acquisition of strategic sites can hardly have been regarded as

[12] The Commission's report set forth two plans, one primarily for Mississippi flood control and the other primarily for local flood control and secondarily for Mississippi flood control. The Commission recommended the second as a general plan (def. ex. 32 (original) p. 33, r. 4062), but, as Clemens testified, it was found practicable to combine both on the Tennessee (see Clemens, r. 1656-1657).

helpful in developing the river. The vice president of appellant The Tennessee Electric Power Company, a witness in this case, frankly admitted in testimony before a House committee in 1933 that "either the Government has to develop the Tennessee River, or it won't be developed at all" (r. 974).

The court found that neither at the time of the enactment of the Tennessee Valley Authority Act nor since that time has there been any reasonable prospect that a comprehensive development of the Tennessee River and its tributaries for the combined purposes of navigation and flood control in the Tennessee and Mississippi River basins could be obtained except by the construction of high dams by the United States or an agency thereof (fdg. 67, r. 614, app. I, 41; see H.Doc. 131, 72d Cong., 1st sess.).

3. THE PROBLEM OF IMPROVING THE USEFULNESS OF WILSON DAM

Even apart from the unified project for the development of the river, two of the dams—Wheeler on the main stream and Norris on the Clinch River—were long recognized to be particularly desirable as auxiliary to Wilson Dam.

In the hearings on the appropriation for the completion of Wilson Dam in 1922, and subsequently, the importance of Wheeler Dam, or Dam Numbered 3 as it was then designated, was emphasized in relation to the

completion of the improvement of the 37 miles comprising Muscle Shoals.[13]

The value of Norris Dam, or Cove Creek Dam as it had "by long custom become known and designated," for purposes of augmenting and regulating the stream flow at Wilson Dam was similarly recognized and is reflected in sections 17 and 18 of the Tennessee Valley Authority Act (app. II, 23-25). The construction of Wilson Dam, as established by the *Ashwander* case, was undertaken in part pursuant to the war powers of Congress, and the dam as completed constitutes a valuable national-defense asset and lawfully owned property of the United States. Wilson Dam was equipped with eight generating units with a total capacity of 184,000 kw (fdg. 43, r. 605, 607, app. I, 27, 29). At the time of its construction the stream flow at Wilson Dam, without the aid of stream-flow regulation, was sufficient to utilize only a small portion of the generating capacity originally installed for firm-power production. Yet emplacements were provided for ten additional generating units which would provide an additional generating capacity of 260,000 kw (*ibid.*). It was evident that increased stream flow through the release of stored waters on the upper reaches of the river during low-water season was essential if the usefulness of Wilson Dam as originally planned was to be achieved. It was essential that the large amount of secondary power

[13] Hearings on Sundry Civil Appropriation Bill, 1922, before Subcommittee of the House Committee on Appropriations, 66th Cong., 3d sess., pp. 14-18, 78-81; Hearings before the House Committee on Military Affairs, 70th Cong., 1st sess., p. 90; S.Rept. 831, 67th Cong., 2d sess. (pt. 2) pp. 14-15.

available at Wilson Dam be converted into more usable firm power by increasing and regulating the stream flow (fdg. 89, r. 620, app. I, 50). In addition, the special importance of Norris, or Cove Creek, Dam as a flood-control and navigation measure was emphasized both in the act (sec. 18, app. II, 24) and in the early consideration given the project.[14] President Hoover, although returning without his approval a bill providing for Government operation of the Muscle Shoals properties, recommended the construction by the United States of Cove Creek Dam (S.Doc. 321, 71st Cong., 3d sess., p. 8). It is this dam that appellants have singled out for special attack (br. 38-40).

4. THE TENNESSEE VALLEY AUTHORITY ACT: ITS PURPOSES AND RELEVANT PROVISIONS

In 1933 the Tennessee River was still unimproved for large-scale commercial navigation. The problem of the uncontrolled floodwaters of the Tennessee River and its tributaries was still unsolved. The potential benefits of the Government-owned Wilson Dam and the Muscle Shoals properties were largely unrealized. There was no prospect that private interests would undertake the development of the river for any purpose. In these circumstances, Congress enacted the Tennessee Valley Authority Act. Its purposes are clearly set forth in section 1:

---

[14] S.Rept. 831, 67th Cong., 2d sess. (pt. 1) pp. 33-34; S.Rept. 19, 71st Cong., 1st sess., pp. 10-12; S.Doc. 21, 72d Cong., 1st sess., p. 5; S.Rept. 23, 73d Cong., 1st sess., p. 1; H.Rept. 48, 73d Cong., 1st sess., p. 8; 75 Cong. Rec., 72d Cong., 1st sess., p. 9655; 77 Cong. Rec., 73d Cong., 1st sess., pp. 2276, 2283, 2663. The Senate Committee Report on the Tennessee Valley Authority Act of 1933 refers to the building of "Cove Creek Dam, mainly a flood-control and navigation proposition" (see app. II, 35).

That for the purpose of maintaining and operating the properties now owned by the United States in the vicinity of Muscle Shoals, Alabama, in the interest of the national defense and for agricultural and industrial development, and to improve navigation in the Tennessee River and to control the destructive flood waters in the Tennessee River and Mississippi River Basins, there is hereby created a body corporate by the name of the "Tennessee Valley Authority" (hereinafter referred to as the "Corporation") [app. II, 1].

The same principles are repeated in section 4 (j), which deals specifically with authority for the construction of dams:

Sec. 4. Except as otherwise specifically provided in this Act, the Corporation—

* * *

(j) Shall have power to construct such dams, and reservoirs, in the Tennessee River and its tributaries, as in conjunction with Wilson Dam, and Norris, Wheeler, and Pickwick Landing Dams, now under construction, will provide a nine-foot channel in the said river and maintain a water supply for the same, from Knoxville to its mouth, and will best serve to promote navigation on the Tennessee River and its tributaries and control destructive flood waters in the Tennessee and Mississippi River drainage basins; and shall have power to acquire or construct power houses, power structures, transmission lines, navigation projects, and incidental works in the Tennessee River and its tributaries, and to unite the various power installations into one or more systems by trans-

mission lines. The directors of the Authority are hereby directed to report to Congress their recommendations not later than April 1, 1936, for the unified development of the Tennessee River system [app. II, 4-6].

The basic purposes are reiterated in section 23, which governs recommendations for future legislation:

Sec. 23. The President shall, from time to time, as the work provided for in the preceding section progresses [sec. 22, providing for making surveys and plans], recommend to Congress such legislation as he deems proper to carry out the general purposes stated in said section, and for the especial purpose of bringing about in said Tennessee drainage basin and adjoining territory in conformity with said general purposes (1) the maximum amount of flood control; (2) the maximum development of said Tennessee River for navigation purposes; (3) the maximum generation of electric power consistent with flood control and navigation; (4) the proper use of marginal lands; (5) the proper method of reforestation of all lands in said drainage basin suitable for reforestation; and (6) the economic and social well-being of the people living in said river basin [app. II, 27].

In addition to the power to construct dams under section 4 (j), each project has been authorized by name in the several appropriation laws dealing with the Authority.[15] Norris Dam (formerly designated as

[15] See Second Deficiency Appropriation Act, fiscal year 1935, 49 Stat. 571; First Deficiency Appropriation Act, fiscal year 1936, 49 Stat. 1597; Second Deficiency Appropriation Act, fiscal year 1937, 50 Stat. 213; Independent Offices Appropriation Act, fiscal year 1939, Public, No. 534, 75th Cong., 3d sess. (See app. II, 71, 76, 83, 92.)

Cove Creek Dam) was also authorized by sections 17 and 18 of the Tennessee Valley Authority Act. These provisions, authorizing that dam as part of the Authority's navigation and flood-control project, recognized also its special usefulness in improving Wilson Dam for national defense.

Appellants assert that the statute authorizes the Authority to develop all of the potential power resources of the Tennessee River and its tributaries, including the hypothetical series of purely power dams located on remote tributaries which were mentioned in House Document No. 328. This is a gross misconstruction of the statute. Section 4 (j), which contains the affirmative grant of power to construct dams, limits that power to

> . . . such dams, and reservoirs, in the Tennessee River and its tributaries, as . . . will provide a nine-foot channel in the said river and maintain a water supply for the same, from Knoxville to its mouth, and will best serve to promote navigation on the Tennessee River and its tributaries and control destructive flood waters in the Tennessee and Mississippi River drainage basins . . . [app. II, 5-6].

By this language Congress has set up the legislative standard by which every dam proposed for construction must be measured. No dam can be constructed unless it will promote navigation or assist in the control of destructive floods on the Tennessee and Mississippi Rivers. It is established on this record that the number of sites upon which dams

meeting these specifications could be constructed is strictly limited (fdg. 93, r. 621, app. I, 51; Bowman, r. 2235). While House Document No. 328 refers to 149 potential sites on the Tennessee River system, Colonel Watkins, the district engineer, testified that in addition to the seven high dams on the main stream of the Tennessee, the only projects considered for navigation and flood control were a limited number of storage projects on the major tributaries similar to those under construction by the Authority (r. 1579-1580).

Specific directions to the Authority for the operation of its dams are contained in section 9a:

> Sec. 9a. The Board is hereby directed in the operation of any dam or reservoir in its possession and control to regulate the stream flow primarily for the purposes of promoting navigation and controlling floods. So far as may be consistent with such purposes, the Board is authorized to provide and operate facilities for the generation of electric energy at any such dam for the use of the Corporation and for the use of the United States or any agency thereof, and the Board is further authorized, whenever an opportunity is afforded, to provide and operate facilities for the generation of electric energy in order to avoid the waste of water power, to transmit and market such power as in this act provided, and thereby, so far as may be practicable, to assist in liquidating the cost or aid in the maintenance of the projects of the Authority [app. II, 13].

Subject to the express limitations set forth in sections 4 (j) and 9a, the act authorizes the sale and transmission of surplus power according to the terms of sections 10, 11, and 12 (app. II, 13-17). The pertinent provisions of these sections are discussed *infra*, page 106 *et seq.*, in connection with the method of disposal of the power. There is no disposition to minimize these provisions. The availability of substantial amounts of power as a result of construction and operation of the high-dam projects is an important factor bearing on the economic soundness of the undertaking and was undoubtedly given appropriate weight in the determination of Congress to authorize the undertaking. But the fact that the Congress made adequate provision for the disposition of this power in no way reflects upon the purposes for which the dams were authorized.

5. THE PROJECTS OF THE AUTHORITY: THEIR LOCATION, DESIGN, AND ORDER OF CONSTRUCTION

Pursuant to the statute and the appropriation acts of Congress (*supra* pp. 31-34) the Authority has constructed, is constructing, and has recommended for construction, to serve the purposes prescribed in the statute, a series of seven high dams on the main stream of the Tennessee and two reservoir dams on two of the principal tributaries, the Clinch and Hiwassee Rivers (fdg. 40, r. 603, app. I, 23).

The dams *completed* are:

Norris Dam, on the Clinch River
Wheeler Dam, on the main stream

The dams *under construction* are:

Gilbertsville Dam[16]
Pickwick Landing Dam
Chickamauga Dam
Guntersville Dam
all on the main stream, and
Hiwassee Dam, on the Hiwassee River

The dams recommended by the Authority for construction and for which Congress has appropriated funds for project investigations are:

Watts Bar
Coulter Shoals, both on the main stream[17]

While the Fontana project on the Little Tennessee River was recommended in the report entitled *The Unified Development of the Tennessee River System* (comp. ex. 328 (original), r. 3068), submitted to Congress on March 31, 1936, pursuant to section 4 (j) of the Tennessee Valley Authority Act (app. II, 5), Congress has made no appropriation either for construction or investigation at that site, and neither construction nor preliminary investigation nor other work is in progress on it (fdg. 40, r. 603, 604, app. I, 23, 25). The Authority has no plans and has made no investigations of any substantial character for the construction of any other dams; no other projects have been recommended for construction by the Federal Government (fdg. 230, r. 650, app. I, 92).

---

[16] The finding does not record Gilbertsville Dam under construction. Funds for beginning construction at Gilbertsville were appropriated subsequent to the trial (Independent Offices Appropriation Act, fiscal year 1939, Public, No. 534, 75th Cong., 3d sess. (see app. II, 92)).

[17] Second Deficiency Appropriation Act, fiscal year 1937, 50 Stat. 213 (app. II, 83).

The sequence of construction has been determined according to the requirements of navigation and flood control, and not of power. The complainants' witness Crane so testified and the court so found (Crane, r. 1285; fdg. 75, r. 618, app. I, 46; Bowman, r. 2244-2247, 1758; Barker, r. 1950-1951). This record furnishes the complete answer to appellants' contention on this point (br. 29-31).

The location of the nine projects of the Authority, constructed, under construction, or recommended for construction, is shown on the map of the Tennessee River drainage basin appearing as defendants' exhibit 36 in the volume entitled *Reproductions of Certain Original Exhibits Submitted by Appellees.*

Each of the dams of the Authority, already constructed, under construction, or recommended for construction, is located on or near the site selected for the high dams by the Army Engineers in their report in House Document No. 328 (comp. ex. 105 (original) p. 4, r. 2615). This was conceded by complainants' witness Crane, and the court below so found (r. 1285; fdg. 41, r. 604, app. I, 25). The close correspondence between the dams of the Authority and those projected in House Document No. 328 for navigation and flood control appears from the testimony of the district engineer in charge of the survey embodied in that report (Watkins, r. 1548, 1579-1580; fdg. 41, r. 604, app. I, 25).

The design of the several projects, showing the locks, the slack-water navigation pool, the flood storage, and the facilities for the generation of power, appears

graphically in defendants' exhibits 38, 40, 44, 49, and 50 in *Reproductions of Certain Original Exhibits Submitted by Appellees.* A table containing data with respect to each dam, showing its location, drainage area, length of reservoir, elevation of gates, normal pool level, low pool level, and acre-feet of storage space, will be found in finding 43 (r. 605, 606, app. I, 27, 28).

As the court below found, each of the projects of the Authority has all the elements of design reasonably required for the combined purposes of navigation and flood control in accordance with accepted engineering standards (fdgs. 42, 68, r. 604, 615, app. I, 26, 42). Each has been designed to provide capacity for a slack-water pool behind the dam for navigation and a substantial additional storage capacity above the slack-water pool level for flood control. (See def. exs. 38, 40, 44, 49 in *Reproductions of Certain Original Exhibits Submitted by Appellees.*) Each of the main-stream projects is equipped with a lock designed by the Corps of Engineers, with space for an additional parallel lock when commerce warrants. The locks which are being installed are of sufficient size and capacity to accommodate adequately the traffic which may be expected in the reasonably near future (fdg. 42, r. 604, app. I, 26). Each of the projects is equipped with large spillway gates to provide effective means for flood control and stream-flow regulation (*ibid.*). In addition, the tributary projects are equipped with sluiceways of large capacity, through which may be discharged for navigation and flood-control purposes several times as much water as may be passed through the generator turbines

(*ibid.*). Each of the projects can be operated to secure substantial benefits in the improvement of navigation, the control of destructive floods, and the production of electric energy (*ibid.*).

The testimony is uncontradicted that the projects of the Authority on the main stream and the tributaries of the Tennessee are the only projects which will provide flood control for the Tennessee and Mississippi Rivers in combination with a nine-foot navigation channel on the main stream of the Tennessee, and the trial court so found (Watkins, r. 1557; Clemens, r. 1651-1652, 1654-1655; Kimball, r. 1851-1852; Barker, r. 1977-1978; Bowman, r. 1759; fdgs. 60, 66, 68, r. 613, 614, 615, app. I, 38, 41, 42). The admissions of complainants' witnesses that the suggested alternative projects made no provision for Mississippi flood control leave no doubt on this point (Kurtz, r. 1229; Kelly, r. 1376-1377).

6. THE BENEFITS SECURED BY THE PROJECTS

It has been found unanimously, and it cannot be disputed, that the projects of the Authority when completed will provide a continuous nine-foot channel with appropriate overdepths over the entire distance from the mouth of the Tennessee River at Paducah, Kentucky, to Knoxville, Tennessee, approximately 650 miles, and will substantially alleviate the destructive floods in the Tennessee and Mississippi River basins (fdgs. 39, 52, 53, 65, 68, r. 603, 610, 614, 615, app. I, 23, 33, 34, 40, 42).

Navigation: The trial court found that *each* of the Authority's projects will result in substantial improvement to navigation (fdg. 53, r. 610, app. I, 34). The continuous nine-foot channel which will be created will make the Tennessee River an integral part of the great inland waterway system centering on the Mississippi (fdgs. 51, r. 610, app. I, 33). This channel will be physically integrated with that existing on the other sections of the interconnected Mississippi system. As the court found:

> The boats and barges which are now in general use on the interconnected inland waterways of the Mississippi River system will be able to navigate the Tennessee River where improved by the projects of the Authority without change of design or extent of loading [fdg. 54, r. 610, 611, app. I, 34, 36].

The importance of this achievement, in view of the century-old effort to accomplish it, would be difficult to exaggerate, though appellants now characterize the waterway as an "incidental channel" (br. 109). The geographical setting of the waterway and its significance to national commerce has been discussed *supra*, pages 15-16. The trial court found that the improvement provided by the projects of the Authority will cause a substantial development of waterway traffic between the Tennessee Valley region and other regions of the United States connected by water, rail, and highway (fdg. 56, r. 611, app. I, 36). It should be observed that the value of the improvement to navigation will not be limited to the reduction in the cost of trans-

portation to shippers but will include substantial intangible values, such as the stimulation of growth of industry and business and the promotion of the general prosperity of the region under the influence of the improved waterway (fdg. 57, r. 612, app. I, 37; Putnam, r. 1182-1183).

Even prior to completion of all the recommended projects on the main stream, navigation will be materially improved through the combined operation of the existing main-stream projects and the tributary dams. The completed Norris Dam is being operated to provide a navigation channel of seven-foot minimum depth in the 207-mile stretch between Pickwick Landing and the mouth of the Tennessee River (fdg. 71, r. 616, app. I, 44). Upon completion of the Hiwassee Dam on the Hiwassee River the depth below Pickwick will be increased to seven and a half feet (*ibid.*). Together with Wheeler and Wilson Dams on the main stream, already constructed, and Pickwick Landing and Guntersville Dams, under construction, these projects will provide a commercially feasible navigation channel between Chattanooga and the inland waterway system, a distance of 464 miles (*ibid.*). As a result of the completion of the dams now under construction, for the larger part of each year there will be a through navigation channel of nine feet from Chattanooga to the mouth of the river (*ibid.*). The court unanimously found that the tributary projects would substantially increase the navigation depths on the lower Mississippi River and on the shallow upper reaches of the navigation pools created by the main-

stream dams, and that this result would be of material benefit to navigation on the Tennessee and Mississippi Rivers (fdg. 69, r. 616, app. I, 43; see also fdg. 52, r. 610, app. I, 33).

Flood control: The court unanimously found that each of the projects is of substantial value for the reduction of flood heights in the Tennessee and Mississippi River basins (fdg. 65, r. 614, app. I, 40). A total of 8,925,000 acre-feet of controlled flood storage will be made available by the projects of the Authority (fdg. 43, r. 605, 606, app. I, 27, 28). Of this amount, 6,543,000 acre-feet will be available at the main-stream dams and 2,382,000 acre-feet at the two tributary dams (*ibid.*). The distribution of the space among the various projects is shown in the table in finding 43 (*ibid.*). In the operation of the dams as discussed *infra* (pp. 48-51), a total of 4,034,000 acre-feet of the same reservoir space is used both for storage in the flood season and releases during the low-water season (*ibid.*). The contention of appellants that the Authority's projects have merely displaced so-called "valley" or "natural" storage is absurd. So-called valley storage is simply the changing space occupied by the flood itself as it moves down the valley and spreads its destructive force (fdg. 66, r. 614, app. I, 41).

If the projects of the Authority had been in operation during the past floods since 1897, they could have reduced the height of all major Mississippi floods since that date by two feet or more from Cairo, Illinois, at least to Helena, Arkansas; and it is reasonable to expect that these projects will make possible a reduction

similar in extent in all probable floods in the future on the lower Mississippi. This is the conclusion set forth in the testimony of several highly qualified witnesses and supported by thorough studies and investigations (Kimball, r. 1838-1839; Clemens, r. 1650-1651; Floyd, r. 1890, 1891; Okey, r. 1933-1934; Kelly, r. 1381). The importance of this contribution to the control of Mississippi floods is sufficiently evidenced by the fact that the existing levee system for the control of Mississippi floods is now recognized as inadequate, and by the further fact that as originally designed the levee provided only a one-foot freeboard (Kelly, r. 1378-1382; fdg. 62, r. 613, app. I, 39). The reduction provided by the Authority's projects will provide substantial additional flood protection for the lower Mississippi, a substantial safety factor for the levee system, and reduce the frequency of the use of floodways and the flooding of backwater areas (Clemens, r. 1645-1646, 1650-1651, 1672; Okey, r. 1914-1919, 1922; fdg. 65, r. 614, app. I, 40).

While, as pointed out below, any one of the dams cannot be viewed in isolation if its benefits are to be adequately understood, nevertheless, in view of the attack made on the tributary dams, it is noteworthy that the court found that Norris Dam, even before the completion of the system, has been successfully operated to improve substantially the navigation channel of the Tennessee between Wilson Dam and its mouth, to prevent a probable flood at Chattanooga in the year 1936, and to hold off through the peak of the Mississippi flood of 1937 approximately 28,000 cubic

feet per second (fdg. 73, r. 617, app. I, 45). For a period of six weeks during the Mississippi flood of 1937, Norris Dam stored the entire flow of the Clinch River (*ibid.*), which itself may have saved the city of Cairo (r. 4315; *cf.* Kelly, r. 1383; Clemens, r. 1645).

In addition to their effect on the reduction of flood peaks on the lower Mississippi, the projects of the Authority are likewise important to serve the purpose of flood control on the Tennessee. The court found that for effective flood control in the Tennessee basin it is desirable to provide high dams with controlled storage both on the main stream and on the tributaries, including the Clinch and Hiwassee Rivers (fdg. 60, r. 613, app. I, 38). It is true that the projects will not alone eliminate the flood hazard at Chattanooga, but no series of reservoirs ever proposed would of themselves accomplish that end without the construction of local protection works (Kurtz, r. 1204; comp. ex. 328 (original) p. 19, r. 3068). It is also true that the projects would have to be supplemented by a project on each of the major tributaries of the Tennessee above Chattanooga, including the Little Tennessee, the French Broad, and the Holston, in order to reduce the height of the greatest possible flood sufficiently to make feasible the construction of the necessary levee works by the city of Chattanooga (Kimball, r. 1836; comp. ex. 328 (original) p. 18, r. 3068). But it cannot be denied that if the Authority's projects had been in operation in the past, they would have eliminated substantially all flood damage at Chattanooga for which adequate records are available (Kimball, r. 1835-1836; def. ex.

82, r. 4097). And in any system established for effective control of Tennessee floods, the projects of the Authority on the main stream and on the tributaries should be included (Kimball, r. 1834-1835; Watkins, r. 1539-1540; fdg. 60, r. 613, app. I, 38).

Appellants, while conceding that the projects of the Authority could be operated to obtain these benefits, set up an alternative system which they insisted would secure at least the same benefits at lesser cost. That system, projected for purposes of the case by appellants' witness Kurtz, consisted of a series of detention reservoirs on the Tennessee. That hypothetical system is discussed more fully *infra*, pages 86-87. It is enough here to state that, as the court found and as the appellants acknowledge, the system would have no value for flood control on the Tennessee below Chattanooga and none whatever for Mississippi flood control (fdg. 66, r. 614, app. I, 41). This hypothetical plan would thus plainly fail to conform to the legitimate interests of Congress. In fact, as the witness Clemens testified, the system might be a positive menace in conditions of flood on the Mississippi (r. 1654-1655; fdg. 70, r. 616, app. I 44). Furthermore, the system of detention reservoirs would involve the pre-emption of the limited number of sites available on the Tennessee for the construction of multiple-purpose projects; and since the detention reservoirs would have no value except for local flood protection above Chattanooga, they would forever preclude the utilization and development of the river by

anyone for the combined purposes sought to be realized by Congress (fdgs. 66-70, r. 614-616, app. I, 41-44).

Improvement of national-defense projects: There is no dispute in the record on the following finding of the court:

> The increase of the low-water flow by means of the storage of water during the high-water season at Norris Dam and the release of such water during the low-water period has increased and will substantially increase the continuous water power available at Wilson Dam and will increase the value of Wilson Dam for all purposes [fdg. 72, r. 617, app. I, 45].

7. THE OPERATION OF THE PROJECTS FOR NAVIGATION AND FLOOD CONTROL AND THE PRODUCTION OF POWER

Section 9a of the act (app. II, 13) makes explicit the requirement that the projects of the Authority be operated primarily in the interest of navigation and flood control. The detailed method of operation in conformity with this requirement must necessarily be determined on the basis of engineering experience and investigation. The engineers of the Authority in responsible charge have determined upon a method of operation for the projects, on the basis of a study of all available records, which in their judgment is the most effective method for the improvement of navigation and the control of destructive floods in the Tennessee and Mississippi River basins (fdg. 44, r. 608, app. I, 30). The projects of the Authority which are com-

pleted and in operation have been and are operated primarily for navigation and flood control; the responsible officers of the Authority charged with the operation of the projects are required by instructions from the board of directors to operate them primarily for those purposes, and these instructions have been uniformly obeyed. This was the unanimous finding of the court (fdg. 76, r. 618, app. I, 47).

The method of operation determined upon and carried out by the engineers of the Authority may be described succinctly as follows. The reservoir levels of the main-stream dams below Chattanooga are held somewhat above low pool level during the flood season and drawn down to or below such level in advance of a flood; those above Chattanooga are to be held at about low pool level during flood season. As the flood season draws to a close, about the begining of April, reservoir levels on the main stream are allowed to rise. The reservoir levels of the tributary projects are maintained at about low pool level at the beginning of the flood season, and a substantial portion of the storage capacity below so-called normal pool level is gradually filled during and after the flood season. A sufficient capacity is held available at the close of the flood season to control the largest run-off that may be expected at that time. The water stored in the reservoirs on the tributaries and the main stream is released during the low-water season to augment the low-water flow (fdg. 45, r. 608, app. I, 30).

As the trial court found, the general method of operation set forth in finding 45 (r. 608, app. I, 30) con-

forms to the method of operation for navigation and for flood control contemplated in House Document No. 328 and House Document No. 259 (both *supra*; comp. ex. 105 (original), r. 2615; def. ex. 32 (original), r. 4062) and is reasonably calculated to provide most effectively for the improvement of navigation and the control of destructive floods in the Tennessee and Mississippi River valleys without reduction in the effectiveness of the Authority's projects for either flood control or navigation (fdg. 46, r. 608, app. I, 31).

When operated for the improvement of navigation and the control of destructive floods, the dams of the Authority will provide, in addition to the benefits to navigation and flood control, a large amount of continuous power (fdg. 94, r. 621, app. I, 51). The amount of continuous power is determined by the available head and the minimum flow in low-water season (*ibid.*). The construction and operation of the projects of the Authority for navigation and flood control will concentrate the fall of the river at certain points, thus necessarily creating a head of water power, and will substantially augment the minimum flow in low-water season (*ibid.*). The so-called "dead storage" behind the dams is itself the navigation channel and necessarily forms a power head.[18] The floodwaters stored in the additional storage space during or after the flood

[18] The complainants' contention that the slack-water pools behind the tributary dams are valuable only for power is refuted by the findings of the court and the testimony of the witnesses Watkins and Barker (fdg. 68, r. 615, app. I, 42; Watkins, r. 1542, 1543; Barker, r. 1955-1957). It should be noted that this so-called "dead storage" at the tributary projects is only a small fraction of the total storage at these projects and in the entire system.

season may be released in low-water season, increasing power and the navigable depths in the stream below (Watkins, r. 1543-1544, 1633-1634). In this manner the same space used for flood control also serves the other functions. The power is thus acquired in the operation of the projects for flood control and navigation, and the trial court unanimously so found (fdg. 94, r. 621, app. I, 51).

There is no basis for the contention that the projects have been enlarged beyond the needs of navigation and flood control. The amount of storage in the Authority's projects over and above that required for maintenance of the nine-foot channel is somewhat less than the ten million acre-feet on the Tennessee River system recommended by the Mississippi River Commission for Mississippi and local flood control (H.Doc. 259, *supra*, def. ex. 32 (original) pp. 40, 46; Kelly, r. 1385-1386) and set forth in *The Unified Development of the Tennessee River System* as a guide to the Authority's objectives for Mississippi flood control (comp. ex. 328 (original) p. 19, r. 3068). Likewise, the total storage capacity of all the dams above Chattanooga, over and above the amount required for maintenance of the nine-foot channel, is less than the total recommended by the complainants' witness Kurtz for Tennessee flood control (*cf.* comp. ex. 353, r. 3086, with fdg. 43, r. 605, 606, app. I, 27, 28). The benefits to navigation and flood control described above could not be obtained by any alternative structures. The trial court found on the basis of the uncontradicted evidence that the high-dam projects of the Authority, both on the main stream and the tributaries of the Tennessee River, are

the only projects which will provide effective flood control for the Tennessee and Mississippi Rivers in combination with a nine-foot navigation channel on the Tennessee River (fdgs. 66, 68, r. 614, 615, app. I, 41, 42).

The appellants' sole claim is that the same flood storage cannot be operated both for flood control and power. It is sufficient answer that, as the trial court found, there is no such conflict in the operation of the projects of the Authority (fdg. 47, r. 609, app. I, 31). The Authority's method of operation is reasonably calculated to provide most effectively both for flood control and for navigation, and the trial court so found (fdg. 46, r. 608, app. I, 31). See argument, *infra* pages 90-94.

Appellants' statement that the tributary dams create five-sixths of the power has no basis in fact. As well might it be said that *all* the power is produced by the main-stream dams. The tributary dams produce no firm power whatever. For months their generators are nonproductive and no water is released (Woodward, r. 1786). These dams merely provide an increased water supply in the dry months, the main-stream dams producing practically all the power for the remainder of the year (def. ex. 139, r. 4186; Wessenauer, r. 2175-2180).

Appellants' basic error on this question and throughout their argument is their failure to recognize the necessary interrelationship of all of the projects of the Authority in the performance of the inseparable functions of navigation and flood control. Both of these related functions are served by each

project, and each is operated for both. But no dam is independent. Significantly, the river system itself is unitary, and a proper regard for its control in the interest of the combined functions of navigation and flood control requires that the operation of all the projects be coordinated. In general, storage and releases in the tributary reservoirs must be responsive to the needs of the main stream. The effective control of floods requires carefully coordinated operation of all the dams from day to day. Flood routing throughout the stream is a scientific problem. Each of the dams should be under effective control and operated with due regard for the status of the reservoirs at the other dams, and the operation of the system as a whole must meet the requirement of reducing the flood crest at the point of danger.

The Authority's projects must serve not merely Tennessee navigation and flood control but Mississippi flood control as well, a point virtually ignored in appellants' brief. There can be no doubt that for the most effective flood control a combination of both main-stream and tributary dams is necessary (fdgs. 60, 66, r. 613, 614, app. I, 38, 41). The function of the tributary dams is to reduce the volume of the floodwaters and enable the main-stream dams closest to the danger point to reduce the crest (Kimball, r. 1838, 1850; Clemens, r. 1651, 1652; Floyd, r. 1891-1894).[19] Whether

[19] The assertion that the main-stream dams above Chattanooga would be valueless in a great Tennessee flood because they would be drowned out simply ignores the fact that their effectiveness depends on a reduction in the volume of the flood by tributary projects, and that, this accomplished, the main-stream dams can operate most effectively to reduce the flood peaks at the exact place and time needed (Kimball, r. 1869).

the storage capacity at one of the dams is relatively small, as at Guntersville, or relatively large, as at Gilbertsville, is immaterial. It is the *total capacity* of the system that matters, provided only that there be a reasonable balance between main-stream and tributary storage (Clemens, r. 1657). The interrelationship and interdependence extends to navigation in combination with flood control. Thus, the navigation depths on the lower 200-mile (and controlling) stretch of the Tennessee River can be maintained by stream-flow regulation (fdg. 71, r. 616, app. I, 44), which permits substantial additional capacity to be made available at Gilbertsville (in close proximity to the Mississippi River) for the reduction of the flood crest without diminution of the necessary nine-foot navigable depth. The importance of this consideration is fully developed in the testimony of the witness Floyd (r. 1891-1894) and established by the findings (fdg. 69, r. 616, app. I, 43). The methods of coordinated operation are discussed more fully in the argument.

8. THE METHOD OF DISPOSAL OF THE POWER

With the complete generating units which have already been installed or are under contract for installation at Norris, Wheeler, Guntersville, Wilson, and Pickwick Landing Dams, the dams constructed or under construction by the Authority will have a firm-power capacity of 395,000 kw (fdg. 94, r. 621, app. I, 51). Together with the additional generating units at these dams and at Hiwassee and Chickamauga Dams

which have been authorized and for which appropriations have been made or requested, the dams of the Authority will have a firm-power capacity of 570,000 kw (*ibid.*). Of this amount, the Authority is already committed to supply 310,530 kw, as shown by the contracts in evidence (fdgs. 165-168, r. 637, app. I, 74-75). There is a steadily increasing demand for electric energy in this area, as well as unserved potential markets (fdgs. 233-235, r. 651, app. I, 94). As shown by the evidence and found by the court, it is to be anticipated that the utilities within ready transmission distance of the Authority's run-of-the-river plants will require 310,000 kw of additional capacity in 1939 and 787,500 kw by 1943 (fdg. 231, r. 650, app. I, 92). It appears without dispute that the amount of power which will be available at the projects of the Authority is less than the amounts necessary to meet the increases in demand in the area which were predicted by witnesses for both sides (fdg. 238, r. 652, app. I, 95).

Failure to generate and sell the power created by the operation of the Authority's dams for navigation and flood control (fdg. 94, r. 621, app. I, 51) would result in its complete waste (fdg. 172, r. 638, app. I, 76). Section 9a (app. I, 13), which requires that the dams be operated primarily for navigation and flood control, also authorizes the board, so far as may be consistent with these purposes, to provide for the generation and marketing of electric energy in order to avoid the waste of water power and, so far as may be practicable, to assist in liquidating the cost or aid in the maintenance of the projects. Provisions for the generation

of power at each of the projects and installation of generating facilities at some of them have been made pursuant to this section. Sections 10 and 11 (app. II, 13-15) provide for sales of power to States, public agencies, corporations, and rural areas, preference to be given, in accordance with familiar precedent, to public agencies and quasi-public membership corporations. Section 12 (app. II, 15) authorizes the board to construct or acquire transmission lines "In order to place the board upon a fair basis for making such contracts and for receiving bids for the sale of such power."

A full discussion of the method of disposal of the Authority's power, pursuant to these statutory provisions, is contained in the argument (*infra* p. 106 *et seq.*). The salient facts may, however, be summarized here.

The market for the power at the dam sites is dominated by three affiliated companies of the Commonwealth and Southern system (fdg. 177, r. 639, app. I, 78), and the market for at least 100 miles from any of the dams is likewise controlled by that system and, to a much smaller degree, by the Electric Bond & Share Company (*ibid.*). The Authority has in fact sold large amounts of power to the Commonwealth and Southern companies (fdgs. 196, 213, r. 643, 646, app. I, 82, 87). Pursuant to the provisions of the statute, the Authority has entered into contracts for the sale of power at wholesale to municipalities and to rural cooperative associations serving consumers theretofore without electric service and has contracted for the sale of firm and secondary power to large electrochemical

and electrometallurgical industries constituting new electric business in the area (fdgs. 203-207, r. 644-645, app. I, 84-86; fdg. 151, r. 633, app. I, 69). The Authority does not own or operate any local or urban retail distribution systems[20] and does not attempt to control the operations of such systems (fdgs. 106, 140-147, 187, 193, r. 624, 631-632, 641, 642, app. I, 56, 66-68, 80, 82). The municipalities and cooperatives purchasing power from the Authority assume the responsibility at the point of delivery and sell and distribute the power over their own facilities with their own operating staffs and without assistance or direction from the Authority (fdg. 140, r. 631, app. I, 66). In order to serve its purchasers, the Authority has constructed or acquired about 1,100 miles of marketing transmission lines (fdgs. 183, 186, r. 640, 641, app. I, 79, 80), the largest of which is about 100 miles in length (def. ex. 136, r. 4175; def. ex. 136A in *Reproductions of Certain Original Exhibits Submitted by Appellees*).

The essential similarity of these facilities and classes of purchasers to those involved in the *Ashwander* case is evident. The similarity is analyzed in some detail in the argument *infra*, pages 114-116.

A word should be added regarding the size of the Authority's undertaking. The phase of the undertaking dealing with the disposal of power has been greatly magnified by appellants. Although, as has been pointed out, the firm-power capacity of all the seven dams of

---

20 The Authority owns a small number of rural lines in the vicinity of Norris and Wilson Dams, some of which were purchased from the Alabama Power Company and The Tennessee Electric Power Company (fdgs. 106, 187, r. 624, 641, app. I, 56, 80). No question is raised as to these.

the Authority now constructed or authorized for construction is 570,000 kw at 60% load factor, with all the generating units installed or authorized for installation (fdg. 94, r. 621, app. I, 51), appellants persistently use a figure of 1,100,000 kw of firm capacity at the same load factor (see, e.g., br. 67), an amount almost twice as great. As is explained *infra*, page 109, the latter figure is based on hypothetical calculations which assume unauthorized installations at unauthorized dams and unauthorized interconnections with privately owned plants. The same fallacy is responsible for the tenfold ballooning by appellants of the Authority's 1,100 miles of transmission lines (plus about 400 miles of plant tie lines) into 15,000 miles of lines (br. 69). See *infra*, pages 111-112.

In pointing to these exaggerations, we do not seek to minimize the scope of the Authority's undertaking insofar as it relates to power. That undertaking is an impressive one, though it is not nearly so large as the historic undertaking of the Government in developing and marketing its real property, the public domain, and it is quite comparable to the disposal of power at the Government's Boulder Canyon project (see *infra* pp. 141-145). But the phase of the Authority's undertaking which is concerned with power must be viewed in relation to the other aspects of the project. A system of structures which will create and maintain a nine-foot navigable waterway throughout a distance of 650 miles and which will provide almost 9,000,000 acre-feet for controlled flood storage can be expected to make available a proportionate amount

of power. If the undertaking is large, it is large in all its aspects, all its functions, and all its benefits.

Since the legal issues concerning the validity of the dams and the property in the resulting power depend upon the application of settled principles to the engineering facts set out above, we have, for purposes of clarity, placed the argument on those issues immediately following this statement of facts and in advance of the argument on the right of the complainants to maintain their suit. Considerations of convenience seemed to dictate such a course. It is our position, however, adhered to throughout the case, that the complainants are without sufficient legal interest to maintain this suit, and that the case may be disposed of upon that ground.

SUMMARY OF ARGUMENT

I

Under the decision of this Court in the *Ashwander* case, electric energy which "comes into being in the operation of works constructed in the exercise of some power delegated to the United States" is the lawful property of the United States. *Ashwander* v. *Tennessee Valley Authority*, 297 U.S. 288, 340. The question for decision on this aspect of the case is whether the projects of the Authority were authorized for and substantially serve constitutional functions.

The Tennessee Valley Authority Act sets forth as its basic purposes the improvement of navigation, the control of destructive floods in the Tennessee and Mississippi River basins, and the promotion of national defense. The importance of these functions is attested by the fact that each was the subject of extensive investigation and endeavor by Congress, the Corps of Engineers of the Army, and other interested bodies prior to the consideration and enactment of the statute. The projects of the Authority are limited by the act to such as will serve these basic constitutional functions, and Congress has specifically authorized the several structures in that view. The whole record confirms the legislative judgment that the projects are appropriate means for the accomplishment of the functions prescribed in the statute.

1. Under any theory of constitutional authority, however narrow, the power generated at the projects

is lawfully acquired, since these are the only projects capable of providing flood control on the Tennessee and the Mississippi in conjunction with a nine-foot navigation channel on the Tennessee. That the projects will create and maintain a continuous nine-foot waterway throughout the 650-mile length of the Tennessee is undisputed. Not only the main-stream dams, but the two tributary dams as well, will provide substantial benefits to navigation both on the Tennessee and the Mississippi, by virtue of releases of stored water in low-water season. It is contended by appellants that a comparable navigation improvement could have been obtained by the construction of a less costly system of 32 low dams. While the relative advantages and disadvantages of the alternative systems are not legally material, the record demonstrates and the trial court found that the projects of the Authority will provide a navigation channel superior to that which could be provided by any alternative system.

The function of the projects in serving to control floods in the Tennessee and Mississippi River basins furnishes additional ground for their validity. Even if the power to construct flood-control works must be rested on the power to improve navigation, the test is met by these projects, since their operation for flood-control purposes results in substantial benefits to navigation. *Jackson* v. *United States*, 230 U.S. 1, 23; *Cubbins* v. *Mississippi River Comm.*, 241 U.S. 351, 368-369. But Congress has power to promote and protect interstate commerce on land as well as on water, and accordingly to engage in flood-control measures where,

as on the Tennessee and the lower Mississippi, there is a serious flood menace to all forms of interstate commerce. *Cf. Wilson* v. *New*, 243 U.S. 332; *National Labor Relations Board* v. *Jones & Laughlin Steel Corp.*, 301 U.S. 1. In addition, the power of Congress to cope with the recurring threat of floods can be rested on its power to make expenditures for the general welfare. *Cf. Steward Mach. Co.* v. *Davis*, 301 U.S. 548.

The interest of national defense is substantially served by the tributary dams which release water during the low-water season and so enhance the value and usefulness of the Government-owned properties at Muscle Shoals.

The construction and operation of the projects for the purposes of navigation and flood control will, as the court found, necessarily produce a large amount of continuous power. Pursuant to section 9a of the act, which directs that the Authority operate its projects primarily for the purposes of promoting navigation and controlling floods, the board of directors has instructed the responsible officers of the Authority to operate them primarily for those functions, and these instructions have been uniformly obeyed. In the operation of the projects there is no real conflict between the utilization of storage capacity for flood control and the production of power.

2. As has been stated, the Authority's projects are the only ones capable of providing flood control in the Tennessee and Mississippi River basins in conjunction with nine-foot navigation on the Tennessee,

and the operation of the projects for those purposes necessarily produces a large amount of continuous power. But even if the facts were otherwise, the property in the power would nonetheless be lawfully acquired by the United States. In providing works which appropriately serve as navigation and flood-control structures, Congress may determine the size of the projects and the mode and manner of their use, and the power which is thus acquired is the lawful property of the United States. *Arizona* v. *California*, 283 U.S. 423, 456; *Green Bay & Miss. Canal Co.* v. *Patten Paper Co.*, 172 U.S. 58, *rehearing denied*, 173 U.S. 179; *United States* v. *Chandler-Dunbar Water Power Co.*, 229 U.S. 53.

The development of the Tennessee River for navigation alone or for flood control alone by systems of structures such as those suggested by appellants would require that the development of the river for other legitimate purposes be abandoned. The number of sites for such structures on the river is strictly limited, and if they were preëmpted for any single function, the development of the river for other related uses would be permanently foreclosed.

II

The means of disposition of power authorized by the statute are lawful. As this Court held in the *Ashwander* case, the water power created by these projects is the property of the United States, may be converted into electric energy, and, under the property clause of the Constitution, all of the electricity so acquired may be disposed of by transmission to the market and by sales to municipalities, rural cooperatives, and industrial customers. *Ashwander* v. *Tennessee Valley Authority, supra.*

1. In the *Ashwander* decision this Court upheld the validity of a contract providing for sale to the Authority of certain transmission lines of the Alabama Power Company serving a number of municipalities in northern Alabama, as well as auxiliary lines serving rural and industrial customers. There is no distinction between the means of disposition set forth in this record and those approved in that decision. The Authority is now selling power to the same classes of customers as those served by the lines purchased under the contract approved in the *Ashwander* case. And, as found by the trial court, all of the marketing facilities constructed and operated by the Authority, namely, *transmission lines*, *substations*, and *rural lines*, are similar in character and function to the facilities purchased under that contract.

In this case, as in the *Ashwander* case, the method of disposition is necessary to avoid a private monopoly of the Government's property, to prevent waste, and

to secure a widespread distribution of benefits pursuant to the statute.

2. As authorized by the act, the Authority's contracts with municipalities and cooperatives establish the resale rates to be charged by the distributors (sec. 10). Appellants have no standing to challenge these provisions in the contracts, since the provisions were voluntarily entered into by the municipalities and cooperatives, which are empowered to do so by valid State law. Any advantage or disadvantage to appellants resulting from the rates adopted by the municipalities and cooperatives is merely the incidental result of the exercise of the rights vested in them by the laws of the States of their creation to set their own rates and to contract with respect to them. *Edward Hines Trustees* v. *United States*, 263 U.S. 143, 148; *Sprunt & Son* v. *United States*, 281 U.S. 249, 254-256; *Wilbur* v. *Texas Co.*, 40 F. (2d) 787 (App.D.C., 1930), *cert. denied*, 282 U.S. 843; *Georgia Power Co.* v. *Tennessee Valley Authority*, 14 F.Supp. 673 (N.D. Ga., 1936).

In any event, these provisions of the contracts are valid. They were adopted, as the contracts recite, "In order to facilitate the disposition of surplus power generated by Authority and not needed by it in its operations, and in order to carry out the intention of Congress to encourage the more abundant use of electricity throughout the area in which municipality [cooperative] operates." In fact, these results have been secured (see, e.g., comp. ex. 118, r. 2771, 2802, 2804). The federal interests involved are apparent. The Gov-

ernment is selling at wholesale. The demand for the Government property will be influenced by the rates charged to the ultimate consumer. The Congress, in the position of a trustee of Government property, may therefore authorize this means to assure a widespread diffusion of the benefits to the people. It has long been established that in disposing of its property the Federal Government may contract with the purchaser with respect to the use of the property and to the price at which it may be resold. *Oregon & Calif.R.R.* v. *United States*, 238 U.S. 393; *United States* v. *Gratiot*, 26 Fed. Cas. 12 (C.C.D.Ill., 1839), *aff'd*, 14 Pet. 526.

3. There is no invasion of the rights reserved to the States under the tenth amendment, even if it be assumed that the amendment constitutes an independent limitation on the exercise of granted powers. The denial of the power of the Congress to construct the necessary transmission facilities and to enter into the necessary contracts for the sale of the power would limit the Authority's market to sales at the dam sites where the Commonwealth and Southern companies, in all practical effect, are the only available purchasers.

The conclusive answer to the invocation of the tenth amendment is that the means of disposition do not impair the exercise of the States' police power. The controlling fact is that the Authority is dealing with municipalities and cooperatives who are subject at all times to the complete control of the States, and the State courts have determined that there is no abdica-

tion of State powers. *Memphis Power & Light Co.* v. *Memphis*, 172 Tenn. 346 (1937); *Oppenheim* v. *Florence*, 229 Ala. 50 (1934). An arrangement by which the State authorizes its agencies, at their election, to purchase property from the Government, still retaining in the State the right of regulation and control, can give rise to no questions under the tenth amendment. *Cf. Steward Mach. Co.* v. *Davis, supra; United States* v. *Bekins*, 304 U.S. 27. The States may authorize municipalities to construct and operate electric plants in competition with the appellant companies even though the result is harmful to the business of the companies. *Alabama Power Co.* v. *Ickes*, 302 U.S. 464. To the extent that this competition is related to the wholesale service of the Authority, the case is one of the federal exercise of the granted power to dispose of public property by sales to local public agencies who themselves engage in an enterprise authorized by the States. Such cooperation is permitted by the Constitution and not forbidden by the tenth amendment. *Duke Power Co.* v. *Greenwood County*, 91 F. (2d) 665, 673 (C.C.A. 4th, 1937); *cf. Steward Mach. Co.* v. *Davis, supra; United States* v. *Bekins, supra.*

Moreover, any effect of competition upon appellants' rates does not constitute regulation and is only the collateral effect of the exercise of a granted power. *Duke Power Co.* v. *Greenwood County, supra; cf. Sonzinsky* v. *United States*, 300 U.S. 506, 513-514; *United States* v. *Carolene Products Co.*, 304 U.S. 144.

The federal power to dispose of Government property is not limited by the territorial scope of the project. The scope of the projects necessary for the disposition of public property is a question for Congress to determine (*cf. Arizona* v. *California, supra; United States* v. *Hanson*, 167 Fed. 881 (C.C.A. 9th, 1909)). In the *Ashwander* case, this Court rejected the contention that the amount of power which the Government may sell is limited by any consideration other than the amount lawfully available.

The resale-rate provisions of the contracts do not deprive the States of their power to regulate intrastate rates and are not in violation of the tenth amendment. The courts of the States in which these contracts are in force have held that there is no interference with State jurisdiction. *Oppenheim* v. *Florence, supra; Memphis Power & Light Co.* v. *Memphis, supra.* There cannot be said to be any impairment of State sovereignty where, as here, the States have authorized the contracts and have reserved a continuing power to revoke the authorization. *Cf. Steward Mach. Co.* v. *Davis, supra; United States* v. *Bekins, supra.*

4. The sale of power by the Authority and its wholesale customers does not constitute regulation, and the loss of appellants' business, if any, is not a "taking" of their property under the fifth amendment. *Sonzinsky* v. *United States, supra; Standard Scale Co.* v. *Farrell*, 249 U.S. 571; *Pennsylvania R.R.Co.* v. *United States R.R. Labor Board*, 261 U.S. 72; *United States* v. *Los Angeles R.R.*, 273 U.S. 299. *Cf. Walla Walla* v.

Walla Walla Water Co., 172 U.S. 1; *Joplin* v. *Southwest Mo. Light Co.*, 191 U.S. 150; *Helena Water Works Co.* v. *Helena*, 195 U.S. 383; *Puget Sound Co.* v. *Seattle*, 291 U.S. 619.

III

1. Appellants have no standing to maintain this suit. Their municipal and county street franchises, licenses, or easements, at the most, confer only the right to enjoin the use of the streets and highways by one competing with appellants without a like franchise, license, or easement. No showing has been made that the Authority's facilities occupy the public streets and highways. Moreover, whatever the nature of the rights conferred by local street franchises, licenses, or easements, it is conceded that the Authority has been granted such rights by the local authorities in the areas in which it operates.

The only so-called "State franchises" which appellants, as a class, possess are corporate privileges derived under the general State laws governing incorporation and the qualification of foreign corporations. Such corporate "franchises" obviously confer no immunity from competition. *Cf. Railroad Co.* v. *Ellerman*, 105 U.S. 166. Appellants have not been required to obtain certificates of convenience and necessity to serve in the area in which the Authority is operating. Consequently, appellants are not within the protection of *Frost* v. *Corporation Comm.*, 278 U.S. 515.

In any event, the State statutes in all the States in which the Authority is under contract to sell electricity within the claimed territory of appellants have exempted the Authority from the jurisdiction of the regulatory commissions and from the requirement of certificates of convenience and necessity. The validity of these exemptions is not challenged as unlawfully discriminatory. The decision of this Court in the *Frost* case merely holds that one who is required to obtain a certificate of convenience and necessity may enjoin competition by one who is subject to the same statutory provisions and has failed to comply with their terms. *Carolina Power & Light Co.* v. *South Carolina Public Service Authority*, 94 F. (2d) 520 (C. C.A. 4th, 1938), *cert. denied*, 58 Sup. Ct. 1048. It is insufficient answer that the powers of the Federal Government may not be enlarged by State enactments. The validity of these State statutory exemptions (which is not challenged by appellants) may be supported without regard to the constitutional validity of the Tennessee Valley Authority Act.

2. In addition to their lack of the necessary franchises, nine of the appellant companies are not shown to be threatened with damage by any concrete act of the appellees. In the claimed territory of these appellants the Authority neither owns electric facilities nor has it negotiated any contracts for the sale of power. As to these appellants, obviously no justiciable controversy is presented. *Ashwander* v. *Tennessee Valley Authority, supra.* Four other appellants, all members of the Commonwealth and Southern system, are es-

topped to deny that the power of the Authority is lawfully acquired and are likewise estopped from challenging the validity of the transmission and the marketing of the power. These companies have purchased a large proportion of the total amount of the power developed and generated at the projects of the Authority, both at the switchboard and, in the case of the Alabama Power Company, at the end of the Authority's transmission line; and all of them have received many other benefits under the provisions of the act now challenged. Acceptance of these benefits estops these appellants from questioning the validity of the provisions of the act under which the benefits were received. *Great Falls Mfg. Co.* v. *Attorney General*, 124 U.S. 581; *Wall* v. *Parrot Silver & Copper Co.*, 244 U.S. 407; *St. Louis Co.* v. *Prendergast Co.*, 260 U.S. 469. The decision in the *Ashwander* case held merely that the purchase of power at the dam site under the circumstances of that case did not preclude an attack on separable provisions of the statute authorizing the acquisition of transmission facilities and is clearly distinguishable from the case at bar.

3. Finally, the competition of which the appellants complain is the competition of the municipalities and cooperatives and not of the Authority, and under the decision in *Alabama Power Co.* v. *Ickes, supra,* the appellants cannot challenge the validity of the contracts between the Authority and these municipalities and cooperatives. Appellants' legal interest is the same whether the permanent electric supply of the

municipal and cooperative distribution systems is generated by facilities owned by the United States or by facilities owned by the distributor but constructed by means of federal loans and grants.

The potential damage alleged to result from the loss of the wholesale municipal and cooperative markets served by the Authority is wholly speculative and unreal. Neither the municipalities nor the cooperatives were potential customers of the appellants. The same is true of the large electrochemical and electrometallurgical industries under contract with the Authority which have located in the claimed territory of the Commonwealth and Southern companies.

On the whole record, appellants have failed to show a sufficient legal interest to maintain this suit, and the case presented does not admit of judicial determination.

IV

The trial was fair and exhaustive. On the whole record, it is clear that the rulings of the trial court on evidence and procedure were well within its discretion, and, in any event, appellants have failed to show any prejudicial error sufficient to justify or even to permit the remand of a case of this character.

ARGUMENT

I

THE POWER GENERATED BY THE AUTHORITY IS ACQUIRED IN THE OPERATION OF PROJECTS CONSTRUCTED PURSUANT TO THE CONSTITUTIONAL POWERS OF CONGRESS AND IS THE LAWFUL PROPERTY OF THE UNITED STATES.

As this Court held in the *Ashwander* case, the electric energy which "comes into being in the operation of works constructed in the exercise of some power delegated to the United States" is the property of the Government (*Ashwander* v. *Tennessee Valley Authority*, 297 U.S. 288, 340). It is clear, we submit, from the act, the evidence, and the findings that the power generated at the projects of the Authority is acquired in the operation of works lawfully constructed for the improvement of navigation and the control of destructive floods.

The Tennessee Valley Authority Act sets forth these basic purposes (see pp. 31-33, *supra*). There are important federal interests of navigation and flood control of accepted national significance which depend upon the improvement and control of the Tennessee River system. The act requires in section 4 (j) that the dams constructed by the Authority must be such as will best promote navigation and control destructive floodwaters in the Tennessee and Mississippi River basins; and section 9a prescribes that in the operation of the dams the stream flow must be regu-

lated primarily in the interests of navigation and flood control. The act is, therefore, plainly valid on its face. Moreover, the specific projects of the Authority have been authorized not only by the provisions of the basic statute but by particular appropriation acts pursuant thereto (see pp. 3-4, *supra*).

In the judgment of Congress, therefore, the projects serve the basic constitutional purposes which Congress has sought to promote. The burden is on appellants to show that on the whole record the legislative judgment is necessarily precluded. *Cf. South Carolina State Highway Dept.* v. *Barnwell Bros.*, 303 U.S. 177, 191-192. That this burden has not been discharged must be evident from the statement of facts already set forth. The evidence and the findings, so far from detracting from the force of the legislative judgment, furnish independent and overwhelming confirmation of the appropriateness of the projects for the basic constitutional functions. It follows that power created in the operation of the projects is the lawful property of the United States. *Ashwander* v. *Tennessee Valley Authority, supra.*

Appellants contend that the power must be unavoidably produced in the sense that no system of projects incapable of producing power could have been devised to accomplish the federal functions. Upon this theory, appellants seem to argue that since Congress could have obtained a certain degree of navigation improvement by the construction of low dams not capable of producing power (or of controlling floods) and could have obtained limited flood protection above Chattanooga (for

the Tennessee River alone) by the construction of detention basins deliberately designed to avoid the production of power, the legislative choice is limited to those alternatives. The Constitution, it is submitted, imposes no such limitations on the congressional choice of means. But even on appellants' view, the power generated by the projects of the Authority is the lawful property of the United States, since the projects of the Authority are the only ones which can provide flood control on the Tennessee and on the Mississippi in conjunction with a nine-foot navigation channel throughout the Tennessee.

Appellants suggest the further question whether the power is produced as a result of an increase in the size of the projects beyond that needed for navigation and flood control alone. As is fully explained elsewhere (see *infra* pp. 88-94), the facts refute appellants' contention, and the trial court so found (fdgs. 46, 47, 52, 60, 66, 68, r. 608-609, 610, 613, 614, 615, app. I, 31, 33, 38, 41, 42). It is our position, however, that even though the facts were as appellants maintain, the conclusion would nonetheless follow that the power is lawfully acquired. It has been uniformly held that where a project constructed by the United States substantially serves a lawful purpose, the size of the project is for Congress to determine. This Court has held that it will not determine whether the particular structures are "reasonably necessary." *Arizona* v. *California*, 283 U.S. 423, 456; *Green Bay & Miss. Canal Co.* v. *Patten Paper Co.*, 172 U.S. 58, *rehearing denied*, 173 U.S. 179; *United States* v. *Chandler-Dunbar Water*

Power Co., 229 U.S. 53. See also *Buchanan* v. *United States*, 78 Ct. Cl. 791 (1934), *cert. denied*, 294 U.S. 723.

The following discussion will be devoted first to showing that the power is necessarily acquired by the Authority in the operation of projects constructed for recognized constitutional functions (*infra* pp. 75-95). This is sufficient, on any view of constitutional authority, to establish the lawful ownership of the power of the Authority. We shall then show, in the alternative, that this is an unduly narrow view of the constitutional powers of the Federal Government; that it is for the Congress to determine the size and scope of the projects and the mode and manner of their use; and that the power so acquired is the lawful property of the United States (*infra* pp. 95-106).

1. THE PROJECTS OF THE AUTHORITY ARE SUBSTANTIALLY RELATED TO THE IMPROVEMENT OF NAVIGATION.

The substantial and indeed outstanding character of the navigation improvement which will be brought about by the Authority's projects is not open to dispute. In this regard the evidence and the findings in the present case go much beyond the facts in previously decided cases sustaining the power of Congress. *Cf. Arizona* v. *California, supra.*

While conceding that the main-stream dams will result in a substantial improvement of navigation, appellants contend that they are unconstitutional because a comparable improvement could have been obtained by the construction of a less expensive system of dams. The argument is that since Congress

could have obtained navigation improvements for less money, the fact that it elected to construct the more expensive projects, which are capable of producing power, establishes that the dams are power projects. Upon this theory appellants proceed with a consideration of the relative advantages and disadvantages of the alternative systems and reach the conclusion that the 32-low-dam system would produce a substantially similar channel. Then, ignoring the other major functions of the high dams, they conclude that the only purpose of expending the additional funds for the high-dam system was the production of power. The question of the relative advantages and disadvantages of the two systems is, of course, immaterial under any theory. It should be observed, however, as the trial court found, that the projects of the Authority will provide a navigation channel superior to that which could be provided by an alternative system (fdgs. 52, 54, r. 610, app. I, 33, 34).

The superiorities of the high-dam system are manifold and were recognized by the Board of Engineers for Rivers and Harbors in House Document No. 328, 71st Congress, 2d session (comp. ex. 105 (original) pp. 12-13, r. 4272). Among the substantial advantages inherent in the high-dam system are the superior channel depths, the fewer lockages, the smaller current velocities, the lesser pool fluctuations, and the elimination of interruptions from floods. The practical benefits accruing from these advantages, and particularly the substantial increase in economy and dependability of service upon which the success of any navigation de-

velopment depends, were fully canvassed in the testimony and are outlined in finding 54 (r. 610-611). This finding is supported by the testimony of several eminently qualified witnesses, including Watkins, Brodie, and Barker (see app. I, 34). It is of interest to note that the Corps of Engineers is now replacing movable-wicket dams of the type considered in House Document No. 328 with fixed dams of various heights and is generally avoiding the use of the movable-wicket structures (Barker, r. 1974; Putnam, r. 1174-1175; fdg. 55, r. 611, app. I, 36). Of particular significance is the fact that at the time of the passage of the Tennessee Valley Authority Act the Corps of Engineers was engaged in the construction of a lock at the site of the Wheeler Dam which was designed for a high navigation and power dam with fixed crest substantially similar in design to the present Wheeler Dam (Bowman, r. 1762, 1763, 1765-1766; fdg. 55, r. 611, app. I, 36; Putnam, r. 1172).

Appellants appear to suggest that these advantages are offset by an alleged lesser carrying capacity and lack of integration with the Mississippi River system, resulting, as they claim, from two factors: (1) the winds and waves which they claim will be created on the wide pools of the high-dam system, and (2) the size of the locks now being provided above Wilson Dam. The facts are contrary to these contentions, and the trial court so found (fdgs. 42, 54, r. 604, 610, app. I, 26, 34). As to the alleged danger of wind and waves, it is sufficient to say that the witness James S. Brodie, the superintendent of mainte-

nance of the Federal Barge Lines and the only witness in this case with practical experience in large-scale commercial navigation, preferred the high dams with the long, wide pools (r. 2027). He added that the wind-and-wave action would have no adverse effect on any of the equipment now in general use on the inland waterway system (r. 2023-2024).

There is no basis for criticism of the size of the Authority's locks. The locks being constructed in the dams located above the existing Wilson Dam are of the same size and capacity as the locks installed by the Army Engineers at Wilson and Wheeler, and are larger than the lock in the existing Hales Bar Dam (Barker, r. 1951-1952; Putnam, r. 1172-1173). Since these three locks must be used by any equipment engaged in through navigation, it was decided, after due consideration and consultation between the engineers of the Authority and representatives of the Corps of Engineers that for the present at least it would be uneconomical to construct the larger size locks in the upper portion of the river (def. ex. 112, r. 4111; Barker, r. 1951-1952, 1968). Below Wilson Dam larger locks are being installed. The locks as being constructed above Wilson are sufficient to accommodate the traffic to be anticipated there in the immediate future. Moreover, space has been provided at all of the dams for the construction of additional locks if and when the movement of traffic justifies them (fdg. 42, r. 604, app. I, 26; def. ex. 112, r. 4111).

Perhaps some mention should be made of appellants' present contention that the 32-low-dam system

as outlined in House Document No. 328 would have provided a minimum channel of nine feet with overdepths of three feet, whereas the channel being created by the Authority provides for overdepths of only two feet at the controlling points. The adequacy of the overdepths provided by the Authority's projects is fully established by the findings of the trial court, based upon direct evidence (fdgs. 54, 68, r. 610, 615, app. I, 34, 42). The assertion that the low-dam plan would have provided adequate overdepths is inferred solely from testimony that such was the practice of the Corps of Engineers, but the witness Barker, who had made a specific study of the engineering data upon which the low-dam plan was based, expressly testified that no provision was made for overdepths in the low-dam plan outlined in House Document No. 328 (r. 1973-1974). The failure to provide adequate overdepths in the plan as outlined in House Document No. 328, contrary to the usual practice of the Corps of Engineers, is, of course, explained by the wholly hypothetical character of the low-dam plan. The provision for overdepths would require a change in the low-dam project, and, of course, increased cost.

While appellants disregard the explicit findings of the trial court on the comparative benefits for navigation and ignore the supporting evidence, they emphasize a statement of General Pillsbury, excluded by the trial court (r. 1617-1618, 2252), to the effect that the additional cost of the high dams is justified only for power (br. 35-36). This statement is quoted from Hearings before the House Committee on Military

Affairs, 74th Congress, 1st session (comp. ex. 365 (original), r. 3121). The complete document (as well as others of a similar character) was admitted in evidence because it contained statements of the Authority's directors constituting a quasi-official report to the Congress (r. 894), and the excerpts introduced into the record as excerpts were all limited to statements of the directors only (r. 1239-1240, 4345-4348). When complainants sought to use this statement of General Pillsbury for cross-examination, the court properly sustained the Government's objection (r. 1617-1618, 2252). If it were permissible to introduce such statements without opportunity for cross-examination, it would even more clearly be proper for the Government to introduce General Pillsbury's contemporaneous testimony in the *Ashwander* case that "There is no question as to the superiority of high dams over low dams for navigation" (record, *Ashwander* case, 754), and perhaps even the resulting finding of the district court in that case that "The high dam type of development will furnish navigation facilities superior to those that would be provided by the alternative low dams or by a combination of the two" (*id.*, 1083).

It is unnecessary to burden this brief with further discussion of the comparative merits of the high-dam and low-dam plans for navigation since it is conceded that the low-dam projects have no value for flood control (fdgs. 66, 70, r. 614, 616, app. I, 41, 44).

Appellants contend (br. 111-114) that in any event the tributary projects of the Authority have no sub-

stantial relation to navigation. The validity of these projects is sufficiently rested on their benefits to Tennessee and Mississippi flood control, a question more fully discussed below. It should be observed here, however, that the storage of water in these projects during flood season for flood-control purposes (Watkins, r. 1543-1544, 1633-1634) and release in the low-water period will result in substantial benefits to Mississippi navigation (fdgs. 52, 69, r. 610, 616, app. I, 33, 43), and the benefits to Mississippi navigation from these flood-control structures amply sustain their validity. *Cubbins* v. *Mississippi River Comm.*, 241 U.S. 351, 368-369; *Jackson* v. *United States*, 230 U.S. 1, 23.

The benefits of the tributary projects to Tennessee navigation are likewise substantial (fdgs. 69, 71, 52, 53, r. 616, 610, app. I, 43, 44, 33, 34). While, as we have shown above (see *supra* pp. 51-53), it is impossible to consider these benefits apart from the coordinated operation of these projects with the main-stream dams for the combined purposes of navigation and flood control, a few facts may be stated here which sufficiently demonstrate the error of appellants' position. It is not true, as appellants contend, that the only substantial value of the tributary projects for Tennessee navigation is a temporary one which will cease on the completion of the main-stream dams, although this benefit alone would be sufficient to support their constitutionality. *Arizona* v. *California*, *supra* at 457. The fact is that the benefits of the tributary projects for Tennessee navigation are permanent and substantial. It is surprising to find appellants taking a dif-

ferent position, in view of the fact that through the testimony of their own witness Putnam they sought to establish that the nine-foot channel in the 200 miles below the Pickwick Dam could be maintained by means of stream-flow water releases, particularly from the tributary dams, together with a moderate amount of dredging, and that the Gilbertsville project (the most important project of the Authority for flood control) was therefore without substantial value to navigation (fdg. 71, r. 616, app. I, 44; Putnam, r. 2312-2313). The benefits are no less after the construction of Gilbertsville. The availability of water stored in the tributaries, as explained above, makes a large amount of flood storage available at Gilbertsville (where it is most needed and effective), which would otherwise have to be filled to maintain the navigation channel (Floyd, r. 1891-1894; Barker, r. 1958).

What has been said sufficiently indicates that the projects must be viewed not merely in relation to navigation but also in relation to flood control in the Tennessee and Mississippi River basins.

2. THE PROJECTS OF THE AUTHORITY ARE SUBSTANTIALLY RELATED TO THE FEDERAL FUNCTION OF THE CONTROL OF DESTRUCTIVE FLOODS IN THE TENNESSEE AND MISSISSIPPI RIVER VALLEYS AND ARE THE ONLY PROJECTS WHICH WILL PROVIDE SUCH FLOOD CONTROL IN COMBINATION WITH A NINE-FOOT NAVIGATION CHANNEL ON THE TENNESSEE RIVER.

Appellants state that "the power of the Federal Government over flood control does not extend beyond the power to protect or improve navigable channels of

interstate navigable streams" (br. 128). Even on this narrow theory the projects of the Authority are valid. As stated above, the tributary projects will substantially increase the low-water flow on the Mississippi River, which will be of substantial benefit to navigation on the Mississippi. The trial court so found, and its finding is amply supported in the testimony of the witnesses Watkins, Brodie, and Barker (see fdgs. 52, 69, r. 610, 616, app. I, 33, 43). Appellants contend that Congress has no power to control destructive floods unless such control results in a substantial benefit to navigation. Yet they attack the validity of the tributary projects as flood-control structures solely upon the ground that they are operated partially to increase depths in low-water periods in the interest of navigation.

Since the control of destructive floods on the Tennessee and Mississippi Rivers is in itself a substantial contribution to the improvement of navigation, the function of flood control may be regarded as an additional aspect of that power. Thus the validity of the construction by the United States of the levees on the Mississippi River as a legitimate aid to navigation was sustained by this Court with the observation that "the absence of merit in all the claims [to the contrary] is too clear to require anything but statement" (*Jackson* v. *United States, supra* at 23). In addition to increasing navigable depths in low-water periods, these dams protect navigation on both the Tennessee and Mississippi from interruption by floods (fdgs. 52, 59, 65, 69, r. 610, 612, 614, 616, app. I, 33, 38, 40, 43).

The validity of the projects as aids to flood control need not be rested, however, solely upon the effect of such aid in improving navigation. Congress has ample power to protect and promote the movement of interstate commerce on land as well as on the rivers. The menace of floodwaters on the Tennessee and lower Mississippi to the movement of interstate commerce by railway and highway is familiar (def. exs. 91, 66 in *Reproductions of Certain Original Exhibits Submitted by Appellees*). The great floods of the past on these rivers have caused complete interruption of commerce on the rivers and on the railroads and highways, as well as substantial damage to the facilities employed for these purposes (fdgs. 58, 59, r. 612, app. I, 37, 38). The obstructions to interstate commerce thus caused and threatened by floods bear even more direct and palpable relation to interstate commerce than the interferences held to be within the power of Congress in such cases as *Wilson* v. *New*, 243 U.S. 332, and *National Labor Relations Board* v. *Jones & Laughlin Steel Corp.*, 301 U.S. 1.

Finally, if additional support were needed for the power of Congress to take effective measures to cope with the recurring threat of floods, it could be found in the power to make expenditures to provide for the general welfare. Surely it is no less within the power of Congress to spend funds for the prevention of these national disasters than for the relief of the victims. *Cf. Steward Mach. Co.* v. *Davis*, 301 U.S. 548.

The substantial benefits of the Authority's projects for Tennessee and Mississippi flood control have been

sufficiently set forth in the statement (see *supra* pp. 43-47). Appellants ignore all the findings of the trial court on this subject and all of the supporting evidence. They dismiss without argument, for example, the unanimous finding that each of the projects of the Authority will be of substantial value in the reduction of flood heights on the Mississippi River (fdg. 65, r. 614, app. I, 40), and ignore the supporting testimony of Clemens, Kimball, Floyd, and Okey that the projects of the Authority alone could reduce the heights of all great Mississippi floods *two* feet or more from Cairo, Illinois, to Helena, Arkansas (Clemens, r. 1650-1651, 1637-1638); Kimball, r. 1838-1839; Floyd, r. 1890-1891; Okey, r. 1933-1934; *cf.* Kelly, r. 1381).

They rely, however, on a statement of General Pillsbury to the effect that the reduction of Mississippi flood heights by the projects of the Authority could be measured in inches (br. 60). This statement, like the one discussed above, was made in 1935 before the House Committee on Military Affairs, 74th Congress, 1st session (see comp. ex. 365 (original), r. 3121), at a time when none of the projects of the Authority had been completed and only a few authorized. The statement was not even called to the court's attention. Appellants ignore the fact that the Army Board of Engineers for Rivers and Harbors, when General Pillsbury was chairman, generally concurred in a contemporaneous report of the Mississippi River Commission finding that Mississippi flood heights could be reduced *seven* feet, sufficient to eliminate the use of the floodways, by a system of tributary reservoirs includ-

ing substantial storage on the Tennessee River system, and recommending that the Federal Government adopt a policy of encouraging the construction of such reservoirs (H.Doc. 259, 74th Cong., 1st sess., def. ex. 32 (original) pp. 11, 12, 33, 40, r. 4062). Appellants ignore the trial court's finding (fdg. 62, r. 613, app. I, 39) and the recent report of the Chief of Army Engineers (Com. Doc. 1, H.R.Com. on Flood Control, 75th Cong., 1st sess.; r. 1379-1380) that the existing flood-protection system is inadequate to protect the lower Mississippi Valley; that the Mississippi levees, designed with only one-foot freeboard (r. 1379-1914), have reached the limits of practicable height; and that tributary reservoirs are necessary for adequate protection; and complainants' witness, Colonel Kelly, agreed with each of these conclusions (r. 1379-1380). Appellants likewise ignore the trial court's finding (fdg. 63, r. 613, app. I, 40) and the recommendations of the Army Engineers in House Document No. 306, 74th Congress, 1st session (r. 1382), that the best available sites for Mississippi flood-control reservoirs are on the tributaries of the lower Ohio, including the Tennessee, a conclusion expressly concurred in by Colonel Kelly (r. 1382).

As an alternative to provide flood control complainants presented through their witness Kurtz a suggested system of nineteen automatically controlled detention basins (r. 1201-1209). Like the system of low dams proposed for navigation improvement, these basins would be incapable of producing power. They would, concededly, *have no value for the alleviation of floods on the Mississippi*, and hence their construction

would ignore one of the purposes expressly set forth in the Tennessee Valley Authority Act (Kurtz, r. 1222-1223). Indeed, as stated by the witness Clemens, they would constitute a positive menace to the Mississippi flood problem (r. 1654-1655). The court found as a fact that the complainants' hypothetical system of detention basins would be of no value for the control of floods on the lower Mississippi and might aggravate flood conditions there (fdgs. 66, 70, r. 614, 616, app. I, 41, 44). It was also conceded that these projects would be of no value for navigation (Kurtz, r. 1219). Finally, as already noted, the system of detention basins would preëmpt for the single purpose of local flood protection the limited number of available sites and thus foreclose the development of the river for any other uses (fdg. 93, r. 621, app. I, 51). The construction of a system of such detention basins was never recommended by any public authority or professional group, nor, indeed, does it appear ever to have been proposed for the Tennessee by anyone outside the present trial.[21]

[21] Even for its limited purpose of local flood protection on the Tennessee, the system appeared upon examination to be seriously deficient. The Authority's flood-control expert Kimball was convinced by his study of the proposal that the automatic control, considered essential by the sponsor of the plan, would render the project ineffective to control successive floods (r. 1843-1850). He was further of opinion that the failure to provide dams on the main stream, leaving without a reservoir the long stretch between Chattanooga and the nearest proposed tributary project, reduced the effectiveness of the projects as the distance increased (r. 1850). The trial court found that the detention basins would be of uncertain value even for Tennessee flood control (fdg. 66, r. 614, app. I, 41). At the trial complainants suggested as one of the benefits of the Kurtz system the protection afforded on the Emory River. The failure of the Authority's projects to provide such protection was suggested as a striking deficiency. Both of these contentions are renewed in appellants' brief (p. 124). As explained in the testimony of the witness Kimball, the damage on the Emory River was due to a single localized disturbance of the cloudburst variety. His testimony fully explains the impracticability of providing a sufficient number of reservoirs to protect against all of such local disturbances (r. 1827-1828, 1834). The figure of past damage on the Emory River, emphasized in appellants' brief, is without significance, since that damage resulted from one such local storm (r. 1827-1828, 1834).

The sufficient answer to all of appellants' contentions is that the projects of the Authority are the only projects which will provide flood control for the Tennessee and Mississippi Rivers in combination with nine-foot navigation on the Tennessee River (fdg. 68, r. 615, app. I, 42).

3. THE POWER PRODUCED AT THE PROJECTS OF THE AUTHORITY IS NECESSARILY ACQUIRED IN THE CONSTRUCTION AND OPERATION OF WORKS LAWFULLY CONSTRUCTED FOR THE IMPROVEMENT OF NAVIGATION AND THE CONTROL OF DESTRUCTIVE FLOODS.

Section 9a of the act directs the Authority in the operation of its projects "to regulate the stream flow primarily for the purposes of promoting navigation and controlling floods." Pursuant to the mandate of the act, the Board of Directors of the Authority has instructed the responsible officers charged with the operation of the projects to operate them primarily for these functions. The trial court unanimously found that these instructions have been uniformly obeyed (fdg. 76, r. 618, app. I, 47).

The head for power produced at the Authority's projects is necessarily created by the maintenance of the slack-water pools behind the dams for navigation. So much even appellants concede.[22] Their contention

[22] The appellants' contention that the slack-water pools behind the tributary dams are valuable only for power is unfounded. The court unanimously found that the provision of a slack-water pool behind Norris Dam was necessary to preserve existing navigation on the Clinch River, a navigable tributary of the Tennessee, and to prevent foreclosure of the river's future improvement for navigation (fdg. 68, r. 615, app. I, 42), a finding fully supported by the testimony of the witnesses Watkins and Barker (r. 1542, 1956-1957). The court below also found that the maintenance of the slack-water pool at the Hiwassee project would be of value for the preservation of its level by affording a capacity for the deposit of

that the projects are larger than required for navigation and flood control, as we have shown above (see *supra* pp. 50-51), rests solely upon the alleged principle, unfounded in fact as the trial court found (fdgs. 46, 47, 64, 69, 94, r. 608-609, 614, 616, 621, app. I, 31, 40, 43, 51), that the same storage capacity cannot be operated for both flood control and power, and that to whatever extent the storage is used for flood control it can produce no power. The trial court unanimously found that the power produced at the projects of the Authority is created by the construction and operation of the projects for navigation and flood control (fdg. 94, r. 621, app. I, 51).

The decisions of this Court, we submit, do not permit appellants to challenge the method of operation which in the considered opinion of the engineers in responsible charge will most effectively serve the interests of flood control and navigation (fdg. 44, r. 608, app. I, 30). This Court will not assume that the provisions of section 9a requiring the Authority to operate its projects "primarily for the purposes of promoting navigation and controlling floods" are a sham and a pretense or that the mandate of the act will be disregarded. *Arizona* v. *California, supra* at 456-457. In that case it was contended that the purpose of navigation expressed in the act was a sham and a pretense upon the ground that the operation of the project for

silt (fdg. 68, r. 615, app. I, 42), a finding amply supported by the testimony of Watkins and Barker (r. 1543, 1955). The slack-water pool at the Hiwassee project, consisting of only 73,000 acre-feet (Bowman, r. 1724; see def. ex. 50 in *Reproductions of Certain Original Exhibits Submitted by Appellees;* Kimball, r. 1851)—out of a total of 12,959,000 acre-feet of all of the Authority's projects (fdg. 43, r. 605, app. I, 27)—is hardly an important issue in this case.

irrigation as authorized by the statute was in necessary conflict with its operation for navigation. That contention was dismissed by this Court. This Court has held that it is for the Government to determine by what engineering methods the mandate of Congress may best be carried out. At what time and in what amount water should be stored and released for flood control and navigation can only be determined by the agency charged with operating the facilities for flood control and navigation improvement. "In such matters there can be no divided empire." The "mode and extent of the use and enjoyment" of federal projects "fall within the sole control of the United States." *Green Bay & Miss. Canal Co.* v. *Patten Paper Co., supra* at 80.

Since, however, the evidence and findings deal fully with complainants' criticism of the Authority's method of operation, it should be pointed out that the criticism is without merit in fact. The trial court found that this general method of operation conforms to the method contemplated for navigation and for flood control in House Document No. 328 and House Document No. 259 and is reasonably calculated to provide most effectively for the improvement of navigation and the control of destructive floods in the Tennessee and Mississippi River valleys (fdg. 46, r. 608, app. I, 31).

There can be no serious question that the storage capacity above the navigation level on the main-stream dams can be operated with complete effectiveness for both flood control and power (Woodward, r. 1783-1784; Kimball, r. 1850-1851; Floyd, r. 1891; Kelly, r. 1387). The water stored during flood season in the flood

storage of the main-stream dams below Chattanooga can be drawn down in advance of floods, as Kelly and other witnesses stated (Kelly, r. 1387; Woodward, r. 1782-1783; Kimball, r. 1850-1851; Floyd, r. 1891). The flood season on the Tennessee River definitely ends about April 1-15, and that on the Mississippi a month later (fdg. 64, r. 614, app. I, 40; Woodward, r. 1788; Kimball, r. 1828; Kurtz, r. 1235; Kelly, r. 1386-1387; Clemens, r. 1665), and as the flood season draws to a close some of the flood storage at all of the main-stream projects may be gradually allowed to fill (Woodward, r. 1784; Kimball, r. 1851).

The principal issue is with respect to the gradual filling of Norris Dam during flood season and the release of stored water during low-flow season. It is conceded that no other possible method of operation would serve the interests of navigation. The substantial benefit to navigation, both on the Mississippi and Tennessee Rivers, is sufficient justification, as we have shown above (*supra* pp. 80-83).

The case is no better for complainants if the interests of navigation are disregarded. Like all sweeping generalizations, the alleged conflict between storage for flood control and storage for low-water regulation is not absolute; its existence or extent depends on the facts of the particular project. It has a limited application to reservoirs designed for local protection only (Watkins, r. 1543-1544; Bowman, r. 1738-1739).

The alleged conflict has no application to the projects of the Authority, which must be operated for the protection of distant points on the lower Tennessee,

Ohio, and Mississippi Rivers, as well as for navigation and local flood protection, and the court so found (fdg. 47, r. 609, app. I, 31). Norris Dam must be operated for both Tennessee and Mississippi flood control (Woodward, r. 1786-1789; Watkins, r. 1543-1544) and is beyond prediction distance of the principal points of danger in Mississippi floods—that is, the time of water travel from the dam to Cairo, Illinois, is greater than the time of notice of flood stage (Woodward, r. 1783). The importance of this factor was brought out by the complainants' witness Kelly, who adhered to the view expressed by the Reservoir Board for Mississippi Flood Control of 1927, of which he was chairman, that the tributary reservoirs beyond prediction distance should be operated to store the water every year throughout the season of probable Mississippi floods,[23] while, on the other hand, the flood storage of dams within prediction distance should be brought into operation at the flood crest (r. 1386-1387). This conforms to the view expressed in the Authority's report to Congress entitled *The Unified Development of the Tennessee River System* (comp. ex. 328 (original) pp. 18-19, r. 3068). A similar view was expressed by Colonel Watkins both in this case (r. 1543-1544) and in House Document No. 328 (comp. ex. 105 (original) p. 78 (par. 52), r. 2615). That the distant tributary reservoirs like Norris should provide "seasonal" storage was contemplated in the *Comprehensive Report on Reservoirs in Mississippi River Basin,* House Docu-

---

[23] While the Reservoir Board fixed this period as being from February 15 to May 15, Kelly testified that the season of Mississippi floods begins on the first of January (r. 1367). (See also Watkins, r. 1544.)

ment No. 259, 74th Congress, 1st session (def. ex. 32 (original), r. 4062), prepared under Clemens's direction (r. 1651, 1658, 1659). Clemens assumed that the Authority's flood-control storage would be available at the "beginning of the flood season" in his testimony as to the value of the Authority's projects for Mississippi flood control (r. 1659-1660), but that this storage would and could also be used for low-water regulation (r. 1665-1666). Specifically he testified that the flood storage at Norris Dam could be operated for flood control and at the same time to obtain large benefits for low-water regulation from the same storage capacity (r. 1654).

The Authority's engineers Woodward and Kimball testified that (without regard to the factor of prediction distance) the successful operation of Norris Dam for both Mississippi and Tennessee flood control required a large storage capacity, substantially larger than required for a single Tennessee flood alone, because of the difficulty of releasing floodwater (r. 1790), and that having such large capacity, Norris could be successfully operated for Mississippi and Tennessee flood control and at the same time for low-water regulation (Woodward, r. 1786-1788, 1790; Kimball, r. 1851, 1880-1881). The witness Woodward testified that it was the "best method for flood control" (r. 1788) and of particular value for Mississippi protection (r. 1790). The witness Sargent, who has operated the same storage space at Sacandaga with complete success in controlling floods and in increasing low-water flow (see Crane, r. 1286), confirmed the views of the Authority's engineers (r. 1678-1681).

This method of operation is thus in the interest of flood control when Norris Dam is considered separately. Moreover, as the witness Floyd testified (r. 1891-1894), the available water thus stored in Norris Dam to maintain navigable depths by low-water releases permits the Authority to maintain or draw down the flood-control reservoirs on the main stream to a substantially lower level than would otherwise be consistent with the requirements of navigation. Thus, by coordinated development, the effectiveness of the mainstream dams for flood control is substantially increased, and the court unanimously so found (fdg. 69, r. 616, app. I, 43).

4. THE POWER PRODUCED AT THE TRIBUTARY DAMS IS LAWFULLY ACQUIRED IN THE CONSTRUCTION OF WORKS FOR THE NATIONAL DEFENSE AND THE IMPROVEMENT OF GOVERNMENT-OWNED PROPERTY.

As pointed out in the statement (*supra* p. 47), the release of water from the tributary dams during the low-water season greatly enhances the value and usefulness of the Government properties at Muscle Shoals for the national defense (fdg. 72, r. 617, app. I, 45). Both under its war powers and under its power to maintain and improve the property of the United States, Congress was authorized to construct the tributary dams, even apart from the important function which they perform in the improvement of navigation and the control of floods. The trial court specifically held that the constitutional authority to construct Norris Dam exists under the national-defense powers in

addition to the other constitutional powers (r. 559, app. I, 133).

An analogous exercise of the power under the property clause is the improvement of the arid public lands of the United States pursuant to the Reclamation Act. For that purpose reservoirs have been constructed to store water during flood season and release it for irrigation during low-water season. This Court has recognized that "The Government incurs heavy liability in providing water for these lands" (*Irwin* v. *Wright*, 258 U.S. 219, 231). The validity of the extensive projects undertaken pursuant to the Reclamation Act for the improvement of the property of the United States cannot be doubted. See *United States* v. *Hanson*, 167 Fed. 881 (C.C.A. 9th, 1909); *Kansas* v. *Colorado*, 206 U.S. 46, 92.

5. APART FROM THE FOREGOING CONSIDERATIONS, THE WATER POWER IS LAWFULLY ACQUIRED; CONGRESS MAY DETERMINE THE SIZE OF THE PROJECTS REQUIRED FOR NAVIGATION AND FLOOD CONTROL AND THE MODE AND MANNER OF THEIR USE; AND ANY WATER POWER ACQUIRED IN THE OPERATION OF SUCH PROJECTS IS THE PROPERTY OF THE UNITED STATES.

What has been said above sufficiently demonstrates, we believe, that the power produced at the projects of the Authority is *necessarily* created in the operation of works having a bona fide and substantial relation to the improvement of navigation, the control of destructive floods, and the national defense. The power generated is thus the property of the United States, even on the narrow interpretation of the decisions advanced by appellants. It is clear, however, that no

such showing need be made. The decisions of this Court establish that in the construction of works for lawful purposes, it is for the Congress to determine the size of the project and the mode and manner of its use. And any water power acquired in the operation of such projects is the lawful property of the United States. *Green Bay & Miss. Canal Co.* v. *Patten Paper Co.*, 172 U.S. 58, *rehearing denied*, 173 U.S. 179; *United States* v. *Chandler-Dunbar Water Power Co.*, 229 U.S. 53; *Arizona* v. *California*, 283 U.S. 423, 456. See also *Buchanan* v. *United States*, 78 Ct. Cl. 791 (1934), *cert. denied*, 294 U.S. 723.

Appellants' principal reliance is a dictum in the opinion of this Court in *Kaukauna Co.* v. *Green Bay & Miss. Canal Co.*, 142 U.S. 254. Appellants ignore the subsequent decision in *Green Bay & Miss. Canal Co.* v. *Patten Paper Co., supra.* In that case this Court upheld the right of the United States, as owner of a dam and canal used for the storage and diversion of water through the navigation canal, to control and dispose of all the water power thereby created, even though it was established by findings of the State court, from which the case was appealed, that only 1% of the flow of the stream diverted through the navigation canal was required for navigation, the remaining 99% being diverted "ex industria, for the purpose of creating a water power" (*Green Bay & Miss. Canal Co.* v. *Kaukauna Water Power Co.*, 90 Wis. 370, 371 (1895)).[24] It was the power thus created which was

[24] It should be noted that in addition to creating a water power by the diversion of water through the navigation canal, the dam also created a slack-water pool for navigation. As to the power thus created by the slack-water pool, even the State court held that it was "in a true sense, incidental to the erection of the dam" (90 Wis. at 401).

held "incidentally created" (172 U.S. at 68; 173 U.S. at 190).

The same problem was presented in *United States v. Chandler-Dunbar Water Power Co., supra.* An act of March 3, 1909 (35 Stat. 815), authorized the Secretary of War to condemn property for navigation improvements and to lease any excess of water power over the needs of the Government resulting from the navigation works constructed. In condemnation proceedings by the United States the company claimed damages for the taking of water-power rights in excess of navigation needs, contending, among other things, that in authorizing the lease of the water power the act authorized a taking of private property for commercial use. The district court found as a fact that it was necessary to utilize only a small portion of the total flow of the river for existing navigation purposes in connection with the canal. (See record in No. 783, October Term, 1912, at 330, and the opinion of the district court, *id.* at 408.) This objection was disposed of by this Court in these words:

> If the primary purpose is legitimate, we can see no sound objection to leasing any excess of power over the needs of the Government. The practice is not unusual in respect to similar public works constructed by state governments [229 U.S. at 73, citing *Kaukauna Co.* v. *Green Bay & Miss. Canal Co.*, 142 U.S. 254, 273].

This settled principle was reaffirmed in *Arizona* v. *California, supra.* In that case it was urged that the

construction of Boulder Dam, with its reservoir and power house, was undertaken for the purpose of irrigating private lands and generating power, the project being larger than required for any legitimate purpose of the Government. Even the navigability of the river was denied by the averments of the bill and the interstate compact. Nonetheless, the project was upheld on demurrer to the bill, the Court taking judicial notice that the Colorado was navigable and observing that "the means which the Act provides are not unrelated to the control of navigation" (283 U.S. at 455-456). "Whether the particular structures proposed are reasonably necessary," the Court added, "is not for this Court to determine [citing authorities]. And the fact that purposes other than navigation will also be served could not invalidate the exercise of the authority conferred, even if those other purposes would not alone have justified an exercise of Congressional power" (*id.* at 456).[25]

In *Buchanan* v. *United States, supra,* it was alleged that a federal navigation and power dam had been con-

[25] The Boulder Canyon Project Act (45 Stat. 1057) imposed as a condition precedent to the construction of the project works the execution of contracts by the Secretary which would be adequate in his judgment to reimburse the United States for costs of the project. The bill of complaint filed by Arizona in that case pointed out that prior to the suit the Secretary had concluded a fifty-year contract with the Metropolitan Water District of California for the sale of electric energy (record in No. 19, Original, October Term, 1931, at 36). In an appendix to the bill of complaint were set out so-called "Power Regulations of the Secretary of the Interior," which described additional contracts between the Secretary and the city of Los Angeles and the Southern California Edison Company providing, among other things, that the company and city should act as "generating agencies" and transmit energy to certain prospective purchasers who would contract directly with the Secretary for the purchase of electricity (*id.* at 90-91, 108-109). Allocations for the purchase of electricity had been made by the Secretary to eleven municipalities (*id.* at 96). The bill of complaint urged that the purpose of the project was to put the Government in "the business of generating and selling electric power" (*id.* at 31).

structed several feet higher than required for navigation, and compensation was sought for the taking of lands to the extent that they were overflowed by the excess taking. Demurrer was sustained on the authority of the *Chandler-Dunbar* case (78 Ct. Cl. at 794-795). This Court denied certiorari (294 U.S. 723).

There is no occasion in this case to overturn a principle which has been settled for half a century. A narrower construction of the Constitution, we submit, would require the Congress to destroy the water resources of the great navigable rivers or abandon their development for legitimate federal purposes.

The development of the Tennessee, or any other river, for navigation and flood control cannot be divorced from its development for other and inseparable uses. This is a well-settled principle of conservation. The reports of the Inland Waterways Commission, the National Conservation Commission, and the National Waterways Commission, created by President Theodore Roosevelt and the Congress, all recognized the intimate interrelation between navigation and flood control and other water uses. They each recommended that every water-development project for any one use should be planned with relation to its potential use for other related functions in order to conserve the water resources. In this manner, projects which might be uneconomic when considered for one purpose may become economically justified when used to serve multiple functions. (See *Preliminary Report of the Inland Waterways Commission*, S.Doc. 325, 60th Cong., 1st sess., pp. 21-25; *Report of the Na-*

tional Conservation Commission, S.Doc. 676, 60th Cong., 2d sess., p. 27; *Preliminary Report of United States National Waterways Commission*, printed as appendix I to *Final Report of National Waterways Commission*, S.Doc. 469, 62d Cong., 2d sess., p. 82 (see app. II, 98-107)).

These principles have long been embodied in all federal legislation relating to water development under federal jurisdiction. The legislation respecting the licensing of private developments does not require extensive comment here, but it may be worth noting that under section 10 of the Federal Water Power Act of 1920 (41 Stat. 1063) all licenses are conditioned as follows:

> That the project adopted, including the maps, plans, and specifications, shall be such as in the judgment of the commission will be best adapted to a comprehensive scheme of improvement and utilization for the purposes of navigation, of water-power development, and of other beneficial public uses; and if necessary in order to secure such scheme the commission shall have authority to require the modification of any project and of the plans and specifications of the project works before approval [p. 1068].

The same principles are particularly appropriate where the Federal Government itself undertakes to develop navigable rivers for legitimate ends. Included in the *Final Report of the National Waterways Commission*, Senate Document No. 469, 62d Congress, 2d session, page 135, is a study of a suggested system of

reservoirs for Mississippi flood control based on the principle that while reservoirs for flood control alone may involve prohibitive costs, when used for navigation and power as well they may be economically justified. The Chairman of the Senate Committee on Agriculture and Forestry (from which the Tennessee Valley Authority Act was reported) defended the construction of the Cove Creek (now Norris) Dam for Mississippi flood control on these grounds. (See app. II, 102; *cf.* Tennessee Valley Authority Act, sec. 14). These views have gained general acceptance in practice.

While power possibilities were overlooked at the time of the passage of the Reclamation Act of 1902 (32 Stat. 388), the act was amended in 1906 to permit the development of power in connection with irrigation projects when "an opportunity is afforded . . . under any such project" (34 Stat. 116, 117), and in 1912 the Congress authorized the Secretary of War to make provision for the future development of electricity at all navigation dams whenever appropriate (37 Stat. 201, 233). The scope of the surveys of the Army Engineers was broadened by the act of March 3, 1925 (43 Stat. 1186), in order to permit consideration of potential river developments for navigation in combination with the other related uses, including water power and flood control.

The most significant illustrations of the adoption of these principles are the great multiple-use projects established in the last ten years, of which the Boulder Dam is, of course, the outstanding example. Eminent engineering authority may be cited for the view that

"the multiple-use reservoir is designed to play an increasingly important role in the future," and this for three related reasons: (1) reservoirs for flood control alone are too costly for any but the most densely populated and industrialized area; (2) the division of cost among several interests promotes the economic feasibility of reservoir projects; (3) the waste of floodwaters is at variance with the modern concept of water conservation. (See app. II, 98-113.)

These considerations are particularly applicable to the case at bar. The evidence shows that, as is true with respect to most rivers, in order to conserve the waters of the Tennessee for any beneficial use, storage reservoirs are required to regulate the sharp variations of stream flow from flood season to low-water period (fdg. 93, r. 621, app. I, 51). The central fact is that the sites essential for the necessary reservoirs are strictly limited in number, and those required for flood control frequently coincide with those necessary for the development of the river for other purposes (*ibid.*). To utilize these sites for "dry" reservoirs alone would foreclose their development for any other use (*ibid.*) and, so complainants' witnesses testified, would not be economically justifiable for flood control alone (Kelly, r. 1389). The construction of low movable-wicket dams on the main stream would prevent the use of high dams for flood control and other purposes (Watkins, r. 1547).

It was on these grounds that the district engineer made the following recommendation in House Document No. 328:

> Sites at which storage can be developed economically are limited. Some of these sites are in the navigable portion of tributaries and some are located in headwaters in the nonnavigable sections of streams. On account of the great importance of reservoir storage to the development of the Tennessee River and its tributaries for navigation, water power and flood control, steps should be taken to see that all available sites are conserved for the development of the river and its tributaries and that such sites are developed to the most economic height and drawdown required for the development of the entire system [p. 64].

The projects of the Authority are the only projects which adequately develop the available sites to conserve the water resources of the Tennessee River system for navigation, flood control, power, and other beneficial uses (fdg. 93, r. 621, app. I, 51). The Congress, we submit, may authorize the full utilization of the necessary sites wherever the projects are reasonably required for navigation and flood control. The acceptance of the narrow views advanced by the appellants would, in all practical effect, deny to the Congress the means of effecting the development of the Tennessee River for navigation and flood control.

Neither at the time of the enactment of the Tennessee Valley Authority Act nor since has there been any reasonable prospect that a comprehensive development of the Tennessee River and its tributaries for the combined purposes of navigation and flood control in the Tennessee and Mississippi River basins could be

obtained in any way except by the construction of high dams by the United States Government or some agency thereof. The court unanimously so found (fdg. 67, r. 614, app. I, 41). If the improvement of navigation and control of floods were the only ends in view, appellants would not be here to object. They insist, however, that the Congress must permanently commit the resources of the river to be destroyed for other uses or abandon the development of the river for any purpose. No such choice, we submit, is required by the Constitution.

The decisions of this Court establish that if the projects are not unrelated to navigation or flood control, the Congress may provide appropriate means to insure their practical execution; the courts will not inquire whether the means thus provided are reasonably required for navigation and flood control alone. *Arizona* v. *California, supra; United States* v. *Chandler-Dunbar Water Power Co., supra; Buchanan* v. *United States, supra.* (See pp. 96-99, *supra.*) The same principle has been recognized in other types of federal water developments, notably in relation to reclamation. Thus in *Burley* v. *United States*, 179 Fed. 1 (C.C.A. 9th, 1910), it was held that where the controlling object of the project is to reclaim public lands, the Government has the power to provide facilities for the reclamation of interrelated private lands in order to assure the practicability and economic feasibility of the project.

A consideration of the congressional power to make appropriations for the general welfare leads to the

same conclusion. The statute under consideration, as we have said, is not a regulatory measure but a public improvement carried into effect solely by means of the expenditure of public funds. The ends to be served are clearly for the general welfare of the Nation. The husbandry of our physical resources is second only to the protection of our human resources in the scale of national interests. *Cf. Steward Mach. Co.* v. *Davis, supra.* On this question, at least, the Nation speaks with one voice. The general interest would be indubitable if the Congress had sought to extend the present undertaking to all the major regions of the United States. The Tennessee Valley Authority project is nonetheless national and not local in character, though the Congress has conservatively determined to test its feasibility on one river draining parts of seven southeastern States.

No interests of the States are invaded. In the court below it was argued that the Government's contention disregarded the principle that the States held title to the waters of navigable as well as nonnavigable rivers, subject only to the paramount interests of the Federal Government for navigation purposes. *Cf. Pollard's Lessee* v. *Hagan*, 3 How. 212; *Shively* v. *Bowlby*, 152 U.S. 1; *Port of Seattle* v. *Oregon & W.R.R.*, 255 U.S. 56; *Wisconsin* v. *Illinois*, 278 U.S. 367. The same argument was urged and rejected in the *Ashwander* case, *supra* at 337-338. Any notion of a conflict between the National Government and the States in the utilization of the resources of the river is illusory. The development of the Tennessee River and its tributaries

by the State or its licensees for power or for any other purpose is dependent on the utilization of sites which the Federal Government must necessarily preëmpt in providing the necessary flood-control and navigation facilities. If the Federal Government were to develop these sites for flood control or navigation alone, it would be physically impossible for the State or its licensees to develop the river for any other purpose, even if they could obtain the necessary license from the Federal Government. (See *supra* pp. 102-103.) There is thus no question of conflict in this case between the interests of the Federal and State Governments. The sole question is whether the resources of the Tennessee River may be developed by the Federal Government or not at all.

II

THE MEANS CHOSEN BY CONGRESS IN THE TENNESSEE VALLEY AUTHORITY ACT FOR THE DISPOSITION OF POWER ARE VALID.

The water power created by the projects of the Authority is the property of the United States, may be converted into electric energy, and all of the electricity so acquired may be disposed of under the property clause of the Constitution. *Ashwander* v. *Tennessee Valley Authority*, 297 U.S. 288. It is the position of the Government that under the decision in the *Ashwander* case and under the settled principles of constitutional law, the Congress may lawfully authorize the sale of such property to municipalities, rural cooperatives, and

industrials, as well as to private utilities, and may lawfully authorize the acquisition of the necessary facilities for the generation, transmission, and sale of the power. Separate and subordinate questions are raised with respect to the provisions in the contracts between the Authority and the municipalities and rural cooperatives concerning resale rates and related conditions of service. The Government contends that the appellants have no sufficient legal interest to question the validity of these provisions, and that, in any event, the provisions in question are valid. Neither the sale of power nor the terms of the contracts, it will be shown, impair the exercise of the States' police power or in any way invade the rights reserved to the States under the tenth amendment.[26]

1. THE CONGRESS MAY LAWFULLY AUTHORIZE THE SALE OF GOVERNMENT-OWNED POWER TO MUNICIPALITIES, RURAL COOPERATIVES, AND INDUSTRIALS, AS WELL AS TO PRIVATE UTILITIES, AND MAY LAWFULLY AUTHORIZE THE ACQUISITION OF THE NECESSARY FACILITIES FOR THE GENERATION, TRANSMISSION, AND SALE OF SUCH POWER.

The statute: The Act declares it to be the policy of the Government, so far as practical, to distribute and sell the surplus power generated by the Authority "equitably among the States, counties, and municipalities within transmission distance" (sec. 11), a policy incorporated in this act after years of mature de-

[26] No question is raised as to the power to acquire or operate steam plants. The steam plant at Muscle Shoals is not in operation (fdg. 197, r. 643, app. I, 83). As in the *Ashwander* case, no question is presented as to the operation of local distribution systems (fdgs. 106, 187, 193, r. 624, 641, 642, app. I, 56, 80, 82).

liberation[27] and in accordance with the traditional principle that the benefits of public property should be broadly distributed. It is further declared to be the purpose of Congress to obtain revenues from the sale of the power which might otherwise be wasted and thus to liquidate some part of the cost of the projects (sec. 9a), an established Government policy in the disposition of power produced at federal water developments.[28]

The board is accordingly authorized to contract for the sale of surplus power to States, public agencies, corporations, and others, and is required to give preference to public agencies and quasi-public membership corporations in accordance with familiar precedent (sec. 10).[29] Special provision is made for the service of rural areas "not otherwise supplied" at reasonable rates (*ibid.*), presumably for the reason that the rural areas in the Tennessee Valley were almost entirely without the benefit of electric energy prior to the enactment of the Tennessee Valley Authority Act (Hapgood, r. 2147) and furnished an obvious market for the Government's surplus power (fdgs. 234,

---

27 See H.Con.Res. 4, 69th Cong., 1st sess.; Hearings before Senate Committee on Agriculture and Forestry, 68th Cong., 1st sess., pp. 301-309, 340-345, 373-386, 949-950; S.Rept. 831, 67th Cong., 2d sess. (pt. 1) pp. 31-32; S.Rept. 678, 68th Cong., 1st sess., p. 12; S.Rept. 672, 69th Cong., 1st sess., p. 12; 67 Cong. Rec., 69th Cong., 1st sess., p. 4986.

28 See veto message of President Theodore Roosevelt, 30 Cong. Rec., 57th Cong., 2d sess., p. 3071; *Annual Report of the Commissioner of Reclamation* (1932) pp. 12-17; H.Doc. 395, 73d Cong., 2d sess., p. 54; *cf.* Boulder Canyon Project Act (45 Stat. 1057).

29 For other examples of similar preference provisions regarding power, see section 5 of the Reclamation Act of 1906 (34 Stat. 116, 117) and section 5 of the Boulder Canyon Project Act (45 Stat. 1057, 1060). The employment of such provisions to assure "a sound competitive condition" and to prevent the power from being "monopolized" was noted in the committee reports on the Boulder Canyon Act (see H.Rept. 918, 70th Cong., 1st sess., p. 22; S.Rept. 592, 70th Cong., 1st sess., pp. 26-27).

235, r. 651, app. I, 94). Sales to industry are made a secondary purpose in order to secure revenue and a high load factor and "permit" rural and domestic consumption at low rates which will encourage increased use (sec. 11). The board is authorized to acquire transmission lines "In order to place the board upon a fair basis for making such contracts and for receiving bids for the sale of such power" (sec. 12).

The power supply of the Authority: The firm-power capacity of all the dams of the Authority now constructed or authorized for construction is 570,000 kw at 60% load factor with all the generating units installed or authorized for installation (fdg. 94, r. 621, app. I, 51). This amount, as has been noted, is less than the potential shortage of the private utilities in this area predicted for the date of the installation of the Authority's generating facilities (fdg. 238, r. 652, app. I, 95). The statements in appellants' brief (see, e.g., pp. 154-157) as to the amount of power to be generated at the projects of the Authority are based on fanciful assumptions of complete installations (whether or not authorized) at dams not constructed or even authorized, including Fontana, and unified operation with the plants of the Aluminum Company of America (Wessenauer, r. 2172, 2179-2181), and (apparently) all possible dams at any of the 149 sites located on the Tennessee River system by the Corps of Engineers in House Document No. 328, whether or not any such dams would be of any value for navigation and flood control.

The market for power at the dam sites: As complainants' witness Miller testified, the market for the Authority's power at the dam sites is limited to the demand of complainant utilities and such industries as might locate there (r. 1114; *cf.* fdg. 178, r. 640, app. I, 78). The only transmission lines (other than those of the Authority) connected with any of the Government dams are owned by the Alabama Power Company, The Tennessee Electric Power Company, and the Southern Tennessee Power Company, all subsidiaries of the Commonwealth & Southern Corporation (fdg. 177, r. 639, app. I, 78). Not only is the market at the dam sites thus dominated by three affiliated Commonwealth and Southern companies, but the market for at least 100 miles from any of the dams is likewise exclusively controlled by the Commonwealth and Southern companies and, to a much smaller degree, the Electric Bond & Share Company (*ibid.*).[30]

Contracts executed by the Authority for the sale of power: Under these circumstances and pursuant to the preference provisions of the act, the Authority has entered into contracts with a number of municipalities, many of which have maintained their own distribution or generating and distribution facilities (fdgs. 203-205, r. 644-645, app. I, 84-85), and a group of rural cooperatives serving customers which had theretofore

[30] Since the trial, the Tennessee Public Service Company has sold its facilities to the city of Knoxville and the Authority and has withdrawn from this litigation. The Memphis Power & Light Company is now negotiating the details of a similar contract with the city of Memphis and the Authority and may have withdrawn from this litigation at the time this appeal is heard. These two companies were the principal members of the Electric Bond and Share system in this area affected by the operations of the Authority.

received no electric service of any character (fdgs. 206, 207, r. 645, app. I, 85, 86). In addition, the Authority has contracted for the sale of large amounts of power, both firm and secondary, to certain private utilities (fdgs. 128, 157, r. 629, 634, app. I, 62, 70) and large electrochemical and electrometallurgical industries representing new electric business in this area not heretofore served by any of appellants (fdg. 151, r. 633, app. I, 69). The Authority has sold large amounts of power to the Commonwealth and Southern companies (fdgs. 196, 213, r. 643, 646, app. I, 82, 87) and is even now transmitting and selling power to the Alabama Power Company for distribution in northern Alabama (fdg. 128, r. 629, app. I, 62; Barry, r. 870).

Electric facilities acquired and constructed by the Authority: The Authority has installed or provided for the installation of generating facilities (r. 2180) and has constructed about 400 miles of plant tie lines to interconnect several power plants in order to promote economy of operation and make the power available wherever needed (fdgs. 179-181, r. 640, app. I, 78-79). In addition, the Authority has constructed or acquired about 1,100 miles of marketing transmission lines (fdg. 183, r. 640, app. I, 79). All of these lines are necessary to serve the customers of the Authority (fdg. 186, r. 641, app. I, 80); and while it is not material, it may be noted that they do not constitute duplications of existing facilities (fdg. 184, r. 640, app. I, 79). Appellants' repeated statement (br. 158) that the Authority will require 15,000 miles of marketing transmission lines is not only of no legal significance but is

based on their erroneous assumption as to the potential power and, necessarily, on arbitrary assumptions as to the possible location and character of possible future customers of the Authority which have neither executed nor even negotiated contracts for service (Moreland, r. 1453; *cf.* Hapgood, r. 2146, 2148). It may be pointed out that appellants' contention as to the potential length of the Authority's lines is likewise grossly exaggerated. While 250 miles is a technically feasible transmission distance, even complainants' prophet Moreland did not predict any line for the Authority longer than "somewhat beyond the 150 mile zone" (r. 1452-1453), and, in fact, the Authority's largest marketing line *now* is only about 100 miles in length (see def. ex. 136, r. 4175, and def. ex. 136A in *Reproductions of Certain Original Exhibits Submitted by Appellees*).

Character of the Authority's method of disposition: It is of fundamental importance that the Authority's power contracts provide primarily for service at wholesale to municipalities and cooperatives. With minor exceptions the only ultimate consumers served directly by the Authority are a few large electrochemical and electrometallurgical industries (fdgs. 106, 187, r. 624, 641, app. I, 56, 80) purchasing large blocks of primary and secondary power (fdgs. 148-154, r. 632-633, app. I, 68-70), which cannot be served through any distributor or intermediary (fdgs. 155, 157, r. 634, app. I, 70).[31]

---

[31] The minor exceptions are a few rural and industrial customers in the so-called ceded area covered by the contract of January 4, 1934, in the vicinity of Norris and Wilson Dams, which are served either by rural lines purchased from the Alabama Power Company and The Tennessee

The Ashwander decision: The decision of this Court in the *Ashwander* case, we submit, fully sustains the power of Congress to authorize such sales of power and the acquisition of the necessary electric facilities. In that case the Court upheld the validity of a contract (dated January 4, 1934, and sometimes referred to in the record and in this brief as the contract of January 4) providing for sale to the Authority of certain transmission lines of the Alabama Power Company serving a number of municipalities in northern Alabama, as well as auxiliary lines serving rural and small industrial customers. This Court held (1) that the power lawfully acquired by the Government is the property of the United States and *all* of it may be sold, and (2) that the Government may acquire the transmission and other facilities necessary to market the power; it is not required to waste the power or to sell it only to private utilities at the dam site.

This Court said:

> The United States owns the coal, or the silver, or the lead, or the oil, it obtains from its lands, and it *lies in the discretion of the Congress, acting in the public interest, to determine of how much of the property it shall dispose.*
>
> We think that the same principle is applicable to electric energy [297 U.S. at 336].

Electric Power Company or lines of identical character constructed by the Authority (fdgs. 106, 187, r. 624, 641, app. I, 56, 80). The only electric service provided by the Authority under its contracts with municipalities and cooperatives is a wholesale service. The distribution service is performed by the municipalities and cooperatives with their own facilities (fdgs. 130, 131, 138, 140, 146, 147, r. 629, 631, 632, app. I, 63, 66-68).

With respect to the method of disposition, this Court held:

> The transmission lines which the Authority undertakes to purchase from the Power Company lead from the Wilson Dam to a large area within about fifty miles of the dam. *These lines provide the means of distributing the electric energy, generated at the dam, to a large population. They furnish a method of reaching a market.* The alternative method is to sell the surplus energy at the dam, and the market there appears to be limited to one purchaser, the Alabama Power Company, and its affiliated interests. *We know of no constitutional ground upon which the Federal Government can be denied the right to seek a wider market* [*id.* at 339].

It is difficult to discover any ground of distinction between the means of disposition set forth in this record and those approved by this Court in the *Ashwander* case. As the Circuit Court of Appeals for the Sixth Circuit observed in its opinion dissolving the preliminary injunction granted by the district court:

> . . . the case presents the extraordinary situation in that the authority of the Congress to enact the statute in certain of its aspects, and to authorize thereby certain important transactions in respect to the construction of Wilson Dam, and to the sale and distribution by means of transmission lines of the electric energy there generated, has already been sustained by the Supreme Court, and that other acts and transactions here alleged to illustrate the sweep of the challenged power

> program are not readily to be distinguished from those heretofore validated [90 F. (2d) 885 at 892].

After exhaustive consideration of the evidence, the trial court reached the same conclusion. A specific analysis of the facts amply confirms the conclusion of these two courts.

The customers with whom the Authority has contracts include only the classes of customers served by the properties in Alabama transferred under the contract of January 4 (def. ex. 143, r. 4192-4193). The record in this case shows that the Authority has contracted to sell power to

(a) private utilities
(b) municipalities and rural cooperatives
(c) industrial customers
(d) rural residents in the vicinity of the dams

(fdgs. 129, 198, 199, r. 629, 643, app. I, 62, 83) and that it is using transmission lines, substations, and rural lines, which it has constructed or acquired, to deliver the electricity to these customers (fdgs. 183, 185, 187, r. 640, 641, app. I, 79, 80). The contract of January 4 provided for

(a) the sale and delivery of power to *private utilities* (def. ex. 143A, secs. 8, 9, r. 4201-4202)
(b) the conveyance of "all franchises, contracts and going business . . . with all present customers attached" (*id.*, sec. 4, r. 4197-4198) to transmission lines and substations serving *va-*

rious municipalities (*id.*, ex. B at sheet 2, r. 4215) and

(c) the assignment of contracts with certain *industrial customers* (*id.*, ex. B at sheets 2, 3, r. 4215-4216)

(d) the conveyance of rural lines serving a number of *rural residents* and communities (*id.*, ex. B at sheet 5, r. 4217)

In addition to this complete parallel as to the types of customers, it is beyond question that all of the marketing facilities constructed and operated by the Authority for the disposition of electric energy, namely, *transmission lines, substations,* and *rural lines* (*cf.* fdgs. 183, 185, 187, r. 640, 641, app. I, 79, 80), are similar in character and function to those classes of facilities purchased by the Authority under the contract of January 4 from the Alabama Power Company (fdgs. 174, 192, r. 639, 642, app. I, 76, 81).[32] The facilities in the *Ashwander* case were used for the transmission of power to municipal distribution systems in 12 cities, 1,000 rural customers, and 48 industrial customers (fdg. 174, r. 639, app. I, 76).

A large part of the Authority's power is being sold to serve new electric demand. The trial court found that there are unserved potential markets for electric energy in unserved rural areas near the projects of the

[32] A reference to the chart which is defendants' exhibit 137 (see *Reproductions of Certain Original Exhibits Submitted by Appellees*) will disclose the similarity between the electrical facilities now owned by the Authority and the properties sold to it in Alabama under the contract of January 4. For a precise summary of the lines purchased under the contract of January 4 and those constructed by the Authority, see exhibits B, C, and E to defendants' exhibit 136, which is a stipulation by the parties (r. 4177-4179, 4180-4183, 4184).

Authority; that the percentage of rural electrification in the States which make up the Tennessee River basin is small, and that in 1933 it ranged from 0.8% in Mississippi to 7.9% in Virginia; that a great majority of the so-called rural customers on lines of complainants are in towns of a population of a hundred or more, or within six miles of a transmission substation; and that there was little area-wide rural electrification (fdgs. 234, 235, r. 651, app. I, 94). The trial court found that only two customers of the total number of 16,108 rural customers receiving service as of October 31, 1937, from the fifteen rural cooperatives purchasing power at wholesale from the Authority had ever received electric service of any kind from the complainant companies, except for customers located in the ceded area and served by lines sold to the Authority (fdg. 206, r. 645, app. I, 85). As Judge Sibley observed in denying an injunction to restrain the construction of rural lines by the Authority,

> Thus to encourage the development of a new market for electricity rather than to invade an old one seems to be most considerate of existing interests and not of any detriment to the state [*Georgia Power Co.* v. *Tennessee Valley Authority*, 14 F.Supp. 673, 676 (N.D.Ga., 1936)].

The industrial concerns with which the Authority has contracts, apart from those in the "ceded area" served by the lines acquired under the contract of January 4, are certain new industries that have recently constructed new plants in the area or expanded their

prior operations (fdgs. 150, 151, r. 633, app. I, 69). The Authority is selling large blocks of firm and secondary power to these customers, which is delivered at voltages comparable to those at which delivery is made to the municipalities (fdgs. 149, 157, 158, r. 633, 634, 635, app. I, 68, 70, 71). The reasonableness and, indeed, the practical necessity of these sales as a means of disposing of the surplus power is apparent from a consideration of section 11 of the statute, together with the findings of the court (fdgs. 153-156, r. 633-634, app. I, 70). Section 11, among other things, provides that

> . . . sale to and use by industry shall be a secondary purpose, to be utilized principally to secure a sufficiently high load factor and revenue returns which will permit domestic and rural use at the lowest possible rates and in such manner as to encourage increased domestic and rural use of electricity.

The trial court found upon the basis of the undisputed testimony that all of the large industrial customers have contracted to purchase large amounts of secondary power, which is that class of power the delivery of which the seller may interrupt during periods specified in the contract (fdgs. 153, 154, r. 633, app. I, 70). These sales of secondary power will increase the load factor and hence the efficiency of the Authority's operations (fdg. 154, r. 633, app. I, 70). It is not feasible to sell this class of power to such industrial customers through a retailer or intermediary (fdg. 155, r.

634, app. I, 70). It was further found that the market for this class of power is limited to such large manufacturing plants and utility companies (fdgs. 153-156, r. 633-634, app. I, 70), and that the complainants do not maintain excess capacity and facilities for service to loads of the large and unusual size of these industrial concerns (fdg. 152, r. 633, app. I, 69).

It would be difficult to suggest a more obvious market for the disposition of Government power. As Judge Sibley said with respect to the unserved rural areas, the sales to these industries are "most considerate of existing interests" (14 F.Supp. at 676). In the many years during which the question of the disposition of the Muscle Shoals power was under consideration by the Congress, numerous bids were submitted by similar industries to lease the Wilson Dam power,[33] and no doubt was ever expressed as to the constitutional validity of the proposals. Indeed, all of the representatives of the Commonwealth and Southern companies testified during the hearings before the House Committee on Military Affairs that they would be willing to see the Government sell its power to such industries, although their suggestion was limited to industrials located along the river which could be served without construction of transmission facilities which might be used to compete for the power companies' existing markets. See Hearings before the House Committee on Military Affairs, 73d Cong., 1st

[33] See offer of Henry Ford, H.R. 518, 68th Cong., 1st sess., sec. 16; offer of Union Carbide Co., S.Doc. 105, 68th Cong., 1st sess., sec. 13, p. 8; offer of American Cyanamid Co., H.R. 16,614, 69th Cong., 2d sess., sec. E (3); offer of Farmers Federated Fertilizer Corporation, S. 4632, 69th Cong., 2d sess., sec. 84.

sess., pp. 129, 136, 155, 177, 199. The denial of constitutional authority to dispose of the Government's power to such industries would, as this Court observed in the *Ashwander* case, lead to absurd consequences (297 U.S. at 336-337).[34]

In this case, as in the *Ashwander* case, the method of disposition is necessary to avoid a private monopoly of the Government's property. As this Court held in the *Ashwander* case, the Government is not required to sell its power to the Commonwealth and Southern companies or allow it to waste. That case did not establish a novel precedent. The decisions of this Court uniformly sustain the power of Congress to prevent the waste or monopoly of public property and to make a widespread distribution of the benefits.

The prior decisions: The water power created by dams of the Government, like other property of the United States, is "held in trust for all of the people" (*United States* v. *Trinidad Coal Co.*, 137 U.S. 160, 170; *cf. Light* v. *United States*, 220 U.S. 523, 537; *United States* v. *Beebe*, 127 U.S. 338, 342; *Camfield* v. *United States*, 167 U.S. 518). And "how that trust shall be administered . . . is for Congress to determine" (*Light* v. *United States, supra* at 537; *cf. Ruddy* v. *Rossi*, 248 U.S. 104, 106-107). "The disposal must be left to the discretion of Congress" (*United States* v. *Gratiot*, 14 Pet. 526, 538). The administration of this trust to avoid monopoly and permit a widespread utilization of public proper-

[34] The sale to industries has been an important market for the disposition of power produced at the federal irrigation projects (see *Annual Report of the Commissioner of Reclamation* (1932) p. 13).

ties has been repeatedly sustained by this Court. The Congress is clothed with the power and charged with the duty to protect its properties against monopoly and waste (*United States* v. *Trinidad Coal Co., supra; Camfield* v. *United States, supra; United States* v. *Shryock,* 162 Fed. 790, 793 (C.C.S.D. Ohio, 1908); *United States* v. *Hanson,* 167 Fed. 881 (C.C.A. 9th, 1909)). As this Court observed in the *Camfield* case, *supra,* "it [Congress] would be recreant to its duties as trustee for the people of the United States to permit any individual or private corporation to monopolize them [public lands] for private gain" (167 U.S. at 524).

These principles govern the disposition of all natural resources owned by the United States. To enable the settlement of public lands in small tracts, the Congress may limit the size and sale price of tracts sold by the Government's grantees (*Oregon & Calif.R.R.* v. *United States,* 238 U.S. 393; *cf. Causey* v. *United States,* 240 U.S. 399; *Ervien* v. *United States,* 251 U.S. 41), and may undertake extensive reclamation projects to make the public lands "marketable and habitable" for small settlers (*United States* v. *Hanson, supra* at 883-884; *Kansas* v. *Colorado,* 206 U.S. 46, 92). This Court has recognized that "The Government incurs heavy liability in providing water for these lands" (*Irwin* v. *Wright,* 258 U.S. 219, 231). The capital for these great projects could have been supplied by private enterprise if the Government had been willing "to abandon our time-honored policy of inviting and encouraging small individual land hold-

ings" and to turn over the public lands to private interests in sufficiently large tracts to render private projects economically feasible. But "no one contemplates so stupendous a price as this for irrigation development."[35] The Reclamation Act in this view represents a choice of means, the refusal of Congress to resort to private agencies, and a determination that the Federal Government must undertake these projects in order to insure the success of its long-established policy.

Equally broad is the power of Congress to prevent such monopoly of mineral or other Government natural resources. From the beginning of our Government, the Congress has reserved valuable mineral lands from ordinary grants (*Morton* v. *Nebraska,* 21 Wall. 660; *United States* v. *Sweet,* 245 U.S. 563). In making specific disposition of mineral and timber lands, Congress has strictly limited the area open to entry by any one individual or association (13 Stat. 529; 16 Stat. 217; 17 Stat. 91; 17 Stat. 607; 29 Stat. 526). The purpose of these restrictions, as this Court has observed, "was, manifestly, to prevent monopolies" (*United States* v. *Trinidad Coal Co., supra* at 169; *United States* v. *Munday,* 222 U.S. 175, 181). The Congress may promote this policy by reserving the minerals from public lands and disposing of them by limited leases (*United States*

[35] The majority report accompanying the Reclamation Act declared: "If we were willing to abandon our time-honored policy of inviting and encouraging small individual land holdings and were prepared to turn over all of the public lands under a large irrigation system to the control of a single individual or a corporation, we could undoubtedly secure the construction of extensive works which cannot be profitably constructed by private enterprise under present conditions, but no one contemplates paying so stupendous a price as this for irrigation development" (H.Rept. 794, 57th Cong., 1st sess. (pt. 1) p. 3).

v. *Gratiot, supra*), or it may mine and market the minerals directly (*Ashwander* v. *Tennessee Valley Authority, supra*).

These principles are clearly applicable in the instant case. The acquisition of generating and transmission facilities to serve municipal, rural, and industrial customers is no less reasonable than the construction and operation of dams, reservoirs, and canals and the appropriation of waters under State laws to make marketable the arid public lands. And, as this Court recognized in the *Ashwander* case, such method of disposition of Government-owned power does not differ in principle from the mining and marketing of minerals owned by the United States.

The scope of the property clause cannot be limited as appellants attempt to do by describing it as a "proprietary power." In the days of the settlement of this country it was the property clause that empowered the Congress "to convert waste places into permanent homes" (*Ruddy* v. *Rossi, supra* at 105), and by which "Empire was given a path westward and prosperous commonwealths took the place of a wilderness" (*Oregon & Calif.R.R.* v. *United States, supra* at 416). And when, at the turn of this century, the need for conservation gained national recognition, the property clause conferred the necessary powers to fashion the instruments needed for the husbandry of our Government-owned natural resources (*Kansas* v. *Colorado, supra; Light* v. *United States, supra*).

Nor is the appellants' argument advanced by calling the activities of the Authority a "business."

The argument is reminiscent of the contention made by the opponents of the Reclamation Act that "the United States is not a dealer in real estate . . . [or] a real estate improvement society, and has not the constitutional power to become such" (H.Rept. 794, 57th Cong., 1st sess. (pt. 2) p. 10). The mere fact that one of the incidental results is governmental activity in a field more commonly occupied by private corporations is not a reason for denying the existence of the power, *a fortiori* when the field is frequently occupied by other public agencies. "The conduct of business in competition with private interests may of course, be for a public purpose" (*Emergency Fleet Corp.* v. *Western Union Tel. Co.*, 275 U.S. 415, 424-425; *cf. Standard Oil Co.* v. *Lincoln*, 114 Neb. 243 (1926), *aff'd*, 275 U.S. 504).

Examples of governmental activity which in their commercial aspects are similar to those now challenged are numerous and familiar. Among these, in addition to the establishment of banks (*M'Culloch* v. *Maryland*, 4 Wheat. 316; *First National Bank* v. *Fellows*, 244 U.S. 416; *Smith* v. *Kansas City Title Co.*, 255 U.S. 180), are the leasing of lead mines on the public lands (*United States* v. *Gratiot, supra*); the ownership and operation of merchant ships (*King County* v. *United States Shipping Board Emergency Fleet Corp.*, 282 Fed. 950 (C.C.A. 9th, 1922); *Sloan Shipyards Corp.* v. *United States Fleet Corp.*, 272 Fed. 132 (W.D.Wash., 1921); *cf. Emergency Fleet Corp.* v. *Western Union Tel. Co., supra*); the establishment of a federal housing corporation (*New Brunswick* v. *United States*, 276 U.S.

547); the establishment and operation of the Panama Railroad (*Wilson* v. *Shaw*, 204 U.S. 24); and the establishment of the parcel post in competition with private express companies (37 Stat. 557-559) and the postal savings system in competition with banks (36 Stat. 814).

In the disposal of its *real property*, the Government has long undertaken a "business" of great magnitude. It is worth recalling that the disposal of the public domain has involved an enterprise so extensive that it has given a now-familiar phrase to the language—"a land-office business."

The contention that the sale of power by the Government constitutes a "business" and is therefore unlawful was advanced in the *Ashwander* case and rejected by this Court:

> The argument is earnestly presented that the Government by virtue of its ownership of the dam and power plant could not establish a steel mill and make and sell steel products, or a factory to manufacture clothing or shoes for the public, and thus attempt to make its ownership of energy, generated at its dam, a means of carrying on competitive commercial enterprises and thus drawing to the Federal Government the conduct and management of business having no relation to the purposes for which the Federal Government was established. The picture is eloquently drawn but we deem it to be irrelevant to the issue here. The Government is not using the water power at the Wilson Dam to establish any industry or business. It is not using the energy generated at the dam to manu-

> facture commodities of any sort for the public. The Government is disposing of the energy itself which simply is the mechanical energy, incidental to falling water at the dam, converted into the electric energy which is susceptible of transmission. The question here is simply as to the acquisition of the transmission lines as a facility for the disposal of that energy [297 U.S. at 339-340].

The hypothetical cases suggested as analogies in appellants' brief (pp. 136-137) raise questions as to the extent to which the Government may process Government-owned property as a means to disposition. Since appellants concede that the Government may lawfully convert water power into electricity if the power is lawfully acquired, it is unnecessary to elaborate the obvious distinctions between the instant case and those suggested by appellants.

Appellants insist that the power to dispose of Government property is limited by the provisions of the tenth amendment. The relation of this amendment to the details of the methods of disposition is discussed fully *infra*, pages 134-154. In general, it should be observed, as this Court said in the *Ashwander* case:

> To the extent that the power of disposition is thus expressly conferred, it is manifest that the Tenth Amendment is not applicable. And the Ninth Amendment (which petitioners also invoke) in insuring the maintenance of the rights retained by the people does not withdraw the rights which are expressly granted to the Federal Government [297 U.S. at 330-331].

The Authority's method of disposition is not invalidated by the tenth amendment.

> Certainly, the Alabama Power Company [and its affiliates of the Commonwealth and Southern system] has no constitutional right to insist that it shall be the sole purchaser of the energy generated at the [Government dams] . . . that the energy shall be sold to it or go to waste [*id.* at 339].

2. THE APPELLANTS HAVE NO STANDING TO CHALLENGE THE VALIDITY OF THE RESALE-RATE PROVISIONS CONTAINED IN THE CONTRACTS BETWEEN THE AUTHORITY AND MUNICIPALITIES AND COOPERATIVES; BUT IN ANY EVENT, THESE PROVISIONS ARE VALID.

The act authorizes the Authority to include in contracts with municipalities and cooperatives provisions establishing resale rates to be charged by the distributor (sec. 10). The authority of the statute is of general application, and, in fact, resale-rate provisions have been included in *all* such contracts (whether or not the distributor operates in a territory served by complainants), including those with municipalities which had theretofore owned and operated their own electric plants and cooperatives serving consumers theretofore without any electric service (fdg. 221, r. 648, app. I, 90).[36] In general, the municipality or cooperative and the Authority agree upon the resale rates set forth in the contract. The Authority is required to agree to such modification as may be neces-

[36] The contracts also contain provisions respecting such matters as the municipal accounting system and the collection of bills. There is no suggestion anywhere in appellants' brief that any of the contract provisions in question (other than those with respect to resale rates) have any regulatory effect on appellants' operations.

sary to maintain the contractor's distribution system on a "self-supporting and financially-sound basis," and the contractor agrees to use all surplus revenues to reduce rates. The rates may be changed at any time by agreement of the parties. (See, e.g., contract between the Authority and the city of Sheffield, Alabama, secs. 6, 7, comp. ex. 118, r. 2802, 2804-2805).[37]

The appellants do not and cannot challenge the validity of these contract provisions under State law. *Oppenheim* v. *Florence*, 229 Ala. 50 (1934); *Memphis Power & Light Co.* v. *Memphis*, 172 Tenn. 346 (1937). The argument is, however, that the contract rates, which are substantially lower than those of appellants, in effect determine the rates which appellants may charge, and that appellants have a right to operate free from federal regulation and may, therefore, question the power of Congress to contract with municipalities and cooperatives with respect to the resale rates to be charged by the distributor.

The argument overlooks the fundamental fact that the muncipalities and cooperatives may charge whatever rates they please and are at liberty to put into effect the rates set forth in the contracts with the Authority even in the absence of any agreement. So

[37] In a few of the early contracts it was provided that the initial rates set forth in the contracts could be modified by the Authority. In all the contracts, however, the Authority is required to agree to such rates as may be required to maintain the distribution system on a "self-supporting and financially-sound basis," and the contractor agrees to use all surplus revenues to reduce rates. The rate schedule set forth in the contracts is thus in all cases merely an initial rate schedule, the continuing obligation of the parties being to maintain rates which are neither higher nor lower than those necessary to maintain the distribution system on a financially sound basis. See, e.g., contract between the Authority and the city of Athens, comp. ex. 117, r. 2729, 2731.

far as appears, not only do the municipalities and cooperatives approve the rates they propose to charge under the contracts with the Authority but they do not wish to change them. Any advantage which complainants might have derived if the municipalities and cooperatives had formulated higher rates in the absence of the agreement with the Authority would have been a mere incident of the right of municipalities and cooperatives to charge such rates in their discretion. Any disadvantage to complainants by virtue of the fact that the municipalities and cooperatives have put into effect rates lower than complainants is likewise a mere incident of the same right of the municipalities and cooperatives. Appellants cannot insist upon the possible advantage or complain of the disadvantage. *Edward Hines Trustees* v. *United States*, 263 U.S. 143, 148; *Sprunt & Son* v. *United States*, 281 U.S. 249, 254-256.

It is immaterial that the resale rates are put into effect pursuant to agreement with the Authority. Stated most favorably for appellants, the case is no different from that which would be presented if the municipalities and cooperatives promulgated these rates pursuant to, or with the approval of, an invalid order of a regulatory commission. In such a situation, it is settled, appellants would have no right to complain. In *Edward Hines Trustees* v. *United States, supra*, the plaintiffs, manufacturers and shippers of lumber, brought suit to annul an order of the Interstate Commerce Commission which abolished a penalty charge on lumber held by carriers at reconsignment

points. The penalty charge had been of substantial benefit to the plaintiffs because of the burden which it placed upon its competitors, and its removal threatened a substantial loss of business. The order was challenged on the ground that it exceeded the power of the Commission. This Court held, however, that the plaintiffs were without standing to challenge the validity of the order. The Court said:

> It is not alleged that the carriers wish to impose such charges and, but for the prohibition contained in the order, would do so. For aught that appears carriers are well satisfied with the order entered. Cancellation of a charge by which plaintiffs' rivals in business have been relieved of the handicap theretofore imposed may conceivably have subjected plaintiffs to such losses as are incident to more effective competition. But plaintiffs have no absolute right to require carriers to impose penalty charges [263 U.S. at 148].

Sprunt & Son v. *United States, supra,* is to the same effect. In that case certain shippers brought suit to set aside an order of the Commission establishing a new rate structure which eliminated, to plaintiffs' disadvantage, a rate differential previously existing. This Court reaffirmed the rule of the *Hines Trustees* case and held that the plaintiffs were without standing to sue, saying:

> The appellants' position is legally no different from what it would have been if the carriers had filed the rates freely, pursuant to an informal sug-

gestion of the Commission or one of its members; or if the filing had been made by carriers voluntarily after complaint filed before the Commission, which had never reached a hearing, because the rate structure complained of was thus superseded. The carriers who were respondents before the Commission filed the new rates presumably because they now desire them. Nothing to the contrary is shown. So far as the carriers are concerned, it is as if the new rates had been filed wholly of their own accord and as if there had never been a controversy before the Commission. Since the appellants' economic advantage as shippers was an incident of the supposed right exercised by the carriers, the appellants cannot complain after the carriers are satisfied or prefer not to press their right, if any [281 U.S. at 256].

A close analogy is found in the decision of the Court of Appeals of the District of Columbia in the case of *Wilbur* v. *Texas Co.*, 40 F. (2d) 787 (App.D.C., 1930), *cert. denied*, 282 U.S. 843, in which it was held that the purchaser of oil from a producer operating under a Government lease had no standing to challenge an order of the Secretary of the Interior setting a minimum price at which the lessee would be permitted to sell such oil.

The precise question was presented in *Georgia Power Co.* v. *Tennessee Valley Authority*, 14 F.Supp. 673 (N.D.Ga., 1936), where Circuit Judge Sibley, in denying an application for preliminary injunction in a case involving an attack upon the validity of the resale-rate provision, took the position that that question

could not properly be raised by the complainant utility.[38]

In any event, these provisions of the contracts are valid. They were adopted, as the contracts recite, "In order to facilitate the disposition of surplus power generated by Authority and not needed by it in its operations, and in order to carry out the intention of Congress to encourage the more abundant use of electricity throughout the area in which municipality [cooperative] operates" (see, e.g., comp. ex. 118, r. 2802, 2804). *Cf. Isbrandtsen-Moller Co.* v. *United States*, 300 U.S. 139. The relation of the means to the end is evident, but if proof were needed, it is amply furnished by the findings of the trial court as to the ever-increasing electric demands of the Authority's customers (fdgs. 223-226, r. 649, app. I, 91). There are definite federal interests of a traditionally accepted character involved in this situation that should not be ignored. Here the Government is selling at wholesale. To a large extent the demand by the distributor for the Government property will be influenced by the rate charged to the ultimate consumer. The Congress, as trustee of Government property, may use means to assure a widespread diffusion of the benefits to the people.

---

[38] "Whether if TVA rather than North Georgia Membership Corporation and the several towns shall be found retailing power to individual consumers, it will be subject to have its rates fixed by the Georgia Commission, and whether if TVA wholesale power to the Membership Corporation and the towns under contracts which undertake to fix the rates to consumers, such rates will be governed by the contracts or by the action of the Georgia Public Service Commission, are questions that must wait until they take concrete form with all interested parties before the court. . . . Several distinctions are here urged. One is that the state of Alabama had there consented to what was done and here Georgia has not. But Georgia is not objecting, and the Georgia Power Company cannot object for it" (14 F.Supp. at 676).

It has long been established that in disposing of public property the Federal Government may contract with the purchaser as to the purposes for which the property is to be used and also as to the price at which it may be resold. In *Oregon & Calif.R.R.* v. *United States*, 238 U.S. 393, this Court had before it the problem of construing a statute providing that all land that had been granted to the railroads and that remained unsold at the time of the passage of the statute should be sold only to actual settlers, in quantities not greater than a quarter section to each purchaser and for a price not exceeding $2.50 per acre. In a decision construing and enforcing the provisions of the statute, the Court made it clear that there could be no legitimate doubt as to the power of Congress to attach such conditions to the subsequent resale of property originally granted by it. In *Ervien* v. *United States*, 251 U.S. 41, this Court interpreted and enforced a similar grant to a State for public improvements. *Cf. Ruddy* v. *Rossi*, 248 U.S. 104; *Causey* v. *United States*, 240 U.S. 399; *Wilbur* v. *Texas Co.*, *supra*.

In one of the leading cases, *United States* v. *Gratiot*, 26 Fed. Cas. 12 (C.C.D.Ill., 1839), *aff'd*, 14 Pet. 526, which was an action by the United States to recover rent under a lease of certain lead mines, defendants in the lower court attacked the validity of the lease because of a provision fixing the price which the defendants were permitted to charge for smelting the ore mined on the property. This Court did not pass upon this point, as it was not renewed on appeal. But

Mr. Justice McLean, who rendered the opinion in the lower court, flatly rejected the contention in the following terms:

> The limitation imposed on the price of the manufactured article is a very proper regulation in the lease; as it prevents monopolies, and other consequences injurious to the public, by a combination of the lessees. . . .
>
> . . . And it [the United States] has a right to stipulate with the lessee, as one of the conditions of his lease, that he shall sell the ore he digs, or the lead he manufactures, at a fixed price. I can see no possible objection to such a regulation [26 Fed. Cas. at 13-14].

3. THE POWERS RESERVED TO THE STATES UNDER THE TENTH AMENDMENT ARE NOT INVADED BY THE STATUTE OR THE ACTIVITIES AUTHORIZED THEREUNDER.

The appellants argue that the statute and the activities of the Authority pursuant thereto will result in the displacement of the State-regulated utilities and the creation of a federal utility free from State control and must therefore be held an unlawful invasion of the rights reserved to the States under the tenth amendment. Appellants' argument proceeds on an erroneous view of the limitations imposed by the tenth amendment on the power granted to the Congress, a point which was fully discussed in the Government's brief in *United States* v. *Bekins*, 304 U.S. 27. The argument is untenable even though the tenth amendment be construed to limit the powers otherwise granted to the Congress by the Constitution.

It should be observed at the outset that the consequence of the acceptance of appellants' argument is to confer upon the Commonwealth and Southern companies a constitutional monopoly of the Government's power, or, indeed, to commit all the power to waste. The denial of authority in the Congress to construct the necessary transmission facilities to serve municipalities, cooperatives, and industries would limit the Authority's market to the dam sites where the Commonwealth and Southern companies are, in all practical effect, the only available purchasers. Appellants' argument would require the Government to waste the power entirely. If the Authority can sell at all, it may, as appellants argue, fix the terms. If this amounts to an invasion of the power reserved to the States, as appellants urge, the Authority may not dispose of any power. For these reasons alone the contention should be rejected. See *Ashwander* v. *Tennessee Valley Authority, supra* at 339.

There is another and conclusive answer. The Authority's method of disposition does not impair the exercise of the States' police power.

(*a*) *The sale of power to municipalities, cooperatives, and industries is not invalid under the tenth amendment:* Appellants ignore the obvious fact that the Authority is dealing with municipalities and cooperatives who are subject at all times to the complete control of the States. While the States in which the Authority operates have exempted municipalities and cooperatives from the jurisdiction of their respective regulatory commissions, if the States should elect to

remove this exemption the Authority's sale of power to municipalities and cooperatives at wholesale would in no way prevent State regulation of the distribution to the ultimate consumer. *Memphis Power & Light Co.* v. *Memphis, supra; Oppenheim* v. *Florence, supra.* Under the decisions of this Court, such an arrangement by which the State authorizes its agencies at their election to purchase property from the Government can give rise to no questions under the tenth amendment. *Cf. Steward Mach. Co.* v. *Davis*, 301 U.S. 548; *United States* v. *Bekins, supra.*

What has been said above indicates the answer to the claim that the Authority may invade appellants' markets without State consent and, having destroyed the appellants' business, *can* withdraw without State permission (see br. 160-161). The States are under no obligation to contract with the Authority. The municipalities, which are mere agents of the States, may be forbidden to do so, and the same is true of the quasi-public electric membership corporations. *Hopkins Fed. Sav. & Loan Ass'n* v. *Cleary*, 296 U.S. 315. During the period of the contract the Authority is bound according to the terms of its agreement. *Cf. Lynch* v. *United States*, 292 U.S. 571. The conjecture that the Authority thereafter may abandon the costly facilities it has constructed for wholesale service and withdraw its service without State permission is without substance.

The appellants contend that the Authority's method of distribution should be held invalid because, if lawful, the Authority may fix its own terms. The

sufficient answer is that, as this Court held in the *Ashwander* case, the Authority may "sell and fix the terms." See *Ashwander* v. *Tennessee Valley Authority, supra* at 338. If these terms are unsatisfactory to the States, they may refuse to contract and, it would seem, forbid their public agencies and quasi-public corporations to do so. *Cf. Hopkins Fed. Sav. & Loan Ass'n* v. *Cleary, supra.*

Any effect on the customary regulation of appellants which may result from the competition of State agencies as authorized by States themselves is immaterial. The States concerned may authorize municipalities to construct and operate electric plants in competition with appellants, though the result is harmful to appellants' business. *Alabama Power Co.* v. *Ickes,* 302 U.S. 464. To the extent that this competition is related to the wholesale service of the Authority, the case presented is one of the federal exercise of a granted power to dispose of public property by sales to local public agencies, who, themselves, engage in an enterprise which the States have lawfully authorized. Such cooperation is permitted by the Constitution and not forbidden by the tenth amendment. See *Duke Power Co.* v. *Greenwood County,* 91 F. (2d) 665, 673 (C.C.A. 4th, 1937); *cf. Steward Mach. Co.* v. *Davis, supra; United States* v. *Bekins, supra.*

The conclusion is the same with respect to the Authority's contracts for the sale of firm and secondary power to certain electrochemical and electrometallurgical industries. The sale of the Government's power in this market, as we have pointed out above, "is of no

detriment to the state" (*Georgia Power Co.* v. *Tennessee Valley Authority*, 14 F.Supp. at 676). It cannot seriously be suggested that the Authority's industrial customers are in need of protection against exorbitant rates, and the contention that the sale of the Authority's power to industries may conflict with State policy with respect to the geographic distribution of industry is without substance. The policy of rate uniformity, repeatedly emphasized in complainants' testimony, is, in fact, applied only to the extent of requiring nondiscrimination by any individual utility. The trial court found that as between the complainant companies operating within a State there is no requirement of uniformity of rates (fdg. 27, r. 599, app. I, 19). No such policy could be enforced on a State-wide basis applicable to all utilities, in view of the constitutional requirement that each separate utility must be allowed an adequate return necessarily varying with the particular investment of the individual company, and obviously no State could prohibit its neighbors from adopting a policy in conflict with its own.

It should be finally observed that competition is not regulation. Appellants' contention that the sale of power by the Authority results in the unauthorized regulation of their intrastate business is based in part upon the theory that in order to meet such competition they will be forced to lower their rates. This effect is characterized as "regulation." This Court has repeatedly held that an exercise of a delegated power is not rendered invalid by reason of its incidental effects.

Cf. Duke Power Co. v. *Greenwood County*, 91 F. (2d) 665; *Sonzinsky* v. *United States*, 300 U.S. 506, 513-514; *United States* v. *Carolene Products Co.*, 304 U.S. 144. And it follows that any effect upon business which may indirectly result from competition of municipalities in the distribution of power purchased from the Authority (as well as from sales to industrials) may not be deemed in any legal sense an impairment of regulation.

(*b*) *The size of the Authority's projects presents no question under the tenth amendment:* The appellants' principal contention is that the *physical size* of the Authority's projects for the disposition of power must necessarily result in the impairment of the rights reserved to the States. The facts in this regard, as we have previously observed, are exaggerated by the appellants. The conclusion is the same, however, though the facts were as stated by the appellants. As we have shown above, the Authority's wholesale service to municipalities and cooperatives and its sales to industry do not interfere in any way with the exercise of the State's police power because of the limitation in the *nature of the service*, and it cannot be material, therefore, what amount of power may be sold by the Government in this manner.

This conclusion is clear in principle, but it should be further observed that appellants' position is in conflict with the relevant decisions of this Court. Appellants rely on a phrase from the opinion of this Court in the *Ashwander* case describing the challenged contract of January 4 as a "limited transaction." But appellants quote this Court's language out of context and

omit language of decisive significance. What this Court said was that

> The transmission lines which the Authority undertakes to purchase from the Power Company lead from the Wilson Dam to *a large area* within about fifty miles of the dam. These lines provide the means of distributing the electric energy, generated at the dam, to *a large population.* They furnish a method of reaching a market. The alternative method is to sell the surplus energy at the dam, and the market there appears to be limited to one purchaser, the Alabama Power Company, and its affiliated interests. We know of no constitutional ground upon which the Federal Government can be denied the right to seek a wider market. We suppose that in the early days of mining in the West, if the Government had undertaken to operate a silver mine on its domain, it could have acquired the mules or horses and equipment to carry its silver to market. And the transmission lines for electric energy are but a facility for conveying to market that particular sort of property, and the acquisition of these lines raises no different constitutional question, unless in some way there is an invasion of the rights reserved to the State or to the people. We find no basis for concluding that the limited undertaking with the Alabama Power Company amounts to such an invasion. *Certainly, the Alabama Power Company has no constitutional right to insist that it shall be the sole purchaser of the energy generated at the Wilson Dam; that the energy shall be sold to it or go to waste* [297 U.S. at 339].

We construe the words "limited transaction" as referring to the nature of the service contemplated, not to its territorial scope. Earlier in its opinion this Court rejected the contention that the amount of power which the Government may sell is limited by any consideration other than the amount lawfully available. This Court said:

> The United States owns the coal, or the silver, or the lead, or the oil, it obtains from its lands, and it *lies in the discretion of the Congress, acting in the public interest, to determine of how much of the property it shall dispose.*
>
> We think that the same principle is applicable to electric energy [*id.* at 336].

The lack of merit in appellants' contention becomes apparent when measured by its application to other projects which have heretofore been deemed within the constitutional powers of the Congress. The amount of power generated at the Boulder Canyon project alone, for example, is almost equal to the amount to be produced at *all* of the dams constructed, or authorized for construction or investigation, by the Authority. (See Wilbur and Ely, *The Hoover Dam Power and Water Contracts* (U.S.Dept. Interior, 1933) p. 16; *cf.* def. ex. 140, r. 4187). The method of disposition in the case of Boulder Dam does not differ materially from that involved in the case at bar. The Boulder Canyon Project Act (45 Stat. 1057) gave the Secretary of the Interior a wide choice of means to dispose of power (secs. 4, 5, 6). He was authorized

to make contracts for the sale of electrical energy or the use of water for power purposes. He was authorized to install generating equipment and operate it. Or he could, in his discretion, enter into contracts of lease of a unit of any Government-built plant, with the right to generate electrical energy or, alternatively, enter into contracts of lease for the use of water at the dam for the generation of electrical energy. The Boulder Canyon Project Act provided for the means of transmission as well as generation (sec. 5 (d)). It provided that any agency which should receive a contract for electrical energy in a large bulk (100,000 firm horsepower) could be required by the Secretary to permit purchasers of smaller amounts of power to use their transmission lines upon the payment of a reasonable share of the cost of construction, operation, and maintenance.

The significance of these provisions in the Boulder Canyon Project Act becomes obvious when the legislative history of that act is examined. The construction of a power plant by the United States at Boulder Dam had been strongly urged by the Secretary of the Interior, who disapproved a previous bill for a project there on the ground that it included no provision for such a plant. (See S.Rept. 592, 70th Cong., 1st sess., p. 31.) In the utilization of the electric power to be generated by this plant, the objectives of Congress were clearly stated. The report of the Senate committee on the project explained that the allocation of power which was contemplated would avoid danger of monopolization:

> The plan of the Boulder Canyon project, as expressed in the bill, contemplates allocation of the power or power rights at Boulder Canyon amongst various agencies, including States, political subdivisions, municipalities, domestic water-supply districts, and private companies.
>
> * * *
>
> With such a distribution of power or power rights at the dam, all danger of monopolization will be avoided, and there will be created a sound competitive condition between these various agencies which will insure the consuming public protection in the form of reasonable rates and good service [*id.* at 26-27].

The report of the House committee enunciated the same objective:

> There were many indications in the testimony adduced before the committee that there would be considerable competition to secure this very desirable power. The committee has so framed the legislation to guard as fully as might be against this asset, created by Federal initiative, being monopolized by any one agency. The bill contemplates that the power will be fairly and equitably distributed amongst the various agencies applying therefor, thus insuring the widest and fairest possible distribution of the benefits [H. Rept. 918, 70th Cong., 1st sess., p. 22].

As actually consummated prior to the appropriation for the project, the Secretary of the Interior entered into contracts with the city of Los Angeles (hav-

ing a population of more than twice the combined population of the three large cities under contract with the Authority) and with the Southern California Edison Company which established them as generating agencies to satisfy the requirements of contracts made and to be made by the Secretary with other purchasers. At the outset, the Secretary contracted with the Metropolitan Water District as such a purchaser. Later, in 1933, it was stated that five additional purchasers had entered into contracts with the Secretary which the generating agencies were obligated to satisfy. (See Wilbur and Ely, *supra* at 45.) The generating costs attributable to the energy delivered to these allottees are to be repaid to the generating agencies by the United States in the form of deductions upon their obligations to the Government, and the United States undertakes to collect these costs from the allottees (*id.* at 50).

The Secretary of the Interior, in reporting on the original contracts to the Senate Committee on Appropriations in 1930, explained that "a wide regional benefit from this power was desired and obtained" (*id.* at 601). He stated that *ninety-one percent* of the firm energy was allocated *to public agencies* to be generated at the dam by the city of Los Angeles; and that the remaining *nine percent* was allocated to "*four public utilities* who alone can serve the great agricultural back-country" (*ibid.*).

The statute provided and the contracts required that the generating agencies should permit the use of their transmission lines by allottees of small amounts

of power, on suitable conditions. See Wilbur and Ely, *supra* at 146-147.

The limitation suggested by appellants would defeat the declared policy of Congress to distribute and sell the surplus power "equitably among the States, counties, and municipalities within transmission distance" (sec. 11). We submit that the physical size of the projects which the Congress may lawfully undertake to dispose of public property must be measured by the need, and the question of the need, this Court has held, is one primarily for the Congress to determine. *Cf. United States* v. *Gratiot, supra* at 533, 538; *Light* v. *United States, supra* at 537. It would be difficult to imagine any undertaking of broader territorial scope than the federal reclamation projects authorized by the Reclamation Act of 1902. Pursuant to the authority of this act, federal reclamation projects have been constructed in many parts of all the States of the arid West in which the Government owned substantial tracts of land.

The Authority's method of distribution substantially serves a legitimate federal objective and impairs no substantial interest of the States. The Constitution permits, and the tenth amendment does not forbid, the Congress to authorize the execution of power contracts and the acquisition of the necessary electric facilities in such number and extent as, in the reasonable exercise of its discretion as trustee "for all of the people" (*United States* v. *Trinidad Coal Co., supra* at 160), the Congress may deem necessary to distribute *all* the Government's power in the public interest. The territorial scope of

the project cannot be limited on any rational legal principle. As well might it be said that the Government's authority to dispose of power may extend to the entire State of Delaware, "limited" in size, but not throughout the vast expanse of Texas. It would seem clear that the Federal Constitution—the grants of power no less than the limitations—has application in all the States and all the counties of the United States, in the entire States of Tennessee, Mississippi, and Alabama as well as in the six northern counties of Alabama (and the ten northeastern counties of Mississippi) to which the contract in the *Ashwander* case related.

(*c*) *The resale-rate provisions of the contracts present no question under the tenth amendment:* It is suggested by appellants that these provisions deprive the States of their power to regulate the rates at which electricity shall be sold in intrastate transactions. There is in fact in the contractual arrangements of the Authority no interference with State jurisdiction. The fact that the States, pursuant to what they deem a wise public policy, have seen fit to exempt these agencies from the rate and commission regulation to which private utilities such as appellants are subject does not mean that the power has been abandoned or bartered away.

Enabling legislation expressly authorizing municipalities to purchase electricity from the Authority and to contract with respect to the terms and conditions upon which such electricity is to be resold has been enacted in the States in which the Authority is under contract to sell power in the claimed territory

of any appellant.[39] This legislation has been sustained by the courts against attacks challenging its validity under State law upon every conceivable ground, including the charge that such contracts deprived the States of their power of regulation. *Oppenheim* v. *Florence*, 229 Ala. 50 (1934); *Memphis Power & Light Co.* v. *Memphis*, 172 Tenn. 346 (1937); *Tennessee Elec. Power Co.* v. *Fayetteville*, 114 S.W. (2d) 811 (Tenn., 1938); *Kentucky-Tennessee L. & P.Co.* v. *Clarksville*, Tenn. Sup. Ct., 1937 (app. II, 132). Similarly, the Supreme Court of Alabama has upheld the validity of the Alabama statute authorizing the organization of rural cooperative associations, empowering such associations to contract with the Tennessee Valley Authority for the purchase and resale of electricity, and exempting them from the jurisdiction of the State regulatory commission. *Alabama Power Co.* v. *Cullman County Elec. Membership Corp.*, 234 Ala. 396 (1937). In the above-cited cases the State courts have sustained the validity of the identical contract provisions that are here under attack and have expressly declared that such contracts do not abrogate or invade the regulatory power of the States.

In *Oppenheim* v. *Florence, supra,* the Supreme Court of Alabama was dealing with a test suit brought for the purpose of determining the validity under State law of the loan-and-grant agreement between the city of Florence and the Public Works Administration and the power contract between the city and the Au-

[39] See app. II, 113; see also app. appellants' br., 47-66.

thority. The contract there involved contained covenants similar to those included in the contracts here under attack. After sustaining the validity of the Carmichael Act (Alabama Acts (ex. sess. (1933) No. 107)) authorizing Alabama municipalities to construct and operate electric distribution systems and to contract with the Authority for a supply of power, the court disposed of the contention that the resale-rate provisions of that contract surrendered to the Authority sovereign powers of the State. Referring to the Carmichael Act under which the contract was made, the court said:

> Instead of granting an uncontrolled and irrevocable right to the cities, it unmistakably reserved its supervision inherent in its police power to pass upon the reasonable aspect of such rates. Within those limits cities have had thereby conferred on them a reasonable latitude to exercise a discretion, but with the right of supervision reserved to the state.
>
> * * *
>
> The effect of the Carmichael Act is that the city cannot bind itself as to rates and regulations for the distribution of electricity in such manner that the court cannot review them to determine if they are reasonable and legal. As we interpret this entire set-up, it is not here so proposed [229 Ala. at 57].

In the case of *Memphis Power & Light Co.* v. *Memphis, supra*, the bill sought to enjoin the city of Memphis from proceeding with a contract to purchase power at wholesale from the Tennessee Valley Au-

thority. This contract contained all of the covenants and conditions which appellants insist constitute an unlawful regulation of intrastate rates. One of the principal questions argued before the court was the validity of the resale-rate provisions. In the words of the court:

> The primary insistence of complainant is that the contract of the city with TVA confers governmental powers upon the latter by delegating to it authority to fix resale rates . . . [172 Tenn. at 353].

In upholding the validity of the contract with particular reference to these covenants, the court first determined that the power of a municipality to contract with reference to the rates to be charged for electric service within its borders was in the nature of a private business power and not governmental. It then proceeded to hold:

> In the instant cause such power was delegated to the city, and it has exercised the authority so conferred upon it and has not, in our opinion, delegated the making of resale rates to TVA. . . . The TVA is a public instrumentality and holds the electric energy generated at its dams in trust for the people of the whole country. . . .
>
> One of the objects of TVA is to supply the inhabitants within its territory with cheap electric current. It does not operate for profit. The contract which it has entered into with the city is predicated upon reasonable rates, and there can be little doubt but that in order to effectuate the purpose to protect the public against unjust

> charges, it reserved the right to approve any increase in rates. There is no provision in the contract authorizing TVA either to increase or reduce the rates agreed upon. The reserved right to approve any increase in charges is a merely supervisory privilege that must be exercised reasonably and not arbitrarily, and, being a servant of the general public, it is presumed that in exercising this right it will conform to the spirit of the contract. . . . But the regulation of rates, *however accomplished, is subject to the continuing police power of the state* [*id.* at 359-361].

In this opinion the Supreme Court of Tennessee squarely met and answered every objection to the contracts that is here urged. The contracts involve no delegation of the sovereign power of the State: (1) because the power to contract with reference to rates is not governmental; (2) because there has been no delegation but, on the contrary, an exercise of the power by the contracting municipality; and (3) because the operations of the municipality under the contract remain subject to the reserved police power of the State. The decision in this aspect was in accord with established Tennessee precedents. *Memphis* v. *Enloe*, 141 Tenn. 618 (1919); *Lewis* v. *Nashville Gas & Heating Co.*, 162 Tenn. 268 (1931). The court further recognized the important fact that in disposing of Government property created at the dams, Congress has the undoubted right to prescribe conditions that are designed to guarantee a widespread and equitable distribution of this property for the general welfare.

There would be no basis for objection, we submit, if the municipalities and cooperatives were authorized to make resale-rate contracts binding on the States. The States may authorize municipalities to enter into binding contracts with private utilities, fixing the utilities' rates for the duration of the contract. *Detroit* v. *Detroit Citizens St. Ry. Co.*, 184 U.S. 368; *Detroit United Ry.* v. *Michigan*, 242 U.S. 238; *St. Cloud Public Service Co.* v. *St. Cloud*, 265 U.S. 352, 355. In any event, there cannot be said to be any impairment of State sovereignty where, as here, the States reserve a continuing power to revoke their consent.

The decision in *Steward Mach. Co.* v. *Davis*, 301 U.S. 548, would seem conclusive on this point. In that case, this Court sustained the constitutional power of Congress to make the enactment of State legislation a condition precedent to receiving the benefits of the Social Security Act. In rejecting the contention that this condition was in violation of the tenth amendment, this Court said:

> We are to keep in mind steadily that the conditions to be approved by the Board as the basis for a credit are not provisions of a contract, but terms of a statute, which may be altered or repealed . . . The state does not bind itself to keep the law in force.
>
> * * *
>
> The inference of abdication thus dissolves in thinnest air when the deposit is conceived of as dependent upon a statutory consent, and not upon a contract effective to create a duty. By this we do

> not intimate that the conclusion would be different if a contract were discovered. Even sovereigns may contract without derogating from their sovereignty. *Perry* v. *United States*, 294 U. S. 330, 353; 1 Oppenheim, International Law, 4th ed., §§ 493, 494; Hall, International Law, 8th ed., § 107; 2 Hyde, International Law, § 489. The states are at liberty, upon obtaining the consent of Congress, to make agreements with one another. Constitution, Art. I, § 10, par. 3. *Poole* v. *Fleeger*, 11 Pet. 185, 209; *Rhode Island* v. *Massachusetts*, 12 Pet. 657, 725. We find no room for doubt that they may do the like with Congress if the essence of their statehood is maintained without impairment [301 U.S. at 594-597].

This principle was affirmed and extended by this Court in sustaining the constitutionality of the amended Municipal Bankruptcy Act, even though the consent of the State to any particular composition, once given, could not be withdrawn. In *United States* v. *Bekins*, 304 U.S. 27, this Court said:

> It is of the essence of sovereignty to be able to make contracts and give consents bearing upon the exertion of governmental power. . . .
>
> Nor did the formation of an indestructible Union of indestructible States make impossible cooperation between the Nation and the States through the exercise of the power of each to the advantage of the people who are citizens of both [304 U.S. at 51-53].

There is no merit in appellants' contention that the resale-rate provisions must be held invalid because,

if lawful, the Congress may reach the same end without State consent. It is settled that the States may withhold from municipalities authority to execute rate contracts or may authorize such contracts subject to a continuing power in the States to set the contract aside. *Puget Sound Traction L. & P.Co.* v. *Reynolds*, 244 U.S. 574; *cf. Home Telephone Co.* v. *Los Angeles*, 211 U.S. 265. The States enjoy the same power with respect to the quasi-public electric membership corporations created under State laws. *Hopkins Fed. Sav. & Loan Ass'n* v. *Cleary*, 296 U.S. 315.

The argument is advanced that the sale of the Authority's power for distribution in competition with appellants, when coupled with agreements as to resale rates, has the necessary effect of regulating appellants' rates, or at least impairing the powers of the States to regulate them. It cannot seriously be urged that the Authority's method of disposition has been "contrived" for this purpose and that it serves no other or no legitimate federal purpose. These provisions are contained in contracts with many municipalities and cooperatives serving consumers which appellants either do not serve or have no franchise to serve (fdgs. 220, 221, r. 648, app. I, 90). It is not even claimed that the Authority has made or rejected any contracts with municipalities depending upon appellants' rates or any offer of appellants to reduce their rates (*cf.* fdg. 221, r. 648, app. I, 90).

What has been said with respect to the claimed regulation of the municipalities through the resale-rate provisions sufficiently disposes of the contention

as to the claimed regulation of the appellants. A similar contention was rejected in the *Duke Power* case, where the court observed that the exercise of a claimed power cannot be defeated because of its incidental effect on complainants' rates. *Duke Power Co.* v. *Greenwood County*, 91 F. (2d) 665, 673, 676; *cf. United States* v. *Carolene Products Co.*, 304 U.S. 144, 147; *Sonzinsky* v. *United States*, 300 U.S. 506, 513-514.

4. THERE IS NO MERIT IN THE CHARGE THAT THE AUTHORITY'S METHOD OF DISPOSITION CONSTITUTES "UNFAIR COMPETITION" IN EXCESS OF STATUTORY POWERS OR IN VIOLATION OF THE FIFTH AMENDMENT.

Appellants argue that the rates of sale by the Authority and its wholesale customers are at such low levels that they cannot be met in competition by the appellants, and hence the enforcement of the policy of the statute necessarily results in violation of the fifth amendment. A sufficient answer to this contention is furnished by the decisions of this Court in *Standard Scale Co.* v. *Farrell*, 249 U.S. 571; *Pennsylvania R.R.Co.* v. *United States R.R. Labor Board*, 261 U.S. 72; *United States* v. *Los Angeles R.R.*, 273 U.S. 299. Since the appellants are not forced by any compulsion of law or regulation to meet this scale of rates, a consideration of whether such rates would be confiscatory if imposed upon the appellants is clearly irrelevant. Completely ignoring the principle of the above authorities that the release of information and the comparison of standards does not constitute regulation by law, ap-

pellants would have this Court treat this case exactly as if the rate schedules at which Government power is sold had been imposed upon them by the order of a regulatory commission.

In addition to the fact that there is no regulation and therefore no confiscation, this argument ignores the settled doctrine that where a public body is otherwise authorized to sell water, gas, or electricity it can make such sales at any level of rates that it desires, even though such rates may be below the cost of production and may be at such a level that a private utility cannot compete. That this is true as to the State and its agencies, acting pursuant to statutory authority, is now too clear for argument. The due process clause of the fourteenth amendment does not prohibit the State or its properly authorized agencies from engaging in competition with a private utility operating in the same area, and where such a competitive situation exists the State or its agencies may perform utility services at rates below those of the private utility and even at rates which the utility cannot meet without the destruction of its business. *Walla Walla* v. *Walla Walla Water Co.*, 172 U.S. 1; *Skaneateles Water Co.* v. *Skaneateles*, 184 U.S. 354; *Joplin* v. *Southwest Mo. Light Co.*, 191 U.S. 150; *Helena Water Works Co.* v. *Helena*, 195 U.S. 383; *Knoxville Water Co.* v. *Knoxville*, 200 U.S. 22; *Madera Water Works* v. *Madera*, 228 U.S. 454; *Springfield Gas Co.* v. *Springfield*, 257 U.S. 66; *Vicksburg* v. *Henson*, 231 U.S. 259; *Puget Sound Co.* v. *Seattle*, 291 U.S. 619.

In these cases this Court has repeatedly held that even where a utility's business is destroyed as a collateral effect of otherwise authorized competition by a public body, there is no deprivation of property within the meaning of the due process clause. It must be equally true that any damage from sales of power by the Government is the indirect result of an exercise of the paramount power of Congress and is not a "taking" within the terms of the fifth amendment.

Both at the trial and in their brief (pp. 233-235) appellants have emphasized what they term "unfair competition." It is difficult to catalogue the charges grouped under this general term. It is still more difficult to determine whether appellants mean to insist that the charges if established would invalidate the statute and the acts done pursuant to it or merely that proof of the charges would entitle them to some form of limited relief against the specific acts claimed to constitute "unfair competition."

Regardless of the legal theory upon which these ill-defined charges of "conspiracy with the PWA," "duress," "coercion," "malice," and "solicitation" of appellants' customers are advanced, none of them are supported by the record.

As the trial court pointed out in its opinion, the facts in this record "do not evidence acts deemed coercion under settled legal principles," and "No malice in law is shown on this record" (app. I, 124). The allegations in the bill were that defendants had conspired to coerce complainants to sell their plants at distress figures and had coerced municipalities and coopera-

tives to set up their own distribution systems for the Authority's power.[40] The proof offered to support the charge of coercion of complainants to sell consisted of evidence that complainants were unable to compete with municipalities and cooperatives receiving grants and loans from the Public Works Administration and selling power at Tennessee Valley Authority rates. As the trial court pointed out, the municipalities and cooperatives being lawfully engaged in the business of selling electricity, the complainants have no legal right to be free from such competition even though it curtail or destroy their business, and complainants have no standing to challenge the validity of loans and grants to them. *Alabama Power Co.* v. *Ickes, supra.* Such competition, therefore, does not amount to legal coercion or duress.

The court found that no coercion was exercised by the Authority upon the municipalities and cooperatives. The evidence amply supports this finding. The facts are succinctly summarized in the court's opinion:

> Certain officials and employees of the TVA gave information, counsel and encouragement to municipalities and co-operatives at the request of such municipalities and co-operatives with respect to the general feasibility of setting up distribution systems for TVA power. The decision on such matters was made by the municipality or co-opera-

[40] So far as can be ascertained, the alleged "conspiracy" was to the effect that the Public Works Administrator would undertake to make loans and grants for the purpose of assisting the Authority in marketing its power. The only question which could be thus raised was the validity of the action of the Public Works Administrator. This is the very question adjudicated in *Alabama Power Co.* v. *Ickes, supra.* The Administrator was not a party in the case at bar. See *infra* pp. 216-220.

tive concerned. Under the statutes of Alabama, Tennessee and Mississippi, hereinafter cited, both municipalities and rural co-operatives are authorized to construct generating plants and distribution systems for the purpose of creating and distributing electric energy. Georgia has a similar statute concerning co-operatives. These cities and co-operatives were free to obtain information and counsel from any source. In each case the decision of the municipality involved was made either by the citizens at an election, or by its duly elected officers. The decision of the co-operatives involved was made by its lawful representatives. Presentation by the Authority of facts as to TVA rates and contracts for power given to citizens or officers of a city or rural co-operative at their request do not constitute intimidation or coercion [app. I, 127].

Cf. Steward Mach. Co. v. *Davis, supra; United States* v. *Bekins, supra.*

The attempt to show malice on the part of the Authority similarly failed. The record amply demonstrates that the marketing activities described above provide a market for widespread use of the surplus power developed at its navigation and flood-control dams, and that the means used to dispose of this power are reasonably appropriate to that end. The Authority has not utilized the preference provisions to favor those municipalities previously served by the appellant companies to promote public ownership in such municipalities. No effort has been made to limit the negotiation of contracts to those municipalities

previously receiving service from the appellant companies. On the contrary, most of the contracts executed by the Authority provide for service to municipalities which owned and operated their own municipal distribution systems prior to the passage of the Tennessee Valley Authority Act (fdgs. 219, 220, r. 648, app. I, 89, 90).

The facts brought out in the record abundantly support the following findings of the court:

> 186. The transmission lines substantially as constructed by the Authority are essential for service to the customers of the Authority now being served or under contract [r. 641, app. I, 80].
>
> 217. The officials of the Authority have taken the position in correspondence with municipal officials that the question of whether a municipality shall own and operate its own distribution system is one for the sole determination of the municipality [r. 648, app. I, 89].
>
> 227. The Authority has not induced the breach of any power contract between any complainant and any of its customers [r. 649, app. I, 92].
>
> 228. In marketing the power generated at its dams the Authority has not engaged in any solicitation of customers, coercion, duress, fraud, or misrepresentation in procuring contracts with municipalities, cooperatives, or other purchasers of power [r. 649-650, app. I, 92].

In view of this record, the court's conclusions that "no malice in law" was shown necessarily followed. It cannot seriously be suggested that the sole purpose of

the Authority in marketing the Government's power has been to injure the complainants. *Isbrandtsen-Moller Co.* v. *United States*, 300 U.S. 139, 145; *Beardsley* v. *Kilmer*, 236 N.Y. 80 (1923); *Passaic Print Works* v. *Ely & Walker Dry-Goods Co.*, 105 Fed. 163 (C.C.A. 8th, 1900); *cf. American Bank & Trust Co.* v. *Federal Reserve Bank*, 256 U.S. 350, 262 U.S. 643.

III

APPELLANTS HAVE NO STANDING TO MAINTAIN THIS SUIT.

The gravamen of appellants' case on the issue of their legal standing is, and must be, that they are threatened with substantial and irreparable injury from the competition of the Authority. It is in competition by the Authority, if anywhere, that there is to be found "action of a definite and concrete character constituting an actual or threatened interference with the rights of" the appellants (*Ashwander* v. *Tennessee Valley Authority*, 297 U.S. 288, 324). Our position on this issue is threefold: (1) Appellants' "franchises," if any, afford no basis for the maintenance of this suit; (2) most of the appellants lack standing to maintain this suit either because they are estopped or because the Authority is not engaged in or threatening any activities in their claimed territories; and (3) the only competition which will cause damage to any of the appellants is the competition of the

municipalities and cooperatives, and such competition does not involve legal injury.

1. APPELLANTS' "FRANCHISES," IF ANY, AFFORD NO BASIS FOR THE MAINTENANCE OF THIS SUIT.

Assuming that the Authority itself is to be regarded as in competition with appellants,[41] appellants have no standing by reason of their franchises or otherwise to challenge the validity of the grant of power to the Authority.

We consider first the status of appellants apart from franchises which they may possess. None of appellants are entitled to be free of competition. As they are not entitled to immunity from competition, they have no standing to question the authority of a rival to compete. This is made clear in *Railroad Co.* v. *Ellerman*, 105 U.S. 166. There the Court treated the question as one involving the standing of a wharfinger to enjoin competition by a railroad company having no charter power to engage in such a business. In rejecting the claim that damage from unauthorized competition affords a basis for injunctive relief, the Court said:

> But if the competition in itself, however injurious, is not a wrong of which he could complain against a natural person, being the riparian proprietor, how does it become so merely because the author of it is a corporation acting *ultra vires? The damage is attributable to the competition, and to that*

[41] It will be shown *infra* (pp. 182-192) that the only damage, actual or threatened, to any of appellants is properly attributable to the competition of the municipalities and rural cooperatives, and that such competition is *damnum absque injuria*.

> ***alone. But the competition is not illegal. It is not unlawful for any one to compete with the company, although the latter may not be authorized to engage in the same business.*** The legal interest which qualifies a complainant other than the State itself to sue in such a case is a pecuniary interest in preventing the defendant from doing an act where the injury alleged flows from its quality and character as a breach of some legal or equitable duty. A stockholder of the company has such an interest in restraining it within the limits of the enterprise for which it was formed, because that is to enforce his contract of membership. The State has a legal interest in preventing the usurpation and perversion of its franchises, because it is a trustee of its powers for uses strictly public. In these questions the appellee has no interest, and he cannot raise them in order, under that cover, to create and protect a monopoly which the law does not give him [pp. 173-174].

The same principles are applicable where the defendant is a public agency or officer and where the alleged lack of authority lies in an excess of constitutional rather than charter powers. Although the contrary position was strenuously advanced in the *Alabama Power* case, the argument was rejected, and necessarily so. To have held otherwise would have been to establish a novel doctrine of public law. For "Suitors may not resort to a court of equity to restrain a threatened act merely because it is illegal or transcends constitutional powers" (*United Gas Co.* v. *Railroad Comm.*, 278 U.S. 300, 310). Allegations of unconstitutionality do not dispense with the requirement that one who seeks

an injunction must show some " 'direct injury suffered or threatened, presenting a justiciable issue,' " the concept of "direct injury" meaning "a wrong which directly results in the violation of a legal right" (*Alabama Power Co.* v. *Ickes*, 302 U.S. 464, 479). Only where an injury of this character, which would otherwise be justiciable, is presented does occasion arise to consider the justification of the defendants' conduct founded on an act of the Legislature. The power of the courts to declare an act unconstitutional, it was said in *Massachusetts* v. *Mellon*, 262 U.S. 447,

> . . . amounts to little more than the negative power to disregard an unconstitutional enactment, which otherwise would stand in the way of the enforcement of a legal right. . . . If a case for preventive relief be presented the court enjoins, in effect, not the execution of the statute, but the acts of the official, the statute notwithstanding [p. 488].

The whole history of suits against Government officers, with the requirement in such suits that an actionable injury be shown apart from the alleged unconstitutionality, demonstrates the firmness of this principle. The right which will support a "case for preventive relief" may be founded on contract,[42] or on an interest entitled to protection from tortious invasion,[43] or on a

---

[42] E.g., *Walla Walla* v. *Walla Walla Water Co.*, 172 U.S. 1.

[43] E.g., the seizure of property, *In re Ayers*, 123 U.S. 443; *Lipke* v. *Lederer*, 259 U.S. 557; *Hamilton* v. *Kentucky Distilleries Co.*, 251 U.S. 146; the placing of a cloud on title, *Scully* v. *Bird*, 209 U.S. 481, 488-490; *Lane* v. *Watts*, 234 U.S. 525, 540; vexatious and oppressive litigation, *Ex parte Young*, 209 U.S. 123, 160; threats of coercion, *Pierce* v. *Society of Sisters*, 268 U.S. 510; *Truax* v. *Raich*, 239 U.S. 33.

statute conferring a privilege.[44] Only if such a case is presented does it become necessary or appropriate to inquire into the validity of the statute set up by the defendant in justification. Putting aside the question of franchise rights, which will be dealt with separately, it seems plain enough that no case for preventive relief is made out merely by coupling a showing of competition with an allegation that the competition is beyond the constitutional power of the Authority.

Appellants contend, however, relying upon *Frost* v. *Corporation Comm.*, 278 U.S. 515, that as holders of franchises they are entitled to challenge the validity of the Authority's competition. In the *Frost* case the plaintiff held a certificate of public convenience and necessity to operate a cotton gin, the certificate having been issued by a State commission under a statute which provided that the commission "may authorize a new ginning plant only after a showing is made that such plant is a needed utility" (p. 519). A majority of the Court in the *Frost* case were of opinion that as the holder of such a certificate of convenience and necessity the plaintiff was entitled to enjoin the issuance of a certificate to a competing cooperative on the ground that the amendment to this statute, granting to cooperatives the privilege of engaging in the same business without similar limitations, was an unconstitutional discrimination under the fourteenth amendment. In short, as explained in subsequent decisions, that case decided that a franchise of the character there con-

[44] E.g., the use of the mails, *American School of Magnetic Healing* v. *McAnnulty*, 187 U.S. 94, 110; *Baldwin Co.* v. *Robertson*, 265 U.S. 168.

ferred under State law entitled the holder to attack the competition of another seeking to operate without a similar franchise or under a void franchise. In *Corporation Comm.* v. *Lowe*, 281 U.S. 431, the principle was thus stated:

> In *Frost* v. *Corporation Commission of Oklahoma*, 278 U. S. 515, the Court concluded that one who had complied with the statutes of Oklahoma and had obtained a permit to operate a cotton gin, held a franchise which constituted a property right, and that while this right did not preclude the State from making similar valid grants to others, it was an exclusive right as against attempts to operate a competing gin without a permit or under a void permit [p. 435].

See also *Alabama Power Co.* v. *Ickes, supra* at 484-485.

The *Frost* case did not hold that a franchise holder has the right to question generally the charter or constitutional powers of a competitor, as appellants seek to do in this case. Appellants do not base their attack upon the lack of similar franchises by the Authority. This suit is neither for the protection of any particular franchise nor for the annulment of a void franchise. Appellants frankly state their position to be that the "holder of a non-exclusive franchise has a right to invoke a judicial determination of whether any actual or threatened competition with him is legal" (br. 196-197). This contention that a franchise holder has the right to contest the legality of competition generally and on *any* grounds goes far beyond the holding of the *Frost* case and is in direct conflict with this Court's decision in the *Ellerman* case, *supra*.

The appellants here have no franchises, so far as appears, which confer protection against unauthorized competition. Two classes of so-called franchises are relied upon by appellants (br. 61-63, 196). One type is granted by the municipalities and counties, the other by the States. Each class will be considered in turn, with respect to its nature and its relevance to the operations of the Authority.

Municipal and county easements or "franchises": The municipal and county franchises, so called by appellants, have been carefully described in finding 28 (r. 599, app. I, 19) based on a stipulation of the parties (r. 2453). It appears that appellants have been issued "franchises, licenses, or easements by most but not all of the municipalities and by most but not all of the counties in which they respectively operate electric facilities" (fdg. 28, r. 599, app. I, 19). Concerning these franchises, licenses, or easements the court found, on the basis of the stipulation:

> Said franchises, licenses, or easements vary in original term and in unexpired term from a few months to more than 50 years, and many are unlimited in term. Most of the said franchises, licenses, or easements purport to be nonexclusive. Most of said franchises, licenses, or easements grant rights not limited within the respective municipalities or counties, but some are limited to particular streets or highways or to portions of the respective counties or municipalities. Some of the franchises, licenses, or easements purport to grant the right to construct and occupy the streets and highways with electrical facilities; some

of said franchises, licenses, or easements purport to grant, for the purpose of engaging in the business of selling and distributing electricity, the right to occupy the streets and highways; and some of said franchises, licenses, or easements purport to grant the right to occupy the streets and highways with electrical facilities and to engage in the business of selling and distributing electricity within the respective municipalities and counties [fdg. 28, r. 599-600, app. I, 19-20].

These local franchises, licenses, or easements merely confer the privilege of occupying streets and highways with electrical facilities in connection with the carrying on of the utility business. They are not franchises or certificates of convenience and necessity to engage in the business of selling electricity. This fact appears from the record and also from the constitutions and statutes and from the decisions of the States. The pertinent constitutional and statutory provisions confer on the municipalities and counties only the power to withhold consent to the use of public streets and highways or to grant such consent upon appropriate conditions (see, e.g., Alabama Const., art. XII, sec. 220; Alabama Code (1928) secs. 2016, 7017, 7024, 7035; Kentucky Const., sec. 163; Mississippi Code (1930) secs. 2400, 2401, 2414; Williams' Tenn. Code (1934) secs. 3326 (5), 3326 (6)).

The nature of such street and highway franchises was explained in *Bland* v. *Cumberland Tel. & Tel. Co.*, 33 Ky. Law 399, 109 S.W. 1180 (1908). In that case the defendant was sued for breach of contract and fail-

ure to provide and maintain connecting facilities as required by the contract in question. The defense was made that the complainant was operating without a franchise to occupy the streets and highways. The complainant replied that none of its lines occupied the public streets. The court held that the reply was good, and explained the nature of a municipal street franchise as follows:

> It is not, as sometimes seems to be thought, the right to operate a telephone exchange in a city. That right is not one to be granted or denied by the municipality any more than it could grant or refuse a franchise to conduct a dry goods store within the city. The franchise under discussion is the permission to do something which the city has the right of control over—that is, the occupancy of some part of the public streets [109 S.W. at 1181].

Cf. Mayor of Knoxville v. *Africa*, 77 Fed. 501, 507 (C. C.A. 6th, 1896).

A case which did not arise in any of the States here involved but which has been widely cited and is perhaps the leading authority on the subject is *Bartlesville Elec. L. & P.Co.* v. *Bartlesville I.Ry.Co.*, 26 Okla. 453, 109 Pac. 228 (1910). There the court said, in explaining the nature of a franchise to use the streets and highways:

> The general subject of the ordinance is the granting of the franchise to construct, maintain, and operate an electric light and power plant. The

> statement of this purpose in the language of the title carries with it the suggestion that the ordinance gives to the grantee the right to use the streets and public grounds for that purpose, and it would occur to any one from the title that such was the object of the ordinance, *for the granting of the right to construct and operate a light and power plant in fact conveys no other right than the right to use the streets and public grounds. Unless the grantee desires the use of the streets and public grounds, a franchise is not necessary;* but it would be difficult, if not almost impossible, to construct and operate such a plant without the use of the streets and public grounds, and the right to do the former suggests the latter as a necessary incident thereto [109 Pac. at 230].

Such is the limited scope of the local franchises, licenses, or easements of appellants. At best they may be claimed to confer protection against the exercise of a similar privilege—the occupancy of streets and highways—without a similar grant or under a void grant. *Cf. Memphis Street Ry. Co.* v. *Rapid Transit Co.*, 138 Tenn. 594 (1917); *Montgomery* v. *Orpheum Taxi Co.*, 203 Ala. 103 (1919); *Consolidated Elec.L.Co.* v. *People's Elec.L. & G.Co.*, 94 Ala. 372 (1892); *People's Transit Co.* v. *Louisville Ry. Co.*, 220 Ky. 728 (1927); *Bland* v. *Cumberland Tel. & Tel. Co., supra; McInnis* v. *Pace*, 78 Miss. 550 (1901). No case has been cited by appellants, and we know of none, in the courts of the States in question which extends the protection of the local franchise beyond this point.

It is therefore of the utmost significance that appellants have not alleged or attempted to prove that the Authority is in fact occupying the streets or highways of counties or municipalities with electrical facilities. In fact, with insignificant exceptions, no such use could be shown.[45] Furthermore, whether necessary or not and whatever the nature of the street franchises or easements, the Authority has in fact secured permission from the municipalities and counties for use of the streets and highways, as the proof introduced by complainants shows (comp. exs. 214-223, 225-264, r. 3022-3026, 3026-3037). And appellants have made no effort to establish the invalidity of any easement in use by the Authority.

State "franchises": The facts with respect to the so-called State "franchises" upon which appellants rely (br. 61-63) are set forth in a stipulation entitled "Stipulation Respecting Incorporation and Domestication of Complainant Companies" (comp. ex. 2, r. 2450; *cf.* fdgs. 1, 6-23, r. 585-597, app. I, 1, 2-16). These so-called "franchises" confer, of course, only the right to do business as a corporation; indeed, practically all of the appellants were incorporated in States other than those in which they operate and have merely qualified under the general laws with respect to the do-

[45] The occupancy by the Authority of streets within city limits is and will be practically negligible in view of the fact that the cities own and operate the distribution facilities. Practically all of the Authority's lines are built on its own rights-of-way. For example, in Tennessee the Authority owns altogether only about ten miles of transmission lines which occupy public streets or highways, and most of these were sold to the Authority by appellant The Tennessee Electric Power Company. In Alabama the Authority has less than five miles of line occupying public streets or highways. As pointed out in the text, for this limited use of the streets and highways the Authority has obtained county and municipal licenses.

ing of business by foreign corporations (fdgs. 6-23, r. 585-597, app. I, 2-16; see, e.g., Public Acts of Tenn. (1877) ch. 31, as amended by Public Acts of Tenn. (1891) ch. 122, and Public Acts of Tenn. (1895) ch. 81). *Cf. Tennessee Eastern Elec. Co.* v. *Hannah*, 157 Tenn. 582 (1928). Surely it cannot be contended that such qualification affords the basis for an action to restrain competition. *Cf. Railroad Co.* v. *Ellerman, supra.*[46]

The appellants, so far as appears, have obtained no certificates of convenience and necessity such as would entitle them to enjoin unauthorized competition under the doctrine of the *Frost* case. At the time the appellants entered into the utility business in the respective States no such certificates were required. In short, the States did not hold out to appellants any grant of immunity against competition on the part of others. Statutes in Alabama, Kentucky, and Tennessee have established requirements for certificates of convenience and necessity for extensions of existing systems (Alabama Code (1928) sec. 9795; Carroll's Ky. Stat. (1936) sec. 3952-25; Williams' Tenn. Code (1934) secs. 5502-5503). The only evidence submitted with

---

[46] The pertinent statutory provisions are the following: *Tennessee:* Public Acts of Tenn. (1875) ch. 142 (providing for incorporation for mining and manufacturing purposes), as amended by Public Acts (1909) ch. 127 (authorizing incorporation for the purpose of carrying on certain utility businesses); Public Acts (1877) ch. 31 (providing for the qualifying of foreign corporations to do business in the State of Tennessee), as amended by Public Acts (1891) ch. 122, and Public Acts (1895) ch. 81; *Mississippi:* Mississippi Code (1930) sec. 4130 *et seq.*; *Alabama:* Alabama Code (1928) secs. 6964, 7036, 7193 *et seq.*; *Kentucky:* Carroll's Ky. Stat. (1936) sec. 538 *et seq.*

None of the appellants, except the Franklin Power & Light Company (comp. ex. 21, r. 2498), have been required to obtain commission approval of their charters required under section 5453 of Williams' Tennessee Code (1934), and the Franklin Power & Light Company is not threatened with any competition (fdg. 111, r. 625, app. I, 57).

respect to the seeking of certificates of convenience and necessity consists of certain orders of the Public Service Commission of Alabama approving certain extensions of lines by the Alabama Power Company (comp. ex. 88, r. 2559). So far as appears, however, the certificates of this one company do not involve the territory outside the ceded area in which the Authority is alleged to be competing with the company.[47]

The case is no better for appellants even assuming the appellants have certificates of public convenience and necessity in the same category and conferring the same rights as the type of franchise involved in the *Frost* case. Appellants themselves have pointed to the statutory exemption of the Authority from the jurisdiction of the public service commissions but have not attacked the validity of such exemption as being discriminatory under the fourteenth amendment. It is only by showing that this statutory exemption is discriminatory under the fourteenth amendment that appellants can challenge the Authority's failure to secure similar franchises or licenses. No such constitutional objection has been advanced in the bill of complaint or in the appeal to this Court. The validity of such statutory exemption and the classification by the States might well rest on the distinctive character of the Authority as a public, nonprofit undertaking.

[47] The appellant companies operating in Tennessee may have received commission approval (under sec. 5453 of Williams' Tenn. Code (1934)) of street franchises or easements granted by some counties and municipalities in which they claim to be threatened with competition. Since, as pointed out *supra* (p. 170), the Authority does not use the streets and highways so as to require the municipal and county franchises or licenses, it would not require commission approval irrespective of the statutory exemption of the Authority.

quite apart from any question of the validity of its operations under the Federal Constitution.[48] *Cf. Alabama Power Co.* v. *Cullman County Elec. Membership Corp.*, 234 Ala. 396 (1937). But since the question has not been presented, it is unnecessary to pursue it further.

It was held in the *Frost* case that the grant of a franchise by a State confers protection against similar but invalid grants made to others.[49] It has never been supposed that such a State franchise confers or purports to confer protection against actions of the Federal Government. The principle of the *Frost* case was, it is submitted, correctly interpreted by Judge Parker in *Carolina Power & Light Co.* v. *South Carolina Public Service Authority*, 94 F. (2d) 520 (C.C.A. 4th, 1938), *cert denied*, 58 Sup. Ct. 1048:

> Plaintiffs rely upon the case of Frost v. Corporation Commission, 278 U.S. 515, 49 S.Ct. 235, 73

---

[48] The only contention appellants have made concerning this exemption is that the States may not enlarge the powers granted the Federal Government (*cf.* br. 180-186). So far as the right to sue is concerned, the only pertinent question would be whether, apart from the constitutional validity of the Tennessee Valley Authority Act, the States may exempt the Authority from commission jurisdiction.

[49] The cases of *Campbell* v. *Arkansas-Missouri Power Co.*, 55 F. (2d) 560 (C.C.A. 8th, 1932); *Arkansas-Missouri Power Co.* v. *Kennett*, 78 F. (2d) 911 (C.C.A. 8th, 1935); *Kansas Gas & Elec. Co.* v. *Independence*, 79 F. (2d) 32 (C.C.A. 10th, 1935), cited on page 196 of appellants' brief, represent the limits to which any federal court has extended the holding of the *Frost* case. In these cases it was held that a company holding a municipal franchise may attack the legality of acts of the municipalities in making contracts or borrowing funds for purposes of competition. It is unnecessary in the present case to consider whether those decisions improperly extended the rule of the *Frost* case, since here no action of the States or municipalities is attacked. (*Cf. Carolina Power & Light Co.* v. *South Carolina Public Service Authority*, 94 F. (2d) 520, 525 (C.C.A. 4th, 1938), *cert. denied*, 58 Sup. Ct. 1048, in which the soundness of these decisions is questioned.) None of these cases went so far as to hold that a municipal franchise holder may attack the validity under federal law of acts of a federal agency.

L.Ed. 483; but the extent of the holding there was that the *holder of a nonexclusive franchise was entitled to enjoin the competition of one who was subject to but did not comply with the franchise requirements of the same statute.* The rationale of the decision is that a state statute regulating a business affected with a public interest and requiring a determination of public convenience and necessity creates a quasi monopoly for those engaged therein and gives them a right *to enjoin competition by those who have not complied with its provisions* [94 F. (2d) at 524].

There is no attack in the present case on the acts of the Authority under State law or upon the State laws themselves under the fourteenth amendment. The attack is directed solely at the acts and the power of the Federal Government. Against such acts, local easements and franchises to use public ways obviously confer no standing to complain.

The conclusion seems inescapable that appellants have no greater standing to complain of competition than would any ordinary corporation engaged in any business; and in such circumstance, the *Ellerman* case is controlling.

2. MOST OF THE APPELLANTS LACK STANDING TO MAINTAIN THIS SUIT EITHER BECAUSE THEY ARE ESTOPPED OR BECAUSE THE AUTHORITY IS NOT ENGAGED IN OR THREATENING ANY ACTIVITIES IN THEIR CLAIMED TERRITORIES.

Even assuming that the appellants, as a class, may challenge alleged competition by the Authority, most of the particular appellants are not entitled to maintain this suit. For the record in this case dis-

closes facts that, upon accepted principles of equity, preclude all or some of the appellants from asserting any rights against the appellees.

(a) *Complainants in whose claimed territory the Authority is not carrying on or does not threaten to carry on any activities:* As to nine of the complainants, it is undeniable on the record that in no part of their territory has the Authority built or authorized any transmission line, sold or authorized the sale of any electricity, or contracted for or authorized contracts for the sale of any electricity by others in that territory. The district court found on the testimony of witnesses for the complainants, representing each of the companies mentioned, the following:

> The Tennessee Valley Authority is not now constructing and has not authorized the construction of any transmission line, has not sold or authorized the sale of any electricity, and has not entered into or authorized any contracts for the sale of electricity in any part of the territory claimed by the complainants Franklin Power & Light Company, Appalachian Electric Power Company, Carolina Power & Light Company, Holston River Electric Company, Kingsport Utilities, Inc., Kentucky & West Virginia Power Company, Tennessee Eastern Electric Company, Birmingham Electric Company, East Tennessee Power & Light Company, and Mississippi Power & Light Company, except that it has constructed a transmission line at the expense of the War Department connecting the Authority's lines to the site of Sardis Dam in the claimed territory of the Missis-

sippi Power & Light Company [fdg. 111, r. 625, app. I, 57].[50]

A court of equity will not enjoin the carrying out of a great public enterprise at the instance of complainants so situated. As this Court said in *McCabe* v. *Atchison, T. & S.F.Ry.Co.*, 235 U.S. 151:

> The desire to obtain a sweeping injunction cannot be accepted as a substitute for compliance with the general rule that the complainant must present facts sufficient to show that his individual need requires the remedy for which he asks [p. 164].

Insofar as these complainants are concerned, it is clear that the following language of the opinion in the *Ashwander* case is applicable:

> The pronouncements, policies and program of the Tennessee Valley Authority and its directors, their motives and desires, did not give rise to a justiciable controversy save as they had fruition in action of a definite and concrete character constituting an actual or threatened interference with the rights of the persons complaining. The judicial power does not extend to the determination of abstract questions. *Muskrat* v. *United States*, 219 U. S. 346, 361; *Liberty Warehouse Co.* v. *Grannis*, 273 U. S. 70, 74; *Willing* v. *Chicago Auditorium Assn.*, 277 U. S. 274, 289; *Nashville, C. & St. L. Ry. Co.* v. *Wallace*, 288 U. S. 249, 262, 264 [297 U.S. at 324].

---

[50] The Holston River Electric Company is not a party to this appeal, its motion to dismiss having been granted by this Court.

It is enough to say of the case of these complainants that:

> Claims based merely upon "assumed potential invasions" of rights are not enough to warrant judicial intervention. *Arizona* v. *California*, 283 U. S. 423, 462 [*id.* at 324-325].

(b) *Complainants who are estopped to challenge the legality of activities of the Authority in their claimed territories:* Of the remaining complainants, four are subsidiaries of the Commonwealth & Southern Corporation, namely, Alabama Power Company, Mississippi Power Company, The Tennessee Electric Power Company, and Southern Tennessee Power Company (fdg. 99, r. 623, app. I, 54; def. ex. 135, r. 4171, 4174-4175). The record shows that the great bulk of the transmission lines belonging to the Authority are located in the territory claimed by these complainants (*cf.* comp. ex. 327 in *Reproductions of Certain Original Exhibits Submitted by Appellants* with def. ex. 136A in *Reproductions of Certain Original Exhibits Submitted by Appellees*).

The Alabama Power Company, the Mississippi Power Company, and The Tennessee Electric Power Company[51] were parties to the contract of January 4, 1934. Under this contract these complainants voluntarily accepted and received many benefits from the

[51] The complainant Southern Tennessee Power Company operates only as a transmission company transmitting electric energy from Wilson Dam to the Alabama-Tennessee line, thereby connecting Wilson Dam and the transmission system of The Tennessee Electric Power Company. It is not presently engaged either in the distribution, generation, or sale of electric energy (fdg. 112, r. 626, app. I, 58). It is acting solely as an agency and instrumentality of The Tennessee Electric Power Company.

Tennessee Valley Authority Act and from the acts of defendants pursuant thereto which are challenged here; they have affirmatively contributed to the execution of many of the activities of the Authority now complained of; they have purchased over one billion kilowatt-hours of electric energy from the Authority (fdg. 196, r. 643, app. I, 82; fdgs. 102-110, r. 623-625, app. I, 54-57).

Insofar as the sale of power is concerned, these complainants have continued their purchases, since the *Ashwander* decision, in a greater degree and from additional sources operated by the Authority. Norris Dam began generating power on July 28, 1936, and Wheeler Dam on November 9, 1936 (fdg. 250, r. 654, app. I, 98). All power purchased by the Alabama Power Company and The Tennessee Electric Power Company after these dates was supplied from an interconnected pool, including the power generated at each of these dams (*ibid.*). In the last seven months of 1936 the sales to the Commonwealth and Southern system constituted 83% of the total Tennessee Valley Authority sales (fdg. 251, r. 654, app. I, 98). Furthermore, in those seven months, during which the stream flow of the Tennessee River was abnormally low, the total amount of power so purchased by the Commonwealth and Southern companies (552,562,368 kwh) was more than the total which could have been generated at Wilson Dam without the benefit of releases of stored water from Norris Dam (*ibid.*), and in three months of that period these companies purchased more power from the Authority than could have been gener-

ated by Wilson Dam alone, even with the benefit of the stored releases from Norris Dam (*ibid.*).

In the *Ashwander* case four members of the Court were of the opinion that the mere purchase of power from the Authority before and after the signing of the contract of January 4 was sufficient to estop the Commonwealth & Southern Corporation and its subsidiaries from attacking the validity of the sale of power by the Authority, under the familiar principle that one who avails himself of the benefits of a statute will not be heard to assail its validity. (See 297 U.S. at 341.) The majority of the Court apparently confined its consideration to the purchase of electric energy by the power company prior to its entrance into the contract in question, holding that, while this prior purchase "may have a bearing upon the question before us," "it is by no means controlling" since "The contract in suit manifestly had a broader range" (*Ashwander* v. *Tennessee Valley Authority, supra* at 323). We construe the decision to mean that the acceptance of benefits under one provision of an act of Congress does not preclude an attack on the validity of separable provisions, but we do not understand this Court to have held that the provisions under which the benefits were acquired may likewise be challenged. The decision would otherwise be difficult to reconcile with the settled precedents which were accepted as authoritative in the *Ashwander* case itself. *Cf. Great Falls Mfg. Co.* v. *Attorney General*, 124 U.S. 581; *Wall* v. *Parrot Silver & Copper Co.*, 244 U.S. 407; *St. Louis Co.* v. *Prendergast Co.*, 260 U.S. 469.

The purchase of power has an important bearing upon the question in this case, since one of the primary contentions of the complainants in this suit is that the electricity at the dams is illegally acquired and that the Authority has therefore no right either to sell the power at the dam or to transmit it to the market. It is difficult to see how these complainants, who have purchased such a large proportion of the electricity generated by the Authority, can be heard to challenge the legality of the sale of such electricity by the Authority to others. Indeed, it should be observed that the Alabama Power Company is even now purchasing power from the Authority which is transmitted to the company and delivered at the city gates for distribution in several municipalities in northern Alabama served by the company. The sale and method of disposition of power to the Alabama Power Company is not different in any material respect from the sale and method of disposition of such power to other purchasers (fdg. 128, r. 629, app. I, 62; Barry, r. 870-871). Here the record shows a complainant seeking to challenge the legality of the sale and delivery to municipalities of electricity from the same source as that delivered to the complainant and over the same transmission facilities used to serve the complainant.

The complainant members of the Commonwealth and Southern system have not only purchased power from the Authority but have accepted the benefits and assisted in the execution of the "broader range" of activities contemplated by the contract of January 4, which are of the identical type challenged here. Under

that contract the Alabama Power Company and the Mississippi Power Company sold to the Authority the transmission lines, substations, and rural lines of those companies in six counties in Alabama and ten counties in Mississippi, together with the franchises, contracts, and going business attaching to those properties, in return for valuable considerations (fdgs. 102, 103, 105, r. 623-624, app. I, 54-56). That absolute conveyance necessarily precludes these companies from attacking the sale of power by the Authority in this so-called "ceded" area. Further, the contract by its express terms contemplated the very types of activity and indeed some of the same actual deliveries as those now sought to be challenged.

These appellants have accepted the benefits of the Authority's agreement under the contract to refrain from selling to other customers outside of a particular specified area (def. ex. 143A, sec. 7, r. 4195, 4199). As part of the consideration they consented under provisos of this contract to the Authority's sale of power to many municipalities and rural areas outside the territory served by the facilities conveyed, and the Authority is now serving such municipalities and rural areas and has provided facilities therefor (fdgs. 107, 108, 109, r. 625, app. I, 56, 57). They have sold lands to the Authority for the Wheeler Dam site (see *Ashwander* v. *Tennessee Valley Authority, supra* at 316). They have delivered power essential to the construction of other projects, including Norris and Chickamauga Dams (fdg. 110, r. 625, app. I, 57).

This record, it is submitted, serves to make the present case a more clearly appropriate one than was the *Ashwander* case for the application of the principle that a party who avails himself of the benefits of a statute may not attack its validity. *Great Falls Mfg. Co.* v. *Attorney General, supra; Wall* v. *Parrot Silver & Copper Co., supra; St. Louis Co.* v. *Prendergast Co., supra.* To grant the relief requested by the bill would secure to these very complainants the same monopolistic position with reference to the benefits of power at these dams that they enjoyed at Wilson Dam before the passage of the Tennessee Valley Authority Act.

3. THE ONLY COMPETITION WHICH WILL CAUSE DAMAGE TO ANY OF THE COMPLAINANTS IS THE COMPETITION OF THE MUNICIPALTIES AND COOPERATVES, AND SUCH COMPETITION DOES NOT INVOLVE LEGAL INJURY.

Apart from the considerations discussed in the previous section, none of the complainants are entitled to challenge the validity of the Authority's activities because the character of the service does not give rise to competition between complainants and the Authority.

The claims of the West Tennessee Power & Light Company,[52] the only complainant not discussed in the preceding section, are typical of the claims of the limited number of complainants in whose claimed territory the Authority is selling power, and hence a discussion of the problem in terms of that company's

52 Other parties to the action in the trial court, namely, the Tennessee Public Service Company, the Holston River Electric Company, and the Kentucky-Tennessee Light & Power Company, have withdrawn from the appeal on their own motion. The situation as to the Memphis Power & Light Company is discussed *supra*, p. 5.

situation may be helpful even though other complainants may be concerned.

Competition by municipalities: The first question presented is whether or not the West Tennessee Power & Light Company (and any other complainant similarly situated) may challenge the validity of the Authority's delivery of power at wholesale to the city of Jackson, Tennessee, for distribution by the municipality in competition with complainant. The complainant can show a threat of substantial damage due to the loss of customers to the municipal distribution system. But the competition will be that of the city and not of the Authority. As shown by the findings of fact, the Authority stands in the relation of a wholesaler to municipalities and cooperatives, which are autonomous public bodies (fdgs. 135-147, r. 630-632, app. I, 65-68) owning and operating their own distribution systems (fdgs. 130-131, r. 629, app. I, 63). The municipal competition is not here challenged as unlawful, nor could it be in view of the decisions of the State courts. See *Oppenheim* v. *Florence*, 229 Ala. 50 (1934); *Tennessee Public Service Co.* v. *Knoxville*, 170 Tenn. 40 (1936); *Memphis Power & Light Co.* v. *Memphis*, 172 Tenn. 346 (1937); *Kentucky-Tennessee L. & P.Co.* v. *Clarksville*, Tenn. Sup. Ct., 1937 (see app. II, 132).

This situation presented by the threatened competition of the city is in all essential respects similar to that presented in *Alabama Power Co.* v. *Ickes, supra,* and *Duke Power Co.* v. *Greenwood County*, 302 U.S. 485 (*cf. West Tennessee P. & L.Co.* v. *Jackson*, 97 F.

(2d) 979 (C.C.A. 6th, 1938), *cert. denied*, Oct. 10, 1938, No. 239). As was there pointed out, the loss of business due to lawful municipal competition, even though the competition is made possible by grants of federal funds challenged as invalid and even though the complainants are franchise holders, constitutes no legal injury. It is immaterial whether the United States furnishes funds for the construction of a competitive municipal system or the wholesale supply of electric energy to such a system. In neither case is the United States threatening to compete with the existing utility for its power business. Indeed, the similarity of the present case to the *Duke Power* case is particularly marked, for there the federal funds were furnished to construct not merely a municipal distribution system but a municipal generating system as well, and thus the permanent supply of electric energy was made possible by the challenged federal grant.

It may be argued by appellants that the cases should be distinguished because here the activity of the Authority in selling energy to the municipal system is more continuous than in the case of the grant of funds for the construction of such a system. But the essential feature in both cases is that the threatened competition is that of the municipality and not of the United States. Moreover, the *Alabama Power* and *Duke Power* decisions rested on prior decisions involving a relationship to the competition which was more continuous than the giving of funds. *Railroad Co.* v.

Ellerman, supra, was cited by the Court as "directly in point." There the plaintiff sought unsuccessfully to enjoin the execution of a lease of property by a railroad for use as a wharf on the ground that such a use was *ultra vires*. There the railroad was continuously the owner and supplier of the property used in competition, no less than the Authority will be the continuous wholesale supplier of the electricity to be used by the municipalities in competition. Similar cases are *United States* v. *Dern*, 68 F. (2d) 773 (App.D.C., 1934), *cert. denied*, 292 U.S. 642, and *Milwaukee Horse & Cow Comm. Co.* v. *Hill*, 207 Wis. 420 (1932), both cited in the *Alabama* decision. No different question is raised with respect to complainants' standing to challenge the Authority's contracts with any other municipality.

Competition by rural cooperatives: The West Tennessee Power & Light Company (and any other complainant similarly situated) may not challenge the validity of the power sales contract between the Tennessee Valley Authority and the Southwest Tennessee Electric Membership Corporation. This Southwest Tennessee Electric Membership Corporation, like the other cooperatives to whom the Authority is selling electricity, is a State-chartered organization which purchases its power at wholesale from the Authority, owns and operates its own rural distribution system, and sells to the rural residents the power which it purchases at wholesale from the Authority (fdgs. 132, 136-141, r. 629-631, app. I, 63, 65-66).

The legality of competition by these rural cooperatives with complainant power companies is settled. See *Alabama Power Co.* v. *Cullman County Elec. Membership Corp., supra.* As in the case of the municipalities, any competition with appellant is that of the cooperatives. The decisions in the *Alabama* and *Duke Power* cases are directly applicable.

Any contention that competition by these rural cooperatives is in fact competition by the Authority because of the allegation that the Authority is instrumental in establishing them is in the teeth of the findings of the court: that these cooperatives have been established by the residents of the various communities on their own initiative (fdg. 142, r. 631, app. I, 67); and that whatever part the Authority has taken in the construction of distribution facilities (see fdgs. 133-134, r. 630, app. I, 64), it has not continued to participate in the conduct of the affairs of the cooperatives except to supply power to them at wholesale under the contracts (fdgs. 144, 145, 147, r. 632, app. I, 67-68).

Contracts with industrial concerns: If the Commonwealth and Southern companies are permitted to maintain this suit despite their acceptance of benefits under the Tennessee Valley Authority Act, an additional question will be presented with respect to them. That question is the right of those companies to challenge the Authority's contracts with industrial concerns for the sale of power in bulk lots for industrial use. All of these industrial customers are located either in the area ceded by the Commonwealth and Southern companies under the contract of January 4, con-

sidered in the *Ashwander* case, or in the claimed territory of the Commonwealth and Southern companies.

None of the industrial customers outside the ceded area, purchasing or under contract to purchase power from the Authority, were previously served by any of the complainants (fdgs. 208, 212, r. 645, 646, app. I, 86, 87). All the industrial customers outside the ceded area are large electrochemical or electrometallurgical companies which constitute new loads in the territory (fdgs. 150, 151, r. 633, app. I, 69). Their requirements include a large amount of secondary power, for which the operations of such industrial plants are peculiarly adapted (fdgs. 153, 154, 156, r. 633-634, app. I, 70). The complainants do not maintain excess capacity and facilities for meeting such large and unusual loads as those of these industrial customers but must construct facilities required for service to such companies (fdg. 152, r. 633, app. I, 69). No showing was made by complainants that any of these new industrial loads, with one exception, would have constituted a probable market for complainants' power.[53] The one exception is the Monsanto Chemical Company, which had negoti-

[53] The references in footnote 2 at pages 192 and 193 of appellants' brief relating to alleged competition for industrial contracts should receive a careful examination. There was no evidence offered that complainants wanted, tried to secure, or were able to serve the new loads brought in by the Victor Chemical Company, the Aluminum Company, or the Electro-Metallurgical Company. The record references cited on these contracts are merely to the reprints of the contracts in the recent annual report of the Authority.

The Volunteer Portland Cement Company contract is not involved. The company (the Tennessee Public Service Company) serving that concern has withdrawn from the appeal.

The reference to the competition for the business of the L. N. Gross Company has no significance in view of the fact that the Authority has no contract with that concern, which buys its power from the Lincoln County Electric Membership Corporation, a wholesale purchaser from the Authority (Karr, r. 2203).

ated with The Tennessee Electric Power Company (Willkie, r. 1503-1504). The complainants' own witness testified that the company did not have facilities available from which the load of the industrial concern could have been supplied (Miller, r. 1115).

The only proof offered by the complainants bearing directly upon the question of damage to them because of these industrial contracts was that they maintained large staffs whose duty it was to interest industrial concerns to locate on the lines of the companies, and that they had made substantial sales to new industries over a period of years. They did not connect this effort to any industrial contract of the Authority, save that of the Monsanto Company. This evidence, in a record where it is undisputed that the complainants, and particularly the Commonwealth and Southern companies, are faced with a shortage of power in the next few years unless new generating capacity is acquired (fdgs. 236-237, r. 652, app. I, 94-95; comp. ex. 372 in *Reproductions of Certain Original Exhibits Submitted by Appellants*; Middlemiss, r. 1272-1274), is not a sufficient showing of legal injury to entitle the complainants to challenge the legality of these industrial contracts. *Cf. Alabama* v. *Arizona*, 291 U.S. 286, 292.

What has been said sufficiently demonstrates that the threatened damage of which appellants complain will not be due to competition by the Authority. The alleged threat of a loss of rural business illustrates the point. Complainants even now assert that there is little or no unattached rural demand now unserved

which could be served economically. (See, e.g., Street, r. 978; Ostermueller, r. 991; Bonner, r. 1006-1007; Jacobs, r. 1016). This is the position complainants have always taken with reference to rural service, and it explains why the rural residents served by the cooperatives under contract with the Authority have been heretofore without any electric service. The record shows that, apart from the customers served by the lines acquired under the contract of January 4, only two of the rural residents served by the cooperatives under contract with the Authority had ever been served by complainants (fdg. 206, r. 645, app. I, 85). Complainants cannot reasonably complain of damages by reason of the loss of a market which they have heretofore regarded, and still consider, unprofitable (fdg. 249, r. 654, app. I, 98).

Complainants' case is no better with respect to the alleged competition for the wholesale municipal markets under contract with the Authority. Complainants never offered to prove that, but for the Authority, these municipalities would have purchased their power supply from complainants, the municipalities' competitors. The alleged competition with the Authority for the wholesale business of the municipalities is in fact wholly theoretical and unreal. The Authority's sale to certain large industrials may appear to constitute direct competition with certain of the complainants. But even this industrial demand is of a specialized type for use in electrochemical and electrometallurgical industries representing new business in the area which, for all that appears, became

economically feasible only because of Tennessee Valley Authority rates. Surely complainants cannot demand a monopoly of a market created by the Authority itself.

Complainants' franchises confer no right to sue without a showing of special damages. *Memphis Street Ry. Co.* v. *Rapid Transit Co.*, 138 Tenn. 594, 605-606 (1917); *Northern Pac. Ry. Co.* v. *Bennett*, 83 Mont. 483 (1928). If, as complainants assert, the threat of the loss of potential future markets may constitute a sufficient showing of damage, the fact nevertheless remains that the customers served by the Authority were not potential customers of complainants, and the service of such customers by the Authority constitutes no loss or damage to complainants.

Should the Court decide that none of these contracts, whether they be with municipalities, rural cooperatives, or industrial concerns, present a definite and specific transaction which is a proper subject of controversy between the parties to this case, appropriate for an exercise of judicial power, it will be decisive of this whole litigation. For if the complainants cannot challenge the validity of these contracts, surely they cannot challenge in the abstract the validity of the construction and operation of the generating plants, the transmission lines, and the substations being used to deliver power thereunder. The Authority's so-called "power program" does not present a justiciable controversy. See *Ashwander* v. *Tennessee Valley Authority, supra* at 324. There must be some specific subject

or transaction which is susceptible of judicial determination. See *United States* v. *West Virginia*, 295 U.S. 463; *New Jersey* v. *Sargent*, 269 U.S. 328. This was the holding in the *Ashwander* case in limiting the decision to the contract of January 4 between the Authority and the Alabama Power Company.

Regardless of this Court's decision on the merits, the importance of a careful delineation of the standing of the various complainants to challenge the validity of varied types of transactions need hardly be emphasized. The gravity of constitutional questions has led this Court to formulate special rules governing the scope and character of the inquiry in constitutional cases. The application of these special salutary rules is sought to be blurred by the sweeping, multifarious character of complainants' case. Complainants' bill of complaint was designed to obscure the fact that acts challenged have no specific application to many of the parties complaining, to discourage careful analysis of the right to sue, and to elicit general sweeping rulings.

It was in recognition of the principles governing the presentation of constitutional issues for adjudication that the Government sought to have the bill dismissed on the ground that it was nonjusticiable and fatally multifarious. See Government's petition for certiorari, 301 U.S. 710.

The paramount public importance of restricting the scope of the federal judicial power to actual cases or controversies based upon definite allegations of specific injury to particular parties is self-evident. If the important rules so carefully established by this

Court to govern the scope and character of inquiry into constitutional questions are to be preserved and given practical application, the rights of the complainants in a suit of this nature should be clearly delineated.

IV

THERE IS NO REVERSIBLE ERROR IN THE RULINGS OF THE TRIAL COURT ON EVIDENCE AND PROCEDURE.

The rulings of the court below on evidence and procedure were unanimously concurred in by three judges sitting as a court of equity (r. 2439). Appellants have nevertheless devoted a substantial part of their brief (pp. 214-247) to the contention that the case should now be sent back for a new trial because of errors in such rulings.

There are 135 numbered assignments of error in all, about half of which relate to rulings on evidence and procedure. Appellants have made no attempt to limit their assignments. They indiscriminately press practically every exception they took during the course of the long trial, even to the extent of assigning error to the exclusion of documents which were actually admitted into evidence, and to the refusal to order production of documents authentic copies of which were admittedly in complainants' possession. (See, e.g., assignment 4, r. 717; br. 221; *cf.* comp. ex. 113 (original) p. 22, r. 2684; assignment 59, r. 733; br. 246 (n. 1); *cf.* r. 2421.)

The numerous assignments are vague and general in stating the grounds of error and are careless and unreliable. The treatment of the assignments in appellants' brief only adds to the confusion. The method is to group the various rulings under general subject-matter headings and, without any explanation of the particular circumstances surrounding each of these rulings, to state in conclusory language that the proffered proof was relevant to one of the myriad allegations in the bill whether or not they presented a material issue.

The assignments are directly in violation of Supreme Court Rule 9 (28 U.S.C. 862) and of the repeated and emphatic admonitions of this Court. The confusion resulting from appellants' failure to make the assignments clear and explicit justifies a complete disregard of them. See *Phillips and C.Const.Co.* v. *Seymour*, 91 U.S. 646, 648; *Central Vt. Ry. Co.* v. *White*, 238 U.S. 507, 508; *Chesapeake & D. Canal Co.* v. *United States*, 250 U.S. 123, 124; *Seaboard Air Line R.Co.* v. *Watson*, 287 U.S. 86, 91; *Local 167* v. *United States*, 291 U.S. 293, 296. Far from tending to "define the issues," the assignments of error merely present "bewildering" and "prolix" confusion. See *Local 167* v. *United States, supra* at 296; *Phillips and C. Const. Co.* v. *Seymour, supra* at 648.

Appellants' general basic contention is that they were deprived of their right "to make a full presentation of their case" by the court's rulings. An attempt is made to build up a picture of hasty, ill-considered, and unfair treatment. An examination of the volume

and content of the record conclusively refutes this contention.

As pointed out in the statement (*supra* pp. 7-10), the facts concerning the conduct of the case and the trial indicate the full and fair character of the hearing. The extensive proceedings and arguments in connection with earlier motions and appeals, the scope of the stipulations and depositions, together with the length of court time consumed in the presentation of proof, the voluminous record of testimony and exhibits, and the lengthy arguments heard and numerous briefs filed throughout the trial (r. 2371), all reflect the opportunity afforded the parties to make a full presentation of the case. Appellants' contention that the court unduly expedited the case (br. 214-215) is answered by the statement of counsel made in open court:

> Mr. R. T. Jackson: I did not mean to imply that there had been any undue expedition of the case. I was concerned and am concerned about the question of oral argument, and I thought it my duty to frankly state that to the Court, because it seems to me that is a matter of importance [r. 2284].

Appellants' assignments of error to the fixing of dates for arguments and presentation of findings of facts and briefs (assignments 63-66, r. 735-736) are indicative of the complete lack of merit, if not indeed the frivolousness, of the contention that they were denied a fair trial. There clearly can be no doubt of the court's discretion in these matters. But the record leaves no doubt of the court's reasonableness. On De-

cember 20, that is, almost a month in advance, the court notified counsel that it expected to proceed promptly with the arguments and findings upon the close of the testimony. The court made this announcement just prior to a twelve-day adjournment at the Christmas season (r. 1861). The court stated that it felt justified in asking counsel to use part of this holiday period in preparation of arguments, briefs, and findings so that the case could be disposed of promptly at the conclusion of the testimony (r. 1862, 1919). The judges had come from distant points, and none of them were at or near their regular places of court duty. Attention was drawn to the facts that the case had been pending for almost two years; extensive proceedings had been held over a long period of time; most of the issues had already been thoroughly analyzed and argued by counsel; and both sides had ample counsel representing them, three large firms actively appearing for complainants (r. 1861-1862, 2282-2284).

The record shows that the trial court adopted the liberal policy of admitting evidence even when there was grave doubt as to its admissibility (r. 1492, 2284). The district court repeatedly accepted on behalf of complainants evidence of highly doubtful competence or relevance. (See, e.g., the voluminous exhibits regarding applications to, and loan and grant agreements with, the Public Works Administration, comp. exs. 419-434, r. 3249-3331; the highly speculative testimony of the witnesses Frothingham, r. 1304-1310, and Moreland, r. 1470-1480; the testimony and excerpts regarding applications to and licenses from the Federal

Power Commission, r. 864-865, comp. exs. 91-94, r. 2560-2602.)

Complainants attempted to secure court orders for the production of numerous documents, and some of these requests were denied for reasons which are discussed below in disposing of particular assignments of error. But it may throw light upon the court's rulings generally to consider the documents and data that were given complainants or that were available to them.

The partial denial of complainants' main subpoena duces tecum was expressly conditioned upon delivery by defendants of all contracts relating to the disposition of power and all records of official action of the Board of Directors of the Authority relating to the dams and to the transmission lines or other facilities for the disposition of power or relating in any way to the sale of power (r. 766, 896-897). In compliance, defendants delivered to complainants 367 separate items of board action, constituting the complete record of the action taken by the Authority from its inception to date in regard to the generation and disposition of electric energy (r. 896). The numerous board exhibits, incorporated by reference in nearly all these items, were made available for the examination of complainants, and copies of any that they desired were given to them (r. 897). Every contract which the Authority had ever entered into involving or in any way relating to the disposition of power was likewise delivered to complainants (r. 764, 766, 897).

Complainants were also furnished, by stipulation, with a complete description of every line that the Authority had ever built or authorized for construction, including location, capacity, and places to be served, and a description of every substation that the Authority ever built or authorized, including its capacity, location, and places intended to be served by it (def. ex. 136, r. 4175). This stipulation contained maps and tables showing all of the lines and substations of the Tennessee Valley Authority, in service, under construction, and authorized as of October 15, 1937. (For map see def. ex. 136A in *Reproductions of Certain Original Exhibits Submitted by Appellees.*) The stipulation further contained a map showing all rural lines owned by municipalities and cooperatives purchasing power from the Authority, and rural lines owned by the Authority, together with tables containing the detailed information concerning all of such rural lines. (For map see def. ex. 136B in *Reproductions of Certain Original Exhibits Submitted by Appellees.*)

The foregoing documents and data were not only delivered to complainants; all of them were admitted in evidence (comp. exs. 117-181, r. 2729-2959; comp. exs. 516-627, r. 3357-3477; def. ex. 136, r. 4175). In addition to the contracts, board resolutions, allotment releases, and other information furnished complainants by the defendants, complainants had numerous other sources of information regarding the Authority's plans for the construction and operation of dams and the disposition of power. The pertinent facts concern-

ing the Tennessee River system were exhaustively set forth in the comprehensive report of the Army Engineers in 1930, House Document No. 328 (comp. ex. 105 (original), r. 2615). Detailed information as to the scope, design, location, general methods of operation, and functions of the dams, as well as details regarding the transmission lines, substations, and power contracts, were fully set forth not only in the Authority's regular annual reports and in the report entitled *The Unified Development of the Tennessee River System* (comp. ex. 328 (original), r. 3068) but also in the ten volumes of published hearings held before committees of the Congress on appropriations for the Authority and amendments to the act. Such hearings, held annually by at least one House of the Congress and in several years by both, have been characterized by the exhaustive examination and cross-examination to which committee members subjected officials of the Authority concerning all its plans and operations. Exhibits which the Authority was required to file in connection with such hearings and the detailed testimony given in them covered every phase of the Authority's activities. All these materials were available to complainants long before the trial, and they were offered and admitted in evidence on their behalf (comp. exs. 108, 109, 112, 113, 114, 115, 116, 364, 365, 366 (originals), r. 2623, 2643, 2681, 2684, 2691, 2699, 2727, 3109, 3121, 3125; comp. exs. 117, 118, r. 2729, 2771).

Finally, in considering the character of the trial, it is relevant to note the nature of the case which com-

plainants attempted to make out in the bill. The bill of complaint occupied 71 printed pages (r. 1) and the exhibits thereto 66 pages (r. 72). The bill contained sweeping allegations challenging the validity of a "national power policy" and "the power program of the defendants," attacking not only specific acts allegedly done or threatened but also mere prospects or suggestions for the indefinite future, and involving numerous diverse complainants in whose claimed territory defendants had neither done nor threatened any action of a definite or concrete character (fdg. 111, r. 625, app. I, 57). The Government's motion to dismiss for multifariousness was overruled (r. 158), but at the time of that ruling (over a year before the trial), and frequently thereafter, the district court pointed out that there was much surplusage in the bill (r. 904, 1492, 1532). Complainants, however, took the position throughout the trial that they were entitled to introduce evidence on all and any of the sweeping allegations made in the bill. The contention, as baldly stated in appellants' brief, is that "any evidence which tends to support an issue between the parties is admissible" (p. 218). The possibility that some of the allegations might relate to immaterial issues is disregarded, and the function of the trial court to determine the materiality of and intelligently delineate the issues is ignored. This function is of particular importance in a case tried before a special three-judge court from which a direct appeal is prosecuted to this Court.

Appellants have repeatedly cited such cases as *Chastleton Corp.* v. *Sinclair*, 264 U.S. 543; *Hammond*

v. *Schappi Bus Line*, 275 U.S. 164; and *Borden's Farm Products Co.* v. *Baldwin*, 293 U.S. 194, for the proposition that in constitutional litigation an adequate hearing requires the trial of all the issues and the admission of all evidence deemed material or relevant by the party tendering the proof (br. 217-218). This novel contention finds no support in the cases cited. In each of the cases the trial court took decisive action without any trial. There is no suggestion in these authorities that because a case involves constitutional questions the trial court's important function of ruling on the scope of the issues and admissibility of evidence shall be abandoned. In the instant case complainants were accorded the fullest trial to which any litigant may be entitled. The rulings on evidence and procedure assigned as error were all a part of the important process by which the trial court delineates the issues and sifts the evidence.

As the volume of admitted evidence demonstrates, there was abundant concrete evidence to show the action of the Authority. Most of the excluded evidence consisted of discussions, arguments, informal speeches, press releases, informal communications, informal correspondence, reports from subordinates, and the like. All of the excluded evidence was incompetent, irrelevant, or purely cumulative, having no legal bearing on the issues before the court. In any event, appellants have failed to show any prejudicial error which would justify the remanding of a case of this character.

Any effort to answer fully the assignments of error will consume space and attention disproportionate to their importance. Nevertheless, the incomplete and, in many instances, inaccurate discussion in appellants' brief necessitates consideration in this brief of some of the particular rulings which are emphasized by appellants.

1. THERE IS NO REVERSIBLE ERROR IN THE RULINGS OF THE COURT RELATING TO COMPULSORY PRODUCTION OF DOCUMENTS AND SUBPOENAS DUCES TECUM (assignments 1, 2, 5, 15, 25, 27, 28, 37, 38, 42, 44, 47, 59).

All of the above assignments of error relate to the rulings of the court denying the motion for the production of documents in advance of trial and the numerous applications for subpoenas duces tecum presented throughout the trial. In their brief appellants have apparently abandoned those assignments relating to the denial of the motion to produce documents in advance of trial. A general understanding of that motion and the ruling of the court thereon is essential, however, to an understanding of the rulings on subpoenas duces tecum, since all of the subsequent applications for subpoenas were based upon the original motion and were clearly directed to the same ends.

The purpose of the original motion to produce, as well as of the subsequent applications for subpoenas, was to procure as much detailed information as possible to assist complainants in the preparation of their case prior to trial. Laying aside for a moment the fact that neither a motion to produce documents nor a subpoena duces tecum was designed for this purpose, the

fact is that complainants were not handicapped in their efforts to procure such information. As already pointed out, all of the information and sources of information that could be regarded as even remotely competent—the contracts, board resolutions, allotment releases, reports to the Congress, and the published hearings before congressional committees—were available to complainants either before or at the trial and appear in the record as exhibits.

The fact is that by the motion to produce and the various subpoenas complainants were not seeking material evidence but were asking blanket permission to ransack the files and records of the Authority in the hope of unearthing something that might prove helpful to them or embarrassing to the Authority.

In addition to these considerations, the rulings of the trial court upon the preliminary motion to produce documents and the various applications for subpoenas were well within its discretion and are supported by independent procedural grounds. A brief examination of the particular motions, together with the rulings of the court, is sufficient to show that the discretionary action taken on these matters need not be disturbed upon appeal.

Motion to produce documents in advance of trial and applications for subpoenas duces tecum (assignments 1, 2, 5, 15, 47, r. 715-717, 720, 728). The motion to require the production of documents in advance of trial (assignment 1, r. 715) was a preliminary motion supposedly filed under Equity Rule 58. The reasons for the denial of that motion are dis-

cussed in the opinion of the trial court upon the subject (r. 379), which is fully supported by the authorities. *Fidelity & Deposit Co.* v. *Central Bank*, 48 F. (2d) 477 (C.C.A. 8th, 1931); *Pressed Steel Car Co.* v. *Union Pac.R.Co.*, 241 Fed. 964 (S.D.N.Y., 1917).

The application for blanket subpoena duces tecum and the various separate applications for subpoenas for the minutes of meetings of the Board of Directors of the Authority (assignments 2, 5, 15, r. 716, 717, 720) were in large measure complied with by stipulation. At the time the original application was made the court heard argument only with respect to the items listed in the first paragraph of said application. At the time of that argument counsel advised the court that the defendants had already agreed to furnish copies of all contracts described in paragraph 2 of the subpoena, as well as the maps of transmission and distribution lines and substations described in paragraphs 8 and 9 thereof, and that therefore those items need not be considered (r. 764-765).

After the argument on paragraph 1 of the subpoena, which called for all minutes of the Board of Directors of the Authority, the court denied the request for subpoena for these minutes upon condition that counsel for the defendants should deliver to opposing counsel all contracts made by the Authority and all resolutions authorizing or relating to contracts for the sale of power, the construction or authorization of dams, the construction or authorization of transmission lines, distribution lines or substations, and all resolutions dealing with sales and construction contracts (r. 766-767).

The remaining paragraphs of the original blanket subpoena called for intra-Authority "discussions," "considerations," "memoranda," or "notes" (r. 2441).

As to these and similar documents the original application was properly denied on the ground that there was no prima facie showing that the documents called for were competent, relevant, and material, which is a condition precedent to the issuance of a subpoena duces tecum. *Hale* v. *Henkel*, 201 U.S. 43, 77; *Federal Trade Comm.* v. *American Tobacco Co.*, 264 U.S. 298, 307; *General Finance Corp.* v. *New York State Rys.*, 1 F.Supp. 381 (W.D.N.Y., 1931); *Miller* v. *Mutual Reserve Fund Life Ass'n*, 139 Fed. 864 (C.C.S.D.N.Y., 1905); *Schuricht* v. *McNutt*, 26 F. (2d) 388 (D.Conn., 1928); *Dancel* v. *Goodyear Shoe Mach. Co.*, 128 Fed. 753 (C.C.D.Mass., 1904). Moreover, the sweeping and burdensome breadth of this particular application justified its denial. The practical effect of the issuance of such a subpoena would have been to sweep out the files of the Authority. This Court, as well as the lower federal courts, has consistently condemned sweeping subpoenas of this type. *Hale* v. *Henkel, supra; Federal Trade Comm.* v. *American Tobacco Co., supra; Miller* v. *Mutual Reserve Fund Life Ass'n, supra; Jones* v. *Securities Comm.*, 298 U.S. 1, 26; *Hoppe* v. *Ostrander & Co.*, 183 Fed. 786 (C.C.S.D. N.Y., 1910); *Rawlins* v. *Hall-Epps Clothing Co.*, 217 Fed. 884 (C.C.A. 5th, 1914); *In re American Sugar Ref. Co.*, 178 Fed. 109 (C.C.S.D.N.Y., 1910).

After the denial of the original application, complainants, in an effort to meet the ruling of the court re-

quiring a prima facie showing of relevance and materiality, broke the original application into separate subpoenas (comp. exs. 497, 689-697, 931, 954-956, r. 3331, 3618-3625, 3982, 4002-4004). The first of these would have required the production of a copy of a telegram from the Authority to the Governor of Alabama with reference to certain legislation then pending before the Legislature of Alabama (r. 1437). The materiality and relevance of this document as evidence is discussed *infra*, page 239.

The second of these subpoenas (comp. ex. 689, r. 3618) would have required the defendants to produce documents and records showing the number of employees in the department of electricity as of October 1, 1937, the headquarters or offices of each of said employees, and the names of any additional employees in that department other than those published in the annual report of the Authority for the fiscal year ending June 30, 1937. In response to this application the court required the defendants to state in the record the number of employees in the department of electricity and denied the remainder of the subpoena upon condition that that information be furnished (r. 1528).

The remaining applications for subpoenas, except for the particular instances considered hereinafter, related to letters, memoranda, intradepartmental communications, and board minutes, identical with the items listed in the original subpoena (r. 1529-1531). The immateriality of this type of evidence, which is the ground upon which the rulings of the trial court were based, is considered *infra*, pages 235-239.

The application for subpoena duces tecum for the report on a proposed dam at the Norris site, made by an employee of the Bureau of Reclamation of the Department of the Interior (assignment 47, r. 728) calls for special consideration in view of appellants' inaccurate statement of the facts in this regard. The record shows that this report was delivered by the Authority to the court at the court's request in order that it might inspect the same and determine whether or not any sufficient showing had been made to justify its compulsory production as material evidence in the case. Appellants state in their brief (p. 227) that the Tennessee Valley Authority had employed the Bureau of Reclamation to prepare plans for the construction of Norris Dam, and that this report was made to the Authority by an officer of the Bureau of Reclamation. This statement is inaccurate and contradicted by the record. The nature and status of this report is fully explained by the testimony of the witness Woodward (r. 1816-1818). As pointed out in the unanimous opinion of the trial court denying this application, it appears from that testimony that this report was in no sense an official report of the Bureau of Reclamation to the Authority but was merely a report or recommendation of a subordinate member of the staff of that Bureau to its own chief engineer, setting out the personal opinions and estimates of this particular employee (r. 2197). The witness Woodward, the chief water-control planning engineer of the Authority who was active on the design work of Norris Dam, testified

that so far as he knew the Authority had never requested that this report be made, and that no use had been made of it. He also stated that he personally never did agree with the report, and that he did not think it had any official standing (r. 1816-1817). There is nothing in the record tending to show that this report was ever adopted by the Board of Directors of the Authority or relied upon in any way. If complainants desired to rely upon opinions of the writer of this report, they could have complied with the requirements of judicial procedure by eliciting his testimony under oath, either on the witness stand or by deposition.

The application for subpoena duces tecum for certain tentative and confidential budget estimates submitted to the Appropriations Committee of the House of Representatives in executive session on December 13, 1937 (assignment 59, r. 733), was denied on the ground that complainants had in their possession at the trial a complete photostatic copy of these estimates (r. 2419-2422). Counsel for the Authority had conceded the authenticity of that copy. In response to the assertion that the subpoena for the board resolutions and administrative directions for the operation of the Authority's dams (comp. ex. 956, r. 4004) was denied (br. 239), it should be noted that all of the documents so described were submitted and received in evidence (r. 2418-2419, 2428-2433, 2437-2438; see comp. exs. 923, 924, r. 3955-3975; comp. ex. 957, r. 4004; def. ex. 41, r. 4065; def. ex. 65, r. 4078).

2. THERE IS NO REVERSIBLE ERROR IN THE RULINGS OF THE TRIAL COURT ON THE ADMISSIBILITY OF SPEECHES, PRESS RELEASES, PAMPHLETS, ETC. (assignments 4, 8-12, 17, 24, 29, 30, 43, 44).

The materials included in this group of assignments of error are (a) press releases which either reproduce speeches of individual directors, announce the terms and conditions of contracts for the sale of the Authority's power, or refer to plans or policies of the Authority (assignments 4, 8, 12, 44, r. 717, 718, 719, 728); (b) testimony of witnesses to the effect that individual directors and employees of the Authority made certain statements regarding power contracts and policies at public meetings (assignment 11, r. 719); (c) the testimony of Director Lilienthal at the congressional committee hearings on the Holding Company Act (assignment 10, r. 719); and (d) contract forms and pamphlets purporting to give information on the Authority's power contracts and sales (assignments 9, 17, 24, 29, 30, 43, r. 719, 721, 723, 724, 727). Appellants in their brief devote a whole page to an attempt to show that the court acted arbitrarily in excluding the press releases (pp. 220-221). The record shows that the court heard and considered arguments and briefs on the admissibility of these items (r. 894) and "examined and considered each and all of the press releases offered" (r. 1532).

This type of evidence was excluded on the ground that it was incompetent or cumulative, as well as on the ground that it was irrelevant (r. 894, 1532). Insofar as any of these materials contain facts, as distin-

guished from opinion, they were purely cumulative, since better evidence of the same facts was available and was introduced in the form of the contracts actually executed, the official board resolutions, and the Authority's clear and complete official reports to Congress, all of which were admitted into evidence. These materials were clearly the best evidence "to show what appellees had done" and "were doing" (br. 222) and had authorized to be done. For example, on page 221 of their brief appellants complain of the action of the trial court in excluding two press releases embodying the announcement of the Authority's so-called power policy (comp. ex. 633, r. 3487) and the announcement of the Authority's proposed wholesale and retail rates (comp. ex. 634, r. 3490). The record shows that the complete statement of the power policy, as well as the rate schedules, are fully set out on pages 22 and 35 of the annual report of the Authority for the fiscal year ending June 30, 1934, which was offered and received in evidence as complainants' exhibit 113 (r. 919-920, 2684). What individual directors, subordinate employees, or press releases had to say about these matters could hardly add anything to the facts themselves. Thus, even assuming that these press releases contained relevant evidence, at best they were merely secondary and cumulative evidence which the court in its discretion properly excluded.

Insofar as these materials related to expressions of policies and possible plans, their lack of probative value rendered them incompetent. The speculative and remote character of the inferences sought to be drawn

from them is obvious. The only evidence which has any probative value consists of the official acts of the board of directors as such. The fact that publication of the speeches and opinions of the individual directors was generally authorized does not alter their character as expressions of individual opinion. In preserving to the complainants their right to place before the court all evidence of official acts of the board of directors, the trial court freely admitted in evidence not only the official acts of the board but also all of the testimony of members of the board of directors before various committees of the Congress, which testimony contains the fullest possible discussions of all of the policies and plans, both actual and projected (comp. exs. 108, 109, 112, 114, 115, 116, 364, 365, 366 (originals), r. 2621, 2623, 2674, 2684, 2691, 2700, 3092, 3110, 3121). The speeches and press releases intended for public consumption can only suggest the give and take that is necessarily involved in the formulation of policy and in the making of ultimate decisions by the board. They cannot be taken to represent official action.

It seems apparent that complainants' only purpose in seeking to introduce such evidence was to reflect upon the motives and subjective mental attitudes of the individual directors and employees of the Authority. The trial court properly held the evidence irrelevant on this ground. It was the position of the court that the trial should be limited to concrete and definite action taken or authorized by the Authority and should not go into "motives, declarations, pronouncements, desires," and "policies" (r. 894, 1532). This posi-

tion was clearly in accord with, if not required by, the decisions of this Court in the *Ashwander* and *Isbrandtsen* and other cases. *Ashwander* v. *Tennessee Valley Authority*, 297 U.S. 288; *Isbrandtsen-Moller Co.* v. *United States*, 300 U.S. 139; *Dakota Cent. Tel. Co.* v. *South Dakota*, 250 U.S. 163; *West* v. *Hitchcock*, 205 U.S. 80; *Anicker* v. *Gunsburg*, 246 U.S. 110. See also *Duke Power Co.* v. *Greenwood County*, 91 F. (2d) 665 (C.C.A. 4th, 1937); *South & N.A.R.Co.* v. *Railroad Comm.*, 171 Fed. 225 (C.C.M.D.Ala., 1909). If the concrete official acts done—in the case at bar the construction of dams, the execution of contracts, and the construction and acquisition of facilities for the sale of power—are, viewed objectively, authorized by a constitutional statute, they are valid. As aptly stated by Judge Sibley in his concurring opinion in the Circuit Court of Appeals in the *Ashwander* case:

> This case is not to be decided by the purposes and plans of the board, but by the validity of what is about to be done under the attacked contracts [78 F. (2d) 578 at 583].

In their brief appellants tacitly concede that evidence of the motives and purposes of the members of the board of directors would have been immaterial and contend that the evidence herein questioned was offered for other purposes (br. 223). Yet an examination of the argument which follows in appellants' brief makes it clear that the only real purpose of the proffered proof was to establish those motives and purposes.

In their brief appellants argue that the release of any information regarding the activities of the Authority is "advertising," and that "advertising" is in turn "solicitation" of customers (pp. 224-225), and that "solicitation" is in some way unlawful. All of the press releases, pamphlets, and public statements are claimed to be relevant on this tenuous basis. Appellants have placed so much emphasis on this contention that it is here discused at some length.

3. THE TRIAL COURT DID NOT COMMIT REVERSIBLE ERROR IN EXCLUDING CERTAIN EVIDENCE PURPORTING TO SHOW SOLICITATION (assignments 8-12, 17, 24, 29, 30, 43).

Appellants' theory apparently is that every statement ever made by any director or employee of the Tennessee Valley Authority, and any information published, constituted solicitation of appellants' customers. Even if it be conceded that the ultimate conclusion of this reasoning—the fact of solicitation—is a proper issue in a case in which the court is asked to determine the constitutional power of the Federal Government to construct dams and to generate and distribute electricity at such dams, the reasoning is clearly fallacious. The dissemination of information to the public concerning the activities of a public agency would seem to be obviously proper and indeed necessary. Insofar as the release of such information may have reacted unfavorably upon the appellants, no legal injury has been inflicted. *Cf. Standard Scale Co.* v. *Farrell*, 249 U.S. 571; *Pennsylvania R.R.Co.* v. *United*

States R.R. Labor Board, 261 U.S. 72; *United States v. Los Angeles R.R.*, 273 U.S. 299.

Such of the statements as might have evidenced any pertinent fact would have proved no more than that the Authority and its employees were informing the public generally that the Authority had power available and, in a general way, of the rates, terms, and conditions on which the sales would be made. As the court pointed out, counsel for the Government conceded that the Authority announced to the public that there was a certain amount of power available at certain rates (r. 1134), and further conceded that when requests or applications were received from persons or communities, information was sent out in reply to the requests received (r. 982-983).

The excluded evidence would have added nothing to the fact as found by the court that the Authority's rates have been published generally and are well known throughout the valley (fdg. 124, r. 628, app. I, 61). None of the evidence offered was at variance with the finding to the effect that advice and information was sent out "upon request" (fdg. 143, r. 632, app. I, 67; see also op., r. 553, app. I, 127; comp. ex. 412, r. 3244).

All of this evidence, however, was also clearly incompetent. No proof was offered, for example, to show that the Authority had any connection with the distribution of the circulars and pamphlets referred to in assignments 9, 24, 29, and 30. The statements in appellants' brief (p. 230) that these materials were circulated and distributed by the Authority are unsup-

ported by the record. Complainants' own witnesses testified that they had not at any time seen any Tennessee Valley Authority employee circulate them (Stanley, r. 951, 955; Street, r. 981-982, 983; Green, r. 1008; Woodall, r. 1323-1324), and counsel for the complainants conceded that they had no evidence that the Authority was connected with the distribution of them (r. 952-954). So far as the speeches and statements referred to in assignment 11 (r. 719) are concerned, most of them were statements made by subordinate employees of the Tennessee Valley Authority in informal conferences or at public meetings (Bass, r. 1087; Woodall, r. 1321; Mastin, r. 1327; Burleson, r. 1395-1396; Armington, r. 1357-1358; Gause, r. 1359; Kittredge, r. 1361; Mouldin, r. 1324; McWhorter, r. 1441). *Cf. United States* v. *Martin*, 26 Fed. Cas. 1186, 1187 (C.C. N.D.N.Y., 1832); *Lee* v. *Munroe*, 11 U.S. 366, 368-369; *Waters* v. *United States*, 4 Ct. Cl. 389, 390 (1868); *Allen* v. *United States*, 28 Ct. Cl. 141, 146 (1893); *Carroll* v. *East Tenn., Va. & Ga. Ry. Co.*, 82 Ga. 452 (1889); *West Jersey Traction Co.* v. *Camden Horse-Railroad Co.*, 53 N.J.Eq. 163 (1895).

The other statements referred to in assignment 11 consisted of public speeches made by individual directors. (See Lamar, r. 1130.) On the principles established by the above-cited cases, what individual board members discussed or stated in unofficial public speeches cannot be regarded as competent proof against the Authority. Insofar as it appeared that an individual board member was negotiating in an official capacity, the court admitted into evidence statements

made by such director. Thus, the witnesses Wilkerson and Bass were permitted to testify regarding statements made by Director Lilienthal in conferences concerning the city of Chattanooga (r. 1086, 1047).

Where complainants offered any evidence which purported to show that any customers or potential customers had been induced to contract with the Authority, as distinguished from evidence showing the release of information for publication, the evidence was admitted. But in this respect complainants' case failed completely. In the few instances where complainants purported to show specific solicitation, they merely demonstrated that their charge was groundless. The Yates Bleachery instance referred to on page 230 of appellants' brief (assignment 17, r. 721) is illustrative. While the court excluded as incompetent a pencil memorandum made by a subordinate employee of the Authority on a piece of scratch paper, it admitted almost the entire deposition into evidence (r. 1140, 1143). It appeared from this deposition that the Yates Bleachery Company was not purchasing power from any of the complainant power companies at the time of the conversation with the Tennessee Valley Authority employee and had not been purchasing power from them or from anyone for almost a year prior to the time of such conversation (r. 1141, 1145, 1147). It further appeared that this company had only taken supplementary service from a Tennessee Electric Power Company subsidiary and its load had been only about 30 kw (r. 1144). And finally, the deposition showed that the bleachery company had never had a contract to take power from

the Authority and the Authority never sold any power to it.

Another example of the weak character of the evidence on which the complainants' charges of solicitation were based is the resolution of the city of Moulton, Alabama, referred to in assignment 43 (r. 727-728). Aside from the fact that the city of Moulton is in the "ceded area" under the contract of January 4, 1934, the witness McWhorter testified that the city of Moulton did not have any contract with the Tennessee Valley Authority (r. 1442).

These representative examples offered by complainants can scarcely be regarded as proof of the "high-pressure solicitation" charged. Certainly complainants failed to prove any damaging effects in these trivial instances since in each instance it appeared that the Authority had secured no contract. It is significant that these numerous complainants had to resort to such trifling individual instances to support their charge. The failure to procure substantial evidence establishes that the claimed fact does not exist; and the trial court so found (fdgs. 227, 228, r. 649, app. I, 92).

4. THE TRIAL COURT DID NOT COMMIT REVERSIBLE ERROR IN EXCLUDING ITEMS OF EVIDENCE PURPORTING TO PROVE COERCION, DURESS, FRAUD, OR CONSPIRACY (assignments 12, 31, 32, 33, 38, 39).

(a) *Evidence relating to correspondence between the Authority and other Government agencies* (assignments 12, 31, 32, 33, 38, 39). Appellants assign as error the exclusion of a voluminous mass of correspon-

dence and communications between the Authority or its employees and the Federal Emergency Administration of Public Works, the Rural Electrification Administration, the Electric Home and Farm Authority, and the National Power Policy Committee; the correspondence between these agencies and numerous municipalities and rural cooperatives; and various reports, memoranda, and press releases concerning these various agencies. These rulings are argued on pages 233 to 236 of appellants' brief. The trial court excluded this material on the grounds that the case should be limited to the validity of the activities of the Tennessee Valley Authority and could not be concerned with the activities of other Government agencies and local public agencies, none of whom were parties to the case (r. 906). No extended argument is needed to demonstrate the soundness of this position. It was a practical necessity in this case. If complainants had been permitted to introduce their proposed evidence on the activities of other Government agencies and of the various local agencies, the case would have involved a trial on the legality not only of the Tennessee Valley Authority Act and the activities thereunder, but also of the statutes governing and the activities of the Public Works Administration, the Rural Electrification Administration, the Electric Home and Farm Authority, the National Power Policy Committee, and the local agencies. It is clear that as to these matters the real complaint is against action alleged to be in excess of the powers of these other agencies, questions which the trial court properly re-

fused to consider in a case already overburdened with diverse issues.

This evidence is claimed to be relevant to prove "cooperation" or "confederation or concert of action" to injure appellants (br. 233-234). This is the same "conspiracy" charge made in numerous other suits by power companies and sought to be supported by the identical documents and evidence proffered here by complainants. The identical conspiracy charge made here was advanced in the *Ashwander* case and was rejected by District Judge Grubb on the ground that if the Tennessee Valley Authority was authorized by its statute to do what it was doing, and the Public Works Administration was authorized by its statute to do what it was doing, there could be no illegality in the cooperation between them:

> If the T.V.A. has the right to engage in the business of making and selling electric current . . . for final distribution to consumers, the P.W.A. has the right and power to loan, to the municipal corporations, money to construct distributing plants for electric power to be furnished by the T.V.A. to them [9 F.Supp. 800 at 801].

In the case of *Memphis Power & Light Co.* v. *Memphis,* 172 Tenn. 346 (1937), the Supreme Court of Tennessee similarly disposed of the same conspiracy charge as follows:

> It is further charged that these federal agencies, the state, and the city of Memphis have entered into a conspiracy to injure or destroy the business

of complainant. If the involved contracts are valid, necessarily there is no basis for such a charge [p. 366].

The charge of conspiracy is really an attempt to show that the Public Works Administration was improperly motivated in making loans and grants by a desire to provide a market for the Authority's power. This charge was tried out in the cases brought to enjoin the making of loans and grants, and the charge was found to be without basis in fact. *Alabama Power Co.* v. *Ickes*, 302 U.S. 464. The same company, with its co-complainants here, now seeks to retry the issue in a suit to which the Public Works Administration is not a party.

The repeated efforts on the part of complainant power companies to draw substance from matters relating to the Electric Home and Farm Authority (br. 235) should be disposed of once and for all. This Court over two years ago recognized that the agency referred to in this case was dissolved (*Ashwander* v. *Tennessee Valley Authority*, 297 U.S. at 316). All of the correspondence, memoranda, and press releases which were excluded related to this defunct agency (assignment 12, r. 719). Obviously, these materials can have no bearing on the validity of the Tennessee Valley Authority Act or the Authority's activities.

It may be noted that the court admitted in evidence a mass of material bearing upon these irrelevant questions, including all of the applications and contracts of the Public Works Administration in the Tennessee Valley area; the contract between the Author-

ity and the Electric Home and Farm Authority; and all of the construction loan contracts between rural cooperatives and the Authority pursuant to projects of the Rural Electrification Administration offered by the complainants (comp. exs. 419-434, 649, 162-181, r. 3249-3331, 3554, 2895-2960), as well as the depositions of the officers of the cooperatives explaining the details of their relationship with the latter agency (r. 1334, 1353, 2258, 2269). The only evidence excluded consisted of letters exchanged between individual employees of the various agencies and intradepartmental communications.

(b) *The trial court acted within its discretion in denying complainants' motion for leave to take the deposition of the Public Works Administrator* (assignment 32). Appellants, on page 234 of their brief, have pointed to the rulings of the trial court denying leave to take this deposition as another example of prejudicial error. Significantly, appellants omit all reference to the circumstances under which these rulings were made. The significant facts are: (1) The complainants had every reasonable opportunity to take this deposition and indeed far more opportunity than that afforded by law; (2) the deposition of the Deputy Administrator, who had full access to the files of the Public Works Administration, was taken and admitted into evidence, along with numerous exhibits identified and authenticated by him; and (3) the evidence complainants proposed to secure from Administrator Ickes was wholly irrelevant. The grounds upon which the ruling of the court was based are

stated in its opinion (r. 381). The ruling is supported by the authorities. *Glades County* v. *Detroit Fidelity & Surety Co.*, 65 F. (2d) 252 (C.C.A. 5th, 1933); *Meyers* v. *Occidental Oil Corp.*, 283 Fed. 703 (D.Del., 1922). See *Duke Power Co.* v. *Greenwood County*, 91 F. (2d) 665 (C.C.A. 4th, 1937); and also the record in *Alabama Power Co.* v. *Ickes*, 302 U.S. 464.

5. NO REVERSIBLE ERROR WAS COMMITTED IN THE RULINGS OF THE TRIAL COURT EXCLUDING CERTAIN OFFERED EVIDENCE ON RATES (assignments 13-16, 18, 19, 34).

The excluded evidence referred to in this group of assignments, and argued on pages 236 to 238 of appellants' brief, includes (1) a comparison of the Tennessee Valley Authority rate structures with those of complainant power companies (assignments 13, 34, r. 720, 725); (2) the "regulatory" and damaging effects, however remote, of the Tennessee Valley Authority rates (assignments 14, 16, r. 720, 721); and (3) an inquiry into Tennessee Valley Authority costs, which would necessarily have involved the court in an investigation of the costs of the dams and in the difficult and intricate problem of allocating costs among the different functions such as navigation, flood control, national defense, fertilizer, and power (assignments 15, 16, r. 720, 721).

The record demonstrates that the court had great difficulty in securing from complainants any clear statement as to the relevancy of this testimony. Complainants shifted time and again from one ground to another as the weakness of their position became apparent. Toward the close of their affirmative case,

complainants finally attempted some definite statement of the various grounds on which they regarded this evidence as pertinent. They stated that it was offered for the purpose of showing (1) the nature, extent, and imminence of damage; (2) the regulatory and confiscatory character of the rates; and (3) that the Tennessee Valley Authority has announced rate schedules below cost, in violation of its governing statute. This is the substance of the argument made in appellants' brief (p. 236).

The trial court excluded the evidence on the grounds (a) that the extensive proof proffered by complainants would show no more than the type of damage and the type of "regulation" implicit in the concessions of the Authority, noted below, regarding their rate schedules, and therefore such evidence would be purely cumulative and would unnecessarily involve the court in protracted, complicated, collateral inquiries (r. 946, 1414); and (b) that the detailed proof offered in regard to each independent company and in regard to specific instances relating only to particular complainants did not support the common cause of action (r. 945-946). The statutory point raised by appellants does not affect the soundness of the court's ruling. Since there is no mandatory provision in the Tennessee Valley Authority Act that the Authority's rates be fixed to cover costs, there can be no violation of any duty owed to appellants.

There is ample evidence in the record showing the schedule of rates at which the Authority's power has been sold. The rates are set out in all the contracts

admitted into evidence. And the Government conceded on the record that:

> . . . (1) the wholesale rates of the Tennessee Valley Authority are substantially lower than the wholesale rates of any of the complainants [r. 943].
>
> (2) The retail rates charged by the municipalities and cooperatives purchasing power from the Authority are substantially lower than the retail rates of any of the complainants [r. 944].
>
> (3) The rates charged by the Authority to the rural customers which it serves are substantially lower than the rates for rural service of any of the complainants [*ibid.*].
>
> [4] . . . the Authority's rates to the industrials are substantially lower than the published rates of the complainants [r. 946].

This concession is incorporated in the findings of fact (fdgs. 120-123, r. 628, app. I, 61). The court further found:

> Tennessee Valley Authority has published these rates generally, and they are well known throughout the Tennessee Valley area [fdg. 124, r. 628, app. I, 61].
>
> Substantial future damage to complainants will result from competition with TVA [fdg. 125, r. 628, app. I, 62].

The testimony offered by complainants was intended to prove that (1) in consideration of the amount of power available at the projects of the Authority, the

power would have to be marketed in substantial parts of the territory served by complainants (r. 1415-1416), and (2) to the extent that the power generated at the Authority's projects would be distributed in competition with complainants, the latter would have to meet the rates at which such power was sold (by the municipalities and cooperatives, it should be noted) in order to retain their business (r. 1416). The trial court received all the evidence offered by complainants on the first point (r. 1253-1259, 1268-1274, 1291-1300, 1451-1463, 1470-1480), as well as the testimony offered by the Government in rebuttal (r. 2087-2107; see also fdg. 238, r. 652, app. I, 95), and the second point was merely a self-evident conclusion.

Moreover, complainants' witnesses Moreland, Frothingham, and others were permitted to give extensive and speculative opinion testimony regarding the effects of the Authority's rates on complainants generally. The court admitted into evidence the opinions of these witnesses as to whether and how the sale of Tennessee Valley Authority power at the Authority's rates would result in curtailing the market of the complainants generally, in reducing the values of their physical properties, in depressing their securities, and in impairing their ability to refinance (r. 1303-1320, 1470-1480; comp. exs. 507-511, r. 3347-3352).

The court drew the line against detailed evidence regarding the different complainant companies singly, such as that offered by the witnesses Longley (r. 972), Stanley (r. 935-957), Newton (r. 1419), Robinson (r. 1265), Addinsell (r. 1427), and Lefferson (r. 1412).

The soundness and reasonableness of the court's position appears from the following statement:

> . . . the Court has in mind constantly in this case that there are a large number of complainants here; the fact that an attack is made upon the bill upon the ground it was multifarious.
>
> . . . the court considers that to pursue this question of rates with reference to the rates of the TVA and the rates of the various, multifarious complainants, would be going into an infinite amount of detail, whereas the ultimate conclusion would be fairly expressed with reference to these complainants by the concession made that the rates are substantially lower, both wholesale and on resale.
>
> . . . the Court is endeavoring to carry out the holding of the District Court and of the Circuit Court of Appeals, that you all have a common interest, and we are endeavoring not to go into the diversities of the peculiar situations, except in so far as may be competent, material and relevant under this bill in which you allege that you have a common interest [r. 945-946].

Apart from the cumulative and multifarious character of the evidence, the Government submits that the argument on the merits of this case demonstrates its irrelevancy. It is, of course, irrelevant to the issues of the validity of the dams and the acquisition of power therefrom; and in the disposal of that power, as has been shown, broad discretion is vested in Congress to fix the terms. See pages 106 *et seq., supra.* Appellants'

argument on relevance is that the methods of disposition authorized by the statute have the inevitable effect, through competition and example, of "regulating" the intrastate operations of the appellant companies and are therefore beyond the power of Congress. This notion of regulation finds no support whatever in the authorities, as appears from the argument on the merits (*supra* pp. 138-139, 154 *et seq.*).

Having failed to lay a proper basis for presenting this minute and extensive material on cost and rates, complainants finally, toward the close of their affirmative case, introduced for the first time the contention that the evidence was relevant to show a violation of a statutory requirement. The following provision of section 14 of the act is said to be violated (br. 236-237):

> It is hereby declared to be the policy of this Act that, in order, as soon as practicable, to make the power projects self-supporting and self-liquidating, the surplus power shall be sold at rates which, in the opinion of the Board, when applied to the normal capacity of the Authority's power facilities, will produce gross revenues in excess of the cost of production of said power . . .

It is difficult to see how this provision could be construed to impose a mandatory duty upon the Authority to charge any particular rate. According to the terms of that section the fixing of the rates is clearly within the discretion of the board. The statute creates no duty toward appellants (sec. 14). These provisions were added to section 14 of the act by amendment in

1935. It is plain on the face of section 14 that it contains no mandatory direction to the board. Language could hardly express more clearly the intention of Congress that the rates were to be determined at the sole discretion of the board. Furthermore, any possible construction that the directions of the Congress are mandatory and the exercise of the board's authority to fix rates is subject to review by the courts is clearly repudiated by the legislative history of the provision.

As the legislative history shows, the language in question was adopted as a substitute for language previously proposed which appeared to be mandatory and to invite litigation. The language finally adopted in the statute was, according to the stated purpose of its sponsors, designed to preclude any possibility of litigation and to constitute merely a declaration of policy, with the determination of rates in the sole discretion of the board.

As originally proposed to the House by the Committee on Military Affairs (H.R. 8632, 74th Cong., 1st sess.), this section was to have read:

> After July 1, 1937, the Authority shall not sell the surplus power or chemicals produced by it anually below the cost of the aggregate production for each year [p. 8].

In this form the provision was obviously mandatory. This provision, however, was attacked vigorously within the committee as an "invitation" to "protracted litigation" by "private-utility interests," and it was pointed out that unless revised it would "open the door

to endless litigation involving all the perplexing and vexatious questions of fair value" and "as to the allocation of relative costs on the various projects as between navigation, flood control, national defense, and surplus power" (*id.* at 31).

The sharp division among the committee on this provision precipitated a lively controversy on the floor of the House and it was finally stricken out in favor of the clause now appearing in the act. In the debate on the amendment finally adopted, it was emphasized that the express purpose of the amendment was to leave the determination of rates within the discretion of the board and to avoid subjecting its discretionary action to judicial review (79 Cong. Rec., 74th Cong., 1st sess., pp. 10961-10966).

The remarks of Chairman McSwain of the Military Affairs Committee of the House in responding to questions on the floor plainly revealed the general understanding of the effect of the amended section 14:

> Now, we realize, I think, that we are not now in a position to say what the cost is. We do not have the information. We are not in a position now to say that it shall go on a cost basis right now. I submit that we are not in a position now to say exactly at what definite date in the future we can go on a cost basis . . .

In conference the House amendment was still further liberalized by the insertion of the phrase "in the opinion of the board." The Congress fully appreciated that the guiding purpose and effect of the amendment

was to avoid any possibility of litigation over rates, and, at least for the time being, to leave their determination in the discretion of the board, subject only to the advisory declaration of policy by the Congress and such review as it might care to make.

Far from affording any reason for admitting this evidence, section 14, viewed in the light of the legislative history, conclusively illustrates the soundness of the trial court's rulings excluding detailed evidence on rates and costs. Common-sense considerations of orderly trial administration demanded the exclusion of such an endless and futile inquiry. Particularly is this true since, as has been noted, the rates of the Authority were introduced in evidence and were acknowledged to be lower than the rates of complainants. The admission of this voluminous detail on cost, valuation, allocation, and rate structure would have confused the issues, and would have had the effect of shifting the focus of the inquiry from the basic issues of constitutional authority to irrelevant or collateral matters.

6. NO REVERSIBLE ERROR WAS COMMITTED IN THE RULINGS OF THE TRIAL COURT EXCLUDING CERTAIN ITEMS OF EVIDENCE OFFERED TO SHOW THE RELATION OF THE AUTHORITY TO RURAL COOPERATIVES AND MUNICIPALITIES (assignments 34, 35, 36, 41, 42).

These assignments are discussed together for the reason that they all purport to relate to the exclusion of evidence concerning the nature of the relationship existing between the Authority and the municipalities

and cooperative associations purchasing electricity from it at wholesale (br. 230). In particular, appellants complain of the exclusion of the testimony of the witness Smith (r. 1443-1447). which they claim would have shown subsidies to municipal customers of the Authority (br. 230); testimony taken by depositions of the witnesses Bandy and Pittman dealing with the activities of the North Georgia Electric Membership Corporation, which they claim would have shown the Authority's domination, control, and persuasion of cooperative associations (r. 1329-1330, 1337-1338, 1355-1362; br. 230); testimony of the witness Eaton (r. 1434-1437); and executive messages of the Governor of Tennessee (comp. exs. 686-687, r. 3605, 3617), which they claim would have shown that the Authority had prepared and sponsored special State legislation in Mississippi and Tennessee (br. 231). A reference to the record is sufficient to show that even if otherwise competent this evidence was purely cumulative and unnecessary to the decision of any of the issues in the case.

A large portion of the record is taken up with testimony and documentary evidence designed to set out in complete detail the history, background, and actual mechanics of the relationship between the Authority and its wholesale customers. The best evidence of these facts would appear to be contained in the contracts between the Authority and these customers, and the other related documents and records setting forth in detail the story of how the transmission facilities serving these customers were constructed and financed, as well as evidence as to the manner in which such facilities

were operated by such customers. The record contains all of the power contracts between the Authority and its wholesale customers, including both municipalities and cooperatives (comp. exs. 119-145, 196, 224, r. 2846-2889, 3004, 3026). The record also contains all of the construction contracts, as well as sale and loan contracts, under which the facilities of the cooperative associations were constructed and financed (comp. exs. 162-181, r. 2895-2960). Complainants had access to and offered in evidence the charters, franchises, certificates of incorporation, bylaws, and minutes of meetings of the various cooperative associations (comp. exs. 267-321, 380-384, 387-389, 398-408, 943-953, r. 3040-3066, 3153-3173, 3189-3238, 3996-4002). Furthermore, the record contains all of the resolutions of the Board of Directors of the Authority authorizing or approving the construction, leasing, or sale of facilities and the execution of contracts with the various municipalities and cooperatives (comp. exs. 516-570, 575-577, 582-589, 592-616, 618-626, r. 3357-3384, 3389-3401, 3421-3476). The trial court's extremely liberal attitude in the admission of documentary evidence with even the remotest bearing upon this issue is further illustrated by the fact that all of the Public Works Administration applications and loan-and-grant agreements involving municipalities within the Tennessee Valley were admitted in evidence over the objection of counsel for the defendants (comp. exs. 419-427, 430-445, 451-460, 467, 468, 470-479 r. 3249-3316).

It is further to be noted that the complainants were engaged in the taking of depositions almost entirely devoted to this subject from the middle of July until

August 1, 1937. The selection of the witnesses and the subject-matter to be covered by the depositions were matters entirely within the control of complainants. They had full and complete opportunity to obtain by deposition the testimony of all persons familiar with the facts. They took five depositions of the persons in responsible charge of operating these corporations (Pittman, r. 1334; Carmack, r. 1353; Bandy, r. 1356; Cowley, r. 2258; Hutchinson, r. 2269). These depositions contained detailed evidence on the subject, and all of them were admitted, either on behalf of complainants or on behalf of defendants, except the portions relating exclusively to the Georgia Power Company.

The above general summary of the state of the record is sufficient to show the lack of substantial merit in this group of assignments. However, a brief reference to the items specifically mentioned in appellants' brief may be in order.

With respect to the exclusion of the testimony of the witness Smith, appellants now claim much more for this testimony than was claimed by counsel at the trial in his offer to prove. As appears from the record the excluded testimony related solely to the contention that the Authority, under the terms of the contract between it and the city of Athens, Alabama, which had long owned its own distribution system and is served by the Authority through facilities purchased in the contract of January 4, had rendered certain advisory services as to the method of keeping the accounts of electrical operations of the city and had engaged in

certain promotional activities during the early stages of the contractual relationship. As stated by counsel in his offer to prove, the purpose of this testimony was to show "that the so-called yardstick set up is a sham" (r. 1446). The record shows that none of the complainants had any facilities in this city (r. 1443, 1446). Certainly they have no standing to complain of the rate structure of such a municipality or its contractual relations with others.

The deposition of the witness Bandy and the portion of the deposition of the witness Pittman excluded by the court related exclusively to the competitive situation existing between the North Georgia Electric Membership Corporation and the Georgia Power Company. The trial court throughout the trial consistently ruled that since the Georgia Power Company had been effectively enjoined by a decree of the United States District Court for the Northern District of Georgia from taking any part in these proceedings, all evidence relating solely to the operation of that company should be excluded. *Georgia Power Co.* v. *Tennessee Valley Authority*, 17 F.Supp. 769 (N.D.Ga., 1937), *aff'd*, 89 F. (2d) 218 (C.C.A. 5th, 1937), *cert. denied*, 302 U.S. 692. Furthermore, the evidence contained in these depositions was almost identical with and purely cumulative of the evidence contained in the other depositions admitted in evidence with respect to the organization and operation of the various rural cooperatives in the area.

7. THE TRIAL COURT DID NOT COMMIT REVERSIBLE ERROR IN ADMITTING IN EVIDENCE PORTIONS OF THE TESTIMONY OF DIRECTORS OF THE AUTHORITY BEFORE CONGRESSIONAL COMMITTEES OFFERED BY DEFENDANTS TO EXPLAIN AND COMPLETE FRAGMENTARY EXCERPTS FROM THE SAME DOCUMENTS OFFERED IN EVIDENCE BY COMPLAINANTS (assignment 7).

This assignment offers another example of the type of rulings which appellants regard as unfair. While claiming for themselves the right to offer excerpts from the testimony of the directors before congressional committees, appellants objected to the admission of any portions of these same hearings when offered by the defendants (assignment 7, r. 717; br. 225). The trial court received these hearings in evidence over the Government's objection on the theory that they were in the nature of official reports of the Authority to Congress (r. 894). The refusal of the court to admit "fragments" or "isolated or garbled" excerpts, and its requirement that the complete hearings be introduced, was clearly proper (r. 915, 918). A comparison of the excerpts offered in evidence to show the motives of the Authority's directors with those offered by the Government from the same statements demonstrates the necessity of these rulings (*cf.* br. 43-44, 65-66 with r. 4276-4279, 4287-4288, 4290-4291, 4297-4298, 4321-4322, 4343).

Moreover, it is obvious that no harm was done complainants by the admission of the whole document, since they were permitted to draw the court's attention to the particular excerpts which they considered pertinent (r. 919). There was thus no danger that

the court would mistakenly think that complainants endorsed the entire hearings.

Appellants seem to contend that because their theory of offering these excerpts was that they were admissions against interest, the court erred in considering any portions not offered by complainants (br. 225). This position is untenable, for the rule of documentary completeness would require the admission of other portions of the document, even under appellants' theory of admission against interest. The law is settled that "the opponent, against whom a part of an utterance has been put in, may, in his turn, complement it by putting in the remainder, in order to secure for the tribunal a complete understanding of the total tenor and effect of the utterance" (4 Wigmore on *Evidence* (2d ed., 1923) sec. 2113). *Security Trust Co.* v. *Robb*, 142 Fed. 78 (C.C.A. 3d, 1906); *Davis* v. *Forrest*, 7 Fed. Cas. 129 (C.C.D.C., 1811).

8. THE COURT DID NOT COMMIT REVERSIBLE ERROR IN EXCLUDING EVIDENCE OF INTRADEPARTMENTAL DISCUSSIONS, CONSIDERATIONS, RECOMMENDATIONS, AND REPORTS (assignments 2 (a), 2 (b), 6, 25).

In this group of assignments of error appellants object to the exclusion of various excerpts from corporate minutes relating to "consideration" of "plans" and "policies" (assignments 2 (b), 6, r. 716, 717; br. 229) and to various correspondence between Director Lilienthal and the President of the United States and the Federal Power Commission discussing the situation in regard to rural electric service in the Tennessee Valley (assignment 25, r. 723; br. 232).

As noted above, the court admitted into evidence all resolutions of the Board of Directors of the Authority authorizing action and all records of action actually taken or authorized. It drew the line between discussions, recommendations, negotiations, preliminary plans, and preliminary reports on the one hand, and official action and authorization on the other hand (r. 905). As in the case of the speeches and press releases, the grounds for this distinction were found in the speculative and remote character of this type of evidence and in the rulings of this Court to the effect that the validity of executive action of public officials must be determined by their official acts and not by what they say, consider, or hope.

A brief reference to the items under consideration is sufficient to demonstrate that they do not represent any concrete or official action taken by the Tennessee Valley Authority. Appellants' own description of them is in terms of "consideration," "plans," "objectives," and "policies." (See assignment 2 (b), r. 716.) The excerpts from the "corporate minutes" referred to on page 229 of appellants' brief consist of discussions in board meetings during the early months of the existence of the corporation. None of these excerpts authorized any action. The suggestion that these excerpts were introduced into the instant case by defendants' answer is misleading (br. 229). These excerpts appear as evidence offered by the complainants in the *Ashwander* case, the entire record of which was attached as an exhibit to defendants' answer in this case for the limited purpose of supporting the special

defense of *res judicata* set up against the Alabama Power Company (r. 251). The correspondence referred to in assignment 25 (r. 723), as already stated, was of a purely informational and advisory character. Here again the only purpose that such materials can serve is to indicate the motives and mental attitudes of their authors.

At most, such discussions and communications constitute only some of the many considerations leading to board action. There can be no doubt that the trial court was well within its discretionary powers in refusing to become involved in the volume of intradepartmental discussions and individual reports requested by petitioners. The court's ruling was in accord with the decision of this Court in the recent case of *Baltimore & O.R.Co.* v. *United States*, 298 U.S. 349, in which case complainant attacked the reasonableness of certain rates established by the Interstate Commerce Commission and sought to go behind the findings of the Commission on the basis of the examiners' report. This Court sustained the refusal of the trial court to consider the examiners' official report stating:

> That report is not a part of the record. At the trial appellants offered it in evidence. The commission objected to it on the ground that it is "a mere recommendation of an employee of the commission to the commission." The court sustained the objection. The report of the commission does not disclose the examiners' recommendations but states that its conclusions differ somewhat from those proposed by the examiners. For the reason

> given in the commission's objection, upon which the court excluded what the examiners proposed to the commission, the appellants would not have been justified in raising the question of confiscation upon the proposed report [pp. 370-371].

See also *United States* v. *Fox River Butter Co.*, 61 Treas. Dec. 1047, *cert. denied*, 287 U.S. 628, wherein the United States Court of Customs and Patent Appeals held the report made by the Tariff Commission to the President irrelevant and inadmissible to show the basis of the President's change in rates, on the ground that the action contemplated by the statute was to be taken by the President and not by the Commission.

There is something more involved than the lack of probative value of this type of evidence. Practical reasons of policy requiring its exclusion have been recognized even where intraoffice memoranda of private corporations are concerned. See *Carroll* v. *East Tenn., Va. & Ga. Ry. Co.*, 82 Ga. 452 (1889); *Missouri, K. & T.Ry.Co.* v. *Want & Co.*, 179 S.W. 903 (Tex. Civ. App., 1915); *Patterson & Roberts* v. *Quanah, A. & P.Ry.Co.*, 195 S.W. 1163 (Tex. Civ. App., 1917). Where the action of a public agency is in issue, the practical reasons for exclusion are greatly enhanced by considerations of public policy. A rule subjecting all intraoffice discussions and conferences to use as formal evidence in litigation would stultify preliminary inquiries and would hinder the free expression and consideration of different points of view vital to sound judgment on important public questions. See

Smith v. *The East India Co.*, 1 Ph. 50, 41 Reprint 550 (1841); *Kurrle* v. *Mayor of Baltimore*, 113 Md. 63 (1910); *Texas Utilities* v. *Ickes* and *Alabama Power Co.* v. *Ickes*, record, vol. II, p. 435 (per Wheat, C.J.). *Cf. Carroll* v. *East Tenn., Va. & Ga. Ry. Co., supra.*

The executive messages of the Governor of Tennessee (assignment 41, r. 727) and the telegram from the Authority to the Governor of Alabama (assignment 42, r. 727) setting forth certain suggested legislation recommended by the Authority are referred to on pages 231 and 232 of appellants' brief. As stated in the assignments, the purpose of this evidence was to show that the enabling legislation enacted by the legislatures of Alabama, Tennessee, and Mississippi was prepared and sponsored by representatives of the Authority. The court correctly held that complainants would be permitted to show the enactment of the legislation and what had been done under it, but that the court would not receive testimony as to what was said by supporters or opponents of the legislation at legislative hearings (r. 1435-1438). The soundness of this ruling would not seem open to question. When the legislation in question was duly enacted by the properly constituted legislative bodies of the respective States, it became the law of those sovereignties, and any inquiry by the courts into the nature of the support or opposition of such legislation would be clearly improper under the settled doctrines of this Court. *Cf. Fletcher* v. *Peck*, 6 Cranch 87, 130-131; *American Banana Co.* v. *United Fruit Co.*, 213 U.S. 347.

9. THERE WAS NO REVERSIBLE ERROR IN EXCLUDING CERTAIN DETAILED EVIDENCE PURPORTING TO SHOW EXTENT OF DAMAGES (assignments 18-23, 26, 49).

Some eight or ten of the assignments of error relate to the exclusion of evidence purporting to show the extent and nature of the damages to complainants as the result of the Authority's activities. Apart from the obvious cumulative nature of this evidence, which in itself would justify its exclusion, all of it is so speculative and remote as to be entirely valueless and irrelevant.

Complainants were permitted to introduce ample evidence on the question of actual damage. At least one representative from each of the eighteen companies was permitted to testify regarding the facilities of each company and to facts implying that the Authority's power sales would displace complainants' markets. In addition, the witness Frothingham freely testified regarding the damage which, in his opinion, would result to complainant companies generally by reason of their inability to borrow money at low interest rates (r. 1303-1319). Such evidence as that offered through the witness Addinsell was excluded because it was either merely repetitious of Frothingham's testimony or consisted of details regarding specific individual complainants (r. 1425-1434). The witness Moreland was permitted to testify extensively on the likelihood that the Authority would displace the facilities and service of complainants (r. 1470-1480). While his specific estimates on the money value of damage were excluded, he was permitted to testify at length on the extent and

character of the damage which would result to complainants from the marketing of the Authority's power (r. 1470). The witness Ford testified generally as to the effect upon complainants should they be forced to reduce their rates to meet those charged by the Authority (r. 1126-1127). And finally, the court found that "Substantial future damage to complainants will result from competition with TVA" (fdg. 125, r. 628, app. I, 62). As the court stated during the course of the trial, this finding "is the only ultimate fact which could be established by entering in detail into the evidential facts as to rates" (r. 1414) or by going into "estimates of money damage" (r. 1480):

> . . . to go into these details would lead us into a remote and collateral inquiry which would not affect the ultimate result [r. 1414].

The excluded evidence consisted merely of exhaustive detail concerning every remote possibility of damage and estimates in dollars of the damages expected to result to each individual complainant. Appellants' theory, as frankly stated in their brief, is that anything tending to show "the size, nature and effect of the entire unitary scheme of TVA" (br. 229) should have been admitted into evidence.

A brief summary of this proposed testimony is sufficient to demonstrate its inadmissible character as well as the confusion that would have resulted if the court had given free rein to complainants' broad theory of admissibility of evidence: estimates as to the amount of money damages to each of complainants, assuming

they were forced to reduce their rates (assignment 18, r. 721); detailed charts estimating the money damages to each of complainants due to expected loss of use of facilities (assignment 19, r. 721); estimates of damage due to inability to borrow money at low interest rates (this testimony including some ten detailed charts showing a comparison of the yield of the bonds of each of complainant power companies with Standard Statistics Company's average yields of public-utility bonds) (assignment 20, r. 721); testimony as to the depressed value of dams that the Government might possibly acquire sometime in the future under the Federal Water Power Act, including detailed accounts of the work done by complainants on these dams and the cost of such work, the theory being that such depressed values may affect the price the Government will pay if it shall ever exercise its right to acquire such dams (assignments 22, 23, r. 722, 723). It should be noted that the theory upon which this proof was offered was that by the grant of a license under the Federal Water Power Act the Federal Government granted a special privilege to sell the electricity generated at the dam which could not be impaired by future action of the Federal Government—in short, a discredited theory of perpetual estoppel against the Government by its grant of a license. (See *Tennessee Elec. Power Co.* v. *Ickes*, 22 F.Supp. 639 (D.C., 1938), *aff'd*, 58 Sup. Ct. 947; *Carolina Power & Light Co.* v. *South Carolina Public Service Authority*, 94 F. (2d) 520 (C.C.A. 4th, 1938), *cert. denied*, 58 Sup. Ct. 1048.

Equally incompetent and irrelevant was the proposed testimony of Willkie offered to establish efforts of some of the complainants to minimize their damages (assignment 21, r. 722; Willkie, r. 1505), and the proposed testimony of the witness Collier regarding the situation in the State of Georgia (Miller, r. 1110; Longley, r. 995). If this testimony of the witness Willkie had been admitted on the stated theory of showing the willingness of the Commonwealth and Southern companies to purchase power from the Authority, the court would have had to consider such collateral questions as the action of the complainant The Tennessee Electric Power Company in electing to construct an expensive steam plant at Nashville, Tennessee, rather than to purchase power from the Authority (r. 974). As the court pointed out in regard to the collateral and remote character of the Collier testimony, complainants' theory for its admission would have opened the door to evidence concerning any other noncomplainant power company within possible transmission distance of any of the Authority's projects (r. 997-998).

On pages 226-227 of their brief appellants complain of the ruling of the trial court excluding proposed testimony offered to show the average annual value of agricultural crops on lands which had been acquired by the Authority as a part of the reservoir projects. It is clear that the sole purpose of this testimony was to initiate a comparison of the detailed costs of the Authority's projects with the benefits to be derived from one particular function. The fallacy of attempting to determine the constitutionality of the

dams constructed under the statute by this method of comparative costs has been fully discussed in the argument on the constitutional question.

The letters from municipalities offered by the witness Stanley (assignment 26, r. 723), containing statements that they were proposing to construct their own distribution systems in order to secure power from the Authority, were ruled out as incompetent hearsay since the persons who wrote them did not appear to testify to them (r. 956); and they were also irrelevant, there being no legal damage to a private utility by reason of the fact that an authorized public plant draws its customers away by lower rates (r. 1037-1038). *Cf. Walla Walla* v. *Walla Walla Water Co.*, 172 U.S. 1; *Springfield Gas Co.* v. *Springfield*, 257 U.S. 66.

10. OBJECTIONS TO THE QUALIFICATIONS OF AUTHORITY'S WITNESSES WERE FRIVOLOUS (assignments 50, 51, 52, 58).

Appellants refer to most of these assignments in the section of their brief on "the limitation of the scope of rebuttal" (br. 243-247). Appellants' objections to the qualifications of the Government's witnesses on flood control and navigation can hardly be taken seriously (assignments 50, 51, r. 729; br. 246). A review of the record on the qualifications of these witnesses conclusively shows their high degree of training and experience in the subjects on which they testified (Bowman, r. 1689; Woodward, r. 1772; Kimball, r. 1822; Floyd, r. 1887; Alldredge, r. 2039; Barker, r. 1940; Okey, r. 1902; Brodie, r. 2021).

Appellants' insistence that the testimony of these witnesses varied in substantial respects from the official reports and statements previously made by the directors of the Authority is not supported by the record. The fact is that in all essential respects the testimony of the witnesses, both with respect to the design of the structures and the methods to be followed in their operation, was identical with the plans previously outlined in documents available to the complainants at the trial. The only variations involved matters of detail, such as the additional height of the Gilbertsville Dam, which could in no way affect the contentions of the parties (see *infra* pp. 256-258).

The objection that the witnesses testifying in regard to defendants' dam-construction program, plans and designs for dams, and methods of operation were incompetent to prove official action (assignment 58, r. 732; br. 246) is likewise without substance. As the trial court pointed out, these witnesses were the very men actively engaged in and in charge of the work and qualified by experience to testify on these matters (r. 1791, 2238). They were acting within the duties specifically and duly conferred upon them by board resolution (def. ex. 65, r. 4078). As appears from the record, the witness Woodward had been charged by board resolution with the duty of supervising and controlling the operation of all of the reservoirs (r. 1776; def. ex. 41, r. 4065), and the witness Bowman was directly in charge of the preparation of the plans and tentative figures upon which the design of the projects is based (r. 1717).

Complainants' objection that the witnesses could not testify to definite and final decisions arose not from the fact that the witnesses were not competent but from the fact that in the very nature of things they could testify only as to the present status of the Authority's dam-construction program. The position of complainants was that since the witnesses could not guarantee as definite and final the data they gave regarding the design and operation of dams not yet completed, the court should accept estimates and proposed plans stated in early published reports of the Authority, irrespective of the fact that it could be proved that such estimates and some details had been changed with continued investigations and studies. In other words, complainants insisted upon the right to challenge the legality of specified dams still in the exploratory and blueprint stage, but denied the right of the Authority to produce the only available evidence as to the existing status of the dams. The indefiniteness was inherent in the effort to litigate the validity of dams on which construction had not yet commenced and the preliminary plans of which had not yet been finally decided.

The objection to the evidence of the witness Sargent regarding the design and construction of the Sacandaga Reservoir in the State of New York (assignment 52, r. 730; br. 246) is also groundless. This testimony was offered and admitted for the purpose of showing the past experience of the witness Sargent in operating dams, in order to qualify him (r. 1674-

1680), and it was clearly proper and pertinent for this purpose.

11. THERE WAS NO REVERSIBLE ERROR IN THE COURT'S RULINGS AS TO THE SCOPE OF CROSS-EXAMINATION (assignments 3, 53-57).

Appellants' assignments of error on the rulings on cross-examination are of two types (br. 241-243): (a) the ruling of the court that the cross-examination would not be limited to matters brought out on the examination in chief (assignments 3, 57, r. 716, 732; br. 241); and (b) the rulings of the court refusing to permit cross-examination of the Authority's witnesses regarding the testimony of other witnesses given in other cases or other proceedings (assignments 53-56, r. 730-732; br. 242).

(a) With respect to the scope of cross-examination of complainants' witnesses it should be noted that the assignments of error are much broader than the actual rulings of the court. It is true that the trial court did state in an oral opinion delivered from the bench that it would not limit cross-examination to matters brought out in chief "in view of the number of complainants, the number of witnesses, and the fact that the witnesses are drawn from widely scattered points from a number of several states" (r. 848). In this oral opinion the court pointed out:

> A strict adherence to the rule [that cross-examination shall be limited] . . . without the qualifi-

> cation laid down by the Supreme Court, would compel many witnesses to travel many miles for direct examination, and either to remain here in Chattanooga in attendance upon the trial for an uncertain number of days, or to come back again for the purpose of examination by opposing counsel. We believe that this decision which we have arrived at in the interests of economy and of the convenience of all parties and the witnesses, which will be carried out for the equal benefit of every litigant, lies within our sound discretion as defined by the Supreme Court of the United States [r. 848-849].

Counsel were informed that this ruling should not be regarded as a general ruling, but that specific objections should be made to each question which counsel regarded as being beyond the proper scope of cross-examination (r. 779). This practice was consistently followed throughout the trial. It should be further noted that, with the exception of the cross-examination on depositions, all the examination to which error is assigned was directed to witnesses who were officials of the complainant companies testifying in general terms to the businesses and facilities of those companies and the alleged effect of the Authority's activities upon those businesses and facilities.

Furthermore, it is difficult to understand how appellants can claim any great prejudice from the position taken by the court with respect to cross-examination, since the benefits of these rulings were extended to both parties alike (r. 848). In fact, when the actual rulings are examined, it appears that prac-

tically all of the questions propounded on cross-examination to which complainants' objections were overruled were, in fact, related to the subject of the direct examination within the meaning of the decisions of the federal courts. For instance, in taking the depositions of certain officers of rural electric membership cooperatives the complainants identified and offered in evidence a large volume of documentary proof, including the charters and contracts of the membership corporations. It is clear that the purpose of the examination of these witnesses and the identification of these documents was to prove the theory of the complainants that these cooperatives were, in fact, organized by the Authority for the purpose of competing with the complainants in the rural areas, and that the cooperatives have no independent existence but are merely creatures of the Authority, operated and controlled by it. There is no other theory upon which this evidence, adduced upon direct examination, could be relevant to any of the issues in this case. The testimony brought out by defendants on cross-examination of these witnesses was purposely directed toward a rebuttal and explanation of the inferences which were inherent in the evidence developed upon direct examination (r. 1328-1347).

Even if it were true that the so-called strict federal rule limiting the scope of cross-examination to the subject-matter of the direct is to be applied rigidly in all classes of cases and with reference to all classes of testimony without any discretionary power in the trial courts, the decisions of the federal courts make it clear

that the rule is not to be applied to prevent searching cross-examination with respect to all matters opened up on direct examination, and under the decisions such cross-examination may extend to details never specifically mentioned on direct so long as it appears that such subjects are related to the general subject-matter of the testimony in chief. It is well settled that where the testimony of a witness on direct examination tends to create an inference as to the existence of facts not directly testified to, cross-examination properly extends to any matters tending to rebut such inferences. *Davis* v. *Coblens*, 174 U.S. 719.[54]

Even if the record supported the proposition that the trial court consistently permitted the cross-examination of complainants' witnesses upon matters having no relation to the direct examination, such action would clearly not constitute reversible error under the decisions of this Court. The rule invoked by appellants is one of administrative convenience, designed to expedite the business of the court and to avoid the unnecessary confusion of issues. The decisions make it clear that where a rigid adherence to the rule would defeat rather than accomplish these purposes, it is sufficiently flexible to permit of an application which will avoid defeating the very purpose for which the rule was designed. The reasons stated by the trial court,

Co.*, 129 Fed. 668 (C.C.A. 8th, 1904); *Commercial State Bank* v. *Moore*, 227 Fed. 19 (C.C.A. 8th, 1915); *Austin* v. *United States*, 4 F. (2d) 774 (C.C.A. 9th, 1925); *Minner* v. *United States*, 57 F. (2d) 506 (C.C.A. 10th, 1932); *Tinkoff* v. *United States*, 86 F. (2d) 868 (C.C.A. 7th, 1936).

quoted above, were ample to support a relaxation of the rule in this case.

It would be difficult to conceive of a set of circumstances more clearly justifying the exercise of the discretion of the court. The wide latitude of that discretion was clearly stated by this Court in *Wills* v. *Russell*, 100 U.S. 621. In that case the appellant had assigned error to the rulings of the trial court overruling objections to questions propounded upon cross-examination. This Court conceded in the opinion that the particular cross-examination involved related to matters not covered by the direct examination but overruled the assignment, stating:

> Cases not infrequently arise where the convenience of the witness or of the court or the party producing the witness will be promoted by a relaxation of the rule, to enable the witness to be discharged from further attendance; and if the court in such a case should refuse to enforce the rule, it clearly would not be a ground of error, unless it appeared that it worked serious injury to the opposite party [p. 626].

All of the rulings of the trial court upon this question are well within the rule of discretion as above stated and reiterated in *Davis* v. *Coblens, supra*, where this Court said:

> The question of plaintiff's counsel was a general one and opened many things to particular inquiry. The extent and manner of that inquiry was necessarily within the discretion of the court, even

though it extended to matters not connected with the examination in chief [174 U.S. at 727].

The reasons for strict adherence to the limited rule of cross-examination in cases tried before a jury are scarcely applicable to a trial of an equity case before three experienced judges. As the presiding judge stated at the trial: "This court is capable of following the proof and sifting it out, and to decide what proof is offered by what party, and what constitutes the complainants' case, and what constitutes the defendants' case" (r. 1333).

The claim of appellants that they were seriously prejudiced by the rulings of the court upon cross-examination in that they were thus prevented from calling the directors or employees of the Authority as witnesses on their behalf (br. 242) cannot be taken seriously. The record shows that no effort was made to take the testimony of any of these witnesses either by deposition or by subpoena. In a trial before a court of this character there was no danger that appellants, if they had called adverse witnesses to the stand, would have been held responsible for or bound by the testimony of any such witness. There is no reason to believe that the appellants in such event would not have been permitted to show the hostility or bias of such witnesses and to cross-examine them, as well as to secure protection against broad cross-examination by defendants.

(b) The court ruled that it would not permit cross-examination of a witness on testimony of *other* witnesses in *other* litigation or proceedings (r. 1682) regarding the effect of a different project with which the witness on the stand was not familiar, or on the statement of other witnesses in the *Ashwander* case (r. 2252). These rulings are referred to on pages 242-243 of appellants' brief and are covered by assignments of error 53-56 (r. 730-732). The purpose of the rulings was obviously to prevent the introduction of extraneous hearsay. It should be noted that the court's ruling was not as broad as the partial excerpt from the record quoted in assignment 53 (r. 730) might indicate. None of the instances relied upon by appellants involved cross-examination on testimony of the same witness in any proceeding or on any testimony offered by the defense in this case even through other witnesses.

The attitude of the trial court in regard to such instances as those referred to in assignments 52, 54, and 55 (r. 730, 731) was summed up in the following statement:

> The Court considers the injection into this record of testimony of a witness in another case, between different parties, as offering totally incompetent testimony, a different witness, not this witness [r. 1603].

That this position was within the li ts of the trial court's discretion in a case of this character seems obvious. *Cf. Western Union Tel. Co.* v. *Ammann*, 296

Fed. 453 (C.C.A. 3d, 1924); *Dupont de Nemours & Co.* v. *White*, 8 F. (2d) 5 (C.C.A. 3d, 1925); note 82 A.L.R. 440.

12. THE LIMITATIONS ON REBUTTAL EVIDENCE WERE WITHIN THE TRIAL COURT'S DISCRETION (assignments 61, 62).

The appellants allege error in the exclusion of the testimony of certain witnesses offered on rebuttal (br. 243, 246). An examination of the whole record shows that complainants sought to withhold a part of their main case until the Government had rested and thus to deprive the Government of an opportunity to defend. The nature of the Authority's projects, their general method of operation, and their benefits to navigation and flood control on the Tennessee and Mississippi Rivers were fully set forth in the Authority's "Unified Report" in 1936 (comp. ex. 328 (original), r. 3068), in numerous congressional hearings, and in the Government's answer in this case. Much of the basic supporting data, including the reports of the Army Engineers on the Tennessee River (H.Doc. 328, 71st Cong., 2d sess. (comp. ex. 105 (original), r. 2615), and on Mississippi flood control (H.Doc. 259, 74th Cong., 1st sess. (def. ex. 32, r. 4062); Com. Doc. 1, H.R. Com. on Flood Control, 75th Cong., 1st sess.), were likewise available to complainants prior to the trial. As the trial court observed, there was little element of surprise in this case (r. 1861, 2372-2373). It is evident that the rebuttal testimony was not offered to contradict new

and affirmative matter introduced in the defendants' case, but rather to reassert and amplify contentions which were made or should have been made in the case in chief or to contradict the admissions of complainants' own witnesses on cross-examination. The exclusion of such rebuttal testimony was entirely proper. *Carver* v. *United States*, 160 U.S. 553; *Throckmorton* v. *Holt*, 180 U.S. 552; *Goldsby* v. *United States*, 160 U.S. 70.

Only three issues raised by complainants' offers to prove on rebuttal deserve any attention: first, the offer to prove (r. 2348) that the Mississippi levees could be raised and that the Authority's reservoirs would not appreciably reduce Mississippi flood heights; secondly, the offers to prove (r. 2356, 2378, 2410) that the Authority's method of operation was for power and not for flood control; and finally, the offer to prove (r. 2309, 2349) that any increase in low-water stream flow provided by the Authority's projects would be of no value to Mississippi navigation.

The court properly excluded the testimony offered on rebuttal with respect to Mississippi flood control. As part of complainants' case in chief the witness Kelly testified on this subject at great length and sought to show (a) that the existing protection works for Mississippi flood control were adequate without the addition of the projects of the Authority, and (b) that no tributary flood-control reservoirs, whether those of the Authority on the Tennessee or any others, would have an appreciable effect in the reduction of Mississippi flood heights (r. 1370, 1374-1375). This is the position

which appellants now take in their brief (br. 58-59). On cross-examination, however, the witness Kelly expressly acceded to the views set forth in the report of the Chief of Army Engineers following the great flood of 1937 (see *supra* pp. 20-21) to the effect that the existing Mississippi flood-control protection works were inadequate for the greatest Mississippi floods, that the levees had reached the limits of practicable height, and that additional protection should be sought in part in the construction of reservoirs on the tributaries (Kelly, r. 1379-1380). Thus the testimony offered with respect to the feasibility of raising the levee system not only dealt with the same subject already discussed in the testimony of the witness Kelly on direct examination in their case in chief, but was in fact offered to rebut the admissions of Kelly on cross-examination.

There was even less justification for the offer of rebuttal testimony on the effect of the Authority's projects in reducing Mississippi flood heights. The pretext advanced at the trial was that the preliminary design of the Gilbertsville Dam had been changed subsequent to the last congressional appropriation hearings so as to provide more flood storage (r. 2340-2341). The offer of the Authority's counsel to withdraw any objection to rebuttal testimony limited to the effect of the additional storage at Gilbertsville was unsatisfactory to complainants' counsel (r. 2341). In fact, the change in preliminary design did not materially affect the issue. As we have said, Kelly's previous testimony on direct examination in complainants' case in

chief was based on the impracticability of reservoirs for flood control in principle, and the testimony was not in any way affected by the precise amount of storage space available at the particular projects of the Authority, which was well known to be substantial. The Government's principal witness on Mississippi flood control, Clemens, based his conclusions on the figures of flood storage set forth in congressional hearings available to the complainants (r. 1651). Here again the offer of rebuttal testimony was in truth for the purpose of rebutting the admissions of complainants' witness Kelly on cross-examination.

The court's ruling rejecting rebuttal testimony on the propriety of the Authority's method of operation was equally sound. The Authority's general method of operation, the seasonal filling of the tributary projects during flood season, and the drawdown in advance of floods on the main-stream projects, was set forth in the Authority's "Unified Report" (comp. ex. 328 (original) pp. 18, 19, r. 3068). Complainants' pretext in justification of the rebuttal testimony (r. 2344) was that the *details* of the method of operation of the Norris Dam as testified to by the defendants' witness Woodward (r. 1820-1821) differed in some degree from those tentatively given in a previous congressional hearing (comp. ex. 116 (original) pp. 374-375, r. 2700). The difference in detail, however, was wholly immaterial so far as the complainants' case was concerned. Complainants' witness Kurtz had testified on direct examination in the case in chief that there was a conflict in

the use of a reservoir for power and flood control and that *to whatever extent* a reservoir were used for power, it would have no dependable value for flood control, and conversely (Kurtz, r. 1213).

It is this alleged conflict in principle which complainants now advance as their principal reliance (br. 40). This alleged principle would apply equally whether the Norris Dam were to be filled to elevation 1010 on April 1 (as was stated in one congressional hearing (comp. ex. 116 (original) pp. 374-375, r. 2700)), or only to elevation 1005 on April 15 (as testified to in this trial, r. 1820-1821). This change in detail was the result of further studies, and further studies will undoubtedly produce other changes in detail (fdg. 44, r. 608, app. I, 30). But the principle of operation of the same storage capacity for multiple purposes remains the same, and it is this issue (and not the details) which appellants discuss at such length in their brief. This is obvious from the fact that appellants contend that the alleged conflict has application not merely to the Norris Dam (the only dam as to which detailed testimony was given) but to all the other dams as well (br. 50-51). In fact, the true purpose of the offer of rebuttal on this issue was that, on cross-examination, complainants' witness Kelly admitted (r. 1386-1387) that for Mississippi flood control the dams beyond prediction distance (like the tributary projects) should be operated so as to store water throughout each flood season (as the Authority plans to do) and that the main-stream dams within

prediction distance may be drawn down in advance of flood peaks and additional capacity made available to reduce the crest (as the Authority also plans to do).

The question of the value of the increased stream flow in low-water season for Mississippi navigation was likewise raised by complainants in their case in chief. The complainants' witness Putnam expressly testified on direct examination that, in his opinion, any increase in low-water flow provided by the Authority's projects would be of no value to Mississippi navigation, although he advanced no detailed justification for this opinion (r. 1168). On rebuttal complainants offered to prove that the witness Putnam was "still of the same opinion" (r. 2309-2310). The first time that complainants offered any evidence in support of this opinion was on rebuttal (r. 2355-2356). This evidence was available to complainants in advance of the trial and did not in any way turn on the details of the defendants' testimony. It is obvious that complainants cannot be permitted to withhold part of their case in chief for rebuttal.

All of the remaining testimony offered in rebuttal concerned matters of detail regarding which there was conflicting opinion. For example, the witness Putnam in rebuttal offered testimony which was merely supplementary to his testimony in the case in chief in which he had given a detailed comparison of the relative merits of the low-dam and the high-dam plans, and detailed estimates of the prospective traffic on the improved waterway. He had covered the

same questions before, and the defendants' witnesses Watkins, Alldredge, Barker, and Brodie had disagreed with him (Putnam, r. 1152-1170, 1176-1178; *cf.* r. 2286-2308, 2320-2330; Watkins, r. 1536-1538, 1549-1551; Alldredge, r. 2055-2063; Barker, r. 1959-1973; Brodie, r. 2023-2031). As ruled by the court, certainly the proffered testimony could not properly be received in rebuttal (r. 2288-2289, 2295-2296). The exclusion of such evidence lies within the discretion of the trial court. *Johnston* v. *Jones*, 66 U.S. 209; *Marande* v. *Texas & P. Ry.Co.*, 124 Fed. 42 (C.C.A. 2d, 1903); *Stone* v. *Chicago, M., St.P. & P.R.Co.*, 53 F. (2d) 813 (C.C.A. 8th, 1931). As this Court ruled in the case of *Philadelphia & Trenton R.R.Co.* v. *Stimson*, 14 Pet. 448, concerning the proper order of proof,

> The mode of conducting trials, the order of introducing evidence, and the times when it is to be introduced, are, properly, matters belonging to the practice of the circuit courts, with which this court ought not to interfere . . . [p. 463].

The present case demonstrates the wisdom of this policy, for without such a power vested in the trial court there would have been no end to the multiplication of minutiae.

For all of the foregoing reasons, the decree of the court below should be affirmed.

Respectfully submitted,

ROBERT H. JACKSON

APPENDIX I

SECTION		PAGE
A.	Findings of Fact of Trial Court	1
B.	Conclusions of Law of Trial Court	101
C.	Opinion of Trial Court	113

SECTION A

FINDINGS OF FACT OF TRIAL COURT[1]

STATUS OF THE PARTIES[2]

1. Complainants are eighteen privately owned public utility corporations duly qualified to engage as public utilities in the States of Tennessee, Georgia, Mississippi, Alabama, Kentucky, North Carolina, South Carolina, Virginia, and West Virginia, and are engaged principally in the business of generating, transmitting and distributing and selling electricity, or distributing and selling electricity, or transmitting and selling electricity as public utilities in said States. [Undisputed.]

2. The defendant Tennessee Valley Authority is a body corporate created by an act of Congress approved May 18, 1933, and has an office in Knoxville, Knox County, Tennessee. [Undisputed.]

3. The defendants Arthur E. Morgan, Harcourt A. Morgan, and David E. Lilienthal are, severally, residents of Knox County, Tennessee, and are the three chief executive officers and constitute the Board of Directors of the Tennessee Valley Authority. [Undisputed.]

4. This is an action of a civil nature, in equity, originally filed in the Chancery Court of Knox County, Tennessee, and thereafter duly removed by the defendants to this Court. [Undisputed.]

5. This is a suit in equity and involves questions arising under the Constitution and laws of the United States, and the amount in controversy exceeds, exclusive of interest and costs, the sum or value of $3,000. [Undisputed.]

---

[1] Filed February 23, 1938, ordered by the court to be effective as of January 24, 1938. Reprinted in the record at pages 584-655.

[2] Findings 1 to 37, inclusive, are adoptions by the court of suggested findings of appellants (see r. 566). Naturally, appellants do not assign error on the making of these findings. Therefore, citations to the record for these findings have been omitted.

6. The Tennessee Electric Power Company is a public utility corporation organized under the laws of the State of Maryland, is duly qualified to carry on its business as a public utility in the States of Tennessee and Georgia, and has its principal place of business in the city of Chattanooga, Tennessee. For more than twenty years said company and its predecessors have been engaged in the electric-power business, and today it is distributing electricity in 66 counties in Tennessee, 4 counties in Georgia, and 455 communities in Tennessee and Georgia, including the cities of Chattanooga and Nashville, Tennessee. All of the operating territory of the company, with the exception of a small area north of Nashville, Tennessee, is located within a 100-mile radius of one or more TVA generating plants constructed, under construction, or authorized to be constructed. Said company owns and operates 1,559 miles of transmission lines and 5,226 miles of distribution lines, of which 2,677 are classified as rural distribution lines, in said States of Tennessee and Georgia. It owns generating facilities with a total installed capacity of 244,009 kilowatts and leases generating facilities with a total installed capacity of 6,500 kw. In addition to these facilities the company is preparing to begin construction of a steam generating plant at Bordeaux, Tennessee, with an initial installed capacity of 25,000 kw. and provision for future increase to 150,000 kw. The company's steam plant at Hale's Bar was constructed to provide for expansion of its present capacity of 40,000 kw. to an ultimate capacity of 100,000 kw. Said company also owns hydro sites capable of producing, when developed, 76,000 kw. and has interconnections with other utilities, the total capacity of the interconnections being 160,000 kva. Said company also owns and operates transportation systems in the cities of Chattanooga and Nashville, Tennessee, water systems in 11 municipalities, ice plants in 7 municipalities, and a telephone system in one municipality. For a period of years these

businesses have been operated under the same management with the electric operations and as one business, and the severance of one from the other would have an adverse effect upon the company.

In the year ending September 30, 1937, the company served 136,470 customers, of which 38,399 were classified as rural customers, and, exclusive of sales to other utilities, sold 767,646,665 kilowatt hours, of which 496,923,761 kwh., or 64.7% represented sales to industrial customers. The company has issued an[d] outstanding $49,313,300 in bonds, 241,296 shares of $100 par value preferred stock, and 425,000 shares of no par common stock, all of which were issued with the approval of the Railroad and Public Utilities Commission of Tennessee; and it has 3,500 employees. [Undisputed.]

7. Franklin Power & Light Company is a public utility corporation organized under the laws of the State of Tennessee, is duly authorized to carry on its business as a public utility therein, and has its principal place of business in the city of Franklin, Tennessee. Ever since the organization of the company in 1929 it has been engaged in the electric-power business, distributing electricity in and around the city of Franklin, Tennessee. Its operating territory lies approximately 80 miles from Wilson Dam. The company owns and operates a distribution system consisting of 15 miles of line. It also owns a steam generating plant with an installed capacity of 1,800 kw., which is maintained as a standby plant for The Tennessee Electric Power Company, from which company the Franklin Power & Light Company purchases its power requirements. In the year 1936 the company served 901 customers and sold a total of 3,219,758 kwh. Said company has issued and outstanding $100,000 in bonds and 1,900 shares of $100 par value stock, all of which were issued with the approval of the Railroad & Public Utilities Commission of Tennessee. [Undisputed.]

8. Memphis Power & Light Company is a public utility corporation organized under the laws of the State of New Jersey, is duly qualified to carry on its business as a public utility in the State of Tennessee, and has its principal place of business in the city of Memphis, Tennessee. For more than 20 years said company and its predecessors have been engaged in the electric-power business, and it is now distributing electricity in Shelby County, Tennessee, and in 37 towns and communities therein, including the city of Memphis. The operating territory of the company is from 74 to 105 miles from Pickwick Dam. Said company owns and operates 319 miles of transmission lines and 905 miles of distribution lines. It owns a steam generating plant with an installed capacity of 54,000 kw., has interchange facilities with Arkansas Power & Light Company and Mississippi Power & Light Company, and owns a site for the erection of additional generating facilities with an installed capacity of from 20,000 to 30,000 kw. It owns and operates a natural-gas distribution system throughout its territory, from which approximately 37% of the total gross revenues of the company are derived. The gas and electric properties are jointly operated under the same management, and a loss of all or a substantial part of its electric business would increase the cost of operating the gas department. In the year ending July 30, 1937, the company served 56,952 customers and, exclusive of sales to other utilities, sold 191,888,000 kwh., of which 61,841,000 kwh., or 32.23%, represented sales to industrial customers. The company has issued and outstanding $22,275,000 in bonds, 30,000 shares of no par value $7 preferred stock, 32,000 shares of no par value $6 preferred stock and 7,200 shares of no par common stock, all of which were issued with the approval of the Railroad & Public Utilities Commission of Tennessee. [Undisputed.]

9. Southern Tennessee Power Company is a public utility corporation organized under the laws of the State of

Delaware, is duly qualified to carry on its business as a public utility in the States of Alabama and Tennessee, and has its principal place of business in the city of Chattanooga, Tennessee. The company owns and operates a high-tension transmission line from Wilson Dam, Alabama, to Iron City, Tennessee, a distance of approximately 15 miles, and is engaged in the business of transmitting electric energy over said transmission line, which constitutes a connection between the Alabama Power Company and the Tennessee Electric Power Company. The company has outstanding a note amounting to $380,000 and 10 shares of no par stock. [Undisputed.]

10. Birmingham Electric Company is a public utility corporation organized as such under the laws of the State of Alabama and has its principal place of business in the city of Birmingham, Alabama. For many years said company and its predecessors have been engaged in the electric-power business, and it is now distributing electricity in the city of Birmingham, Alabama, and the metropolitan district thereof, including the towns of Bessemer, Jonesboro, Brighton, Lipscomb, Fairfield, Irondale, Homewood and Tarrant City, as well as in Jefferson County, Alabama, all of which territory was set aside to it by order of the Alabama Public Service Commission. The company's operating territory is located approximately 66 miles from Guntersville Dam. Said company owns and operates 1,057.52 miles of distribution pole lines. It purchases at wholesale from the Alabama Power Company the electricity which it distributes and owns a steam generating plant with an installed capacity of 11,300 kw., which is used as a standby station. It also owns and operates a transportation system throughout its territory, which contributes about 33% of the total gross revenues of the company, and a steam heating system serving a substantial portion of the business district of the city of Birmingham, which contributes approximately 1% of the company's total gross revenues.

These several businesses have for a period of years been jointly operated. The company served 68,110 customers, and in 1936, exclusive of interdepartmental sales, sold 208,113,400 kwh., of which 116,429,366 kwh., or approximately 56% of its total sales, represented sales to industrial customers. [Undisputed.]

11. Mississippi Power Company is a public utility corporation organized under the laws of the State of Maine, is duly qualified to carry on its business as a public utility in the State of Mississippi, and has its principal place of business in the City of Gulfport, Mississippi. For more than 12 years said company and its predecessors have been engaged in the electric-power business, and today it is distributing electricity in 34 counties and in 147 towns and communities in the State of Mississippi. Most of the operating territory of the company is located within 250 miles from Pickwick and Guntersville Dams, and much of the operating territory lies within 100 and 150 miles from said TVA generating plants. Said company owns and operates 857.41 pole miles of transmission lines and 1,080.5 pole miles of distribution lines. It owns generating facilities with a total installed capacity of 18,702 kw., and it has, subject to lease or contract, generating facilities with an installed capacity of 6,450 kw. The company, however, purchases substantially all its power requirements from the Alabama Power Company at 4 interchange points having a combined capacity of 66,300 kw. As a part of its business the company owns and operates a transportation system in the city of Hattiesburg, Mississippi, the total gross revenues from which in the year 1936 were less than 1% of the total revenues received by the company from all sources. In 1936 the company, within a 100-mile radius of Pickwick Dam, served 1,247 customers, sold 2,102,086 kwh., and derived a revenue therefrom of $88,254.39; within a 150-mile radius of said dam it served 6,068 customers, sold 14,816,009 kwh., and derived a revenue therefrom of

$484,839.85; within a 250-mile radius of said dam it served 20,772 customers, sold 87,936,552 kwh., and derived a revenue therefrom of $1,768,553.86. The total kwh. sales to regular customers in that year amounted to 121,160,760 kwh., of which 64,216,059 kwh., or 53%, represented sales to industrial customers. The company has issued and outstanding $10,690,500 in first mortgage bonds, 39,092 shares of preferred stock, and 450,000 shares of common stock; and it has 512 employees. [Undisputed.]

12. Appalachian Electric Power Company is a public utility corporation organized under the laws of the state of Virginia, is duly qualified to carry on its business as a public utility in the States of Virginia, Tennessee, and West Virginia, and has its principal place of business in the city of Roanoke, Virginia. Said company is engaged in the electric-power business and distributes electricity in 29 counties in Virginia, 20 counties in West Virginia, and 522 towns and communities in Virginia and West Virginia. Most of the operating territory of the company is located within 250 miles of Norris Dam; much of its territory is located within 150 miles of said dam, and some of its territory is located within 100 miles of said dam. Said company owns and operates 1,767.88 pole miles of transmission lines, 4,663.79 pole miles of distribution lines, of which 2,527 miles are classified as rural lines, and in addition, on August 31, 1937, had 452 miles of rural lines under construction. The company owns generating facilities with a total installed capacity of 381,390 kw. and has a purchased capacity of 43,500 kw. In 1936 within a 100-mile radius of Norris Dam the company served 439 customers, sold 337,500 kwh., and derived a revenue therefrom of $16,236; within a 150-mile radius of said dam it served 8,171 customers, sold 69,263,102 kwh., and derived a revenue therefrom of $1,312,443; within a 250-mile radius of said dam it served 126,700 customers, sold 1,283,307,996 kwh., and derived a revenue therefrom of $17,690,540. The to-

tal kwh. sales to regular customers in that year amounted to 1,351,653,286 kwh., of which 1,153,567,845 kwh., or 85.34%, represented sales to industrial customers. The company has issued and outstanding $80,774,000 in bonds, and preferred and common stock aggregating $53,500,167.27, and has 3,366 employees. [Undisputed.]

13. Carolina Power Co. & Light Company is a public utility corporation organized under the laws of the State of North Carolina, is duly qualified to carry on its business as a public utility in said State and in the State of South Carolina, and has its principal place of business in the city of Raleigh, North Carolina. For more than 20 years said company and its predecessors have been engaged in the electric-power business. It is now distributing electricity in the States of North and South Carolina and 272 incorporated towns and communities therein. A portion of the company's operating territory is located within a radius of 100 miles of Norris and Fowler Bend Dams and Fontana Dam site, a part of its territory is located within a radius of 150 miles of Fowler Bend Dam and Fontana Dam site, and a part of it is located within a radius of 250 miles of Fowler Bend Dam and Fontana Dam site. Said company owns and operates 1,256 pole miles of transmission lines and 5,921 pole miles of distribution lines. It owns generating facilities with a total installed capacity of 249,050 kw., which are capable of being enlarged so as to produce an additional 80,000 kw. It owns a hydro site capable of producing, when developed, 40,000 kw. and has interconnections with other utilities, the total capacity of such interconnections being 384,000 kw. As a part of its business the company owns and operates transportation systems in Raleigh and Asheville, the gross revenues from which are less than 4% of the total gross revenues of the company. In 1936 the company served 83,836 customers and, exclusive of sales to other utilities, sold 536,521,801 kwh. In said year the company, within a radius of 100 miles

from Norris and Fowler Bend Dams and Fontana Dam site, sold, exclusive of sales to other utilities, 115,802,557 kwh., of which 83,553,403, or approximately 61%, represented sales to industrial customers; within a 150-mile radius of Fowler Bend Dam and Fontana Dam site it sold, exclusive of sales to other utilities, 118,167,621 kwh., of which 85,530,602 kwh., or approximately 72%, represented sales to industrial customers; and within a 250-mile radius of Fontana Dam site it sold, exclusive of sales to other utilities, 309,197,905 kwh. The company has issued and outstanding $46,000,000 in bonds, 165,162 shares of no par value preferred stock entitled to $6 and $7 annual dividends, and 2,500,000 shares of no par common stock, and had as of August 1937, 1,434 regular employees and 57 temporary employees. [Undisputed.]

14. Tennessee Public Service Company is a public utility corporation organized under the laws of the State of Maine, is duly qualified to carry on its business as a public utility in the State of Tennessee, and has its principal place of business in the city of Knoxville, Tennessee. For many years said company and its predecessors have been engaged in the electric-power business, and it is now distributing electricity in Knox, Jefferson, Cocke, Sevier, Union, and Grainger Counties, Tennessee, and 37 towns and communities therein, including the city of Knoxville. The entire operating territory of the company is located within a distance of from 25 to 75 miles of Norris Dam. Said company owns and operates 180.58 miles of transmission lines and 1,063.77 miles of distribution lines. It purchases practically all of its power requirements from the complainant Carolina Power & Light Company and also owns generating facilities with an installed capacity of 3,150 kw. Said company also owns and operates a transportation system in the city of Knoxville, Tennessee, which contributes approximately 21½% of the company's total gross revenues. Both the transportation and electric properties are op-

erated under the same management and as one business. In the year ending September 30, 1937, the company served 30,074 electric customers and, exclusive of interdepartmental sales and sales to other utilities, sold 131,404,000 kwh., of which 73,269,000 kwh., or 55.76%, represented sales to industrial customers. The company has issued and outstanding $7,780,000 in bonds, 50,000 shares of no par preferred stock entitled to a $6 annual cumulative dividend per share, and 1,000,000 shares of common stock, all of which were issued with the approval of the Railroad and Public Utilities Commission of Tennessee. [Undisputed.]

15. Holston River Electric Company is a public utility corporation organized as such under the laws of the State of Tennessee with its principal place of business in the city of Knoxville, Tennessee. Said company is distributing electricity in the incorporated town of Rogersville, Tennessee, and 8 communities in Hawkins and Hamblen Counties, Tennessee, and to rural customers in said counties. The entire operating territory of the company is located within 75 miles of Norris Dam. Said company owns and operates 98.54 miles of distribution lines and purchases at wholesale power, which it distributes, from the complainant Tennessee Public Service Company. For the year ending September 30, 1937, the company sold 1,560,000 kwh. [Undisputed.]

16. Alabama Power Company is a public utility corporation organized under the laws of the State of Alabama, is duly authorized to carry on its business as a public utility therein, and has its principal place of business in the city of Attalla, Alabama. The company is engaged in the electric-power business and distributes electricity in 65 of the 67 counties of the State of Alabama and in 594 communities in the same State. Practically all of the operating territory of the company is located within 250 miles of Guntersville and Wilson Dams; most of the operating territory is located within 150 miles of said dams, and much of the territory is

located within 100 miles of said dams. Said company owns and operates 3,435 circuit miles of transmission lines, 2,810 miles of distribution lines within incorporated municipalities, and 4,519 miles of line classified as rural. It owns generating facilities with a total installed capacity of 571,744 kw. and has made provision for the expansion of its existing plants such that their capacities may be increased by 321,500 kw.

In 1936, exclusive of sales to the Birmingham Electric Company, the company sold within a 100-mile radius of TVA dams constructed or under construction 711,835,625 kwh. and derived a revenue therefrom of $7,384,969,48; within a 150-mile radius of said dams it sold 961,720,184 kwh. and derived a revenue therefrom of $11,147,768.38; and within a 250-mile radius of said dams it sold 1,018,-109,064 kwh. and derived a revenue therefrom of $12,346,-658.72. In that year the total kwh. sales, exclusive of sales to utilities, amounted to 1,145,267,755 kwh., of which 948,-565,825, or 82.8%, represented sales to industrial customers. The total number of customers served in that year was 123,739. The company has issued and outstanding $96,-771,600 in bonds, 367,178 shares of $5, $6 and $7 preferred stock at a stated value of $35,751,258, and 3,775,000 shares of common stock at a stated value of $48,961,300, all of which securities issued subsequent to the creation of the Alabama Public Service Commission were issued with its approval; and it has 2,850 employees. [Undisputed.]

17. Kentucky and West Virginia Power Company, Inc., is a public utility corporation organized under the laws of the State of Kentucky, is duly authorized to carry on its business as a public utility therein, and has its principal place of business in the city of Ashland, Kentucky. Said company is engaged in the electric-power business and distributes electricity in 14 counties and in 100 towns and communities in the State of Kentucky. All of the operating territory of the company is located within 250 miles of Nor-

ris Dam; most of its territory is located within 150 miles of said dam, and some of its territory is located within 100 miles of said dam. Said company owns and operates 435.53 pole miles of transmission lines, 553.01 pole miles of distribution lines, of which 131 miles are classified as rural distribution lines, and in addition, on August 31, 1937, had 31 miles of rural distribution lines under construction. The company owns generating facilities with a total installed capacity of 19,500 kw. In 1936 within a 100-mile radius of Norris Dam the company served 3,713 customers, sold 30,078,589 kwh., and derived a revenue therefrom of $685,969; within a 150-mile radius of said dam it served 9,919 customers, sold 87,946,055 kwh., and derived a revenue therefrom of $1,700,159; within a 250-mile radius of said dam it served 21,170 customers, sold 254,600,861 kwh., and derived a revenue therefrom of $3,314,345. The total kwh. sales to regular customers in that year amounted to 254,600,861, of which 232,243,229 kwh., or 91.32%, represented sales to industrial customers. The company has issued and outstanding $8,499,000 in bonds, and preferred and common stock aggregating $4,147,525, and has 435 employees. [Undisputed.]

18. Kingsport Utilities, Inc., is a public utility corporation organized under the laws of the State of Virginia, is duly qualified to carry on its business as a public utility in the State of Tennessee, and has its principal place of business in the city of Kingsport, Tennessee. The company is engaged in the electric-power business and is distributing electricity in the counties of Sullivan and Hawkins in the State of Tennessee. All of the operating territory of the company is located within a 100-mile radius of Norris Dam. Said company owns and operates 5.75 pole miles of transmission line, 133.53 pole miles of distribution lines, of which 49 miles are classified as rural distribution lines, and in addition, on August 31, 1937, had 6 miles of rural distribution lines under construction. It also owns generating

facilities with a total installed capacity of 11,400 kw. In the year 1936 the company served 4,358 regular customers and sold 37,468,385 kwh., of which 30,356,870 kwh., or 81%, represented sales to industrial customers. The company has issued and outstanding $1,044,000 in bonds and $1,000,000 of preferred and common stocks and has 98 employees. [Undisputed.]

19. Kentucky-Tennessee Light & Power Company is a public utility corporation organized under the laws of the State of Kentucky, is duly qualified to carry on its business as a public utility in said State and in the State of Tennessee, and has its principal place of business in the city of Bowling Green, Kentucky. The company is engaged in the electric-power business and distributes electricity in many counties in Tennessee and Kentucky. All of the operating territory of the company is within a 250-mile radius, and most of the operating territory is within a 100-mile radius, of one or more TVA generating plants constructed, under construction, or authorized to be constructed. Said company owns and operates many miles of transmission and distribution lines in the States of Tennessee and Kentucky. [Undisputed.]

20. West Tennessee Power & Light Company is a public utility corporation organized under the laws of the State of Florida, is duly qualified to carry on its business as a public utility in the State of Tennessee, and has its principal place of business in the city of Jackson, Tennessee. For more than 30 years said company and its predecessors have been engaged in the electric-power business, and it is now distributing electricity in 9 counties in west Tennessee and 24 incorporated towns and communities, including the city of Jackson, Tennessee. All of the operating territory of the company is from 40 to 75 miles of Pickwick Dam. Said company owns and operates 90.6 miles of transmission lines and 193.6 miles of lines classified as rural. It owns generating facilities with a total installed capacity of 5,228

kw. and also has interconnections with Memphis Power & Light Company, from whom it purchases power at wholesale. It owns and operates natural-gas distribution systems in 6 municipalities, ice plants in 2 municipalities, waterworks systems in 3 municipalities, and a transportation system in the city of Jackson, Tennessee. For a period of years these businesses have been operated under the same management with the electric operations and as one business and are closely intermingled. For the year ending July 31, 1937, the company served 10,050 customers and, exclusive of interdepartmental sales, sold 19,322,248 kwh., of which 8,080,659 kwh., or 38.74%, represented sales to industrial customers. [Undisputed.]

21. Mississippi Power & Light Company is a public utility corporation organized under the laws of the State of Florida, is duly qualified to carry on its business as a public utility in the State of Mississippi, and has its principal place of business in the city of Jackson, Mississippi. For many years said company has been engaged in the electric-power business and at present is distributing electricity in 40 counties in Mississippi and 312 incorporated towns and communities therein, including the cities of Vicksburg, Natchez, Jackson, and Greenville. Most of the operating territory of the company is located within 250 miles from Pickwick Dam, and a substantial portion of its operating territory is within 150 miles of Wheeler and Guntersville Dams. Said company owns and operates 456.8 miles of transmission lines and 2,628.2 miles of distribution lines. The company purchases substantially all of its power requirements from the Louisiana Power & Light Company, and also owns generating facilities with an installed capacity of 19,146 kw. As a part of its business the company owns and operates transportation systems in the cities of Jackson, Greenville, and Vicksburg; natural-gas distribution systems in 24 municipalities; ice manufacturing systems in 5 municipalities; water systems in 6 munic-

ipalities; and leases and operates water systems in 4 municipalities. The total gross revenues from such operations in 1936 were 29% of the total gross revenues received by the company from all sources. All properties of the company are operated together as a unit, and the destruction of the whole or a substantial part of its electric business would seriously hamper the company's ability to efficiently operate its other properties. In 1936 the company, within a 150-mile radius of Pickwick Dam, served 7,779 customers, sold 18,734,247 kwh., and derived revenue therefrom of $743,744.92; within a 250-mile radius of said dam it served 29,454 customers, sold 117,792,338 kwh., and derived revenue therefrom of $3,063,194.36. The total kwh. sales to regular customers in that year amounted to 157,608,000 kwh., of which 87,673,000 kwh., or 55.6%, represented sales to industrial customers. The company has issued and outstanding $16,000,000 in bonds, 69,000 shares of no par value first preferred stock entitled to a $6 annual cumulative dividend, 35,000 shares of no par value second preferred stock entitled to a $6 annual cumulative dividend, and 1,000,000 shares of no par common stock. [Undisputed.]

22. East Tennessee Light & Power Company is a public utility corporation organized under the laws of the State of Virginia, is duly qualified to carry on its business as a public utility in the States of Virginia, Tennessee, and North Carolina, and has its principal place of business in the city of Bristol, Tennessee-Virginia. For many years said company and its predecessors have been engaged in the electric-power business, and today it is distributing electricity in Carter, Johnson, Sullivan, Unicoi and Washington Counties, Tennessee; in Scott and Washington Counties, Virginia; in Avery County, North Carolina; and in 32 incorporated towns and communities, including the city of Bristol, Tennessee-Virginia. All of the operating territory of the company is within a radius of 135 miles of Norris Dam, the larger part of it being within a radius of

100 to 115 miles of said dam. Said company owns and operates 66.5 miles of transmission lines and 354.4 miles of distribution lines in said States of Tennessee, Virginia, and North Carolina. It owns generating facilities with a total installed capacity of 3,828 kw. Said company also owns a hydro site near Elizabethton, Tennessee, and has interconnections with Appalachian Electric Power Company and Edmondson Electric Company. The company also owns and operates a gas distribution system in the city of Bristol, Tennessee-Virginia, from which operation approximately 10% of the total gross revenue of the company is derived. In the year ending July 31, 1937, the company served 10,312 customers, of which 1,572 were classified as rural customers, and in 1936, sold 22,904,648 kwh., of which 9,243,729 kwh., or 40.4%, represented sales to industrial customers. The company has issued and outstanding $2,731,000 in bonds, 2,635 shares of no par preferred stock entitled to a $6 annual cumulative dividend, and 35,000 shares of no par common stock, all of which were issued with the approval of the Railroad & Public Utilities Commission of Tennessee; and it has 204 employees. [Undisputed.]

23. Tennessee Eastern Electric Company is a public utility corporation organized under the laws of the State of Massachusetts, is duly qualified to carry on its business as a public utility in the States of Virginia, Tennessee, and North Carolina, and has its principal place of business in the city of Bristol, Tennessee-Virginia. For many years said company and its predecessors have been engaged in the electric-power business, and at present it is distributing electricity in Carter, Greene, Johnson, Unicoi, and Washington Counties, Tennessee, and in 57 towns and communities therein, including the cities of Johnson City and Greenville, Tennessee. The operating territory of the company is located within a radius of from 50 to 100 miles of Norris Dam. Said company owns and operates 65.7 miles

of transmission lines and 442.7 miles of distribution lines. It owns generating facilities with a total installed capacity of 19,060 kw. and has done preliminary work at hydro sites which it owns capable of producing, when developed, in excess of 51,000 kw.; and the capacity of its Watauga steam plant is capable of being enlarged. In the year ending July 31, 1937, the company served 8,642 customers, of which 2,304 were classified as rural customers, and in 1936, exclusive of sales to other utilities, sold 24,548,569 kwh., of which 11,049,650 kwh., or 45%, represented sales to industrial customers. The company has issued and outstanding $2,669,500 in bonds, 6,000 shares of $100 par value preferred stock entitled to an annual $6 cumulative dividend, 5,105 shares of no par value preferred stock entitled to a $7 annual cumulative dividend, and 15,000 shares of no par common stock, all of which were issued with the approval of the Railroad & Public Utilities Commission of Tennessee; and it has 125 employees. [Undisputed.]

24. Installed capacity is not a measure of the dependable capacity available for electric service. In the case of hydroelectric plants the limiting factor is the water available and not the amount of machinery installed. Of the dependable steam and hydro capacity in a low-water year a reserve is required to take care of various contingencies. [Undisputed.]

25. Complainants, and each of them, are subject to a special tax to which taxpayers generally are not subject, the tax being upon electrical energy sold for domestic and commercial consumption, in an amount equal to 3% of the price for which complainants sell the same, which is imposed by section 616 of the Federal Revenue Act of 1932, as amended. Complainants also severally pay large sums of money in the form of general taxes to the Federal Government, including Social Security taxes and taxes for unemployment relief imposed by sections 211 to 219 inclusive of the National Industrial Recovery Act. Complain-

ants severally are subject to and pay special and general taxes levied upon privately owned utilities by the several States and their political subdivisions in which complainants severally carry on business or own property.

Following is a table of the taxes paid by each of the complainant companies, with the exception of Kentucky-Tennessee Light & Power Company, for the year 1936, with an estimate of the taxes to be paid by each company for the year 1937. The taxes paid by complainants for the year 1936, exclusive of Kentucky-Tennessee Light & Power Company, averaged in excess of 12.7% of complainants' gross revenue, and for the year 1937, exclusive of Kentucky-Tennessee Light & Power Company, it is estimated that such taxes will be in excess of 14.4% of the total gross revenues of the companies.

Name of Company	1936	1937 (Est.)
The Tennessee Electric Power Company....	$2,278,880.60	$2,613,895.00
Franklin Power & Light Company.....	5,681.77	.....
Memphis Power & Light Company.....	1,071,794.82	1,321,527.00
Southern Tennessee Power Company.....	5,896.77	5,953.00
Birmingham Electric Company.....	828,953.47	1,009,329.00
Mississippi Power Company.....	396,286.26	437,891.00
Appalachian Electric Power Company.....	2,817,013.07	3,069,047.97
Carolina Power & Light Company.....	1,607,877.58	2,035,440.00
Tennessee Public Service Company.....	471,335.33	590,733.00
Holston River Electric Company.....	5,414.47	5,611.00
Alabama Power Company.....	2,380,556.45	3,126,400.50
Kentucky & West Virginia Power Company, Inc.	344,104.06	350,919.03
Kingsport Utilities, Incorporated.....	59,697.46	85,437.89
West Tennessee Power & Light Company...	119,670.44	140,122.88
Mississippi Power & Light Company.....	738,463.61	918,832.00
East Tennessee Light & Power Company....	87,431.38	105,687.57
Tennessee Eastern Electric Company.....	130,419.90	190,390.40
	$13,349,477.44	$16,007,217.24

[Undisputed.]

26. The rates and services of each of the complainant companies in the States of Alabama, Tennessee, Kentucky, Virginia, Georgia, West Virginia, North Carolina, and South Carolina are regulated by State commissions in the respective States. There is no State commission in Mississippi. The rates and services of the complainant companies in that State are regulated by municipalities within their corporate limits. [Undisputed.]

27. The rates charged by the several complainant companies in the States of Alabama, Tennessee, Georgia, Virginia, North Carolina, and South Carolina are uniform for the different classes of service throughout their respective operating territories. As between the complainant companies operating within a State there is no requirement of uniformity of rates. [Undisputed.]

28. The respective complainants have been issued franchises, licenses, or easements by most but not all of the municipalities and by most but not all of the counties in which they respectively operate electric facilities. Said franchises, licenses, or easements vary in original term and in unexpired term from a few months to more than 50 years, and many are unlimited in term. Most of the said franchises, licenses, or easements purport to be nonexclusive. Most of said franchises, licenses, or easements grant rights not limited within the respective municipalities or counties, but some are limited to particular streets or highways or to portions of the respective counties or municipalities. Some of the franchises, licenses, or easements purport to grant the right to construct and occupy the streets and highways with electrical facilities; some of said franchises, licenses, or easements purport to grant, for the purpose of engaging in the business of selling and distributing electricity, the right to occupy the streets and highways; and some of said franchises, licenses, or easements purport to grant the right to occupy the streets and highways with electrical facilities and to engage in the business

of selling and distributing electricity within the respective municipalities and counties. The validity of one of the municipal franchises, licenses, or easements claimed by complainants is now being contested in a State court by the municipality concerned. [Undisputed.]

Status of Projects of the Tennessee Valley Authority

29. On October 3, 1933, TVA began the construction of Norris Dam and power plant on the Clinch River, a tributary of the Tennessee River, located 79.8 miles above its mouth, and completed such construction in March 1936, at a total cost of $36,310,370, and began generating power in July 1936. The dam is 265 feet high; 1,872 feet in length; has a normal reservoir area of 34,200 acres; a reservoir shore line of 705 miles; and has an installed generating capacity of 100,800 kw. [Undisputed.]

30. On November 30, 1933, TVA began construction of Wheeler Dam and power plant located 15.5 miles above Wilson Dam on the Tennessee River, and construction was completed in November 1936, at a total cost of $35,317,964, exclusive of the cost of the lock built by the War Department, at a cost of $1,939,693. Wheeler Dam began to generate power in November 1936. The Corps of Engineers in 1932 proposed to construct this dam with a lift of 15 feet as an integral part of the low-dam navigation plan. The estimated cost of said dam in its ultimate stage will be $42,817,964, exclusive of the lock built by the War Department. The dam is 72 feet in height; 6,335 feet in length; has a normal reservoir area of 64,300 acres; a reservoir shore line of 1,063 miles; has an initial installed generating capacity of 128,000 kw. and an ultimate generating capacity of 256,000 kw. [Undisputed.]

31. In March 1935 TVA began construction of the Pickwick Landing Dam and power plant located on the Tennessee River 52.7 miles below Wilson Dam and 100 miles

east of Memphis, Tennessee, and the construction will be completed in June 1938, at an initial cost of $33,199,497 and estimated ultimate cost of $42,431,497. The dam will be 110 feet in height; 7,715 feet in length; have a normal reservoir area of 41,600 acres; a reservoir shore line of 496 miles; an initial installed generating capacity of 72,000 kw. and an ultimate generating capacity of 216,000 kw. [Undisputed.]

32. On December 4, 1935, TVA began the construction of Guntersville Dam and power plant located on the Tennessee River above Wheeler Dam, near Guntersville, Alabama, and construction is estimated to be completed in December 1938, at an estimated initial cost of $34,123,660 and an estimated ultimate cost of $38,524,860. The dam will be 89 feet in height; 4,000 feet in length; have a normal reservoir area of 63,300 acres; a reservoir shore line of 660 miles, with an initial installed generating capacity of 50,000 kw. and an ultimate generating capacity of 100,000 kw. [Undisputed.]

33. On January 13, 1936, TVA began construction of Chickamauga Dam and power plant on the Tennessee River about 6 miles upstream from Chattanooga, Tennessee, and it is estimated that construction will be completed in December 1939, at an initial cost of $40,435,645 and an estimated ultimate cost of $45,333,645. The dam will be 104 feet high; 6,025 feet long; have a normal reservoir area of 32,000 acres; a reservoir shore line of 502 miles; an initial installed generating capacity of 50,000 kw. and an ultimate generating capacity of 100,000 kw. [Undisputed.]

34. On July 15, 1936, TVA began construction of Fowler Bend Dam and power project located on the Hiwassee River in North Carolina about 75.8 miles above the confluence of said river with the Tennessee River, and it is estimated that construction will be completed in October 1940, at an initial cost of $17,296,061, and an estimated

ultimate cost of $22,491,561. The dam will be 292 feet high; 1,250 feet long; have a normal reservoir area of 6,240 acres; 150 miles of reservoir shore line; and an ultimate generating capacity of 80,000 kw. [Undisputed.]

35. TVA has announced its intention to construct Watts Bar Dam and power plant on the Tennessee River, and Congress has allocated in its appropriations specific funds for preliminary investigation of a site which has been selected and which is located approximately 530 miles above the mouth of said river. Preliminary work has been done, and construction is scheduled to begin in the near future. The estimated initial cost of the dam and power plant is $29,200,000, and the estimated ultimate cost is $39,800,000. The dam will be 2,900 feet long and have a normal reservoir area of 42,600 acres and will have an ultimate installed generating capacity of 150,000 kw. [Undisputed.]

36. TVA has announced its intention to construct Coulter Shoals Dam and power project on the Tennessee River, and Congress has allocated in its appropriations specific funds for preliminary investigation of a site which has been tentatively selected approximately 30 miles below Knoxville, at which site some preliminary work has been done. The dam will be 2,070 feet long and will have a normal reservoir area of 11,900 acres, and the estimated initial cost of such dam and power plant is $25,000,000, and the estimated ultimate cost is $30,000,000. The ultimate installed generating capacity will be 60,000 kw. [Undisputed.]

37. TVA has announced its intention to construct the Gilbertsville Dam and power plant on the Tennessee River in Kentucky 22.5 miles above the mouth of said river, and Congress has allocated in its appropriations specific funds for preliminary investigation of a site. Preliminary work has been done at the dam site, and construction is scheduled to begin within the near future. The dam will be 150 feet in height; 8,500 feet in length; have a normal reservoir

area of 160,000 acres; and have an ultimate generating capacity of 192,000 kw. Its estimated initial cost is $95,000,000, and the estimated ultimate cost is $112,000,000. [Undisputed.]

38. The Tennessee Valley Authority has constructed or has under construction or has under investigation for construction a series of high dams and reservoirs, 7 on the main stream of the Tennessee River and 2 on principal tributaries of the Tennessee: the Clinch and the Hiwassee Rivers. [Bowman, r. 1690-1725; see def. exs. 36-38, 40, 44, 49, 50 in volume entitled *Reproductions of Certain Original Exhibits Submitted by Appellees;* def. exs. 39, 41-43, 45-48, 51, 52, r. 4064-4074.]

39. These dams, when completed, will provide a continuous 9-foot navigable channel with adequate overdepths for boats of 9-foot draft over the entire distance from the mouth of the Tennessee at Paducah, Kentucky, to Knoxville, Tennessee, a distance of approximately 650 miles [Barker, r. 1949, 1951; Watkins, r. 1557; Putnam, r. 1189; see def. ex. 98 in *Reproductions of Certain Original Exhibits Submitted by Appellees*]; will substantially alleviate the destructive floods in the Tennessee and Mississippi Valleys [Clemens, r. 1650, 1651; Kimball, r. 1837-1839; Floyd, r. 1890-1891; Watkins, r. 1546]; and will also create a substantial amount of water power [Wessenauer, r. 2175-2180; Watkins, r. 1545; def. ex. 139, r. 4186].

40. Beginning at the mouth of the Tennessee River at Paducah, Kentucky, and extending upstream, the dams under control of the Authority already constructed or under construction or active investigation for construction are as follows [Bowman, r. 1691-1696; see def. exs. 36, 37 in *Reproductions of Certain Original Exhibits Submitted by Appellees*]:

Gilbertsville Dam, which is located in Kentucky 22.7 miles from the mouth of the river, and on which preliminary investigations by the Authority are in progress.

[Bowman, r. 1696-1701; see def. ex. 38 in *Reproductions of Certain Original Exhibits Submitted by Appellees;* def. ex. 39, r. 4064.]

Pickwick Landing Dam, which is located in Tennessee 206.7 miles from the mouth of the river and which is under construction by the Authority and almost completed. [Bowman, r. 1704-1705; see def. ex. 40 in *Reproductions of Certain Original Exhibits Submitted by Appellees;* def. ex. 42, r. 4066.]

Wilson Dam, which is located at Muscle Shoals, Alabama, 259.4 miles from the mouth of the river, which was constructed by the United States Army Engineers and transferred to the Authority under the Tennessee Valley Authority Act and which is now in operation. [Bowman, r. 1693.]

Wheeler Dam, which is located in Alabama 15.5 miles above Wilson Dam and 274.9 miles from the mouth of the river, and construction of which was commenced by the United States Army Engineers, completed by the Tennessee Valley Authority, and which is now in operation. [Bowman, r. 1705-1708; see def. ex. 40 in *Reproductions of Certain Original Exhibits Submitted by Appellees;* def. ex. 43, r. 4067.]

Guntersville Dam, which is located near Guntersville, Alabama, 349 miles from the mouth of the river and which is under construction by the Authority. [Bowman, r. 1709, 1710; see def. ex. 44 in *Reproductions of Certain Original Exhibits Submitted by Appellees;* def. ex. 45A, r. 4069.]

Chickamauga Dam, which is located near Chattanooga, Tennessee, 471 miles from the mouth of the river and which is under construction by the Authority. [Bowman, r. 1709-1716; see def. ex. 44 in *Reproductions of Certain Original Exhibits Submitted by Appellees;* def. ex. 46A, r. 4071.]

Watts Bar Dam, which is located in Tennessee 529.9 miles from the mouth of the river and on which preliminary investigations by the Authority are in progress. [Bowman, r. 1716-1719; see def. ex. 47, r. 4072.]

Coulter Shoals Dam, which is located in Tennessee 602 miles from the mouth of the river and on which preliminary investigations by the Authority are in progress. [Bowman, r. 1719-1720; see def. ex. 48, r. 4073.]

The dams constructed or under construction on tributaries are as follows:

Norris Dam, located in Tennessee on the Clinch River 79.8 miles from the mouth of that river and 647.5 miles from the mouth of the Tennessee River, constructed by the Authority, now completed and in operation. [Bowman, r. 1720-1724; see def. exs. 49, 50 in *Reproductions of Certain Original Exhibits Submitted by Appellees;* def. ex. 51, r. 4074.]

Hiwassee Dam, located in North Carolina on the Hiwassee River 75.8 miles from the mouth of that river and 560.3 miles from the mouth of the Tennessee River, under construction by the Authority. [Bowman, r. 1722-1725; see def. ex. 50 in *Reproductions of Certain Original Exhibits Submitted by Appellees;* def. ex. 52, r. 4074.]

The Tennessee Valley Authority has also recommended to the Congress the future construction of a third tributary project at the Fontana Dam site in North Carolina on the Little Tennessee River, but the Congress has appropriated no funds for this purpose, and neither construction nor preliminary investigation or other work is in progress on this project. [Bowman, r. 1694.]

41. Each of the dam projects of the Authority is located on a site at or near the site selected by the United States Army Engineers in their comprehensive report on the Tennessee River system, set forth in House Document No. 328, Seventy-first Congress, second session. [Watkins, r. 1548; Bowman, r. 1760-1761; Barker, r. 1949; Crane, r. 1285.] The projects so described in that report were designed primarily for navigation and flood control. [Watkins, r. 1547-1548.] Prior to the passage of the Tennessee Valley Authority Act the United States Army Engineers

in fact had plans for a high dam at the site of the present Wheeler Dam. Their design made provision for intakes for the later installation of power facilities. Prior to the passage of the Tennessee Valley Authority Act they had commenced construction of the lock for this project. The lock and dam as completed by the Authority are substantially similar in design to the project as designed by the Army Engineers. [Bowman, r. 1762-1763, 1765-1766; Putnam, r. 1172-1173; Crane, r. 1285.]

42. Each of the projects of the Authority has all elements of design reasonably required for navigation and flood control in accordance with accepted engineering standards. [Watkins, r. 1545, 1548; Bowman, r. 2238-2243; *cf.* Bowman, r. 1695-1696, 1720-1722.] Each of the projects has been designed to provide storage capacity for a slackwater pool behind the dam and a substantial additional storage capacity above the slackwater pool level. [Bowman, r. 2237; see def. exs. 38, 40, 44, 50 in *Reproductions of Certain Original Exhibits Submitted by Appellees.*] Each of the main-stream projects is equipped with a lock prescribed and designed by the Corps of Engineers, with space for an additional parallel lock when commerce warrants. [Barker, r. 1951, 1968; def. exs. 111, 112, r. 4110, 4111; Bowman, r. 2243.] The locks which are being installed are of sufficient size and capacity to accommodate adequately the traffic which may be expected in the reasonably near future. [Putnam, r. 1173; def. ex. 112, r. 4111.] To provide effective means for flood control and stream-flow regulations, each of the projects is equipped with large spillway gates, and in addition, the tributary projects are equipped with sluiceways of large capacity. [Bowman, r. 2239-2241; Sargent, r. 1676.] At each of the projects facilities have been provided or construction and design are such that facilities may be provided for the generation of power. [Bowman, r. 1696, 1721, 1722; comp. ex. 328 (original) pp. 57-58; def. ex. 141, r. 4188.] Each of the projects

of the Authority can be operated to secure substantial benefits in the improvement of navigation and the control of destructive floods, and consistently therewith, the production of electric energy. [Watkins, r. 1545, 1548; Woodward, r. 1780-1789, 1820-1821, and in connection therewith Wessenauer, r. 2173-2175, and def. ex. 139, r. 4186; Bowman, r. 1738-1739, 1742; Sargent, r. 1679-1681, *cf.* r. 1687-1689; Clemens, r. 1654, 1655; *cf.* Crane, r. 1286.]

43. The following tables set forth the principal engineering features of the projects of the Authority, Lock and Dam No. 1 constructed by and under the control of the War Department, and the privately owned Hales Bar Dam: [The information shown in these tables appears in def. exs. 39, 42, 43, 45, 45A, 46, 46A, 47, 48, 51, 52, 53, 54, r. 4064, 4066-4073, 4074-4076; def. ex. 152, r. 4263; def. exs. 36, 38, 40, 44, 50 in *Reproductions of Certain Original Exhibits Submitted by Appellees;* def. ex. 153 (original); comp. ex. 116 (original); comp. ex. 328 (original); except for the lock sill elevations, which appear in Barker, r. 2014, 2015, 2016.]

(1) Project	(2) Miles above River Mouth	(3) Drainage Area Sq. Mi.	(4) Length of Res. Miles	(5) Elev. Top of Gates	(6) Normal Pool Level	(7) Low Pool Level at Dam	(8) Low Pool Level at Dam Upstr.	(9) Reservoir Volumes acre-feet Total to Top of Gates	(10) Low Water Regulation	(11) Flood Control

								Total	4,034,000	8,925,000
								Tributary	1,862,000	2,382,000
								Main River	2,172,000	6,543,000

Col. (7) is the lowest elevation to which the reservoir will usually be drawn for flood control and, at the main-stream dams is the usual allowable drawdown with normal wet season flow to give the elevation shown in col. (8) at the next dam upstream, resulting in a minimum navigable depth of 9 feet, with 2 feet over-depth. This elevation is sometimes also referred to as "minimum drawdown elevation" or "minimum navigation level" or "maximum drawdown."

Col. (10) is the difference in the volumes for elevations in columns (6) and (8).

Col. (11) is the difference in the volumes for elevations in columns (5) and (7).

Normal pool level in column (6) is an arbitrary level generally defining the maximum level to which the pool will be raised in low-water season except for possibly a temporary rise of one foot above this caused by malarial control fluctuations.

[The information shown in this table appears in def. exs. 39, 42, 43, 45, 45A, 46, 46A, 47, 48, 51, 52, 53, 54, r. 4064, 4066-4073, 4074-4076; def. ex. 152, r. 4263; def. exs. 36, 38, 40, 44, 50 in *Reproductions of Certain Original Exhibits Submitted by Appellees;* comp. ex. 328 (original).]

Project	Elev. Spillway Crest	Number & Size Spillway Gates	Spillway Disch. Capacity c. f. s.	Elev. Lower Lock Sill	Elev. Upper Lock Sill	Size of Lock Chamber Feet	Power Units Installed or Authorized	Ultimate Power Units Provided For

Hiwassee	1503.5	7–23 x 32	130,000				1–60,000 KW	2–60,000 KW

*Provision for the ultimate installation of all these units was made by the United States Army Engineers in Wilson Dam as originally constructed. The dam as completed by them included the completed power house, with 8 generating units installed and provision made for installation of the additional 10 generating units.

[The information shown in this table appears in def. exs. 39, 42, 43, 45, 46, 47, 48, 51, 52, r. 4064, 4066-4068, 4070, 4072-4075; def. ex. 153 (original); comp. ex. 116 (original).]

44. The engineers of the Authority in responsible charge have determined, on the basis of a study of all available records, upon a method of operation for the Authority's projects which in their opinion is the most effective method of operation for the improvement of navigation and the control of destructive floods on the Tennessee and Mississippi River Valleys. [Woodward, r. 1775; def. ex. 41, r. 4065; r. 1777-1790, 1820-1821; Kimball, r. 1850-1851, 1880-1881.] This is the method of operation which in their opinion is best adapted for the combined purposes of improvement of navigation and the control of destructive floods without reduction in the effectiveness of the Authority's projects for either navigation or flood control. [Woodward, r. 1777-1790, 1820-1821; Kimball, r. 1850-1851, 1880-1881.] The general method of operation is set forth in the report of the Board of Directors of the Tennessee Valley Authority entitled, "The Unified Development of the Tennessee River System," pages 18-19, which is complainants' exhibit 328 in this case. Some details of operation have been changed in the past, and according to the Authority's engineers in responsible charge, other changes may be necessary in the future as further investigations and experience may require. [Woodward, r. 1779, 1780, 1781, 1783, 1784, 1792; Wessenauer, r. 2173.]

45. The engineers of the Tennessee Valley Authority in responsible charge operate the projects of the Authority substantially as follows: The reservoir levels of the mainstream dams below Chattanooga are held somewhat above low pool level during the flood season and drawn down to or below such level in advance of a flood; those above Chattanooga are to be held at about low pool level during flood season. [Woodward, r. 1783-1784; Kimball, r. 1850-1851; Wessenauer, r. 2175.] As the flood season draws to a close, about the beginning of April, reservoir levels on the main stream are allowed to rise. [Woodward, r. 1784; Kimball, r. 1851.] The reservoir levels of the tributary projects

are maintained at about low pool level at the beginning of the flood season, and a substantial portion of the storage capacity below so-called normal pool level is gradually filled during and after the flood season. A sufficient capacity is held available at the close of the flood season to control the largest run-off that may be expected at that time. [Woodward, r. 1784-1785, 1786-1790; Kimball, r. 1851.] The water stored in the reservoirs on the tributaries and the main stream is released during the low-water season to augment the low-water flow. [Woodward, r. 1780-1782; Barker, r. 1954-1956; def. ex. 142, r. 4189; Karr, r. 2195-2199.]

46. The general method of operation set forth in finding 45 conforms to the method of operation for navigation and for flood control contemplated in House Document No. 328 and House Document No. 259 [see comp. ex. 105 (original) pp. 63-64 (par. 31), p. 71 (par. 41), p. 74 (par. 46), p. 78 (par. 52), p. 95 (par. 77); *cf.* Clemens, r. 1658-1660, in regard to def. ex. 32 (original)] and is reasonably calculated to provide most effectively for the improvement of navigation and the control of destructive floods in the Tennessee and Mississippi River Valleys without reduction in the effectiveness of the Authority's projects for either flood control or navigation [Woodward, r. 1779-1780, 1788-1790, 1821; Kimball, r. 1850-1851, 1880-1881; Clemens, r. 1658-1660, 1665-1666, *cf.* r. 1654-1655, 1658-1659; Floyd, r. 1894; Sargent, r. 1678-1681, 1687; Bowman, r. 1738-1739, 1742; Barker, r. 1958; Watkins, r. 1543-1545, 1548].

47. While dams and reservoirs of limited capacity designed for local flood protection only should, according to some engineering opinion, be kept empty in advance of floods and emptied immediately after floods, those principles govern the design and method of operation of dams and reservoirs established for local protection alone and do not apply to the projects of the Tennessee Valley Authority, which are designed and operated for the protection of points

on the Tennessee, the lower Ohio, and the lower Mississippi, and for navigation, as well as for local flood protection. [Watkins, r. 1543-1544, 1633-1634; Kimball, r. 1880-1881; Woodward, r. 1786-1787, 1790; Kelly, r. 1386-1387; Floyd, r. 1894.]

STATUS OF NAVIGATION ON THE TENNESSEE RIVER

48. The Tennessee River, a navigable river approximately 652 miles long, is formed by the junction of the French Broad River and the Holston River at Knoxville, Tennessee, and enters the Ohio River near Paducah, Kentucky. In its unimproved state there were numerous obstacles to commercial navigation, including shoals and bars, steep slopes, high velocities, and floods in many months of the year, and inadequate depths in a great proportion of the river. [Watkins, r. 1549-1550; Barker, r. 1942-1943; see def. exs. 93, 97 in *Reproductions of Certain Original Exhibits Submitted by Appellees;* def. ex. 94, r. 4100.]

49. The problem of improving navigation on the Tennessee River has been a matter of national concern for more than a hundred years. From 1852 to 1933 Congress authorized and made appropriations for numerous navigation surveys and navigation projects covering all portions of the Tennessee River and certain of its tributaries, at a total expenditure of approximately $18,000,000, exclusive of Wilson Dam. [See def. ex. 95 in *Reproductions of Certain Original Exhibits Submitted by Appellees;* Barker, r. 1943.]

50. Prior to the passage of the Tennessee Valley Authority Act the Tennessee River was not adequately improved for modern commercial navigation except for short stretches behind the Government-owned Dam No. 1 and Wilson Dam, and the privately owned Hales Bar Dam. The controlling depth of the river at that time ranged from

4½ feet in the lower part of the river to 1 foot in the upper section. [See def. ex. 97 in *Reproductions of Certain Original Exhibits Submitted by Appellees;* Barker, r. 1949; Watkins, r. 1549-1550; Putnam, r. 1152.]

51. The Tennessee River, as a tributary of the Ohio River, is interconnected with the inland waterway system of the Mississippi River, which connects the Gulf and the Great Lakes and taps the territory of about 15 States, including many important traffic-producing industrial, commercial, and agricultural centers, and extends as far east as Pittsburgh, Pennsylvania, as far west as Kansas City, Missouri, and as far north as Minneapolis and St. Paul, Minnesota. [See def. exs. 116, 118, 123 in *Reproductions of Certain Original Exhibits Submitted by Appellees;* Alldredge, r. 2044-2045.] Interstate railroads and highways interconnect with the waterway at numerous points, permitting joint land and water transportation. [See def. ex. 66 in *Reproductions of Certain Original Exhibits Submitted by Appellees.*] There are varied and substantial agricultural, mineral, and forest resources located in the Tennessee Valley within reach of the waterway. [Alldredge, r. 2046-2051; def. exs. 120, 121, 122 in *Reproductions of Certain Original Exhibits Submitted by Appellees;* comp. ex. 105 (original) pp. 512-514.] About 18.2% of the population of the United States, based on the 1930 census, is located within 25 miles of the banks of this interconnected waterway. [Alldredge, r. 2045-2046; see def. ex. 119 in *Reproductions of Certain Original Exhibits Submitted by Appellees.*] This inland waterway system includes 5,700 miles of improved waterway of 9-foot depth or over, an additional 3,200 miles of 6- to 9-foot depth, and an additional 1,000 miles of 4- to 6-foot depth. [See def. exs. 116, 118 in *Reproductions of Certain Original Exhibits Submitted by Appellees.*]

52. The dams constructed, under construction, or authorized for construction or investigation by the Tennes-

see Valley Authority will provide a navigation channel throughout the length of the Tennessee River substantially superior to that which could be provided by any alternative method of navigation improvement. [Watkins, r. 1536-1539, 1541-1542, 1547-1548, 1556, 1581-1582, 1620; Barker, r. 1958, 1958-1973; Brodie, r. 2024-2031; comp. ex. 105 (original) pp. 12-13 (see appendix A at r. 4272); def. exs. 104, 109, 110 in *Reproductions of Certain Original Exhibits Submitted by Appellees;* def. exs. 106, 107 (original); def. exs. 105, 108, 115, r. 4108, 4109, 4133.] They will also provide substantial navigation improvement on a number of the tributaries of the Tennessee River [Barker, r. 1963-1964; def. ex. 109 in *Reproductions of Certain Original Exhibits Submitted by Appellees*] and will provide an increased water supply, which will substantially improve navigation on the Mississippi River in the low-water season [Barker, r. 1955-1956; Watkins, r. 1545, 1634; Brodie, r. 2027-2029].

53. Each of the dams constructed, under construction, or authorized for construction or investigation by the Tennessee Valley Authority will result in a substantial improvement for navigation. [Barker, r. 1949, 1950-1951, 1955-1956; def. ex. 98 in *Reproductions of Certain Original Exhibits Submitted by Appellees;* Watkins, r. 1539, 1545, 1557; Putnam, r. 1183-1185; Bowman, r. 1693-1694, 1699, 1704-1706, 1709-1710; def. exs. 47, 48, r. 4072, 4073; def. exs. 38, 40, 44 in *Reproductions of Certain Original Exhibits Submitted by Appellees.*]

54. The high-dam projects of the Authority will provide a navigation improvement substantially superior to that which could be provided by the system of low dams set forth in House Document No. 328. [See references in support of fdg. 52.] The superiority of high dams for navigation was recognized by the Board of Engineers for Rivers and Harbors in House Document No. 328. [Comp. ex. 105 (original) pp. 11-13 (see appendix A at r. 4272);

Watkins, r. 1581-1582, 1620.] The Authority's projects will provide superior channel depths and widths [Watkins, r. 1536-1537; Barker, r. 1958, 1974; def. ex. 108, r. 4109; r. 1961, 1968-1970], substantially fewer lockages [Watkins, r. 1536; Barker, r. 1958, 1959 (see def. ex. 105, r. 4108); def. ex. 115, r. 4133; def. ex. 104 in *Reproductions of Certain Original Exhibits Submitted by Appellees;* Putnam, r. 1177], substantially less current velocities [Barker, r. 1958, 1959-1961; def. ex. 106 (original); Watkins, r. 1537], pool fluctuations [Barker, r. 1955, 1958, 1965-1966; def. ex. 110 in *Reproductions of Certain Original Exhibits Submitted by Appellees;* Watkins, r. 1537], and interruptions from floods [Watkins, r. 1537; Barker, r. 1955, 1961]. The elimination of lockages will substantially reduce the time consumed in lockages [Brodie, r. 2024-2025; Barker, r. 1958, 1959 (see def. ex. 105, r. 4108); def. ex. 115, r. 4133; Watkins, r. 1536]; the superiority of channel depths and reduction of current velocities will substantially increase the speed of movement and reduce the amount of motive power required [Barker, r. 1958, 1959-1963, 1968-1970; def. ex. 108, r. 4109; def. ex. 106 (original); def. ex. 115, r. 4133; def. ex. 107 (original); Watkins, r. 1536-1538, 1556; Brodie, r. 2025, 2026-2027]; and the wider and longer pools of the high dams are preferred by the navigator to the narrow, crooked pools of the low dams [Brodie, r. 2027; Barker, r. 1967, 1970; Watkins, r. 1537-1538]. The reduction in pool fluctuations will greatly encourage the development of terminal facilities necessary to the development of commercial navigation. [Brodie, r. 2025-2026; Barker, r. 1965-1966; Watkins, r. 1537.] The advantages of the Authority's projects in these respects will insure a substantially greater efficiency of the navigation channel, substantially greater dependability of service, and may reasonably be expected to attract a substantially greater volume of traffic on the improved river. [Watkins, r. 1556; Brodie, r. 2029-2031.] The high dams will also provide substantial im-

provement of navigation on the tributaries which would not be provided by the low-dam projects. [Barker, r. 1963; def. ex. 109 in *Reproductions of Certain Original Exhibits Submitted by Appellees.*] The advantages of high dams cannot be accurately measured in monetary terms. [Brodie, r. 2037-2038; Putnam, r. 1182, 1183.] The boats and barges which are now in general use on the interconnected inland waterways of the Mississippi River system will be able to navigate the Tennessee River where improved by the projects of the Authority without change of design or extent of loading. [Brodie, r. 2023-2024; Barker, r. 1976-1977.]

55. On other tributaries of the Mississippi the United States Army Engineers are now replacing certain low dams with high dams, with provision for the development of power [Putnam, r. 1174-1175; Watkins, r. 1538; Barker, r. 1974], and at the time of the creation of the Tennessee Valley Authority they were engaged in the construction of a lock for a high navigation dam at the Wheeler Dam site, with provision in their design for the development of power [Bowman, r. 1762-1763, 1765-1766; Putnam, r. 1172-1173; Crane, r. 1285].

56. The improved navigation channel provided by the projects of the Authority will cause a very substantial increase and development in waterway traffic between the Tennessee Valley region and other regions of the United States connected by water, rail, and highway. [Watkins, r. 1550-1556; Alldredge, r. 2053-2056; def. ex. 126, r. 4136; r. 2063-2064; Barker, r. 1977; Brodie, r. 2029.] Despite the numerous obstacles in the past to commercial navigation on the Tennessee River, the traffic on the river over the last 40 years has been between 1,000,000 and 2,000,000 tons annually, but due to lack of adequate depths the traffic has consisted largely of short hauls. [Def. ex. 96 in *Reproductions of Certain Original Exhibits Submitted by Appellees;* comp. ex. 105 (original) pp. 205-233; Watkins, r. 1549-1550; Barker, r. 1944-1946.] It was estimated by the Army

Engineers in House Document No. 328 that there would be an increase of traffic of approximately 7,000,000 tons per annum at a saving of about $10,000,000 annually (or a saving of approximately 25% of the present freight charges; if the Tennessee River were adequately improved for commercial navigation. [Watkins, r. 1552, 1550-1556; comp. ex. 105 (original) p. 497.] Subsequent studies since the creation of the Tennessee Valley Authority have confirmed the reasonableness and conservative character of this estimate. [Def. ex. 126, r. 4136; Alldredge, r. 2053-2054, 2055-2061, 2063-2064.] On the basis of the growth of traffic experienced on the comparable improved waterways of the interconnected Mississippi River system it is reasonable to expect an ever increasing growth in the volume of traffic on the river. [Alldredge, r. 2061-2064; def. ex. 130 in *Reproductions of Certain Original Exhibits Submitted by Appellees;* Watkins, r. 1549, 1554; def. ex. 30 (original).]

57. The value of the improvement to navigation provided by the projects of the Authority is not limited to the reduction in the cost of transportation to shippers, but includes substantial intangible values, such as the stimulation of the growth of industry and business and the promotion of the general prosperity of the region within the influence of the improved waterway. [Putnam, r. 1182-1183; Watkins, r. 1553-1554; Alldredge, r. 2063.]

The Flood Problem on the Tennessee and Mississippi Rivers

58. The recurrent great floods on the Tennessee and Mississippi Rivers have long presented a grave flood menace of national importance. Thousands of miles of interstate railways and highways, and 20,000,000 acres of the richest cotton lands in the United States, the products of which are normally marketed in interstate and foreign commerce, lie within the flood plain of the Mississippi Valley. Lo-

cated in the path of Mississippi floods also are the important commercial cities of Memphis, Cairo, and New Orleans, and other smaller communities, in which are located large cotton warehousing, compressing, and processing plants, and woodworking plants, engaged in the production, processing, and distribution of goods normally marketed in interstate and foreign commerce. [Okey, r. 1905-1913, 1920-1922; def. ex. 91 in *Reproductions of Certain Original Exhibits Submitted by Appellees.*] The city of Chattanooga, which is the principal point of danger on the Tennessee River, is an important center of interstate railways and highways and manufacturing plants, and is a principal center for the distribution throughout the southeastern region of commodities produced in other States. [Kimball, r. 1824; see def. ex. 66 in *Reproductions of Certain Original Exhibits Submitted by Appellees;* Alldredge, r. 2063; Kurtz, r. 1194-1198; comp. ex. 349, r. 3084B.]

59. The great floods of the past on the Tennessee and Mississippi Rivers have caused and unless controlled in the future will cause complete interruption of transportation on the Mississippi and Tennessee Rivers, and complete interruption of interstate commerce on the railroads and highways, as well as interruption in the production, manufacture, and distribution of products normally marketed in interstate and foreign commerce, and substantial damage to the facilities and properties employed for these purposes. [Clemens, r. 1636-1642; Okey, r. 1905-1913, 1920-1922; Kimball, r. 1824-1834; def. exs. 72, 73, 81 in *Reproductions of Certain Original Exhibits Submitted by Appellees;* def. exs. 74-80, r. 4084-4096; Kurtz, r. 1194-1198; comp. ex. 349, r. 3084B; Watkins, r. 1537, 1556-1557; comp. ex. 105 (original) pp. 16-17, 730-734 (see appendix A, r. 4272-4273); Barker, r. 1955.]

60. For the most effective control of destructive floods in the Tennessee River basin, particularly in the critical area at Chattanooga, Tennessee, it is desirable to provide

high dams with controlled storage (such as the projects of the Authority) on the main stream of the Tennessee and on the principal tributaries above Chattanooga, including the Clinch and Hiwassee Rivers, in order to supplement local protective works. [Kimball, r. 1834-1836, 1850-1852, 1867-1869; def. exs. 68, 82, r. 4080, 4097; Watkins, r. 1539-1540, 1544-1546; comp. ex. 105 (original) p. 17 (see appendix A at r. 4273); def. ex. 152, r. 4263; Floyd, r. 1891.]

61. The Ohio River and its tributaries, including the Tennessee River, are the largest contributor to all Mississippi floods, contributing from 52% to 90% of the floods between Cairo, Illinois, and Helena, Arkansas. The Tennessee River has always made a substantial contribution to all Mississippi floods. [Clemens, r. 1637, 1649; Kimball, r. 1825-1826; def. exs. 69, 70, r. 4081, 4082.]

62. The existing flood-protection works on the lower Mississippi River, consisting of levees supplemented by floodways and cut-offs, are inadequate to pass a flood such as is now estimated to be reasonably probable in the future without disastrous overtopping of the existing levees. [Kelly, r. 1379-1380; Clemens, r. 1645-1646, 1650; Okey, r. 1914.] Even in lesser floods the existing projects provide adequate protection for only 60% of the alluvial valley [Okey, r. 1914], and then only with the use of the floodways, the use of which it is desirable to eliminate whenever possible [Okey, r. 1931-1932; Clemens, r. 1645, 1650; def. ex. 32 (original) p. 8]. The levees on the lower Mississippi have reached the practical limits of height. [Kelly, r. 1380; Clemens, r. 1646; Okey, r. 1932-1933.] Any additional protection against lower-Mississippi floods must be found in part in the provision of reservoirs on the tributaries of the Mississippi to reduce their contribution to Mississippi floods. [Kelly, r. 1379-1382; Clemens, r. 1646-1650.] For the most effective flood-control use, reservoirs should be located close to Cairo, which is at the junction of the Ohio

and the Mississippi Rivers. [Clemens, r. 1649-1650; Kelly, r. 1381-1382; def. ex. 32 (original) p. 18 (par. 22).]

63. The Tennessee River, being the largest tributary of the Ohio and closer to Cairo and the lower Mississippi than any other major tributary of the Ohio system, is one of the best rivers for reservoirs for flood control on the lower Mississippi. [Clemens, r. 1650; Floyd, r. 1890-1891.] For the most effective reduction of the contribution of the Tennessee River system to Mississippi floods it is necessary to provide high dams with controlled storage (such as the projects of the Authority) on the main stream and storage dams on the tributaries, including the Clinch and Hiwassee Rivers. [Clemens, r. 1651-1652, 1654-1655; Watkins, r. 1557, 1539-1540, 1544-1547; Kimball, r. 1834, 1850-1851; Floyd, r. 1891.]

64. The season of major floods in the Tennessee River basin is limited to the period from approximately the middle of December to about the first of April. [Woodward, r. 1786-1787; Kurtz, r. 1235; Kimball, r. 1828.] No major flood of record has occurred in the Tennessee basin outside this period; floods occurring outside this flood season are of limited volume and duration, and are local in effect. [Woodward, r. 1787; Kurtz, r. 1235; Bowman, r. 1738; Justin, r. 2388.] The season of major floods on the lower Ohio and lower Mississippi lasts about a month later than the flood season on the Tennessee [Clemens, r. 1665; Kelly, r. 1386-1387], but as the end of the Tennessee flood season approaches, the need for storage capacity to control the contribution of the Tennessee to Ohio and Mississippi floods diminishes [Kimball, r. 1850-1851; Woodward, r. 1786-1788].

65. Each of the projects of the Authority is of substantial value for the reduction of destructive flood heights in the Tennessee and Mississippi River basins. [Def. ex. 151, r. 4263; Bowman, r. 1725, 1751, 1752; Woodward, r. 1784-1785, 1820-1821, 1786-1788, 1807-1808; Kimball, r. 1835-1836, 1838-1839, 1852; def. exs. 82, 152, r. 4097, 4263; Okey, r.

1914-1919, 1922; Clemens, r. 1650-1651, 1656; Watkins, r. 1539-1540, 1545-1546; Floyd, r. 1890-1891; Kurtz, r. 1235; Kelly, r. 1384-1385.]

66. The controlled-storage projects of the Authority are the only types of engineering works on the Tennessee River system which will afford effective flood control in both the Tennessee and Mississippi River basins. [Clemens, r. 1651-1652, 1654-1655; Kimball, r. 1845, 1850; Watkins, r. 1547.] Automatic, uncontrolled detention reservoirs are of uncertain value for local Tennessee flood control [Kimball, r. 1842-1850; Watkins, r. 1547, 1583-1590] and would be of no value for the control of floods on the lower Mississippi [Kurtz, r. 1222-1223; Clemens, r. 1654-1655; Kelly, r. 1372; Watkins, r. 1547; Kimball, r. 1845]. The so-called natural valley storage in the Tennessee River basin is the space occupied by the flood itself, and the retarding effect of such uncontrolled valley storage may increase the danger of Mississippi floods. [Clemens, r. 1652-1653; Kimball, r. 1840-1841; Kelly, r. 1388-1389; Watkins, r. 1540; def. ex. 152, r. 4263.] The low dams set forth in House Document No. 328 would be of no value in the control of destructive floods either in the Tennessee or Mississippi River basins, as was recognized in House Document No. 328. [Clemens, r. 1652; comp. ex. 105 (original) p. 64 (see appendix A at r. 4274); Watkins, r. 1547.]

67. Pursuant to congressional authorization a comprehensive survey of the Tennessee River system with respect to navigation, flood control, and conservation of power resources was undertaken by the Corps of Engineers of the War Department and completed in 1930. This report is contained in House Document No. 328, Seventy-first Congress, second session. [Comp. ex. 105 (original).] The recommendations contained in this report were adopted by Congress in the Rivers and Harbors Act of 1930 and provided for the creation of a 9-foot navigation channel throughout the length of the Tennessee River by a series of

movable low dams to be constructed by the Federal Government or a series of high dams to be constructed by private interests in cooperation with the Federal Government. [Comp. ex. 105 (original) p. 5; Watkins, r. 1535-1536, 1547-1548, 1581-1582.] The preliminary estimate of cost of the low dams was approximately $75,000,000. In 1935 the Mississippi River Commission, in a comprehensive report on reservoir projects for Mississippi flood control, set forth in House Document No. 259, Seventy-fourth Congress, first session, recommended that the Federal Government adopt a policy of encouraging the construction of reservoirs on the tributaries of the Mississippi River for increased flood protection on the lower Mississippi. [Def. ex. 32 (original) p. 33; Clemens, r. 1647-1650, 1671-1672, 1656-1657; Kelly, r. 1384-1386.] In April 1937 the Chief of Engineers, in a report set forth in Committee Document No. 1, Seventy-fifth Congress, first session, recommended the construction by the Federal Government of storage reservoirs on the tributaries of the Mississippi as essential for the control of floods on the lower Mississippi. [Kelly, r. 1380-1382; Okey, r. 1932-1933.] Neither at the time of the enactment of the Tennessee Valley Authority Act nor since has there been any reasonable prospect that a comprehensive development of the Tennessee River and its tributaries for the combined purpose of navigation and flood control in the Tennessee and Mississippi River basins could be obtained in any other way except by the construction of high dams by the United States Government or some agency thereof. [Longley, r. 974; Watkins, r. 1540-1542, 1558.]

Combined Benefits to Navigation and Flood Control From the Tennessee Valley Authority Projects

68. The projects of the Authority will permit the maintenance at all times of the 9-foot channel on the main stream of the Tennessee with sufficient overdepths to ac-

commodate boats of 9-foot draft. [Barker, r. 1951, 1949; def. ex. 98 in *Reproductions of Certain Original Exhibits Submitted by Appellees;* Watkins, r. 1557; Putnam, r. 1189.] The tributary projects on the Clinch and Hiwassee Rivers will also permit the maintenance of slackwater pools in the lower portions of the reservoirs, which is necessary on the Clinch, a navigable tributary, in order to preserve existing navigation and to avoid foreclosing future improvement for navigation [Watkins, r. 1542; Barker, r. 1956-1957], and is valuable on both tributaries in order to preserve the life of the projects by affording capacity for the deposit of silt [Barker, r. 1955; Watkins, r. 1543]. The projects of the Authority will also provide substantial storage space above slackwater pool level to control in whole or in part the run-off from the drainage area above the dams during the flood season. [Bowman, r. 2237; Watkins, r. 1631-1632, 1545, 1539.] Such projects are the only engineering works which can provide effective flood control in conjunction with the continuous maintenance of the 9-foot channel for navigation. [Watkins, r. 1539, 1544, 1546-1547, 1557; Clemens, r. 1651-1652, 1654, 1655; Bowman, r. 1759; Barker, r. 1977-1978; Kimball, r. 1852, 1834-1835, 1838-1850; Kurtz, r. 1219.]

69. The tributary projects of the Authority, by reducing flood flows and increasing low flows, will substantially increase the effectiveness of the high dams on the main stream for the reduction of flood heights on the Mississippi and Tennessee Rivers in combination with the maintenance of a 9-foot navigation channel. [Clemens, r. 1651-1652; Watkins, r. 1545-1547; Floyd, r. 1891, 1892-1894; Kimball, r. 1838, 1850.] These tributary reservoirs will also serve to increase materially the navigable depths in the unimproved portions of the main stream for navigation, will substantially increase the navigable depths in the upper ends of the navigation pools created by the main-stream projects, and will substantially increase the navigable

depths on the lower Mississippi River, which increases will be of material benefit to navigation. [Watkins, r. 1545; Barker, r. 1954-1956.]

70. The low-dam plan recommended in House Document No. 328 as an alternative navigation project would have no flood-control value. [Comp. ex. 105 (original) p. 64 (see appendix A at r. 4274); Watkins, r. 1537, 1547; Clemens, r. 1652.] The low-dam plan in conjunction with detention reservoirs on the tributaries might together accomplish navigation improvement and flood control on the Tennessee River, but this combination would contribute nothing to flood control in the Mississippi River [Kurtz, r. 1222-1223], might aggravate flood conditions there [Clemens, r. 1654-1655; Kimball, r. 1845, 1843-1850; def. exs. 89, 90 in *Reproductions of Certain Original Exhibits Submitted by Appellees*], and would provide navigation improvement inferior to that provided by the projects of the Authority [Watkins, r. 1536-1539, 1556; Brodie, r. 2024-2031; Barker, r. 1958, 1958-1973; comp. ex. 105 (original) pp. 12-13 (see appendix A at r. 4272); def. exs. 106, 107 (original); def. exs. 104, 109, 110 in *Reproductions of Certain Original Exhibits Submitted by Appellees;* def. exs. 105, 108, 111, 115, r. 4108, 4109, 4110, 4133].

71. Upon the completion of the construction of the Pickwick Landing project and the Guntersville project, these two projects, in conjunction with the already-completed Wheeler Dam and the previously existing Wilson Dam, will provide a 9-foot channel from Pickwick Landing to the vicinity of Chattanooga, a distance of approximately 257 miles. [Barker, r. 1950-1951; def. ex. 98 in *Reproductions of Certain Original Exhibits Submitted by Appellees.*] The completed Norris Dam is being operated to provide a navigation channel of 7-foot minimum depth in the 207-mile stretch between Pickwick Landing and the mouth of the Tennessee River. [Barker, r. 1950-1951, 1954-1955, *cf.* r. 1994.] This 7-foot depth below Pickwick will be in-

creased to 7½ feet upon completion of Hiwassee. [Barker, r. 1951.] These projects together will provide a commercially feasible navigation channel between Chattanooga, Tennessee, and the inland waterway system. [Barker, r. 1951.] For the larger part of each year there will be a through navigation channel of 9-foot depth from Chattanooga to the mouth of the river [Barker, r. 1951, 1994], and even prior to construction of Gilbertsville, by means of a moderate amount of dredging and releases from other projects of the Authority, it is feasible to provide a permanent 9-foot channel below Pickwick Dam [Putnam, r. 2312-2313]. Until the Gilbertsville project is constructed, which may not be for many years, it is necessary to store a substantial amount of water in the tributary reservoirs during the high-water season to provide the low-water releases required for this improvement to navigation. [Barker, r. 1992-1993.]

72. The increase of the low-water flow by means of the storage of water during the high-water season at Norris Dam and the release of such water during the low-water period has increased and will substantially increase the continuous water power available at Wilson Dam and will increase the value of Wilson Dam for all purposes. [Bowman, r. 1738, 2251; Thomas, r. 2106-2107; Wessenauer, r. 2181-2182; def. ex. 139, r. 4186; Woodward, r. 1815; Kurtz, r. 1217.]

73. Since completion, Norris Dam has been successfully operated to improve substantially the navigation channel of the Tennessee River between Wilson Dam and its mouth [Barker, r. 1954-1955; Woodward, r. 1780-1782], to prevent a probable flood at Chattanooga in the year 1936, and to hold off from the peak of the Mississippi River flood of 1937 approximately 28,000 c.f.s., the Norris Dam storing the entire flow of the Clinch River for 6 weeks during the 1937 Mississippi flood [Woodward, r. 1788, 1807-1810;

Kimball, r. 1881-1882; *cf.* def. ex. 82, r. 4097; Kimball, r. 1835].

74. The operation of Norris Dam since its completion has also increased the amount of water power available in the low-flow season at the existing Government-owned Wilson Dam [def. ex. 142, r. 4189, 4191, columns 5 and 6; Karr, r. 2198; Bowman, r. 2251], but the operation of holding and releasing waters has been directed primarily to navigation and flood control and the protection of construction works below [Woodward, r. 1779-1780, 1784, 1805; Kimball, r. 1881-1882; Karr, r. 2197; def. ex. 41, r. 4065; Woodward, r. 1775]. The same is true of Wheeler Dam, which has been operated since its completion in 1936 to maintain a 9-foot navigation channel 74 miles to the site of the Guntersville project and to reduce flood waters and protect construction works at the Pickwick project. [Woodward, r. 1783, 1780, 1808; Bowman, r. 1706; Barker, r. 1971-1972.] Approximately 85% of the water released from Norris during the year 1937 was of benefit only to navigation and flood control, and was not required or useful for production of power. [Karr, r. 2198; def. ex. 142, r. 4189, 4190, column 3, 4191, column 6.] The temporary storage and releases of water for power-peaking purposes have been at all times subordinated to the requirements of navigation and flood control, and have never been permitted to interfere with or affect the continued maintenance of the stream flow required for navigation or the storage required for flood control. [Woodward, r. 1779-1780, 1784, 1805; Karr, r. 2197-2199; Barker, r. 1955.] Temporary abnormal conditions, such as the necessity of operating for the protection of the Authority's construction works, have materially affected the operation of the Norris and Wheeler projects. [Woodward, r. 1780, 1808, 1820; Kimball, r. 1881-1882.]

75. The projects of the Authority are designed primarily for the improvement of navigation and the control

of destructive flood waters. [Bowman, r. 2237-2243; *cf.* def. ex. 37 in *Reproductions of Certain Original Exhibits Submitted by Appellees,* and Bowman, r. 1695-1696; *cf.* def. ex. 49 in *Reproductions of Certain Original Exhibits Submitted by Appellees,* and Bowman, r. 1720-1721; r. 1760-1761, 1757-1758; Watkins, r. 1547-1548, 1631-1632.] The sequence of development has been determined according to the requirements of navigation [. . .[1]]. [Bowman, r. 1758, 2244-2247; Barker, r. 1950-1951.]

76. The projects of the Authority which are completed and in operation have been and are operated primarily for navigation and flood control, and the responsible officers of the Authority charged with the operation of such projects are required by instructions from the board of directors to operate them primarily for such purposes. [Def. ex. 41, r. 4065; Woodward, r. 1775, 1779-1780, 1805; Karr, r. 2193-2194, 2197, 2199; Barker, r. 1955; Kimball, r. 1881-1882; comp. exs. 923, 924, 957, r. 3955, 3961, 4004.] These instructions have been un[i]formly obeyed. [Woodward, r. 1775, 1779-1780, 1805, 1820; Karr, r. 2193-2194, 2197, 2199.]

77. The approximate length and maximum width of the pools upon the Tennessee River created by the TVA unified plan will be [def. exs. 55-64 in *Reproductions of Certain Original Exhibits Submitted by Appellants*]:

Dams	Length of Pool	Maximum Width
Gilbertsville	184.2 miles	6 miles
Pickwick Landing	50.1 miles	1½ miles
Wheeler	74.1 miles	3½ miles
Guntersville	82.1 miles	3 miles
Chickamauga	59.9 miles	2½ miles
Watts Bar	73.4 miles	1½ miles
Coulter Shoals	48.8 miles	½ mile

78. Commerce upon the Tennessee River between 1927 and 1934 averaged 1,750,000 tons per year, for which the

[1] The remainder of this finding is incorrectly printed in the record (r. 618).

average haul was 23 miles, which consisted 82% in the transportation of sand and gravel, 9% in the transportation of various forest products, and 9% in the transportation of iron, steel, lime and cement. Since the creation of TVA Government traffic has constituted a substantial portion of the total traffic, amounting to 52% in 1935 and 54% in 1936 of the total traffic. The average annual value of such cargoes was $11,000,000, on which the average annual savings of water transportation over land transportation was $2,000,000. There have been no significant or substantial movements of commerce upon the tributaries of the Tennessee River. [Putnam, r. 1161-1163; Barker, r. 1985-1986, 1983-1984, 2005-2006; Alldredge, r. 2071; def. ex. 153 (original) pp. 938, 1064.]

79. There is no advantage accruing to navigation upon the Tennessee River by shutting off the flow from Norris Dam entirely on Sundays and Labor Days as was done during August and September 1936. This method of operation is entirely consistent with the operation of dams primarily for navigation and flood control. [Barker, r. 1994-1995.]

80. It would not be practical or feasible to construct a belt coal conveyor to pass coal from barges on the reservoir at Norris Dam to other barges below Norris Dam to be transported upon the Tennessee River. [Barker, r. 1995-1999; comp. ex. 933 in *Reproductions of Certain Original Exhibits Submitted by Appellants.*]

81. Practically all of the property damage from floods in the Tennessee Valley occurs at and above Chattanooga, Tennessee. [Kurtz, r. 1197; comp. ex. 349, r. 3084B; Watkins, r. 1582; comp. ex. 105 (original) p. 734.]

82. Flood damages in the Tennessee River below Chattanooga are relatively small in amount and, while including some damage to highways and railroads (easily eliminated by relocation), consist largely of damages to farm crops re-

sulting from the overflow of rich valley lands. The construction of the TVA unified plan will overflow permanently thousands of acres more of such valley farm land than is now occasionally overflowed by floods. At the present time such occasional overflows generally take place before the crop season and their results are beneficial to the land. [Kurtz, r. 1197, 1209, 1195, 1205; comp. exs. 353, 355, r. 3086, 3088; comp. ex. 105 (original) p. 734; def. ex. 153 (original) pp. 919, 947; comp. ex. 116 (original) p. 403.]

83. Less than 8% of the total population in towns and cities upon the Tennessee River and its tributaries, which in 1930 was 341,522, is below Chattanooga. [Kurtz, r. 1195-1196; comp. ex. 348, r. 3084A.]

84. The estimated average annual damage from all floods to all classes of property on the Tennessee River and its tributaries is $1,441,208, of which $1,356,053 occurs at and above Chattanooga. [Comp. ex. 349, r. 3084B; Watkins, r. 1582.]

85. A flood-control program to achieve the maximum practical protection upon the Tennessee River and its tributaries should be directed primarily for protection at and above Chattanooga. [Kurtz, r. 1197.]

86. The greatest flood to be anticipated upon the Tennessee River and its tributaries would result in a stage at Knoxville of 68.3 feet, with a maximum flow of approximately 620,000 second-feet; in a stage at Loudon of 71.5 feet, with a maximum flow of approximately 605,000 second-feet; in a stage at Chattanooga of 73 feet, with a maximum flow of approximately 680,000 second-feet. The previous maximum recorded stage was at Knoxville 44.4 feet; at Loudon 47.0 feet; and at Chattanooga 57.9 feet. [Kurtz, r. 1200; comp. ex. 350 in *Reproductions of Certain Original Exhibits Submitted by Appellants.*]

THE CONSERVATION OF WATER POWER

87. The development of firm power by hydroelectric project is controlled by the amount of power that can be produced by the project both at extreme low water and extreme high water. [Kurtz, r. 1211.]

88. The load factor of a public utility system is the ratio of the average demand for power on that system expressed in kw. to the maximum demand for power on that system, and in the Tennessee basin area is about 60%. [Kurtz, r. 1211.]

89. At 100% load factor the firm capacity of Wilson Dam, excluding United States Nitrate Steam Plant No. 2, before the capacity of Wilson Dam was increased by the TVA dams upon the Tennessee River and its tributaries, was approximately 28,000 kw., and the firm energy was 242,600,000 kwh. per year. At 60% load factor 145,600,000 kwh. per year of firm energy would be produced by Wilson Dam power plant. The operation of the tributary reservoirs under the TVA high-dam program solely for regulation of the river will increase the firm-power capacity of Wilson Dam at 60% load factor by 151,300 kw. per year and the firm energy by 795,200,000 kwh. per year. [Kurtz, r. 1217; Putnam, r. 1167.]

90. At 100% load factor the operation of the tributary reservoirs solely for regulation of the river would increase the firm-power capacity of Wilson Dam by 79,700 kw. and the firm energy by 698,200,000 kwh. per year. [Kurtz, r. 1217; Bowman, r. 2251, 1738.]

91. The operation of Norris Dam in June of 1936, by increasing the low-water flow of the Tennessee River and by the generation of power, was sufficient to double the firm-power capacity of the TVA system as it existed at that time. [Woodward, r. 1815-1816; comp. ex. 909 in *Reproductions of Certain Original Exhibits Submitted by Appel-*

lants; comp. ex. 116 (original) p. 515 (see excerpt at r. 2726A).]

92. The tributary reservoirs under the TVA unified plan will greatly increase the firm power produced by the projects upon the Tennessee River. [Kelly, r. 1375.]

93. The projects of the Tennessee Valley Authority are the only type of dams which will conserve the water resources of the Tennessee River system for navigation, Tennessee and Mississippi flood control, water power, and other beneficial uses. [Watkins, r. 1545, 1557, 1547, 1631-1632; Bowman, r. 2235-2236; Kurtz, r. 1213, 1219, 1227-1228.] The available sites on the Tennessee River system for the construction of dams and reservoirs are strictly limited in number, and those available for flood control coincide in many instances with those required for the regulation of the river for other purposes. The utilization of such sites exclusively for local flood protection would preclude the development of the water resources for any other purposes. The construction of low dams on the main stream of the Tennessee River for navigation would waste the resources of the river for any other purpose. It would be physically impossible to provide the high dams on the main stream necessary for the development of flood control and power without the wasteful removal or duplication of such low dams. [Bowman, r. 2235-2237; Watkins, r. 1547; comp. ex. 105 (original) pp. 12-13, 21, 64 (see appendix A at r. 4272, 4274).]

94. The construction and operation of the projects of the Authority for navigation and flood control will provide a head for power by concentrating the fall of the river at certain points on the Tennessee River system and will substantially augment the minimum flow in low-water season. [Watkins, r. 1545.] Water power is a function of head and stream flow. [Wessenauer, r. 2189-2190.] The amount of continuous power is determined by the available head and the minimum flow in low-water season. Continu-

ous power is power available 24 hours a day, every day of the year, in every year. [Wessenauer, r. 2179-2180.] When operated for the improvement of navigation and the control of destructive floods the dams constructed, under construction, or under investigation for construction by the Tennessee Valley Authority will provide, in addition to the benefits to navigation and flood control set forth in previous findings and without reduction in the effectiveness of these projects for navigation and flood control, a large amount of continuous power. [Wessenauer, r. 2175; Watkins, r. 1545; Clemens, r. 1654, 1658; Sargent, r. 1681; Bowman, r. 1738-1741; Woodward, r. 1788-1790.]

The firm-power capacity, as distinguished from the continuous power, is the maximum demand which the system can reliably supply, having regard to the energy available, the generating units installed, the load factor, and other characteristics of the system. [Wessenauer, r. 2179-2180.] With the complete generating units which have already been installed or are under contract for installation at Norris Wheeler, Guntersville, Wilson and Pickwick Landing Dams [def. ex. 140, r. 4187], the dams constructed or under construction by the Tennessee Valley Authority will have a firm-power capacity of 395,000 kw. [def. ex. 141, r. 4188; Wessenauer, r. 2175, 2175-2180]. Together with the additional generating units at these dams and at Hiwassee and Chickamauga Dams which have been authorized by the Board of the Tennessee Valley Authority and for which appropriations have either been made or requested, the dams constructed or under construction by the Tennessee Valley Authority will have a firm-power capacity of 570,000 kw. [See def. ex. 141, r. 4188; Wessenauer, r. 2175, 2175-2180.]

Stock Ownership, Business, Franchises and Properties of Complainants

95. The National Power & Light Company, 46.56% of whose outstanding voting stock is owned by the Electric Bond & Share Company, owns the following percentages of the total outstanding voting stock of the following complainants [def. ex. 135, r. 4171]:

Birmingham Electric Company	100.00%
Carolina Power & Light Company	93.53%
Holston River Electric Company	100.00%
Memphis Power & Light Company	86.75%
Tennessee Public Service Company	99.31%
West Tennessee Power & Light Company	100.00%

96. The Electric Power & Light Corporation, 46.20% of whose outstanding voting stock is owned by the Electric Bond & Share Company, owns 94.03% of the voting stock of the complainant Mississippi Power & Light Company. [Def. ex. 135, r. 4171.]

97. The American Gas & Electric Company, 17.51% of whose outstanding voting stock is owned by the Electric Bond & Share Company, owns 100% of the voting stock of the complainant Appalachian Electric Power Company, which in turn owns 100% of the voting stock of complainants Kingsport Utilities, Inc., and Kentucky & West Virginia Power Company. [Def. ex. 135, r. 4171.]

98. During the past 5 years the Electric Bond & Share Company has voted the following approximate percentages of the total number of shares of voting stock represented at stockholders' meetings:

National Power & Light Company	62%
Electric Power & Light Corporation	77%
American Gas & Electric Company	25%

Throughout the history of these companies there has been no instance in which there has been any contest over proxies or in which any interests hostile to the managements have

organized opposition to the programs or policies of the respective managements or to the election of directors voted for by proxies designated by such managements. [Def. ex. 135, r. 4171.]

99. The Commonwealth & Southern Corporation owns 91.40% of the outstanding voting securities of the Alabama Power Company; 100% of the outstanding voting securities of the Georgia Power Company, Mississippi Power Company, and Southern Tennessee Power Company; and 64.43% of the outstanding securities of The Tennessee Electric Power Company. [Def. ex. 135, r. 4171.]

100. All of the common and preferred stocks of the complainant East Tennessee Light & Power Company are owned by the Cities Service Power & Light Company. All of the common stock of the complainant Tennessee Eastern Electric Company is owned by the East Tennessee Light & Power Company. [Ide, r. 857-858.]

101. All of the complainants are engaged in the business of generating, transmitting, distributing, and selling electricity as public utility companies, except that the Birmingham Electric Company [Pevear, r. 805], the Tennessee Public Service Company [Lamar, r. 800], the Holston River Electric Company [Canaday, r. 803], the Franklin Power & Light Company [Howard, r. 797], the Mississippi Power Company [Sweatt, r. 787], and the Mississippi Power & Light Company [Sargent, r. 884] purchase practically all of their electrical requirements, and except that the Southern Tennessee Power Company neither generates nor sells power but is engaged exclusively in the business of transmitting electric energy [Nelson, r. 861].

102. The complainant Mississippi Power Company owns no franchises or electrical facilities in 10 counties in northeastern Mississippi. The properties in these counties were sold to the Tennessee Valley Authority under the contract of January 4, 1934, and the area is the ceded area referred to in that contract. [Sweatt, r. 790-793; def. ex.

143A, r. 4195, 4196; *cf.* comp. ex. 12 in *Reproductions of Certain Original Exhibits Submitted by Appellants.*]

103. The complainant Alabama Power Company does not own any electrical facilities in 6 counties in northwestern Alabama except 9 municipal distribution systems and a high-tension 110-kv. line which crosses the territory. [Barry, r. 870, 871; Henkle, r. 1055; *cf.* def. ex. 143A, r. 4195, 4196; *cf.* comp. ex. 326 in *Reproductions of Certain Original Exhibits Submitted by Appellants.*] Under the contract of January 4, 1934, the complainant Alabama Power Company transferred to the Authority all the high-voltage transmission lines leading from Wilson Dam to the municipalities in the area with the exception of a single line leading to Decatur, the substations, and all rural lines in the area. [Barry, r. 870, 871; Henkle, r. 1055.]

104. Section 5 in the contract of January 4, 1934, provides that:

> Alabama Company covenants and agrees to convey its urban distribution systems in the above named counties in Alabama, said distribution systems being listed in Exhibit B, to the respective municipalities in or adjacent to which such systems are located, together with all franchises, contract rights, and going business thereto appertaining, when it has agreed with any such municipality on the price to be paid for the same. Alabama Company agrees to make every reasonable effort to come to an early agreement with said municipalities for such sales. In the event that any such municipality is unable to arrive at a satisfactory price after three months of bona fide negotiation with Alabama Company, or if for some other reason the sale of any such system cannot be consummated, Authority shall have the right to serve such municipality or municipalities irrespective of whether such municipalities have purchased the distribution systems from Alabama Company. [Def. ex. 143A, r. 4195 at 4198.]

105. A part of section 4 further provides with reference to the Alabama properties that:

Any conveyance of property shall include not only the physical property, easements and rights-of-way, but shall also include all machinery, equipment, tools and working supplies set forth in the respective exhibits, and all franchises, contracts and going business relating to the use of any of said properties, without extra charge. [Def. ex. 143A, r. 4195 at 4198.]

106. With a few minor exceptions (a few small industrial customers in the so-called ceded area in Alabama and approximately 3,000 employees on Government reservations and rural customers in the vicinity of Norris Dam and Wilson Dam), all of the Authority's sales are either at wholesale to municipalities, rural cooperatives, and utilities, or to very large industrial customers purchasing both firm and secondary power in large bulk lots for operations not previously served by any of the complainants. [Def. exs. 143, 147, r. 4192-4193, 4242-4243; Karr, r. 2199-2202.]

107. During the period of the contract of January 4 the Authority sold power under the first proviso of section 7 of the contract to the following municipalities:

Dayton, Tennessee.
Dickson, Tennessee.
Pulaski, Tennessee.
Amory, Mississippi.
Okolona, Mississippi.

[Karr r. 2203-2204; def. ex. 143A, r. 4199, 4200.]

108. Under the third proviso of section 7 of the contract of January 4 the Authority contracted to sell and has sold electricity in substantial amounts to the Meigs County Electric Membership Corporation, the Monroe County Electric Power Association, and a number of rural customers served directly by the Authority in Roane

County, Tennessee, near Norris Dam. [Karr, r. 2204; def. ex. 143A, r. 4199, 4200.]

109. Under the last proviso of section 7 of the contract of January 4 the Authority contracted to sell and has sold electricity in substantial amounts to Cullman County Electric Membership Corporation, Duck River Electric Membership Corporation, Middle Tennessee Electric Membership Corporation, North Georgia Electric Membership Corporation, Pickwick Electric Membership Corporation, and in Lincoln County, Tennessee. The total load of these customers during the period of the contract was within the 2,500-kw maximum amount stipulated in the said proviso. [Karr, r. 2205; def. ex. 143A, r. 4199, 4200.]

110. Under the interchange provision of the contract of January 4 the Alabama Power Company supplied power to the Authority for the construction of Guntersville Dam, and the Tennessee Electric Power Company supplied power to the Authority for the construction of Norris and Chickamauga Dams. [Karr, r. 2223.]

111. The Tennessee Valley Authority is not now constructing and has not authorized the construction of any transmission line, has not sold or authorized the sale of any electricity, and has not entered into or authorized any contracts for the sale of electricity in any part of the territory claimed by the complainants Franklin Power & Light Company [Howard, r. 798], Appalachian Electric Power Company [Argabrite, r. 834], Carolina Power & Light Company [Yoder, r. 824], Holston River Electric Company [Canaday, r. 804], Kingsport Utilities, Inc. [Argabrite, r. 834], Kentucky & West Virginia Power Company [Argabrite, r. 834], Tennessee Eastern Electric Company [Ide, r. 858], Birmingham Electric Company [Pevear, r. 807; *cf.* def. ex. 143, r. 4192], East Tennessee Power & Light Company [Ide, r. 858], and Mississippi Power & Light Company, except that it has constructed a transmission line at the expense of the War Department connecting the Author-

ity's lines to the site of Sardis Dam in the claimed territory of the Mississippi Power & Light Company. [Sargent, r. 887; *cf.* def. ex. 143, r. 4192.]

112. The complainant Southern Tennessee Power Company is engaged only as a transmission company transmitting electric energy from Wilson Dam to the Alabama-Tennessee line, thereby connecting Wilson Dam and the transmission system of The Tennessee Electric Power Company. It is not presently engaged either in the generation or distribution and sale of electric energy. [Nelson, r. 861.]

113. Adequacy of facilities means the availability in sufficient quantity of distribution, transmission, and generation facilities at all times to assure ability to take care of immediate loads and any reasonable expectant increase in load with a sufficient margin so as to assure the supplying of proper service. [Sporn, r. 1252.]

114. Prudent utility management requires that a utility shall provide enough surplus capacity to take care of its actual and potential demands in the period of time during which new facilities can be added and that too great a surplus. resulting in nonproductive facilities and higher operating costs, be avoided. [Sporn, r. 1252-1253; Moreland, r. 1459.]

115. The generating facilities of each of the following groups of companies are interconnected and integrated into a single coordinated system or power pool, and such facilities of each group are operated as a unit:

(a) The Appalachian Electric Power Company, Kentucky and West Virginia Power Company, and the Kingsport Utilities, Inc., are integrated into a single system [Sporn, r. 1253] and are also interconnected with a group of affiliated companies in Ohio, Indiana, and Michigan and with nonaffiliated companies in Tennessee and North Carolina [Sporn, r. 1254].

(b) The complainants Alabama Power Company, Mississippi Power Company, The Tennessee Electric Power Company and the noncomplainants Georgia Power Company, Gulf Power Company, and South Carolina Power Company together form the integrated system of Commonwealth & Southern Corporation in the South [Middlemiss, r. 1268-1269] and also have interconnections with the Carolina Power & Light Company, the Florida Power Corporation, the South Carolina Electric & Gas Company, the Duke Power Company, and the Aluminum Company of America [Middlemiss, r. 1269-1270].

(c) The Carolina Power & Light Company, the Tennessee Public Service Company, and the Holston River Electric Company. [Rankin, r. 1293.]

(d) The complainants Memphis Power & Light Company, West Tennessee Power & Light Company, Mississippi Power & Light Company and noncomplainants Louisiana Power & Light Company and Arkansas Power & Light Company. [Rankin, r. 1293.]

(e) The East Tennessee Light & Power Company and Tennessee Eastern Electric Company. [Ide, r. 854.]

116. None of the complainant companies has ever failed to meet the load requirements of their customers [Middlemiss, r. 1274; comp. ex. 372 in *Reproductions of Certain Original Exhibits Submitted by Appellants;* comp. ex. 375, r. 3139], nor have they ever refused additional business due to lack of facilities [Sporn, r. 1257].

117. The complainant companies serve the electric power requirements of substantially all industrial enterprises doing business in the territories served by them [Argabrite, r. 832-833; Ford, r. 809; Sargent, r. 886; Ostermueller, r. 990; Lamar, r. 802; Canaday, r. 803; Pevear, r. 805; Yoder, r. 821; Ide, r. 855; Stanley, r. 939; Street, r. 976-977; Barry, r. 876; Bonner, r. 1005-1006; Jacobs, r. 1015-1016; Perkins, r. 1020; Watson, r. 1026; Shacklett, r. 1029-

1030; Winkler, r. 1033-1034; Henkle, r. 1051-1052], with the following exceptions:

(a) Those industries now being served by TVA [Stanley, r. 955-956; Shacklett, r. 1031-1032];

(b) Those industries which require steam in processing operation and are thus able to produce their own power as a byproduct [Ford, r. 809; Argabrite, r. 832; Street, r. 977; Ostermueller, r. 990; Bonner, r. 1005; Jacobs, r. 1015-1016; Perkins, r. 1020; Watson, r. 1026; Shacklett, r. 1029-1030; Winkler, r. 1034; Henkle, r. 1051-1052];

(c) Those industries, such as sawmills and woodworking plants, which have waste fuel products and can produce power without fuel cost [Street, r. 977; Ostermueller, r. 990; Bonner, r. 1005-1006; Jacobs, r. 1015; Perkins, r. 1020; Shacklett, r. 1029-1030; Winkler, r. 1034; Henkle, r. 1052];

(d) Small and scattered enterprises, such as cotton gins, ice plants, and flour and feed mills, which operate seasonally and which depend upon steam or other mechanical power [Street, r. 977; Ostermueller, r. 990; Bonner, r. 1006; Jacobs, r. 1015; Perkins, r. 1020; Watson, r. 1026; Winkler, r. 1034; Henkle, r. 1052].

All of these businesses except those being served by TVA have their own power units, which would have to be abandoned in order to take central power service. [Ostermueller, r. 990; Bonner, r. 1006; Perkins, r. 1020; Watson, r. 1026; Winkler, r. 1034; Henkle, r. 1052.]

118. The complainant companies serve the electric power requirements of substantially all commercial enterprises doing business in the territory served by them, with the exception of a very few scattered rural stores which do not stay open at night. [Street, r. 977; Ostermueller, r. 990; Bonner, r. 1006; Jacobs, r. 1016; Perkins, r. 1021; Watson, r. 1026; Winkler, r. 1034; Henkle, r. 1052; Ford, r. 809-810;

Lamar, r. 802; Yoder, r. 821; Sargent, r. 886; Ide, r. 857; Argabrite, r. 832-833; Pevear, r. 805.]

119. The complainant companies are now serving, either directly or indirectly, substantially all of the domestic demand within the territory served by them accessible to existing company facilities. [Street, r. 977-978; Ostermueller, r. 990-991; Bonner, r. 1006-1007; Jacobs, r. 1016; Perkins, r. 1021; Watson, r. 1026-1027; Shacklett, r. 1029-1030; Winkler, r. 1034; Henkle, r. 1052-1053; Argabrite, r. 842; Sargent, r. 886; Lamar, r. 802; Canaday, r. 803; Pevear, r. 805; Ford, r. 809-810; Yoder, r. 821; Ide, r. 855.]

120. The wholesale rates of the Tennessee Valley Authority are substantially lower than the wholesale rates of any of the complainants. [R. 943 (conceded by counsel).]

121. The retail rates for every class of service prescribed by TVA and charged by the municipalities and cooperatives purchasing power from the Tennessee Valley Authority are substantially lower than the retail rates of any of the complainants. [R. 943-944 (conceded by counsel).]

122. The rates charged by the Tennessee Valley Authority in all classes of service, including rural customers, domestic customers, and commercial customers which it serves, are substantially lower than the rates for the same classes of service of any of the complainants. [R. 943-944 (conceded by counsel).]

123. The industrial rates charged by the Tennessee Valley Authority are substantially lower than the published rates of any of the complainants. [R. 946 (conceded by counsel).]

124. Tennessee Valley Authority has published these rates generally, and they are well known throughout the Tennessee Valley area. [R. 1130, 1134 (conceded by counsel).]

125. Substantial future damage to complainants will result from competition with TVA. This record does not establish that complainants, or any of them, will have their businesses destroyed by, or will become bankrupt because of, such competition. [See order regarding submitted findings of fact and conclusions of law, r. 566 at 568.]

Power Customers and Power Contracts of the Authority

126. The Authority as of December 15, 1937, had contracts to sell power to 9 municipalities located in the ceded area covered by the contract of January 4 with the complainants Alabama Power Company and Mississippi Power Company. Seven of these municipalities are located in the ceded area in Alabama. [Def. ex. 143, r. 4192-4193; *cf.* Karr, r. 2199-2200.]

127. As of December 15, 1937, the Authority had contracts for the sale of power with 7 rural cooperative corporations and 8 industrial customers located in the ceded area covered by the contract of January 4 with complainants Alabama Power Company and Mississippi Power Company. [Def. ex. 143, r. 4192-4193; *cf.* Karr, r. 2199-2200.]

128. The Authority has a contract to sell and is delivering power in bulk lots to the complainant Alabama Power Company on the low side of several substations acquired by the Authority under the January 4 contract, by means of transmission lines also acquired by the Authority under the contract, for service to several urban distribution systems of the company in the area covered by the contract. [Barry, r. 870; Henkle, r. 1055.]

129. In addition to the contracts for the sale of power in the ceded area, as of December 15, 1937, the Authority had contracts to sell power to 17 municipalities, 12 cooperatives, 3 industrial customers, and one utility company, and the requirements of the War Department for the

construction of Sardis Dam. [Def. ex. 143, r. 4192-4193; Karr, r. 2199-2200.]

130. The contracts with municipalities and cooperatives provide for the wholesale delivery of power in bulk lots at a substation at the city gates in the case of municipalities and at a substation or metering point near the location of their respective operations in the case of cooperatives, the substations and metering equipment to be owned by the Authority. [See def. ex. 143, r. 4192-4193, column 3; Karr, r. 2201; see sections entitled "Point of Delivery" in contracts reprinted in comp. ex. 117, r. 2729, 2730; comp. ex. 118, r. 2771, 2773; comp. ex. 119, r. 2846, 2848; comp. ex. 134, r. 2879, 2882; comp. exs. 135-145, r. 2885-2888; comp. ex. 196, r. 3004; comp. ex. 224, r. 3026.]

131. The contracts with municipalities and cooperatives provide that all lines and substations from the point of delivery and all electrical equipment except the metering equipment of the Authority located on the municipality's or cooperative's side of such point of delivery shall be furnished and maintained by the municipality or cooperative. [See "Terms and Conditions" section of contracts usually entitled "Corporation's Lines and Equipment—Ownership" as on pp. 144, 162, 176, 188, 207, 219, 235, 247, 259 of def. ex. 154, sent up in original form; or see comp. ex. 118, r. 2771, 2786; comp. exs. 119-134, 135-145, 196, 224, r. 2846-2885, 2885-2889, 3004, 3026.]

132. Rural cooperative associations have been organized in the States of Alabama, Tennessee, Georgia, and Mississippi for the purposes of distributing TVA power. Seven such corporations have been organized in Alabama [comp. exs. 267-274, r. 3040-3049], 14 in Tennessee [r. 1520-1521], one in Georgia [comp. exs. 381, 382, r. 3155, 3156], and 11 in Mississippi [comp. exs. 943-953, r. 3996-4002]. All such cooperative associations have been incorporated since May 18, 1933, and have procured franchises in 10 counties in Alabama and 45 counties in Tennessee for the

purposes of erecting, constructing, operating, and maintaining lines, and distributing and selling electricity therein. [Comp. exs. 214-223, r. 3022-3026; comp. exs. 275-319, r. 3049-3065.]

133. TVA has financed for municipalities and cooperatives a large number of rural distribution lines [def. ex. 136, r. 4175, 4184] and has also loaned funds to cooperatives with which to purchase urban distribution systems, including the distribution systems in the towns of Bruce, Caledonia, and Smithville, Mississippi, and Gibson, Tennessee [comp. exs. 181, 592, 595, r. 2950, 3433, 3441]. The indebtedness owed to TVA on this account amounted to $1,424,665.70 as of June 30, 1936 [comp. ex. 116 (original) p. 486], and this indebtedness had increased by June 30, 1937, to the sum of $1,582,412.66 [def. ex. 154 (original) p. 110]. TVA intends to continue this policy. [Def. ex. 153 (original) p. 978.]

134. The TVA in some instances has constructed distribution systems in advance of the organization of any cooperatives. [Comp. exs. 530-531, 534, 535, 553, r. 3360-3361, 3363, 3364, 3374; Watson, r. 2397-2398.] In a number of other instances TVA has constructed lines pending their purchase by the cooperatives, agreeing to collect membership fees, to connect service to prospective customers, to render and collect bills, and perform other like services, including the furnishing of clerical and stenographic service. [Comp. exs. 176, 177, 178, 179, 180, r. 2938, 2941, 2943, 2947; comp. exs. 588, 596, 599, 601, 610, 626, r. 3430, 3451, 3457, 3459, 3476.] In a number of instances TVA has transferred to cooperatives distribution lines and other equipment and has financed and constructed rural lines to be paid for over a 20-year period, and in some instances an unlimited period, at 3½% interest, out of the income from the property. [Comp. exs. 577, 583, 584, 587, 595, r. 3395, 3426, 3427, 3430, 3441; comp. ex. 170, r. 2916; comp. exs. 607, 622, r. 3459, 3468; comp. exs. 117, 181, 175,

173, r. 2729, 2950, 2937, 2926; comp. exs. 618, 605, 609, r. 3461, 3458, 3459; comp. exs. 593, 592, r. 3439, 3433; comp. ex. 163, r. 2909.]

135. The municipalities purchasing power at wholesale from the Authority own and operate their own distribution systems and sell the power which they purchase from the Authority to the ultimate consumers, and the contracts with municipalities not yet purchasing power contemplate the same type of operation. [See def. ex. 147, r. 4237, 4251-4253; Karr, r. 2205-2208; see contracts describing this arrangement in comp. exs. 117, 118, 119-134, 135-145, r. 2729, 2771, 2846-2885, 2885-2888.]

136. The cooperatives purchasing power at wholesale from the Authority own and operate their own rural distribution systems and sell the power which they purchase from the Authority to the ultimate consumers, and the contracts with cooperatives not yet purchasing power contemplate the same type of operation. [See def. ex. 147, r. 4237, 4251-4253; Karr, r. 2205-2208; see contracts describing this arrangement in comp. exs. 117, 118, 119-134, 135-145, r. 2729, 2771, 2846-2885, 2885-2888.]

137. All of the Authority's contracts with said municipalities and cooperatives provide for the delivery of power at a voltage of from 2,300 volts upwards. Voltages of this magnitude are not suitable for delivery to the ultimate consumer, except for a few industrial consumers, and the municipality or cooperative which serves those consumers directly steps down this voltage one or more times after receiving it from the Authority at the point of delivery before actual delivery to the customer at the usual customer voltages of 115 and 230 volts. [See section entitled "Power Supply" in contracts, examples of which are reprinted in comp. ex. 117, r. 2729, 2730, 2743, 2762; comp. ex. 118, r. 2771, 2773, 2803, 2811, 2820; comp. ex. 119, r. 2846, 2848; comp. exs. 120-129, r. 2852-2860; comp. ex. 130, r. 2860, 2862; comp. ex. 132, r. 2867, 2868; comp. ex. 133, r. 2873,

7

2875; comp. ex. 134, r. 2879, 2881; comp. exs. 135-145, r. 2885-2888; *cf.* Moreland, r. 1486.]

138. All of the Authority's contracts with municipalities and cooperatives for the sale of power provide an arrangement whereby the Authority performs the function of a wholesaler generating and transmitting the power in bulk lots to the purchasing municipality and cooperative, which in turn sells the power to the ultimate consumers, performing all the functions of the distributor. [For reprints of contracts, see comp. exs. 117, 118, 119-134, 135-145, r. 2729, 2771, 2846-2885, 2885-2888.]

139. The contracts with municipalities and cooperatives provide only for the sale of firm power. [See references for fdg. 138.]

140. Municipalities and cooperatives under contract to purchase and purchasing power from the Authority assume responsibility for the power at the point of delivery and sell and distribute the power from that point over their own facilities and with their own operating staffs, without any assistance or direction from the Authority. The only assistance rendered by the Authority has been in time of emergency, and in such case the Authority has been paid its full cost, including its usual overhead. [Karr, r. 2223-2224, 2229-2230; *cf.* reprints of contracts, comp. exs. 117, 118, 119-134, 135-145, r. 2729, 2771, 2846-2885, 2885-2888; Hutchinson, r. 2272, 2274; Pittman, r. 1346-1347.]

141. The cooperatives to whom the Authority is under contract to sell power have certificates of incorporation from the authorized officials of the respective States in which they operate showing them to be organized under special acts of the several States in which they operate. These charters show that the corporations are organized by citizens of the respective localities in which the operations of the corporations shall be conducted who were desirous of procuring electric service, and the charter sets

out the form of organization, location of the principal office, terms of membership, purposes, powers, and the names of the board of directors for the first year. [See comp. exs. 267-274, r. 3040-3049, for Alabama charters; comp. exs. 943-953, r. 3996-4002, for Mississippi charters; r. 1520-1521.]

142. These organizations were brought about upon the initiative of the residents of the various communities who were desirous of procuring electric service, without any solicitation on the part of the Authority or any of its representatives. [Hutchinson, r. 2271-2278; Cowley, r. 2263-2269; Pittman, r. 1342-1347.]

143. Upon the request of the citizens of the rural areas in which the respective cooperatives are located, the Authority has given advice and assistance to such cooperatives on problems of organization and has given technical advice on methods of conducting surveys and determining the financial feasibility of proposed operations. [Hutchinson, r. 2274-2275; Pittman, r. 1344, 1345.]

144. The Authority, in advising on the financial feasibility of proposed lines, has not substituted its judgment for that of the respective cooperatives. The cooperatives have made all decisions on line extensions, customers to be served, and all other matters relating to the conduct of their operations. [Hutchinson, r. 2274; Carmack, r. 1355; Pittman, r. 1345-1347.]

145. All contracts between the Authority and the several cooperatives relating either to the construction of lines or to the sale of power have been submitted to and approved by counsel for the respective cooperatives and then considered and finally approved by the board of directors of the respective cooperatives. [Pittman, r. 1346, 1347; Carmack, r. 1354, 1355.]

146. While the Authority has in a few instances temporarily operated directly the lines of certain cooperatives under agreements with such cooperatives providing for

such operation by the Authority, all of such operating agreements had expired by December 15, 1937, and all lines constructed for cooperatives had been transferred to such cooperatives. [Karr, r. 2202-2203; see def. ex. 143, r. 4192, showing dates of power contracts and initial purchases.]

147. Upon the transfer of any lines constructed by the Authority for cooperatives or temporarily operated by the Authority for such cooperatives, the Authority has withdrawn completely from any participation in the conduct of the affairs of such cooperatives, except as it has continued to supply power at wholesale and except as to the enforcement of its rights as a contractor of such of the cooperatives whose lines were financed in whole or in part by the Authority. [Hutchinson, r. 2274-2275; Carmack, r. 1354, 1355.]

148. The power contracts with industrial customers provide in some cases for the delivery of power on the low-tension side of a substation to be owned by the Authority, and in other cases on the high-tension side of a substation to be owned by the industrial customer. In the case of the Electric Metallurgical Company the contract provides that delivery shall be made at the boundary of the Wilson Dam reservation at a high transmission voltage. All the contracts are for sales in bulk lots for use in various industrial processes. [See comp. exs. 118, 151, 152, 160, 161, r. 2771, 2890, 2895; def. exs. 145, 146, r. 4235-4236 (for convenience see reprints of industrial contracts in comp. ex. 118, r. 2771, 2828, and def. ex. 154 (original)).]

149. These industrial contracts provide for the delivery of power at voltages comparable to or higher than the voltages at which delivery is made to municipalities or cooperatives. [See comp. exs. 118, 151, 152, 160, 161, r. 2771, 2890, 2895; def. exs. 145, 146, r. 4235-4236; for references regarding voltage for delivery to municipalities see fdg. 137.] These delivery voltages range as high as 154,000 volts, which is specified for the delivery to the Aluminum

Company of America. [*Cf.* def. ex. 154 (original) pp. 150, 151, sec. 2 of Aluminum Company contract.]

150. Except for the industrial customers located in the ceded area covered by the contract of January 4, all of the industrial customers with whom the Authority is under contract to sell power are large electro-chemical and electro-metallurgical companies. [See contract with Victor Chemical Works, def. ex. 154 (original) and particularly the 2d "Whereas" clause on p. 303 and sec. 11, p. 306; contract with Monsanto Chemical Co., comp. ex. 118, r. 2771, 2828; Karr, r. 2209.] The Electro Metallurgical Company, which is locating a new plant in the ceded area, is also of this type. [See contract in def. ex. 154 (original) p. 315, and particularly the 3d "Whereas" clause and sec. 11.]

151. All of said industrial customers outside the ceded area and the Electro Metallurgical Company constitute new loads in the territory. The loads contracted for have not been previously served by any of the complainant companies. [Def. ex. 143, r. 4193, 2d column; Karr, r. 2200.] Under the contracts with the Victor Chemical Works, the Monsanto Chemical Company, and the Electro Metallurgical Company (in the ceded area) these companies undertake to construct new plants and purchase power from the Authority for service to these plants. [See def. ex. 154 (original) pp. 302, 315; comp. ex. 118, r. 2771, 2828-2829.] The contract with the Aluminum Company of America shows that that company was about to enlarge its facilities and needed additional power to supplement its own generation. [Def. ex. 154 (original) p. 309.]

152. Complainant companies do not maintain excess capacity and facilities for service to loads of such large and unusual size as that of these electro-chemical and electro-metallurgical customers of the Authority, but constructed facilities for service to these companies as needed. [Miller, r. 1115.]

153. All of said large industrial customers have contracted to purchase large amounts of secondary power as well as firm power. [See def. ex. 154 (original) pp. 302, 309, 315, 316; comp. ex. 118, r. 2771, 2828.]

154. Secondary power is that class of power the delivery of which the seller may interrupt during periods which are variously specified in the contract of sale. [Moreland, r. 1449-1450.] All of the industrial customers outside of the ceded area have contracted to purchase large amounts of this secondary power of which the Authority may, under the contracts, suspend delivery for specified periods of time, such as in event of low-water flow. [Karr, r. 2209; *cf.* def. ex. 154 (original) p. 309, sec. 2 (Aluminum Co.); pp. 302, 304, sec. 5(d) (Victor Chemical Works); pp. 315, 316, sec. 4 (Electro-Metallurgical Co.); comp. ex. 118, r. 2771, 2828, sec. 4.] These sales of secondary power materially increase the Authority's sales of energy during the period that such power is available. [Karr, r. 2210, 2212.] These sales of secondary power to large industrial customers will increase the load factor of the Authority's operations during these periods when the power is delivered. [Karr, r. 2212.]

155. It is not feasible to sell this secondary power to such large industrial customers through a retailer or an intermediary. [Karr, r. 2209-2210.]

156. These large manufacturing plants and utility companies, such as the Arkansas Power & Light Company, with whom the Authority also has a contract providing for the sale of secondary power, are the type of customers whose operations are adapted to the use of that type of power. [Karr, r. 2209, 2210; Moreland, r. 1449-1450.]

157. The following contracts provide for the sale of both firm and secondary power for the period of years noted:

(a) Contract between Tennessee Valley Authority and Monsanto Chemical Company, dated May 15, 1936, for 20 years. [Comp. ex. 118, r. 2771, 2828.]

(b) Contract between Tennessee Valley Authority and Aluminum Company of America, dated July 17, 1936 [def. ex. 154 (original) p. 150], as amended by agreement of July 20, 1937, for 10 years [def. ex. 154 (original) p. 313].

(c) Conrract [*sic*] between Tennessee Valley Authority and Arkansas Power & Light Company, dated June 16, 1937, for 5 years, but continuing in effect until cancelled by either party on 30 months' notice. [Def. ex. 154 (original) p. 294.]

(d) Contract between Tennessee Valley Authority and Victor Chemical Works, dated July 2, 1937, for 20 years. [Def. ex. 154 (original) p. 302.]

(e) Contract between Tennessee Valley Authority and Aluminum Company of America, dated July 20, 1937, for 20 years, but cancellable by either party at the end of 10 years on 5 years' notice. [Def. ex. 154 (original) p. 309.]

(f) Contract between Tennessee Valley Authority and Electro Metallurgical Company, dated August 17, 1937, for 20 years. [Def. ex. 154 (original) p. 315.]

158. The maximum amounts of secondary power which the Authority has contracted to sell are as follows:

Monsanto Chemical Company	32,500 kw.
Aluminum Company of America (July 17, 1936)	40,000 kw.
Arkansas Power & Light Company	5,000 to 20,000 kw.
(prior to 6-30-38	10,000 kw.
year ending 6-30-39	15,000 kw.
year ending 6-30-40	20,000 kw.
year ending 6-30-41	15,000 kw.
year ending 6-30-42	10,000 kw.
thereafter	5,000 kw.)
Victor Chemical Works	16,000 kw.
Aluminum Company of America (July 20, 1937)	30,000 kw.
Electro Metallurgical Company	16,000 kw.

[See references to contracts in fdg. 157 above.]

159. The periods in which the Authority is obligated to supply such secondary power and the required notices before interrupting and resuming secondary power deliveries are as follows for the respective contracts above mentioned:

Contract	Period Authority obligated to supply secondary power	Notice required before interruption of delivery	Notice required before resumption of delivery
Monsanto Chemical Co.	300 days annually	14 days	14 days
Aluminum Co. of America (July 17, 1936)	Not less than 90 days when and if available in judgment of Authority	15 days	15 days
Arkansas P. & L. Co.			
Prior to 7-1-42	300 days annually	15 days	7 days
Beginning 7-1-42	75% of the time	5 days	"Reasonable" time
Victor Chemical Works	9 months annually	14 days	7 days
Aluminum Co. of America (July 20, 1937)	75% of the time in ten years	21 days	7 days
Electro Met. Co.	9 months	14 days	7 days

[See references to contracts in fdg. 157 above.]

160. All of the Authority's contracts contain a force majeure clause which relieves the Authority of any obligation to supply power when prevented by injunctions, strike, riot, invasion, fire, accident, breakdown, act of God, or any other causes beyond the Authority's control. In addition the force majeure clause in each of the contracts with the 4 large industrial contractors and the Arkansas Power & Light Company, except the force majeure clauses in the contract with the Aluminum Company dated July 17, 1936, as amended, and in the contract with the Monsanto Chemical Company, relieves the Authority of obligation to supply power when service is interrupted or suspended by reason of floods or backwater caused by floods. The force majeure clauses apply to both firm and secondary power. [See references to contracts in fdg. 157 above.]

161. The Authority's contracts with the Aluminum Company and the Arkansas Power & Light Company pro-

vide that if an emergency or breakdown should occur on the system of either contracting party, the other party shall stand by and supply the power needed in the emergency to the full extent its facilities enable it to do so. [See def. ex. 154 (original) p. 294 (Arkansas P. & L. Co.); def. ex. 154 (original) p. 313 (Aluminum Co.).]

162. All contracts between the Authority and municipalities or cooperatives are for a period of 20 years from the respective dates of execution thereof, except that the contracts with the cities of Florence, Sheffield, and Tuscumbia, Alabama, all of which purchase power at the Wilson Dam reservation, are for a period of 30 years from the respective dates of execution thereof. [See contracts reprinted in comp. ex. 117, r. 2729; comp. ex. 118, r. 2771; def. ex. 154 (original).]

163. With the exception of small industrials in the "ceded areas," all power contracts except one contain either the following provision immediately after the recitals:

Now Therefore, subject to the provisions of the Tennessee Valley Authority Act of 1933, as amended, the parties hereto agree as follows:

or an identical provision except that the word "pursuant" is used in the first line above quoted instead of the word "subject." [See contracts reprinted in comp. ex. 117, r. 2729; comp. ex. 118, r. 2771; def. ex. 154 (original).]

164. The following provision:

* * * should [the contracting municipality or cooperative] desire to increase its purchases in excess of ——— kilowatts, Authority shall deliver such excess upon written demand and after reasonable notice, provided that the requirements of Authority and/or the United States reasonably enable it to do so.

is contained in each of the contracts specified below, with the number after the name of each purchaser indicating the number of kw entered in the blank in the clause above.

Municipality or cooperative	kw.	[Comp. Ex. No.

City of Knoxville, Tennessee.....	35,000	125
City of Guntersville, Alabama.....	3,000	128]

The maximum amount of power each industrial or utility customer may purchase from the Authority is definitely specified in the contract with such customer.

165. The Authority has contracts with municipalities now purchasing power calling for the availability of 38,380 kw. [Comp. exs. 119, 123, 133, 120, r. 2846, 2856, 2873, 2852; comp. ex. 118, r. 2771, 2799, 2800, 2801, 2802; comp. ex. 117, r. 2729, 2740, 2741, 2742, 2760.]

166. The Authority has contracts with municipalities not yet purchasing power calling for the availability of 135,000 kw. [Comp. exs. 126, 127, 128, 129, 130, 132, 134, r. 2857-2873, 2879; comp. ex. 118, r. 2771, 2807, 2808.]

167. The Authority has contracts with rural cooperatives now purchasing power calling for the availability of

9,300 kw. [Comp. exs. 135-142, r. 2885-2887; comp. ex. 118, r. 2771, 2809, 2816, 2817; comp. ex. 117, r. 2729, 2770; comp. ex. 196, r. 3004.]

168. The Authority has contracts with industrial companies by which it contracts to sell 127,850 kw. of firm power. [Comp. exs. 146-152, 153-156, 159-161, r. 2889-2890, 2891, 2894-2895; comp. ex. 118, r. 2771, 2828; def. exs. 145, 146, r. 4235-4236; def. ex. 154 (original) pp. 302, 309, 315.]

169. The Authority has contracts with industrial companies and utilities by which it contracts to sell 139,500 kw. of secondary or interruptible power. [Comp. ex. 118, r. 2771, 2828; def. exs. 145-146, r. 4235-4236; def. ex. 154 (original) pp. 302, 309, 315.]

Power Facilities Used or to be Used in Meeting These Contracts

170. The transfer of the Muscle Shoals properties from the War Department to the Tennessee Valley Authority after the passage of the Tennessee Valley Authority Act included the Wilson Dam and power plant, with 8 generators having a total installed capacity of 184,000 kw., and the Sheffield steam plant, with an installed capacity of 60,000 kw. [comp. ex. 113 (original) p. 24]; also 7.8 miles of high-voltage transmission lines leading from Wilson Dam to various points on the Government reservation, including Nitrate Plant No. 2 [def. ex. 136, r. 4175, 4177].

171. A single generator at Norris Dam, constructed by the Authority, was put in operation on July 28, 1936; a second generator was put in operation on September 30, 1936. Each of these generators are of 50,000-kw. capacity. A single generating unit at the Wheeler project, constructed by the Authority, was put in operation on November 9, 1936; a second unit was put in operation on April 14, 1937. Each of these units is of 32,000-kw. capacity. [Def. ex. 149, r. 4255.]

172. The failure to generate and sell power available at the Wilson, Norris, and Wheeler Dams not needed for governmental uses would result in its complete waste. Substantial amounts of such power have been wasted because of lack of markets in every year since the construction of Wilson Dam. [Def. ex. 149, r. 4255; Karr, r. 2211-2212.]

173. Pursuant to the contract of January 4, with the complainants Alabama Power Company and Mississippi Power Company the Tennessee Valley Authority purchased certain transmission lines extending from Wilson Dam to the nearby area in northwest Alabama and northeast Mississippi. [Def. ex. 143A, r. 4195, and particularly exhibits "A" and "B," r. 4209 *et seq.*] The lines, which included auxiliary electrical properties, such as substations and rural lines in the area, were located in 10 counties in Mississippi and 6 counties in Alabama. [Def. ex. 143A, r. 4195, and particularly exhibits "A" and "B," r. 4209 *et seq.*] These 16 counties are hereinafter referred to as the "ceded area" covered by the contract of January 4. At the time of the transfer of the properties there were approximately 14,200 electric customers in the ceded area. [Sweatt, r. 793; Barry, r. 876.] These customers and all additional customers in the area are now being served by municipalities, cooperatives, and the Alabama Power Company, to whom the Authority sells and delivers power at wholesale for resale in the area [def. ex. 143, r. 4192-4193; Barry, r. 870, 871], except for a few industrial customers and the rural customers, relatively small in number, in the vicinity of Wilson Dam, being served by the Authority [def. ex. 143, r. 4192; Karr, r. 2202].

174. The properties in Alabama purchased from the Alabama Power Company, a complainant in this case, included 128 miles of high-voltage transmission lines [def. ex. 136, r. 4175, 4177], 24 substations located along these lines [def. ex. 136, r. 4175, 4181, 4182], and 203 miles of

rural lines [Barry, r. 871; Henkle, r. 1055; def. ex. 136, r. 4184A]. All of the municipal distribution systems belonging to the Alabama Power Company in these 6 counties, some 12 in number, were served from these transmission lines. [Def. ex. 143A, r. 4195, and particularly r. 4218; Barry, r. 870; Henkle, r. 1055.] They were retained by the Alabama Power Company. Approximately 1,000 rural customers were served from the rural lines at the time of transfer. [Henkle, r. 1055.] The industrial customers being served from these properties at the time of transfer were 48 in number, with a load of approximately 5,000 kw. [Henkle, r. 1054.]

175. The properties located in Mississippi were purchased from the Mississippi Power Company, a complainant in this case, and consisted of 87.3 miles of high-voltage transmission lines [def. ex. 136, r. 4175, 4178], 7 substations [def. ex. 136, r. 4175, 4181], and 167 miles of rural lines [Sweatt, r. 791]. Certain municipal distribution systems and steam and oil generating plants were included in the purchase from the Mississippi Power Company. [Def. ex. 143A, r. 4210, 4211.] Subsequent to the conveyance of the municipal distribution systems to the Authority in May 1934, these distribution systems were sold to municipalities or cooperative organizations of citizens and farmers formed under the laws of Mississippi. [See contracts for power purchase with certain rural associations, reciting that certain distribution properties were transferred—comp. ex. 117, r. 2729, 2760, 2761; comp. ex. 118, r. 2771, 2816, 2817; *cf.* Karr, r. 2202; def. ex. 143, r. 4192.]

176. All of the properties purchased from the Mississippi Power Company were actually transferred to the Authority on approximately June 1, 1934. [Comp. ex. 113 (original) p. 25.] All of the properties purchased from the Alabama Power Company were transferred to the Authority in May 1936. [Karr, r. 2229.]

177. The only transmission lines, other than those purchased or constructed by the Tennessee Valley Authority, connected with any dam of the Authority are owned by the Alabama Power Company, The Tennessee Electric Power Company, and the Southern Tennessee Power Company, all subsidiaries of the Commonwealth & Southern Corporation. [Hapgood, r. 2139-2140; def. ex. 138 in *Reproductions of Certain Original Exhibits Submitted by Appellees.*] Subsidiaries of the Commonwealth & Southern Corporation and companies affiliated with the Electric Bond & Share Company own substantially all of the transmission lines and serve substantially all of the existing load centers in the area within a radius of 100 miles from each of the dams now under construction or completed. [Hapgood, r. 2139-2141; def. ex. 138 in *Reproductions of Certain Original Exhibits Submitted by Appellees;* Miller, r. 1111-1112.]

178. Unless the Authority built transmission lines leading from Wilson Dam and the dams it has constructed or has under construction, it could sell power only to utility companies, except for industrial customers that might locate at the dams and such municipalities and cooperatives as are located in the immediate neighborhood of the projects. Such sales to customers other than utility companies would be very limited. [Thomas, r. 2105, 2107; Miller, r. 1114.]

179. The Authority has constructed 407.6 miles of high-voltage transmission lines interconnecting the power plants at Wilson Dam and the other dams constructed or under construction. [Def. ex. 136, r. 4175, 4178.]

180. Such plant tie lines can be used to transfer power from one project to another and increase the availability and amount of power at Wilson Dam and on the resulting hydroelectric system. [Hapgood, r. 2142, 2161; Miller, r. 1102; Thomas, r. 2107.]

181. The most economical use of the Authority's dams for power supply requires interconnecting transmission lines similar to those constructed, under construction, or authorized for construction by the Authority. [Hapgood, r. 2142, 2161; Miller, r. 1102, 1115.]

182. Unless these lines had been constructed, the Authority would have been forced to rely for the interconnection of its various projects upon lines belonging to companies in the Commonwealth and Southern system, more particularly the lines of the Alabama Power Company and The Tennessee Electric Power Company. These existing lines of the complainant power companies were inadequate to perform these functions, and there was no existing line connecting Wilson Dam with Pickwick Landing Dam. [Hapgood, r. 2142.]

183. In addition to the plant tie lines and the 216 miles of high-tension lines purchased under the contract of January 4, the Authority has constructed 611.6 miles of transmission lines of a voltage of 22 kw. or over; it was constructing on October 15, 1937, an additional 79.1 miles of such lines; and on that date it had authorized for construction an additional 176.9 miles of such lines. [Def. ex. 136, r. 4175, 4178, 4179.]

184. These miles of high-voltage transmission lines constructed, under construction, and authorized by the Authority do not constitute duplication of existing transmission facilities in the area, but are useful and valuable additions to those facilities. [Hapgood, r. 2142-2146.]

185. In addition to the 31 substations purchased under the contract of January 4 from the complainants, the Authority is constructing, has constructed, or has authorized the construction of some 33 substations along or at the end of the transmission lines it has purchased or constructed, and has constructed or is constructing five additional substations at the dams. [Def. ex. 136, r. 4175, 4180.] The substations at the dams are used in stepping up the current

generated to higher voltages for transmission, and those along the lines are used in stepping the voltages down for delivery to the Authority's wholesale customers. [Moreland, r. 1485, 1486.]

186. The transmission lines substantially as constructed by the Authority are essential for service to the customers of the Authority now being served or under contract. [Hapgood, r. 2142-2146; Miller, r. 1112-1115.] Such lines were constructed for service to the customers under contract and not for any strategic purpose of injuring or threatening the complainants. [Hapgood, r. 2142-2143, 2165-2166.]

187. As of October 15, 1937, the Authority owned approximately 421 miles of rural lines in the vicinity of Wilson Dam or Norris Dam. [Def. ex. 136, r. 4175, 4184.] It also owned 107 miles of such lines in Lincoln County, which on December 11, 1937, it contracted to sell and transferred to the Lincoln County Electric Membership Corporation. [Karr, r. 2202-2203; see def. ex. 144, r. 4227.] Of the 421 miles still retained, 353 miles were constructed by the Authority, and of the 353 miles so constructed, 254 miles were located within the so-called ceded area in Alabama. [Def. ex. 136, r. 4175, 4184.] The remaining 68 miles owned by the Authority were either purchased from the complainant Alabama Power Company under the contract of January 4 or were purchased from the complainant The Tennessee Electric Power Company. [Def. ex. 136, r. 4175, 4184.]

188. In addition to the rural lines which the Authority has purchased or constructed and still retains, it has constructed 1,023 additional miles of such lines and sold them to municipalities or rural cooperatives with whom it was under contract to sell electric energy at wholesale; it constructed an additional 1,343 miles of such lines under construction contracts with municipalities or cooperatives

having power-purchase contracts. [Def. ex. 136, r. 4175, 4184.]

189. The rural lines constructed by the Authority and sold to the cooperatives were constructed with the Authority's own funds and sold to the respective cooperatives at the actual cost of such lines to the Authority plus its regular overhead charges, under an agreement secured by mortgage or other instrument of security for the repayment to the Authority of the indebtedness out of the proceeds of the electric business of the cooperative. [Comp. ex. 181, r. 2950; comp. ex. 117, r. 2760.]

190. The remaining rural lines constructed by the Authority for the cooperatives were constructed by the Authority under construction contracts between the Authority and cooperatives, under the terms of which the Authority has been repaid its actual construction cost, including the usual overhead. [Comp. exs. 162-175, r. 2895 *et seq.*, e.g., see sec. 3 of comp. ex. 162, r. 2897, and sec. 2 of comp. ex. 163, r. 2909; Hutchinson, r. 2272.]

191. Some of the respective cooperatives and municipalities purchasing power from the Authority have constructed many miles of rural line either by contract with an independent contractor or with their own crews, without any aid or assistance, financial or otherwise, from the Authority or any other federal agency. [Def. ex. 136, r. 4175, 4184.]

192. The high-tension transmission lines constructed by the Authority are similar in character and function to the lines purchased by the Authority under the contract of January 4. The substations constructed by the Authority are similar in character and function to the substations purchased by the Authority under the contract of January 4. The rural lines constructed by the Authority and retained in ownership or sold are similar in function and character to the rural lines acquired by the Authority under the contract of January 4. [Def. ex. 136, r. 4175;

def. exs. 136A, 136B, 137 in *Reproductions of Certain Original Exhibits Submitted by Appellees.*]

193. The Authority does not own or operate any municipal or urban distribution systems. [Karr, r. 2202-2203; def. ex. 154 (original) pp. 19-20.]

194. As of October 15, 1937, the total number of rural lines distributing TVA power, exclusive of those of the North Georgia Membership Corporation, was 3,086.7, and approximately 490 miles of additional lines were then under construction. Of such total mileage TVA owned and operated 629.7 miles. Of the total distribution lines distributing TVA power only 292 miles were constructed by municipalities or cooperatives. One thousand and twenty-three miles were constructed and financed by TVA, and 1,343 miles were constructed by TVA under contracts with municipalities or cooperatives [def. ex. 136, r. 4175, 4184], 1,593 miles having been constructed by TVA during its 1937 fiscal year [def. ex. 154 (original) p. 94].

195. Expenditures by TVA for distribution facilities up to June 30, 1936, amounted to $1,809,114. This amount was increased to $2,447,956 by June 30, 1937, and TVA proposes to expend an additional sum of $272,000 for distribution facilities during the fiscal year of 1938. [Def. ex. 153 (original) p. 977.]

Power Sales, Present and Potential

196. During the period from May 18, 1933, to January 1934, and of the contract of January 4, approximately 75% of the electricity sold by the Authority was sold to complainant power companies, subsidiaries of the Commonwealth & Southern Corporation, including the complainant Alabama Power Company, complainant Mississippi Power Company, complainant The Tennessee Electric Power Company, and noncomplainant Georgia Power Company. The total of the power so disposed of to these utility

companies since the passage of the Tennessee Valley Authority Act has amounted to 1,216,451,142 kwh. [Def. ex. 147, r. 4237, 4238, 4239, 4241, 4243.] The systems of all of the Commonwealth and Southern companies are interconnected into a single integrated system, and power delivered to one of these companies is merged in the common pool and becomes a joint source of supply. [Middlemiss, r. 1268, 1269.]

197. The power sold in the year 1937 was obtained exclusively from the hydroelectric generating facilities of the Authority, either directly or through interchange arrangements with the Commonwealth and Southern companies and the Aluminum Company of America. [Def. ex 147, r. 4237, 4251-4253, column 2.] The steam plant at Muscle Shoals is not in operation. [Karr, r. 2228.]

198. In the calendar year 1937 the Tennessee Valley Authority sold substantial quantities of power to 17 municipalities owning and operating their own municipal distribution systems, 15 rural cooperatives owning and operating their own rural lines, 8 industrial customers, and 2 private utility companies. [Def. ex. 147, r. 4242-4243; Rankin, r. 1303; Barry, r. 870.] In addition the Authority sold substantial quantities of power to the Commonwealth and Southern companies in January and February under an extension of the contract of January 4. [Def. ex. 147, r. 4243.]

199. In addition to these sales under outstanding power contracts the Authority sold electric energy to residents on 6 Government reservations and to rural residents residing in the vicinity of Wilson and Norris Dams and Lincoln County, Tennessee. [Def. ex. 147, r. 4242.] On December 11, 1937, the Authority contracted to sell the rural lines in Lincoln County, Tennessee, and the Lincoln County Electric Membership Corporation contracted to buy said lines, and since that date these lines have been operated by

the Lincoln County Corporation. [Karr, r. 2202, 2203; def. ex. 144, r. 4227.]

200. As of October 31, 1937, the total of all residents served by the Authority on Government reservations and in the surrounding areas, exclusive of Lincoln County, was 3,228. [Def. ex. 147, r. 4242.] All of the Authority's remaining sales of electricity for public use were made at wholesale to municipalities and rural cooperatives. [Def. ex. 147, r. 4242-4243.] The number of ultimate consumers so served as of October 31, 1937, by said municipalities and cooperatives was approximately 31,900. [Def. ex. 147, r. 4242-4243.]

201. The direct sales to temporary rural customers and employees on Government reservations have been less than 4% of the total kw. sales each year of the Authority's operations. [Def. ex. 147, r. 4237 *et seq.*]

202. In addition to these sales in 1937, power generated by the Authority has been used in the construction of Chickamauga, Guntersville, Hiwassee, Norris, Pickwick, and Wheeler Dams, for service to the fertilizer works at Muscle Shoals, and for the operation of the navigation locks at the Authority's dams on the main stream of the Tennessee River. [Def. ex. 147, r. 4242.]

203. As of December 15, 1937, of the total number of 18 municipalities receiving wholesale service from the Authority, only 6 previously received service of any kind from any of the complainant companies. Of these, 5 were located in the ceded area covered by the contract of January 4, 1934. [Def. ex. 143, r. 4192.] The residents of the city of Jackson, Tennessee, outside the ceded area, were served directly by the complainant West Tennessee Power & Light Company, and some of them have stopped taking service from the complainant company and are buying from the city. [Winkler, r. 1036.]

204. All of the municipalities purchasing power from the Authority in 1937 owned and operated their own mu-

nicipal distribution systems for a long time before the passage of the Tennessee Valley Authority Act, with the exception of Florence, Sheffield, and Tuscumbia, Alabama, and the city of Jackson, Tennessee. [Def. ex. 143, r. 4192.] The cities of Florence, Sheffield, and Tuscumbia, Alabama, are located in the ceded area covered by the contract of January 4, and their boundaries adjoin the Wilson Dam reservation. [Def. ex. 143A, and particularly r. 4218A.] The residents of these municipalities were previously served by the Alabama Power Company, which was operating distribution systems in these cities without franchises long before the Authority contracted with the municipalities [Hood, r. 862.]

205. Except for the cities of Athens, Alabama; Dayton, Tennessee; and Tupelo, Mississippi, all of the municipalities purchasing power at wholesale in 1937 which owned and operated their own distribution systems prior to purchasing from the Authority also owned a generating plant which was used to supply power for such systems. [Def. ex. 143, r. 4192.] The cities of Athens, Alabama, and Tupelo, Mississippi, both located in the ceded area covered by the contract of January 4, purchased their power at wholesale from the Alabama Power Company and the Mississippi Power Company, respectively, while Dayton, Tennessee, purchased its power supply from a local lumber mill. [Def. ex. 143, r. 4192, footnote 3.]

206. Only 2 customers of the total number of 16,108 customers receiving service as of October 31, 1937, from the 15 cooperatives purchasing power at wholesale from the Authority over all the rural lines they operated, whether constructed by them or by the Authority for them, ever received electric service of any kind from any of the complainant companies, except for customers located in the ceded area and served by means of lines sold to the Authority under the contract of January 4 and resold by the Authority to the cooperatives. [Street, r. 987; Wisdom, r. 850;

Winkler, r. 1039; Henkle, r. 1057; Jacobs, r. 1017; Bonner, r. 1010; Perkins, r. 1023-1024; Watson, r. 1028-1029; Ostermueller, r. 1092.]

207. Except for rural customers located in the ceded area on lines purchased from the complainant power companies, none of the rural customers served by the Authority or by municipalities purchasing power at wholesale from the Authority ever received service from any of the complainant companies. [See references for fdg. 206.]

208. None of the industrial loads which the Authority served in 1937 were previously served by any of the complainant companies except the industrial customers in the ceded area in Alabama, whose contracts were assigned to the Authority under the contract of January 4. [Def. ex. 143, r. 4192, 4193.]

209. In addition to the customers served by the Authority as of December 15, 1937, the Authority was as of that date under contract to serve 8 municipalities, 3 rural cooperatives, 2 industrial customers, and the War Department's requirements for the construction of Sardis Dam. [Def. ex. 143, r. 4192, 4193.]

210. Of the municipalities under contract but not yet purchasing as of December 15, 1937, 2 are located in the ceded area in Alabama, 1 is not served by any of the complainants (Middlesboro, Kentucky, served by Kentucky Utilities Company) and 5, including Chattanooga, Tennessee; Knoxville, Tennessee; Memphis, Tennessee; Guntersville, Alabama; and Paris, Tennessee, are now served by the complainants The Tennessee Electric Power Company, Tennessee Public Service Company, Memphis Power & Light Company, Alabama Power Company, and Kentucky-Tennessee Light & Power Company, respectively; that is, these companies presently own and operate urban distribution systems in the 5 municipalities. [Def. ex. 143, r. 4192, 4193.] The Authority is under contract to sell power at wholesale to these municipalities as soon as they acquire

distribution systems. If the municipalities construct new distribution systems and sell power and the complainants continue to operate their existing distribution systems in these municipalities, it is reasonable to believe that a large number of customers of complainants will elect to buy from the municipalities. [Ford, r. 1127; Lamar, r. 1135.]

211. Of the 3 cooperatives under contract but not yet purchasing power as of December 15, 1937, one is located within the ceded area in Mississippi. None of the 3 had previously purchased power from any of the complainants. [Def. ex. 143, r. 4192, 4193.]

212. Of the 2 industrial customers under contract but not yet purchasing power as of December 15, 1937, one is located in the ceded area in Alabama. Neither of the 2 was previously served by any of the complainants. [Def. ex. 143, r. 4192, 4193.]

Reasonableness of Conduct of Authority in Disposition of Surplus Power

213. Under the contract of January 4, as amended and supplemented, the Commonwealth & Southern Corporation, as agent for its subsidiaries Alabama Power Company, The Tennessee Electric Power Company, Mississippi Power Company, and Georgia Power Company, purchased from the Authority power in the aggregate value of $1,814,918.04. [Def. ex. 150, r. 4255, 4258.] In addition there to the Alabama Power Company had purchased from the Authority prior to January 4, 1934, power in the aggregate value of $479,573.67. [Def. ex. 150, r. 4255, 4258.] The amounts of power delivered by the Authority to the Alabama Power Company and The Tennessee Electric Power Company (for the subsidiaries of the Commonwealth & Southern Corporation above mentioned), from January 4, 1934, to January 1, 1935, and for the calendar years 1935 and 1936, were as follows [def. ex. 150, r. 4255, 4257]:

Alabama Power Company	1934	110,127,068 kwh.
	1935	164,127,787 kwh.
	1936	344,308,127 kwh.
The Tennessee Electric Power Co.	1934	39,514,200 kwh.
	1935	76,022,503 kwh.
	1936	212,313,103 kwh.

214. In addition to the sales of power under the contract of January 4, the Authority is currently selling power to 2 utility companies under recent contracts and has practiced no discrimination against complainant utility companies or other utility companies in the sale of power. [Def. ex. 145, r. 4235; Barry, r. 870.]

215. The so-called power policy of the Authority, dated August 15, 1933, consisting of a joint press release, was never formally approved by the Board of Directors of the Authority nor ever put into action or followed. [Def. ex. 29, r. 4061.]

216. The Authority has sold substantial blocks of power to many municipalities which formerly operated their own municipal generating plants, which sales did not involve any displacement of any existing load of the complainant companies. [Def. ex. 143, r. 4192.] The Authority has sold substantial blocks of power to cooperatives for distribution by them in rural areas to rural customers heretofore unserved, which sales did not involve any displacement of any existing load of complainant power companies. [Street, r. 987; Wisdom, r. 850; Winkler, r. 1039; Henkle, r. 1057; Jacobs, r. 1017; Bonner, r. 1010; Perkins, r. 1023-1024; Watson, r. 1028-1029; Ostermueller, r. 992; Carmack, r. 1355; Hutchinson, r. 2272, 2273; Cowley, r. 2264-2265.] The Authority has sold substantial blocks of power to industrial concerns who located new plants or enlarged existing plants, which sales did not displace any existing load of complainant power companies. [Def. ex. 143, r.

4192, 4193; def. ex. 147, r. 4237, 4242.] The Authority has sold substantial blocks of power to complainant and non-complainant companies with existing utility networks. [Def. ex. 150, r. 4255, 4257; Rankin, r. 1303.] In fact, none of the sales of power by the Authority have directly displaced any existing load of complainant companies except in the ceded area covered by the contract of January 4, in which the Authority purchased, for valuable considerations, the existing facilities from the complainants Alabama Power Company and Mississippi Power Company. [Def. ex. 143A, r. 4195.] None of the Authority's sales of power to date have indirectly displaced any existing load of the complainants outside the ceded area, except that the complainant West Tennessee Power & Light Company has lost some customers to the city of Jackson and has lost a load of approximately 50 kw. in the town of Gibson which it sold to the Gibson Power & Light Company; this latter load was lost to the complainant West Tennessee Power & Light Company when the properties in the town of Gibson were sold at auction by the Gibson Power & Light Company to the Gibson County Electric Membership Corporation. [Wisdom, r. 850-851.]

217. The officials of the Authority have taken the position in correspondence with municipal officials that the question of whether a municipality shall own and operate its own distribution system is one for the sole determination of the municipality. [Comp. ex. 412, r. 3244; def. exs. 5-9, r. 4031-4035.]

218. The Authority does not aid or assist in conducting surveys to determine the economic feasibility of proposed municipal-plant operations by municipalities applying for the purchase of power from the Authority. [Comp. ex. 412, r. 3244.]

219. The standard of the Authority in entering into power contracts with municipalities is the financial feasi-

bility of extending wholesale service to such municipalities as apply for wholesale service. [Comp. ex. 412, r. 3244.]

220. The Authority has not confined its power disposition to those municipalities which previously did not own and operate their own municipal distribution systems. [Def. ex. 143, r. 4192, column 2.] On the other hand, the Authority has throughout the course of its existence entered into a large number of contracts with municipalities who owned and operated municipal distribution systems before the passage of the Tennessee Valley Authority Act. [Def. ex. 143, r. 4192, column 2; Wisdom, r. 847; Sweatt, r. 794; Winkler, r. 1038.] The power contracts between the Authority and municipalities are substantially uniform, and there are no special provisions favoring municipalities who had not previously owned and operated their distribution systems or discriminating against municipalities that did own and operate their municipal distribution systems before the passage of the Tennessee Valley Authority Act. [For contracts see comp. ex. 117, r. 2729; comp. ex. 118, r. 2771; def. ex. 154 (original) p. 135 *et seq.*]

221. The contracts for the disposition of power between the Authority and municipalities and cooperatives contain provisions in which the parties agree that certain schedules of rates shall be charged by the wholesale purchaser to persons to whom it resells. These provisions for agreed resale rates are contained in all contracts regardless of whether or not the complainant utility companies own and operate distribution systems in the municipality or area where the purchased power is to be resold. [For contracts see comp. ex. 117, r. 2729; comp. ex. 118, r. 2771; def. ex. 154 (original) p. 135 *et seq.*]

222. The Authority has made no effort to regulate the rates of its municipal or cooperative customers and has taken no action regarding such rates other than entering into the initial agreement establishing resale rates.

223. There have been uniform and progressive increases of a substantial character in the amount of wholesale purchases of power made by each municipality which has purchased power from the Authority. [See def. ex. 147, r. 4237; def. ex. 154 (original) pp. 20-21.]

224. There has been a uniform and progressive increase in the number of ultimate consumers served by each municipality and cooperative that has purchased power at wholesale from the Authority. [Def. ex. 147, r. 4237.]

225. The amount of power purchased by each of the municipal customers of the Authority in October 1937 was on the average about 100% in excess of the respective amounts purchased by the respective municipalities in the initial month of wholesale service by the Tennessee Valley Authority. [Def. ex. 147, r. 4237.] This percentage of increase is in excess of the highest percentage of increase of any of the complainant companies in power sold to regular customers from 1933 to 1936. [See def. ex. 2, r. 4007; comp. exs. 10, 15, 23, 28, r. 2488, 2494, 2498, 2501; comp. exs. 30, 35, 38, 46, r. 2502, 2505, 2508, 2535; comp. exs. 55-57, r. 2540-2542; comp. exs. 76, 84, 96, 104, r. 2554, 2558A, 2604A, 2608.] It is greatly in excess of the approximately 20% of increase in the national production of electricity for the same period of years. [Comp. exs. 99, 99a, r. 2606.]

226. The annual average consumption of residential customers of municipalities and cooperatives purchasing power from the Authority generally exceeded the average for the same class of customers of the complainant companies. [For averages of residential customers of wholesale purchasers from TVA, see comp. ex. 919, r. 3948; for averages of comp. companies see comp. exs. 10, 15, 28, 35, r. 2488, 2494, 2501, 2505; comp. exs. 61, 62, 63, 76, r. 2546-2548, 2554; comp. exs. 84, 85, 96, 104, r. 2558A, 2558B, 2604A, 2608.]

227. The Authority has not induced the breach of any power contract between any complainant and any of its customers.

228. In marketing the power generated at its dams the Authority has not engaged in any solicitation of customers, coercion, duress, fraud, or misrepresentation in procuring contracts with municipalities, cooperatives, or other purchasers of power.

229. In marketing the power generated at its dams the Authority has not acted with any malicious or malevolent motive and has not conspired with municipalities or other prospective purchasers of power.

Extent of Displacement of Existing Utilities Threatened

230. The defendant Authority has no plans and has made no investigations of any substantial character for the construction of any dams in the Tennessee Valley except the 7 high dams on the main stream and Norris and Hiwassee Dams on the tributaries. [Bowman, r. 1693-1695.] Other than these projects it has recommended only the construction of the Fontana Dam on the Little Tennessee River. [Bowman, r. 1694.] The surveys of the Tennessee River basin and its tributaries conducted by the Corps of Engineers of the United States Army for the War Department and reported in House Document No. 328, Seventy-first Congress, second session, concerned combined public and private projects; the 149 projects so surveyed have not been recommended for construction by the Federal Government. [R. 4273-4274; comp. ex. 105 (original) p. 19 (par. 33); r. 895.]

231. It is reasonably estimated that the utilities within ready transmission distance of the Authority's run-of-river plants, constructed or under construction, will require 310,000 kw. of additional capacity in 1939 and 787,500 kw.

of additional capacity in 1943. [Thomas, r. 2092, 2086-2105; def. ex. 133, r. 4150.] Of this amount the requirements of the Commonwealth and Southern companies which are complainants herein, plus the requirements of the non-complainants Georgia Power Company, Gulf Power Company, and South Carolina Power Company, affiliated and interconnected non-complainant companies, are 207,000 kw. in 1939 and 559,000 kw. in 1943 [def. ex. 133, r. 4150]; and the requirements of the Electric Bond and Share companies who are complainants herein and affiliated non-complainant companies are 88,200 kw. in 1939 and 190,000 kw. in 1943 [def. ex. 133, r. 4150]. The estimated energy requirements for the companies within ready transmission distance of the Authority's run-of-river dams, constructed or under construction, will be over 770,000,000 kwh. in 1939 and over 2,150,000,000 kwh. in 1943. [Thomas, r. 2091-2105; def. ex. 133, r. 4150.] Of these amounts the additional requirements of the Commonwealth and Southern complainant companies and the Georgia Power Company will be over 550,000,000 kwh. in 1939 and 1,600,000,000 kwh. in 1943. [Def. ex. 133, r. 4150.] The additional energy requirements of the Electric Bond & Share Company and affiliated companies with which they are interconnected will be over 200,000,000 kwh. in 1939 and over 560,000,000 kwh. in 1943. [Def. ex. 133, r. 4150.]

232. Some of the complainants have added substantially to their generating capacity since 1933. [Comp. ex. 502, r. 3335.] Some of the complainants are preparing for the construction of additional generating plants of a substantial capacity. The Tennessee Electric Power Company is preparing to construct a steam plant at Nashville with a generating capacity of approximately 25,000 kw. [Middlemiss, r. 1273.] The Appalachian Electric Power Company is constructing a hydroelectric project on the New River in Virginia with a planned installed capacity of about 75,000 kw. and has leased 55,500 kw. of power

from the Federal Government at navigation projects on the Kanawha River. [Argabrite, r. 834.] The Arkansas Power & Light Company has contracted to purchase 40,000 kw. from the Authority in the near future. [Def. ex. 145, r. 4235; def. ex. 154 (original) p. 294.]

233. There is a steadily increasing demand for electric energy in the area within transmission distance of the Authority's projects constructed, under construction, and investigated for construction. [Thomas, r. 2101-2103; comp. exs. 360, 370, r. 3090, 3126D; comp. ex. 372 in *Reproductions of Certain Original Exhibits Submitted by Appellants;* comp. exs. 374-376, r. 3128A-3148; comp. ex. 501, r. 3334.]

234. There are unserved potential markets for the electric energy which may be generated at the projects of the Authority, not involving any displacement of the existing loads of complainant companies, including new industries and unserved rural areas. The percentage of rural electrification in the States which make up the Tennessee River basin is small. In 1933 it ranged from 0.8% in Mississippi to 7.9% in Virginia. In 1936 it ranged from 2% in Mississippi to 10.3% in Virginia. [Hapgood, r. 2147-2148.]

235. There are many unserved rural areas. A great majority of the so-called rural customers on lines of complainants existing in the counties or areas where the lines of the cooperatives have been constructed were in towns of a population of 100 or more, or within 6 miles of a transmission substation. [Hapgood, r. 2169.] There was little area-wide rural electrification. The fact that the lines of the cooperatives extend out from load centers or communities produces less customer density to the mile. [Hapgood, r. 2169.]

236. The growth in demand in terms of the firm peak load of the principal companies operating in territory located within a radius of 250 miles of the dams recom-

mended in the TVA unified plan from 1929 to 1936 was approximately 22%, that is, from 2,992,000 kw. in 1929 to 3,652,000 kw. in 1936. [Comp. ex. 501, r. 3334, line 20 entitled "Firm Peak Load"; Moreland, r. 1454-1455.] It is reasonably estimated by experts from both sides that this firm peak load will increase at least an additional 772,000 kw. or 21%, by 1939. [Comp. ex. 501, r. 3334, line 20 entitled "Firm Peak Load"; Thomas, r. 2103, 2097; def. ex. 133, r. 4150.]

237. By the date the power generating units authorized for the dams of the Authority are installed it is reasonably estimated by witnesses for both sides that the power demand in the area within transmission distance of the projects of the Authority will be greatly in excess of the present peak-load ability of the existing generating plants in the area. Unless additional generating capacity is provided by private utilities or at the projects of the Authority, there is likely to be a substantial power shortage. [Thomas, r. 2091-2092, 2097; def. ex. 133, r. 4150; Moreland, r. 1459-1463; comp. ex. 501, r. 3334.]

238. Without subtracting the substantial amounts of power which the Authority has contracted to sell to large industrial customers, the Arkansas Power & Light Company, and municipalities not yet served, the amount of power which will be available at the projects of the Authority with authorized installations of generating capacity is less than the amounts of power necessary to meet the increases in demand in the area served by private utilities within transmission distance predicted for the date when these installations are scheduled for completion. [Def. ex. 133, r. 4150; def. ex. 141, r. 4188; comp. ex. 501, r. 3334.]

239. For most of the complainants 1936 represented a new high point in volume of power sales, the increases from 1930 to that year ranging up to more than 50%. Since 1933 sales to regular customers have increased even more rapidly, the rates of growth during the latter period rang-

ing up to approximately 75%. [Def. ex. 2, r. 4007; comp. exs. 10, 15, r. 2488, 2494; comp. ex. 102, r. 2607; comp. ex. 28, r. 2501; comp. ex. 76, r. 2554; comp. ex. 38, r. 2508; comp. ex. 96, r. 2604; Barry, r. 874; Ostermueller, r. 994; comp. exs. 47, 55-57, r. 2536, 2540-2542.]

240. The number of electric customers served has shown a substantial increase for each of the respective complainants, the present number of customers served in 1937 constituting a new high for the said respective complainants. [Def. ex. 2, r. 4007; for individual companies see references to fdg. 239 above.]

241. Both the gross and the net revenues of the respective complainants in their electric-utility operations have increased substantially in the period since the creation of the Tennessee Valley Authority. [Def. ex. 2, r. 4007; for individual companies see references to fdg. 239 above.]

242. In many cases the gross revenues have reached a new high for the respective companies. [Def. ex. 2, r. 4007; for individual companies see references to fdg. 239 above.]

243. From 1933 to the middle of 1937 the rate of growth in the consumption of electricity in the 7 States, parts of which compose the Tennessee Valley basin, has been in excess of the national rate. [See comp. ex. 919, r. 3946, for rate of increase in Valley States; see comp. ex. 99a, r. 2606A, for the national rate of increase.] The increase in average annual residential use of customers of many utilities operating in the area from 1933 to 1937 greatly exceeds the increase in national average annual residential use. [See def. ex. 154 (original) p. 22, for national average; for rates of increase for complainant companies, see comp. exs. 10, 16, 28, 35, r. 2488, 2495, 2501, 2505; comp. exs. 38, 47, 55-57, r. 2508, 2536, 2540-2542; comp. exs. 76, 84, 85, 96, 104, r. 2554, 2558A, 2558B, 2604A, 2608.]

244. The generating and transmission facilities of the complainants Alabama Power Company, Mississippi Power Company, The Tennessee Electric Power Company, and non-complainants Georgia Power Company, Gulf Power Company, and South Carolina Power Company are interconnected and are operated as an integrated power pool. [Middlemiss, r. 1268-1270; Barry, r. 875.] Any point on the system of any of said companies may be served with power generated at any other point in said power pool. [Middlemiss, r. 1268-1270; Thomas, r. 2091, 2088.]

245. The facilities of complainants West Tennessee Power & Light Company, Memphis Power & Light Company, and Mississippi Power & Light Company, and non-complainants Louisiana Power & Light Company and Arkansas Power & Light Company, both members of the Electric Bond & Share Company system, are interconnected, and operated as a common integrated transmission and generating pool. [Rankin, r. 1293.]

246. The entire power requirements of the complainant Tennessee Public Service Company are purchased from complainant Carolina Power & Light Company. [Lamar, r. 802.] The Carolina Power & Light Company is interconnected with the Appalachian Electric Power Company and the Duke Power Company. [Yoder, r. 813, 822-823.]

247. The generating and transmission facilities of the Appalachian Electric Power Company, Kingsport Utilities, Inc., and Kentucky & West Virginia Power Company, Inc., are interconnected and operated as an integrated transmission and generating-plant system. [Argabrite, r. 829-830.]

248. The generating and transmission facilities devoted to service to the municipalities now served by the respective complainants and under contract to purchase power from the Authority form parts of integrated transmission and generating systems and may be devoted to serving the growth in other loads on the system should there be any loss of load in any given municipality which

purchases power from the Authority due to loss of customers to said municipality. [Hapgood, r. 2170.]

249. The unserved rural market in the area adjacent to the lines of the respective complainants which can be economically served by the complainants is negligible in amount and the injury to the respective complainants from any extension of rural lines for service to this market by the Authority or municipalities or cooperatives purchasing power at wholesale from the Authority would also be negligible. [Street, r. 977-978; Ostermueller, r. 990-991; Bonner, r. 1006-1007; Jacobs, r. 1016; Perkins, r. 1021; Watson, r. 1026-1027; Winkler, r. 1034-1035; Henkle, r. 1052-1053; Argabrite, r. 842; Sargent, r. 886; Lamar, r. 802; Canaday, r. 803; Ford, r. 809-810; Yoder, r. 821.]

250. Prior to the completion of generating plants at Norris Dam on July 28, 1936, and Wheeler Dam on November 8, 1936 [def. ex. 150, r. 4255, 4256-4257], all power supplied by the Authority to said companies under the contract of January 4, 1934, was supplied from Wilson Dam. Wilson and Norris Dams are and have been interconnected from and after July 28, 1936. [Def. ex. 150, r. 4255, 4256-4257.] Norris Dam began generating power on July 28, 1936, and Wheeler Dam on November 9, 1936. [Def. ex. 150, r. 4255, 4256-4257.] All power purchased by the Alabama Power Company and The Tennessee Electric Power Company from and after the respective dates of completion of Norris and Wheeler Dams was supplied from an interconnected pool, including the power generated at both of said dams from and after the dates of completion. [Def. ex. 150, r. 4255, 4257; *cf.* Karr, r. 2211.]

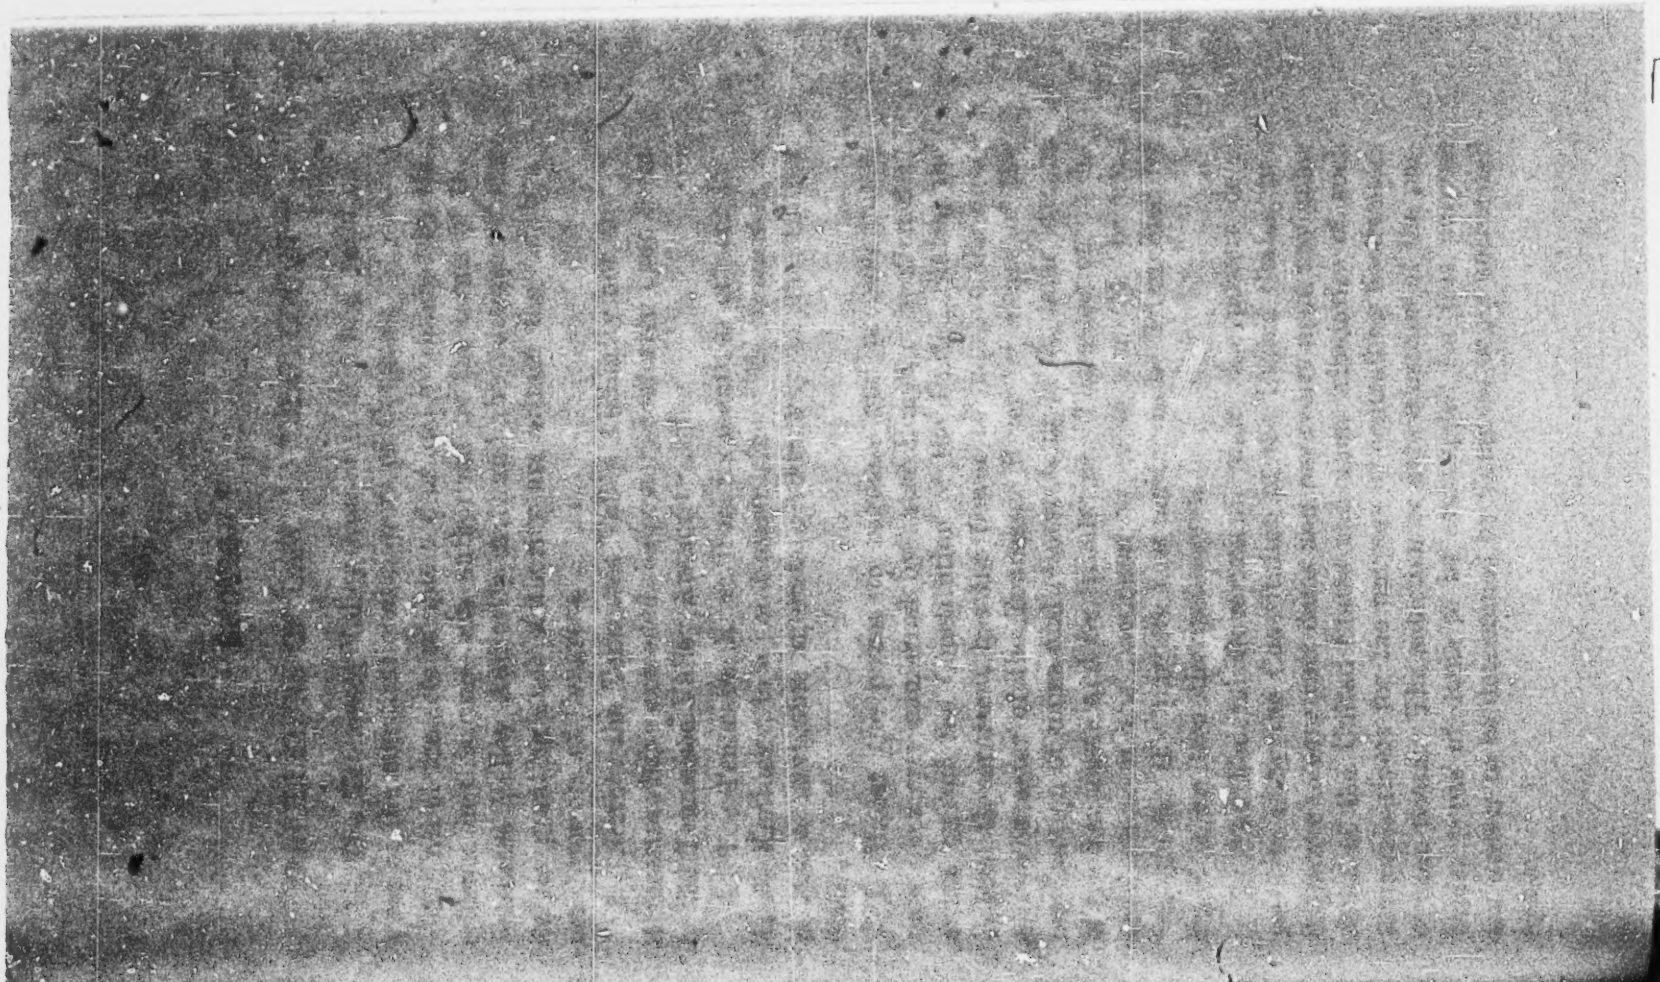
251. The months of June through December 1936 were months of subnormally low stream flow in the Tennessee River. [Karr, r. 2210.] The purchases of power from the Authority by the Commonwealth and Southern companies in these months were very substantial. During the 7 months these purchases amounted to 552,562,368 kwh.

[def. ex. 147, r. 4237, 4241; def. ex. 148, r. 4254], which was slightly more than the total amount of kwh. which could have been generated at Wilson Dam without the benefit of storage releases from Norris Dam [def. ex. 148, r. 4254, lines 3 & 4]. During August, September, and November the purchases by the Commonwealth and Southern companies were substantially greater in proportion to the generating ability of Wilson Dam without benefit of Norris Dam [Karr, r. 2210-2211]; those purchases ranged from 110% to 137% of the amount of power which could have been generated at Wilson Dam in those months without the benefit of Norris Dam [def. ex. 148, r. 4254, line 6]. During this 7-month period the sales to the Commonwealth and Southern companies were approximately 92% of the amount of power which could be generated at Wilson Dam including the benefit of Norris storage releases [def. ex. 148, r. 4254, line 5], and 83.45% of the total TVA system sales [def. ex. 148, r. 4254, line 11]. In August, September, and November the Commonwealth and Southern companies purchased more power than Wilson Dam generated, including the generation resulting from Norris storage releases, the percentages varying from 101.82% in August to 108.51% in September. [Def. ex. 148, r. 4254, line 5.]

FINDINGS OF FACT OF TRIAL COURT

District Judge Gore suggested certain modifications of the following findings of fact (r. 665): 39, 42, 53, 54, 62, 63, 68, 69, 71, 73, 93, 186, 198, 216, 237, 249, 250.

District Judge Gore dissented from the following findings of fact (r. 664): 38, 41, 43, 46, 47, 52, 55, 56, 59, 60, 66, 70, 75, 125, 184, 196, 197, 213, 214, 217-220, 222, 228, 229, 238, 243, 251.



SECTION B

CONCLUSIONS OF LAW OF TRIAL COURT

1. The Tennessee Valley Authority Act is a valid exercise of the constitutional powers of Congress.

2. All of the acts complained of and established by the evidence in this cause are authorized by the terms of the Tennessee Valley Authority Act, and the portions of the statute granting such authority are within the constitutional powers of Congress.

3. Neither the Tennessee Valley Authority nor any of its directors have exceeded the powers conferred upon them by the Tennessee Valley Authority Act.

4. The Tennessee River from its mouth at or near Paducah, Kentucky, to a point above Knoxville, Tennessee, is in law a navigable interstate waterway of the United States.

5. Under the power to regulate and promote interstate commerce conferred by subsection 3 of section 8 of article one of the Constitution of the United States, the Federal Government has the power to improve the navigable character of the Tennessee River by means of the construction of dams and reservoirs upon the main stream of the Tennessee and its tributaries. The selection or determination of the particular types of dams to be constructed for this purpose is a matter to be determined by Congress or its authorized agents.

6. The Federal Government, under the powers delegated to it by the Constitution of the United States, has the power to construct dams and reservoirs upon navigable rivers of the United States and upon tributaries of such navigable rivers for the purpose of controlling floodwaters on such rivers. The selection or determination of the particular types of dams to be constructed for this purpose is a matter to be determined by Congress or its authorized agents.

CONCLUSIONS OF LAW OF TRIAL COURT

7. Under the powers delegated to it by the Constitution of the United States, the Federal Government has the power to construct dams and reservoirs for the purpose of protecting interstate commerce, both upon the navigable waterways and upon the highways and railroads, from interruption and interference due to destructive floods.

8. Under the powers delegated to it by the Constitution of the United States, Congress has the power to construct dams and reservoirs for the purpose of protecting the instrumentalities of interstate commerce, including navigable waterways, railroads, highways, and manufacturing establishments engaged in the production of goods moving in interstate commerce, from the hazards and interruptions resulting from destructive floods.

9. Under the powers delegated to it by the Constitution of the United States, the Federal Government has the power to construct dams and reservoirs upon the Tennessee River and its tributaries for the purpose of controlling destructive floods in the Tennessee and Mississippi River Valleys.

10. Under the power to regulate and promote interstate commerce, the Federal Government has the constitutional power to construct all dams in the Tennessee River and its tributaries that are reasonably related to the improvement of the navigable character of the Tennessee River or any of its navigable tributaries.

11. Under the powers delegated to it by the Constitution of the United States, Congress has the power to authorize the construction of all dams upon the Tennessee River and its tributaries that will in fact contribute to the control of destructive floods in the Tennessee and Mississippi River Valleys.

12. Under the power to regulate and promote commerce between the several States, Congress has the constitutional power to authorize the construction of each of the

dams constructed, under construction, or under investigation for construction by the Tennessee Valley Authority upon the main stream of the Tennessee River and its tributaries.

13. By the terms of the Tennessee Valley Authority Act, Congress has created the Tennessee Valley Authority as an agency of the Federal Government and has expressly authorized this agency to construct each of the dams constructed, under construction, or under investigation for construction on the main stream of the Tennessee River and its tributaries. Congress has from time to time authorized the construction of each individual dam constructed or under construction by appropriate appropriation statutes.

14. The water power created as a result of the construction of the dams authorized by the Tennessee Valley Authority Act is the property of the United States.

15. Congress has the constitutional power to authorize the installation and operation of such generating facilities at the dams authorized by the Tennessee Valley Authority Act as may be necessary to generate electric energy from the water power created by the construction of such dams.

16. By the terms of the Tennessee Valley Authority Act, Congress has authorized the Tennessee Valley Authority to make provision in the dams constructed by it upon the Tennessee River and its tributaries for the necessary facilities for generating electric energy. The statute specifically authorizes the installation and operation of powerhouses, generators, and other facilities.

17. The electric energy generated at any of the dams authorized by the Tennessee Valley Authority Act is the property of the United States and may be disposed of by Congress or its authorized agency under subsection 2, section 3, article 4 of the Constitution of the United States.

18. The electric energy generated at any of the dams authorized by the Tennessee Valley Authority Act is law-

fully and legally acquired property of the United States resulting from the exercise of its constitutional powers and may be used or disposed of in any manner which the Congress, in the exercise of its discretion, may select as the reasonable means of such disposition.

19. The Tennessee Valley Authority Act directs the Tennessee Valley Authority to operate all of the dams constructed by it primarily in the interests of navigation and flood control, but expressly authorizes the said Tennessee Valley Authority to generate electric energy at said dams insofar as this can be done consistently with the interests of navigation and flood control.

20. The method of operation of the dams and reservoirs constructed and under construction which the defendants have followed and propose to follow in the future is authorized by the Tennessee Valley Authority Act.

21. Under the power to dispose of property of the United States, Congress has the constitutional power to authorize the construction of transmission lines from the dams authorized by the Tennessee Valley Authority Act in order to dispose of the electric energy generated at such dams.

22. Under the power to dispose of property of the United States, Congress has the constitutional power to authorize the Tennessee Valley Authority to generate electric energy at all dams authorized by the Tennessee Valley Authority Act; to construct or acquire transmission lines leading from such dams to municipalities, cooperative associations of citizens and farmers not organized for profit, large industrial customers, and other purchasers of power.

23. By the terms of the Tennessee Valley Authority Act, Congress has authorized the Tennessee Valley Authority to construct or acquire transmission lines leading from each of the dams constructed under the authority of the Tennessee Valley Authority Act to the surrounding market area.

24. Under the power to dispose of property of the United States, Congress has the power to authorize the Tennessee Valley Authority to sell electric energy generated at any of the dams authorized by the Tennessee Valley Authority Act to wholesale customers under long-term contracts.

25. Under the power to dispose of property of the United States, Congress has the power to authorize the Tennessee Valley Authority to sell electric energy generated at any of the dams authorized by the Tennessee Vally Authority Act direct to rural customers and inhabitants of small towns and villages, and to industrial customers.

26. Under the power to dispose of property of the United States, Congress has the power to authorize the Tennessee Valley Authority to own and operate transmission lines and rural distribution lines for the purpose of transmitting and selling the electric energy generated at said dams.

27. Under the terms of the Tennessee Valley Authority Act, Congress has authorized the Tennessee Valley Authority to enter into contracts with municipalities, cooperative associations of citizens and farmers not organized for profit, and industrial customers for the sale of electric energy generated at the dams constructed by the Tennessee Valley Authority under said act.

28. By the terms of the Tennessee Valley Authority Act, Congress has authorized the Tennessee Valley Authority to sell electric energy generated at any of the dams constructed under the terms of said act direct to rural customers and inhabitants of small towns and villages.

29. By the terms of the Tennessee Valley Authority Act, Congress has authorized the Tennessee Valley Authority to own and operate transmission and rural distribution lines for the purpose of transmitting and selling the

electric energy generated at any of the dams constructed under the authority of said act.

30. By the terms of the Tennessee Valley Authority Act, Congress has directed the Tennessee Valley Authority to give preference in the sale of power to States, counties, municipalities and cooperative organizations of citizens or farmers not organized for profit. This provision is a valid exercise of the power of Congress to dispose of property of the United States.

31. The Tennessee Valley Authority Act authorizes the Authority to construct rural transmission lines for service to farmers or cooperative organizations of citizens or farmers and to sell such lines to municipalities or such cooperative organizations. This provision is a valid exercise of the power of Congress to dispose of property of the United States.

32. The Tennessee Valley Authority Act authorizes the Authority to sell power direct to industrial customers in order to increase the load factor on the system. This provision is a valid exercise of the power of Congress to dispose of property of the United States.

33. The Tennessee Valley Authority Act authorizes the Board of Directors of the Authority to fix the rates at which the electric energy generated at the dams authorized by the Tennessee Valley Authority Act may be sold. The statute vests discretion in the board in fixing such rates, and the exercise of this discretion is not subject to judicial review. This provision of the statute is a valid exercise of the power of Congress to dispose of property of the United States.

34. Under the constitutional power to dispose of property of the United States, the Government may attach to the sale of its property such conditions as it may deem reasonable to insure the widespread diffusion of the benefits of such property and the avoidance of monopolistic control of such property.

CONCLUSIONS OF LAW OF TRIAL COURT

35. Under the power to dispose of property of the United States, Congress has the constitutional power to authorize the Tennessee Valley Authority to include in any contracts for the sale of power generated at any of the dams authorized by the Tennessee Valley Authority Act provisions with respect to the rates at which such power is to be resold to the ultimate consumers.

36. By the terms of the Tennessee Valley Authority Act, Congress has authorized the Authority to include in any contracts for the sale of power generated at any of the dams authorized by the Tennessee Valley Authority Act provisions with respect to the rates at which such energy is to be resold to the ultimate consumers.

37. Under the power to dispose of property of the United States, Congress has the constitutional power to authorize the Tennessee Valley Authority to include in all contracts for the sale of power generated at any of the dams authorized by the Tennessee Valley Authority Act provisions relating to the bookkeeping and accounting methods to be followed by the purchasers of such power.

38. By the terms of the Tennessee Valley Authority Act, Congress has authorized the Tennessee Valley Authority to include in all contracts for the sale of power generated at any of the dams authorized by the Tennessee Valley Authority Act provisions relating to the bookkeeping and accounting methods to be followed by the purchasers of such power.

39. The Tennessee Valley Authority Act does not contain any provisions regulating or attempting to regulate the rates or operations of complainant companies or other private utilities.

40. Sales of power by the Tennessee Valley Authority in accordance with the provisions of the statute at rates fixed and determined by the board of directors do not constitute regulation of the rates or businesses of the complainant companies or other private utilities.

CONCLUSIONS OF LAW OF TRIAL COURT

41. The municipalities and cooperatives purchasing power at wholesale from the Authority are subject to regulation by the States.

42. The municipalities and cooperatives purchasing power at wholesale from the Authority are authorized under the statutes of the several States in which they are located to purchase said power, to contract with the Authority with respect to the same, and to engage in the business of selling the same at retail.

43. All of the municipalities and cooperatives purchasing power at wholesale from the Authority are authorized by the statutes of the several States in which they are located to enter into contracts with the Authority containing provisions agreeing upon the rates at which such power is to be resold and provisions relating to the bookkeeping and accounting methods to be followed by such purchasers. Under the laws of the several States in which the municipalities and cooperatives are located, such provisions do not constitute any unlawful delegation or abdication of sovereign power by the municipalities or cooperatives.

44. The provisions of the contracts between the Authority and the municipalities and cooperatives purchasing power at wholesale from it relating to the rates at which the power so purchased from the Authority is to be resold and the provisions relating to the methods of keeping accounts do not constitute any invasion of the reserved powers of the States under the tenth amendment to the Constitution of the United States.

45. The provisions in the contracts between the Authority and the municipalities and cooperatives purchasing power at wholesale from it relating to the rates at which such power is to be resold do not in law amount to regulation either of the rates of said wholesale purchasers or of the rates of private companies competing with such wholesale purchasers.

CONCLUSIONS OF LAW OF TRIAL COURT

46. Under the laws of the several States in which the municipalities and cooperatives purchasing power at wholesale from the Authority are located, the rates at which the power purchased from the Authority may be resold by the municipalities and cooperatives remain subject to the police power of the States, if and when the States may elect to exercise such power.

47. The cooperatives purchasing power at wholesale from the Authority are, under the laws of the several States in which they are located, independent corporate entities and not subsidiaries or instrumentalities of the Authority.

48. The municipalities purchasing power at wholesale from the Authority are, under the laws of the several States in which they are located, independent public agencies of said States and are not subsidiaries or instrumentalities of the Authority.

49. The municipalities and cooperatives purchasing power at wholesale from the Authority are authorized under the laws of the several States in which they are located to engage in the business of selling and distributing electric energy at retail and have the legal right to compete with the complainant companies in such business. Any damage or injury resulting or threatened to the complainant companies, or any of them, from such competition is damnum absque injuria and does not give rise to a cause of action on behalf of said companies.

50. None of the complainant companies have or claim any exclusive franchise or right to engage in the business of selling and distributing electricity in the various municipalities and communities in which they operate.

51. The sale of electric energy by the Tennessee Valley Authority to municipalities and cooperatives lawfully engaged in the business of selling and distributing said energy at retail does not result in any legal injury to any

of the complainant companies and does not invade any legal right of any of said companies.

52. The complainant companies have no standing or right to challenge the right of the municipalities and cooperatives purchasing power at wholesale to engage in the business of selling and distributing electric energy in competition with said companies.

53. The complainant companies have no standing or right to challenge the legal right of the Authority to sell electric energy at wholesale to municipalities and cooperatives engaged in the business of reselling said energy at retail in legal competition with the complainant companies.

54. The complainant companies have no standing or right to challenge the validity of the contracts under which the Authority is selling or has agreed to sell electric energy at wholesale to municipalities and cooperatives engaged in the business of reselling said energy at retail in legal competition with the complainant companies.

55. Having failed to prove any damage in fact, actual or threatened, resulting from the sales of power by the Authority direct to rural customers not previously served by any of the complainant companies, said companies have no standing or right to challenge the legal right of the Authority to make such sales.

56. Having failed to prove any damage, actual or threatened, resulting from the sales of power by the Authority direct to industrial customers not previously served by any of the complainant companies, said companies have no standing or right to challenge the legal right of the Authority to make such sales.

57. The complainant companies have no legal right to be free from competition, and they have no legal standing or right to challenge the statutory powers of the Authority to generate, transmit, and sell electric energy in competition with them, or some of them.

CONCLUSIONS OF LAW OF TRIAL COURT

58. Under the decision of the Supreme Court in the Ashwander case, the right of the Authority to acquire and operate the facilities in Alabama transferred to it under the contract of January 4 is settled and cannot be questioned in this case.

59. Section 7 of the contract of January 4 confers upon the Authority the contractual right to serve municipalities located within the ceded area in Alabama, and the Alabama Power Company, a party to that contract, has no right to question the legal right of the Authority to engage in such service.

60. Section 7 of the contract of January 4 confers upon the Authority the right to sell power to any municipality owning and operating its own distribution system and not purchasing power from the utilities party to that contract, and the complainants Alabama Power Company, Mississippi Power Company, and The Tennessee Electric Power Company, parties to that contract, have no right to challenge sales to such municipalities by the Authority.

61. Section 7 of the contract of January 4, 1934, confers upon the Authority the right to sell power to any customers not served by the parties to that contract as of January 4, 1934, up to a maximum aggregate demand of 2,500 kw., and the complainants Alabama Power Company, Mississippi Power Company, and The Tennessee Electric Power Company have no right to challenge sales of power to customers served pursuant to the right so conferred.

62. Under the record the complainants have no legal right within the areas served by them respectively to exclude lawful competitors from the power markets of the future.

SECTION C

OPINION OF THE TRIAL COURT[1]

Decided January 21, 1938

Before ALLEN, Circuit Judge, and GORE and MARTIN, District Judges.

ALLEN, Circuit Judge.

Complainants have filed a bill in equity praying for relief against the operation of the Tennessee Valley Authority Act of 1933, as amended 48 Stat. 58, 49 Stat. 1075, 16 U.S.C. § 831 et seq, 16 U.S.C.A. § 831 et seq. The bill joins as defendants the Tennessee Valley Authority, the agency created by the Congress to carry out the provisions of these statutes, and Arthur E. Morgan, David E. Lilienthal, and Harcourt A. Morgan, who are the chief executive officers of the Authority and constitute its board of directors.

The complainants are nineteen companies generating, transmitting and distributing power within Tennessee, Alabama, Mississippi, North Carolina, South Carolina, Kentucky, Virginia, West Virginia, and Georgia, one of which, the Georgia Power Company, has been enjoined from participating in this action by the United States District Court for the Northern District of Georgia. Georgia Power Co. v. Tennessee Valley Authority, 17 F.Supp. 769. This decree has been affirmed by the Court of Appeals for the Fifth Circuit. 89 F.2d 218. For this reason we give no consideration to alleged competition of the Authority with the Georgia Power Company.

The complainants are in general owned by holding companies, as set forth in the findings of fact. They are all taxpayers, citizens of and authorized to do business within the states in which they operate, and none of them claims to operate under any exclusive franchise.

---

1 As reported in 21 F.Supp. at 947. Reprinted in the record at page 542.

The bill cannot be summarized within the appropriate limits for a trial court's opinion. In addition to its seventy pages of pleading and sixty-five pages of exhibits, it contains within the bill itself much that is argumentative, repetitious and immaterial to the legal questions presented. It charges coercion, fraud and conspiracy on the part of the defendants officially and individually. It charges that Secretary Harold L. Ickes, Public Works Administrator, has joined with the Authority in certain coercion and conspiracy against the legal rights of these complainants. The argumentative matter and conclusions which we deem immaterial are so interwoven with allegations bearing upon the legal questions presented that it is impossible to extricate them. The same statement is true of the prayer. Paragraphs h, i, l, o, p and q of the prayer are considered by the court to have no relation to this case under Ashwander v. Tennessee Valley Authority, 297 U.S. 288, at page 324, 56 S.Ct. 466, 472, 80 L.Ed. 688, which held that such matter presents no justiciable controversy. It suffices, therefore, to say that in its essential and material features the bill seeks a decree holding that the Tennessee Valley Authority Act of 1933, as amended, and the acts done by the board of directors thereunder officially and individually, violate the Constitution of the United States. It seeks an injunction restraining the defendants, their agents and employees, from carrying out the provisions of the statute with reference to the sale of electric power, from purchasing, constructing or otherwise acquiring electric generating plants, transmission lines or distribution lines, or from selling electric energy, except such energy as may be produced at Wilson Dam, "to the extent the production and sale of power at Wilson Dam has been held legal." For practical purposes this bill seeks to enjoin the further construction of TVA dams now in process of construction in the Tennessee Valley, the construction of new dams in such valley for which specific appropriation has been made by

Congress, and the operation for generation and sale of electric power of all TVA dams built and to be built.

The answer denies the material allegations of the bill. Only one of the affirmative defenses requires special mention. The defendants claim that certain of the complainants are estopped to deny the constitutionality of the TVA statutes because of extensive purchases of power from the Authority. These purchases were made under the contract of January 4, 1934, by which certain complainants contracted with the Authority to transfer to the Authority their plants, lines, equipment, customers and franchises within certain counties within Mississippi and Alabama for a valuable consideration and upon the condition that the Authority would not operate within those states outside of the counties specified. The properties have been transferred and the contract to date has been fully performed. The court has ruled in favor of the complainants on this contention, and has held that the record presents no essential difference from the situation covered by the ruling as to estoppel in the Ashwander Case, supra, 297 U.S. 288, at page 323, 56 S.Ct. 466, 472, 80 L.Ed. 688, and therefore this question will not be discussed.

After a trial which consumed about seven weeks, in which approximately 1,100 exhibits were offered, the material issues in the case as briefed, argued and outlined in the actual testimony are defined as follows:

(1) Whether the Authority is engaged in acts constituting in law malice, coercion, and duress, to the injury of complainants.

(2) Whether the Authority and the individual defendants have conspired with Secretary Ickes and the Public Works Administration to induce municipalities and cooperative associations through loan grant agreements from the Public Works Administration to set up their own distribution systems and to coerce them into executing con-

tracts for purchase of TVA power by threat of denial or cancellation of such PWA loan grants.

(3) Whether the acts of the defendants are authorized by the TVA statutes.

(4) Whether the act itself is unconstitutional and void, and the acts done under it are illegal because the Congress is not empowered either under the interstate commerce clause, article 1, § 8, or under the national defense powers, article 1, section 8, of the United States Constitution, to enact the TVA statutes.

(5) Whether the generation of electricity at the TVA dams is unlawful because it is inconsistent with the regulation of interstate commerce, with flood control, with the improvement of navigation on a navigable river, and with purposes of national defense.

(6) Whether the method of disposition of electric energy authorized by the TVA statutes is appropriate and constitutional under the power to dispose of property belonging to the United States conferred upon the Congress by section 3 of article 4 of the Constitution.

Each of the dams constructed, in process of construction, and proposed for the TVA system, while varying somewhat in use, as hereafter set forth, is a unit of an integrated multiple-purpose project, the system being designed for co-ordinated use of the full benefits of the river along the line of navigation, flood control, national defense and power development. Wherever water falls, power is created, and one of the express purposes of the TVA statutes is that hydro-electric power so created shall be sold to assist in liquidating the cost of the project. This is in line with the general development of the conservation movement from 1908 to the present, as it relates to streams. See National Waterways Commission Report, Senate Document 469, 62d Congress, Second Session, Appendix I, pages 27, 52, 61, 82, 85, 87; Statement of Chairman of Fed-

eral Power Commission, House Document 395, 73d Congress, Second Session, page 54; Report of National Resources Board, pages 263, 264. Similar provisions as to river projects have been embodied in previous legislation. In 1912 a statute was enacted authorizing the Secretary of War to provide, in navigation dams, in order to make possible the economical future development of water power, such foundations, sluices, and other works as may be considered desirable for the development of such power. Act July 25, 1912, § 12, 37 Stat. 233, 33 U.S.C.A. § 609. The Boulder Canyon Project Act of 1928, 45 Stat. 1057, 43 U.S.C.A. § 617 et seq., provided for a multiple-purpose project for irrigation, flood control, improvement of navigation and generation of power. As fully appears from the opinion in Arizona v. California, 283 U.S. 423, 51 S.Ct. 522, 75 L.Ed. 1154, navigation on the Colorado River was negligible in comparison with navigation on the Tennessee River under the record in this case. Though navigation on the Colorado River had ceased, the project of reclaiming its navigability was held by the Supreme Court to establish the constitutionality of the multiple-purpose project, including the generation and sale of power.

TVA Project.

Pursuant to the TVA statute as amended and to subsequent related enactments, the Authority has constructed and is planning to construct seven high dams on the main channel of the Tennessee River, and certain dams on its tributaries. The Tennessee River is formed by the confluence of the Holston and French Broad Rivers in the east-central part of Tennessee. It flows southwesterly across the eastern part of Tennessee into Alabama, westerly across the northern part of Alabama, northerly between Alabama and Mississippi, and across the western part of Tennessee and Kentucky, and empties into the Ohio River near Paducah, Kentucky. Its length is 652 miles, and

its drainage basin is 40,600 square miles. It has eight principal tributaries. The main stream dams, including Wilson, which was constructed previous to 1933, are as follows:

(1) Gilbertsville, on which preliminary investigations are in progress, located in Kentucky about 22 miles from the mouth of the river.

(2) Pickwick Landing Dam, under construction and almost completed, located in Tennessee about 206 miles from the river's mouth.

(3) Wilson Dam, now in operation, constructed by United States Army engineers and transferred to the Authority under the TVA Act, located at Muscle Shoals, Alabama, about 259 miles from the river's mouth.

(4) Wheeler Dam, construction of which was begun by the United States Army engineers and completed by the Authority, located in Alabama about 15 miles above Wilson Dam and about 275 miles from the river's mouth. This dam is now in operation.

(5) Guntersville Dam, under construction, located near Guntersville, Alabama, 349 miles from the mouth of the river.

(6) Chickamauga Dam, now under construction, located near Chattanooga, Tennessee, 471 miles from the mouth of the river.

(7) Watts Bar Dam, on which preliminary investigations are in progress, located in Tennessee about 530 miles from the mouth of the river.

(8) Coulter Shoals Dam, on which preliminary investigations are in progress, located in Tennessee 602 miles from the river's mouth.

The tributary dams are Norris, completed and in operation, located in Tennessee on the Clinch River about 79 miles from the mouth of the Clinch and about 647 miles

from the mouth of the Tennessee, and Hiwassee Dam, now under construction, located in North Carolina on the Hiwassee River about 75 miles from the mouth of that river and about 560 miles from the mouth of the Tennessee River.

A third tributary reservoir, Fontana, on the Little Tennessee River, is recommended by the Authority, but the Congress has made no specific appropriation for this suggested dam. While Wheeler and Norris are the only dams built by the Authority which are completed and in operation, they co-ordinate in use with Wilson at Florence, Alabama. They release water to Wilson, and thus aid in the generation of power at Wilson. Wilson Dam was built under the national defense powers of the Congress, as held in Ashwander v. Tennessee Valley Authority, supra. While the constitutional authority to dispose of electric energy generated at Wilson Dam is not and cannot be questioned, its present use in combination with Norris and Wheeler, and its future use in conjunction with Guntersville, Chickamauga and Hiwassee, all of these dams being upstream from Wilson and each being part of an integrated system built for the combined purposes of navigation, flood control, power and national defense, has immediate bearing on this case.

The importance of the Tennessee drainage basin has been recognized for over a century and repeated acts of Congress have provided for the canalization of different parts of the river. A canal with locks throughout the length of Muscle Shoals opened to navigation in 1834 fell into disuse. Another Muscle Shoals canal was completed about 1891. The Rivers and Harbors Act of 1890, 26 Stat. 426, provided that the Colbert Shoals section should be improved by a lock and a canal. In 1913 the Hale's Bar lock and dam, completed by private interests, provided a canalization of 33 miles of the river below Chattanooga. The Widow's Bar lock and dam below Hale's Bar was

completed in 1926. Wilson Dam provided a canalized waterway for 15½ miles from Muscle Shoals. Lock No. 1, immediately below Wilson Dam, was completed in 1926.

These projects were in general unrelated and uncoordinated. This was the situation when a comprehensive survey of the Tennessee basin was ordered in five successive Acts of Congress from 1922 to 1928, resulting in the reports contained in House Document 328. This document contained an exhaustive report by the district engineer and comments thereon, together with recommendations made by the division engineer, the board of engineers for rivers and harbors, and the chief of engineers. It set forth alternate plans for securing a depth of nine feet in the main stream, that is, an improvement for navigation only, and also a plan for the development of the river and its tributaries for purposes of flood control, navigation and power. The suggested plan for the improvement of navigation only involved in one of its phases the building of 32 low dams which would provide a nine-foot navigable channel, but would have no value either for flood control or power.

House Document 328.

The complainants vigorously assert that House Document 328 recommends the low dam plan, as distinguished from the TVA plan. It is of little assistance in this phase of the controversy to rely only upon the recommendations of the various engineers, without studying the text (House Document 328, pages 1-25). As to the report of the district engineer, of which the chief of engineers said "There has never been presented to Congress a more thorough and exhaustive study", the board of engineers for rivers and harbors, in its conclusions on the various projects presented, stated that "The construction of the storage reservoirs" (on the tributaries) "described in this report would have a favorable effect in reducing floods on the

Tennessee River and on the lower portions of its tributaries" (p. 23). It declared that "The improvement of the Tennessee from its mouth to Knoxville by a series of low movable dams without power development would have practically no effect on floods" (p. 23). It also said, speaking of low-lift dams, that "Such a waterway would be inferior to the high-dam developments and would not permit the economical development of power" (p. 13). The board of engineers pointed out that in addition to having no value whatever for flood control, the 32 low dams, though less expensive to construct than the high dams, provided a navigation channel inferior to that of the high dam plan.

It stated its opinion that the river "has large potential value as a means of transportation and that its improvement to a depth of nine feet would ultimately make it an important feeder to the Ohio-Mississippi system" (p. 20). It concluded that "It is evident that the full utilization of the resources of this river for the public benefit requires its improvement by means of high dams built for the joint development of power and navigation."

These extracts show that consideration of the bare recommendations, apart from the conclusions expressed, are misleading. In the recommendations the division engineer disagreed with the district engineer who drew the report, as to his estimate of the amount of benefit to navigation. The board of engineers disagreed on certain points with the division engineer, and the chief of engineers, in certain matters, disagreed with all of his subordinates. But the projects actually recommended by each of these engineers were not in essential features the same as those embodied in the TVA statutes. They provided for the development of the river by private interests, or by a combination of private interests and the Government.

In order to carry out this policy, the Rivers and Harbors Act was passed in 1930, 46 Stat. 918, 927, 928, extending

to private interests on certain conditions the right to develop the river by a series of high dams in co-operation with the Government. No private interest availed itself of the opportunity and in 1933 Congress delegated the task to an agency of the Government.

The program adopted by the Authority, in its main features, and the choice of the sites for the various dams follow the broader multiple-project plan outlined in House Document 328 (p. 43), commended by the board of engineers of rivers and harbors, as superior to the low dam plan. This multiple-project contemplated the erection of seven high dams in the main stream (in addition to Wilson, which had already been built), and reservoirs on the tributaries.

Uses of the Dams.

The dams on the tributaries, as outlined in House Document 328, and as shown in the evidence, are used and to be used for flood control, water regulation, power and purposes of national defense. Of the completed dams, Norris is so constructed as to be able to retain the entire flood waters of the Clinch in flood season, and was in fact so operated in 1936 and 1937. In 1936 it averted a probable flood at Chattanooga. It also generates power. Releases of water from Norris in the dry season are now used for regulation of stream flow so as to maintain a seven-foot navigable channel throughout the summer. Similar releases will be necessary until the entire series of mainstream dams as planned has been completed. Wheeler backs the water of the Tennessee into a slack water pool providing nine-foot navigation to Guntersville. It generates power and has a surcharge usable for flood control. It is uncontradicted that the releases from Norris and Wheeler, and from Hiwassee, Guntersville and Chickamauga, as planned, create and will create extra head for continuous water power at Wilson, and thus aid in the

national defense. Cf. Ashwander v. Tennessee Valley Authority, supra.

Of the dams under construction, Guntersville, Chickamauga, and Pickwick Landing are essential to the maintenance of nine-foot navigation. Each of these dams is equipped with electric generators and has a substantial surcharge usable for flood control. Hiwassee, on a tributary, will be used mainly for flood control and power, and for aiding Wilson Dam with water releases at dry season. Until the project is completed it will assist in regulating stream flow, thus improving navigation. Gilbertsville, while authorized by Congress, has only been investigated and surveyed. The plans for this dam have necessarily been delayed because of it size and because of the difficulty of locating suitable rock foundation. It is reasonably estimated that Gilbertsville, when completed, will supply over 4,000,000 acre feet of flood storage, and it is the most important of the series for flood control on the Ohio and the Mississippi. The Tennessee contributes materially to the flood crest on the Ohio at Cairo. Its flood flow is almost double its drainage area in relation to other feeders of the Mississippi, because of the high precipitation in the Tennessee Valley which varies from 47.5 inches per year at Knoxville to 51.2 at Paducah on the main stream. The Ohio with its tributaries, including the Tennessee, is the principal feeder to the Mississippi floods. All of the TVA dams, on both the river and the tributaries, are used so far as constructed, are planned, as shown by the official TVA reports, and are required under the statute, to be employed as an integrated co-ordinated system for the combined purposes of navigation, flood control, power and national defense.

Conspiracy, Coercion and Unlawful Competition.

The bill charges a conspiracy to injure or destroy the complainants' business, to compete unlawfully, to breach the complainants' existing contracts with their customers, to compel and coerce complainants to sell their plants at distress figures. It charges that the TVA has conspired with and practiced coercion upon municipalities and cooperatives to compel them to set up their own distribution systems for the purpose of selling TVA power at retail. If the record had substantiated the allegations of the bill, grave questions would have been presented. But these allegations have not been established. None of the complainants has sold its property except those covered by the contract of January 4, 1934, a contract entered into at arm's length and not even challenged by complainants as unfair. Since complainants have not sold, they have not been coerced to sell their properties, and the negotiations for sale presented in this record do not evidence acts deemed coercion under settled legal principles. No malice in law is shown on this record. The motive of officials who execute a law is immaterial, even though accompanied by a wrongful purpose. Isbrandtsen-Moller Co. v. United States, 300 U.S. 139, 145, 57 S.Ct. 407, 410, 81 L.Ed. 562.

Unlawful Competition.

Neither has unlawful competition been proved. The attempt to show that the Authority has endeavored to persuade complainants' customers to breach their existing contracts for purchase of power from complainants has totally failed. In every case where any of complainants has lost a customer to the Authority, the cause has been not unlawful competition, but the lawful allurement of substantially lower prices. In every such case the change of relationship has occurred at a time when no contract with any of the complainants was in existence. In fact, it is shown

that the TVA does not serve the complainants' customers with direct service except as to industrials and "ceded areas." Thus the municipalities now served by the TVA in Tennessee,—Dayton, Pulaski, and Dickson,—each generated its own power or purchased power at wholesale from a non-utility prior to the time when the TVA started selling them power. The positive statement is made by officers of the Mississippi Power & Light Company, the Franklin Power & Light Company, the Holston River Electric Company, the Birmingham Electric Company, the Carolina Power & Light Company, the Appalachian Electric Power Company, the West Virginia Power Company, the Kingsport Company, the East Tennessee Light & Power Company, the Tennessee Eastern Company, and by the Southern Tennessee Power Company, that the TVA neither serves any of the customers of these utilities direct, nor any wholesale customer by whom distribution is made to any of these utilities' former customers. The TVA serves certain cities and customers formerly served by the Alabama Power Company, but all of these customers are situated or reside within certain counties called the "ceded area." In the agreement of January 4, 1934, the Alabama Power Company contracted that its lines should be sold to the TVA within that area, and that the TVA should serve within that district and nowhere else in Alabama. The TVA is serving nowhere else in Alabama except within this area. The Mississippi Power Company has made a similar contract with the TVA, and the TVA is not serving outside of the "ceded area" in Mississippi except to municipalities which previously maintained their own generating and distribution systems. No fraudulent attempt has been made to secure complainants' markets. Whatever compulsion exists is the inevitable compulsion exercised by the fact that a competitor sells at lower rates than complainants. But if the operation of the TVA is legal, the complainants have no legal right not to be subjected to such

competition even though it curtail or destroy their business. Alabama Power Co. v. Ickes, 58 S.Ct. 300, 82 L.Ed. ——, decided January 3, 1938.

Conspiracy with Public Works Administration.

The complainants allege that the defendants have conspired with the Public Works Administration to finance the construction of duplicating distribution lines and systems in various municipalities and co-operatives for the purpose of using TVA power and selling that power at rates so low as to constitute competition destructive to complainants' business. Numerous contracts are introduced in evidence beween the Public Works Administration and municipalities and co-operatives, providing for the financing of electrical distribution projects. The power is being sold, or is contracted to be sold, to these municipalities and co-operatives at wholesale by TVA.

The facts do not establish a conspiracy. It is not questioned that loans were made within the provisions of the Public Works Administration statute, 40 U.S.C.A. §401 et seq. The validity of that statute is not attacked in this proceeding, and we therefore assume that it is valid. The acts done by Secretary Ickes and his subordinates have been done under the purview of the controlling statute. Their acts are presumed to be valid. Where no fraud, malice, or coercion is shown, co-operative action by two groups of public officials in administering the provisions of two statutes, does not constitute conspiracy. The decisions relied on by complainants with respect to unlawful concert, plan or design, involve a plan either to commit an unlawful act or to commit acts otherwise lawful with the intent to violate a statute, or commit an unlawful act. Cf. Swift & Co. v. United States, 196 U.S. 375, 25 S.Ct. 276, 49 L.Ed. 518. The acts done by the officials of the Public Works Administration in co-operation with the officials of the TVA, as shown by this record, were done with the in-

tent to carry out the provisions of the Public Works Administration statute; the acts done by the TVA in co-operation with the Public Works Administration were done with the intent to carry out the TVA statute. Intent to execute a valid and existing law is not evidence of illegality. As to the transactions of the Public Works Administration, no evidence of conspiracy is presented.

Coercion upon Municipalities and Co-Operatives.

Certain officials and employees of the TVA gave information, counsel and encouragement to municipalities and co-operatives at the request of such municipalities and co-operatives with respect to the general feasibility of setting up distribution systems for TVA power. The decision on such matters was made by the municipality or co-operative concerned. Under the statutes of Alabama, Tennessee and Mississippi, hereinafter cited, both municipalities and rural co-operatives are authorized to construct generating plants and distribution systems for the purpose of creating and distributing electric energy. Georgia has a similar statute concerning co-operatives. These cities and co-operatives were free to obtain information and counsel from any source. In each case the decision of the municipality involved was made either by the citizens at an election, or by its duly elected officers. The decision of the co-operatives involved was made by its lawful representatives. Presentation by the Authority of facts as to TVA rates and contracts for power given to citizens or officers of a city or rural co-operative at their request do not constitute intimidation or coercion.

Damage.

The record shows that the sales of every one of these complainants and the proceeds of these sales have reached an all-time high in recent years. Several of the most important complainants have recently extended their lines,

built new plants, and acquired new equipment. The Authority concedes that it sells, or intends to sell, power at substantially lower rates, residential, industrial, and rural, than those of the complainants, and that some displacement of service will result. 250 miles is the distance within which electricity can feasibly be transported from each of the dams. As a result of the lower TVA rates, cities which formerly purchased power from some one of the complainants have taken steps to finance the construction of distribution systems, or have negotiated with the power companies to purchase the existing systems of the power companies, in many instances securing financial aid from the Public Works Administration with the express purpose of selling TVA power through the systems thus acquired. The city of Memphis has issued bonds for this purpose, and under the contract which the city has signed with the Authority, the Memphis Power & Light Company will be deprived of its greatest outlet. A similar proposition has been made, but not yet carried through, in Knoxville. If the arrangement is consummated, the Tennessee Public Service Company and the Carolina Power & Light Company will each be deprived of one of its most profitable customers. A similar situation exists in Chattanooga. The rural cooperatives distribute TVA power, but for the most part they reach areas not formerly served by these complainants. The Monsanto Chemical Company of Alabama discontinued certain of its operations at Anniston, Alabama, heretofore served by the Alabama Power Company. An affiliated company, Monsanto Chemical Company of Delaware, set up a substitute plant at Columbia, Tennessee, near a source of its raw material, using power purchased from TVA. The Volunteer Portland Cement Company failed to renew its contract with Tennessee Public Service Company and, instead, entered into a contract with the Authority, a contract since assigned to the city of Knoxville.

In view of the inevitable effect of the lower rates of the TVA within this area, and the economic necessity forced upon the complainants of lowering their rates to meet the competitive rates of the Authority, we conclude that the record presents evidence of substantial future damage to these complainants. But such damage constitutes damnum absque injuria unless sales of power by the TVA are unlawful. Alabama Power Co. v. Ickes, supra.

We find in this record no coercion, conspiracy, malice or fraud on the part of the defendants. None existing, the operation of the Authority is lawful unless (1) the defendants are exceeding their statutory authority or (2) the statute is unconstitutional.

Compliance with the Statute.

Section 9a of the statute, as added by Act Aug. 31, 1935, § 5, 16 U.S.C.A. § 831h—1 reads as follows:

"The Board is hereby directed in the operation of any dam or reservoir in its possession and control to regulate the stream flow primarily for the purposes of promoting navigation and controlling floods. So far as may be consistent with such purposes, the Board is authorized to provide and operate facilities for the generation of electric energy at any such dam for the use of the Corporation and for the use of the United States or any agency thereof, and the Board is further authorized, whenever an opportunity is afforded, to provide and operate facilities for the generation of electric energy in order to avoid the waste of water power, to transmit and market such power as in this chapter provided, and thereby, so far as may be practicable, to assist in liquidating the cost or aid in the maintenance of the projects of the Authority."

It is the principal contention of the complainants that this statute is a sham, pretense, and fraud, and these dams as built and planned cannot and will not be operated within

the statute. We therefore consider the actual operation of the dams.

In Water Bulletin No. 1, dated June 30, 1936, adopted by the TVA Board, it was ordered that the reservoirs of the Authority be operated "First, to serve as navigation channels and maintain navigation depths in the reaches of the river below the reservoirs; and Second, to reduce the magnitude of flood peaks below. Requirements for the control of malaria and temporary needs of construction shall be given due consideration. So far as consistent with the above procedure, as much water power available at the dam shall be converted into electricity as is feasible."

The complainants contend that this order is a sham, and that none of the dams can be or will be operated in compliance therewith. They direct a particular attack upon Norris, which is now completed and in operation. However, Water Bulletin No. 2, dated June 30, 1936, ordered that until further notice water be released from Norris reservoir so as to maintain as nearly as may be a constant flow at Florence, Alabama, of 15,000 c. f. s. The evident purpose was to maintain a constant and sufficient stream flow for Wilson Dam. This and succeeding water bulletins, which are in evidence, outlining the same general policy, have for one of their main purposes the increase of continuous water power at Wilson. Hence, operation of the dams above Wilson is clearly constitutional under the national defense powers of the Congress.

With reference to the general operation, a resolution of the TVA Board, adopted July 1, 1936, created a committee on water control operations, consisting of the chief water control planning engineer and the chief electrical engineer, which committee was and is authorized to prepare general regulations as to the control of water through the operation of reservoirs. The regulations are transmitted to the general manager in the form of bulletins, and at times of flood or emergency, oral instructions are also given. Woodward,

the chief water control planning engineer, testified that he prepares these bulletins and that none is issued without his approval. He stated that he was guided in his operations by the statute, and that the constant flow of 15,000 c. f. s. was maintained at Florence, Alabama, for the purpose of securing the necessary navigable depth in the river. Karr, electrical engineer at Norris, testified that if the limited instructions given to him for operation were such that he had either to violate the instructions or to leave a city without power, "someone would have to go without power temporarily." Woodward testified that he permits the use of the water for power, and in special cases, if extra water is wanted, it is given extra consideration. It is uncontroverted that the water control planning engineer is in direct charge of the regulation of water flow, and also that he regulates water flow from Norris primarily for navigation and flood control.

It appears that in actual operation there is a seasonal drawing down of Norris Dam so that extra storage space may be available during the flood season. Norris was actually operated during the flood of 1937 to reduce the crest on the Tennessee River and to reduce the crest on the Ohio at Cairo. The complainants' expert Kurtz was familiar with the fact that Norris was so operated. Power is produced at Norris. The defendants introduced detailed testimony as to the full amount of TVA power presently produced, the available facilities for generation, the possibilities for future generation, the present load and the load now contracted for.

Complainants urge that the estimated future TVA load set forth in the various TVA reports, and the load it may reasonably be expected to acquire because of its substantially lower rates, will demand that the dams built and to be built be operated in violation of the statute and not (as required in section 9a) in the primary interest of navigation and flood control. But this point is completely refuted by

the numerous TVA contracts which are in evidence and are described in the findings of fact.

These contracts generally contain a clause relieving the Authority of any obligation to supply power when prevented by fire, accident, breakdown, act of God, or any other causes beyond the Authority's control. Substantially all of these contracts contain the following provision: "Subject to the provisions of the Tennessee Valley Authority Act of 1933 as amended, the parties hereto agree as follows * * *." Under the familiar rule, this provision reads the statute, including its mandatory requirement that the dams and reservoirs be operated primarily for flood control and navigation, into every one of these contracts. Under the contracts with the Arkansas Power and Light Company, the Victor Chemical Works, the Aluminum Company of America dated July 20, 1937, and with the Electro-Metallurgical Company, which are contracts both for firm and secondary power, the Authority is expressly relieved of obligation to supply power when service is interrupted or suspended by reason of floods or back-water caused by floods.

Reading these contracts in conjunction with the statute and the general resolution governing water control above described, it is evident that the long-term contracts of the Authority strongly corroborate (1) the sincerity of the resolution and water bulletins establishing the system of water control in the interest of flood control and navigation; (2) the testimony of Woodward and Karr; (3) the uncontradicted facts as to the principles applied in the actual operation of the dams. The overwhelming weight of the testimony supports defendants' contention that the mandatory provision of the statute that navigation and flood control be given primary consideration both at the other dams, built and planned, and at Norris Dam, is at all times scrupulously followed and that the statute is neither violated nor exceeded.

Constitutionality of TVA Statute must be Determined.

Since no fraud, coercion, conspiracy or malice is shown, and since the Authority has acted within the provisions of the statute under consideration, unless the statute itself is unconstitutional the dams are lawfully erected, the energy is lawfully created, and the water power is the property of the United States. Ashwander v. Tennessee Valley Authority, supra. It therefore is essential to the decision of the case pleaded in the bill to determine the constitutionality of this statute.

The Statute.

The complainants contend that the statute was enacted primarily for power purposes, and that flood control, navigation, and national defense are incidental and merely a cloak for the unlawful purpose of permitting the government to enter the power business. The defendants contend that the statute was passed and that dams were erected and are under construction, or were authorized, for the purpose of combined flood control, navigation, and national defense; and that the installation of generators, the creation of power and its sale, have been authorized by the Congress as an incident to the exercise of constitutional powers.

National Defense.

Article 1, section 8, clause 1 of the Constitution of the United States, provides that the Congress shall have power "to * * * provide for the common Defence and general Welfare of the United States."

In pursuance of this power it may make all laws which shall be necessary and proper for carrying into execution the national defense powers. An express purpose of the Tennessee Valley Authority Act is that of maintaining the

properties owned by the United States in the vicinity of Muscle Shoals, Alabama, in the interest of national defense. The amended Tennessee Valley Authority Act, § 17, Title 16 U.S.C.A. § 831p, provides that "The Secretary of War, or the Secretary of the Interior, is hereby authorized to construct * * * a dam in and across Clinch River in the State of Tennessee, which has by long custom become known and designated as the Cove Creek Dam, together with a transmission line from Muscle Shoals, according to the latest and most approved designs, including power house and hydroelectric installations and equipment for the generation of power, in order that the waters of the said Clinch River may be impounded and stored above said dam for the purpose of increasing and regulating the flow of the Clinch River and the Tennessee River below, so that the maximum amount of primary power may be developed at Dam Numbered 2 and at any and all other dams below the said Cove Creek Dam."

In compliance with this provision, Norris Dam was built and is being operated to create extra head of water power at Wilson Dam. This means that constitutional authority to construct Norris exists in addition to the congressional power to authorize the construction of this dam under other clauses of the Constitution of the United States.

Navigation and Flood Control.

The Constitution of the United States, article 1, § 8, cl. 3, provides that the Congress shall have power to regulate interstate commerce. Commerce includes navigation. Gibbons v. Ogden, 9 Wheat. 1, 6 L.Ed. 23. Congressional control of navigable waters embraces flood control.

The statute on its face repeatedly stresses navigation and flood control. The purpose clause of the act reads:

"To improve the navigability and to provide for the flood control of the Tennessee River; to provide for re-

forestation and the proper use of marginal lands in the Tennessee Valley; to provide for the agricultural and industrial development of said valley; to provide for the national defense by the creation of a corporation for the operation of Government properties at and near Muscle Shoals in the State of Alabama, and for other purposes." 48 Stat. 58.

The first section of the enactment, 16 U.S.C.A. § 831, creates the Authority for the purpose of maintaining and operating properties owned by the United States in the vicinity of Muscle Shoals in the interest of the national defense and "to improve navigation in the Tennessee River and to control the destructive flood waters in the Tennessee River and Mississippi River Basins." The board of the Authority is given power, section 4(j), as amended, 16 U.S.C.A. § 831c(j) "to construct such dams, and reservoirs, in the Tennessee River and its tributaries, as in conjunction with Wilson Dam, and Norris, Wheeler, and Pickwick Landing Dams * * * will provide a nine-foot channel in the said river and maintain a water supply for the same, from Knoxville to its mouth, and will best serve to promote navigation on the Tennessee River and its tributaries and control destructive flood waters in the Tennessee and Mississippi River drainage basins." Other sections in which the purposes of navigation and flood control are stressed are sections 13, 18, 23, and section 26a, as added by Act Aug. 31, 1935, § 11, 16 U.S.C.A. §§ 831*l*, 831q, 831v, 831y—1. The most important section is 9a, 16 U.S.C.A. § 831h—1, heretofore quoted, which governs the operation of any dam or reservoir, in the possession and control of the board, and requires the board to regulate the stream flow primarily for the purposes of promoting navigation and controlling floods. Numerous specific provisions of the statute relate to the generation and sale of electric power for the purpose of assisting in liquidating the cost

of these projects, but all of them are limited and controlled by this general provision in section 9a.

Under the statute, therefore, the generation of electric energy is specifically required to be incidental to the exercise of constitutional powers under the interstate commerce clause, and the operation complies with this requirement. The record shows that the dams are adapted by their construction to combined use for flood control and improved navigation, and to generate electricity. All experts agree that the pondage at each of the dams on the main river and also at the storage dams on the tributaries can be drawn down, and that space thereby made available is capable of being used to store flood waters in the rainy season. It appears from the uncontroverted testimony that the erection of the main-river dams will create a nine-foot navigable channel. We find from the weight of the evidence that Norris has been used for the purpose of controlling floods. These facts are not controverted, except by opinion evidence.

Certain expert witnesses, in answer to hypothetical questions, stated that the dams might be operated for the primary purpose of power. Thousands of pages of testimony and numerous exhibits were introduced to show that Congress might have adopted a better plan than the TVA Unified System. Experts equally qualified testified to the contrary.

The court is of opinion that the relative value of these various plans is immaterial, since it has been established that the TVA project is reasonably adapted to use for combined flood control, navigation, power and national defense, and that in actual operation the creation of energy is subordinated to the needs of navigation and flood control.

In short, the contention that the statute and the unified project authorized therein are a sham and pretense is without foundation. It cannot be disputed that the river is

navigable and that it occupies a strategic position with relation to floods, both within its own drainage area and on the Ohio-Mississippi. We are not at liberty to conclude that the river is not susceptible of development as an important waterway, nor that it cannot be regulated so as to assist substantially in the control of floods in the alluvial valley of the Mississippi as well as practically eliminating local floods on the Tennessee River. Ashwander v. Tennessee Valley Authority, supra. Norris will create additional power for use for purposes of national defense at Wilson. Hence, we are not at liberty to conclude that the Congress has not undertaken this specific development for purposes within its constitutional powers, nor that the construction of these high dams and reservoirs along the lines proposed is not an appropriate means to accomplish these legitimate ends. Cf. Ashwander v. Tennessee Valley Authority, supra. The dams and their power equipment, both constructed, under construction and authorized, must be taken to have been authorized, constructed and planned in the exercise of the constitutional functions of the Government.

Interference with States' Rights.

Complainants contend that the TVA statutes constitute an unlawful interference with the police power of the states because they regulate the rates of utilities which themselves are subject to state regulation. The statute does not fix, nor purport to fix, the complainants' rates. But the contention is that the lower rates of the TVA will inevitably force complainants to lower their rates, and also that the TVA in its operations is not subject to the police power of the state.

The Authority operates within four of the nine states in which these complainants do business, namely, Tennessee, Alabama, Mississippi, and Georgia, its contracts with cities and co-operatives in Tennessee, Alabama and Mississippi being authorized by express legislation. All mu-

nicipalities in these three states have the statutory power to own and operate electric distribution systems. General Laws of Mississippi 1936, c. 185; Carmichael Act, Alabama Code Supp.1936, § 2001 (1) et seq.; Public Acts of Tennessee 1935, c. 32, Tennessee Code, § 3708 (1) et seq. In Mississippi, Tennessee and Alabama, municipalities are expressly authorized to contract for TVA power and to make agreements with TVA as to resale rates. Chapter 271, General Laws of Mississippi 1936; chapter 37, Public Acts of Tennessee 1935, Tennessee Code, § 3708 (96) et seq.; Alabama Code Supp.1936, § 687 (62). In Mississippi, Tennessee and Alabama, non-profit membership corporations such as rural co-operatives may operate electric systems, purchase from TVA, and make contracts as to re-sale rates. This is also true in Georgia, where the North Georgia Membership Corporation is alleged to compete with the Tennessee Electric Power Company. Chapter 184, General Laws of Mississippi 1936; Chapter 231, Public Acts of Tennessee 1937, which is an amendment of the Electric Membership Corporation Act of 1935, Pub. Acts 1935, Ex. Sess., c. 32; Alabama Code Supp.1936, § 687 (18) et seq.; Georgia Laws 1937, p. 644.

The Supreme Court of Alabama has upheld the validity of the Carmichael Act, section 2001 (1) et seq., Alabama Code Supp.1936, in Oppenheim v. Florence, 229 Ala. 50, 155 So. 859. The similar act relating to co-operatives was sustained by the Supreme Court of Alabama in Alabama Power Co. v. Cullman County Electric Membership Corp., 234 Ala. 396, 174 So. 866. In Tennessee the Supreme Court has upheld the right of the cities of Memphis and Chattanooga to buy TVA power and to establish their own electric systems under special laws. Memphis Power & Light Co. v. Memphis, Dec. term, 1936, 112 S.W.2d 817; Tennessee Electric Power Co. v. Chattanooga, Dec. term, 1936, 114 S.W.2d 441; Tennessee Public Service Co. v. Knoxville, 170 Tenn. 40, 91 S.W.2d 566.

The actions which the complainants attack are authorized by the states themselves. It is strange doctrine that acts authorized by a sovereign state constitute interference with its sovereign rights because of the fact that they are also authorized by the Federal Government. We think that deliberate co-operation between the state and the United States, authorized in each case both by the state legislature and by the Congress, constitutes no abdication of any state right.

Moreover, no state has intervened as a party in this proceeding to protest that its laws are violated by the TVA, and no regulatory commission is a party to this action. These complainants are not authorized to object on behalf of the states. Georgia Power Co. v. Tennessee Valley Authority, D.C., 14 F.Supp. 673, 676. Questions of the conflict of the TVA statute with the sovereign power of the states are not properly raised until the interested parties are before the court. Georgia Power Co. v. Tennessee Valley Authority, supra. The TVA statutes do not violate either the Ninth or the Tenth Amendment to the Constitution of the United States.

Since the United States has acquired these dam sites and constructed these dams legally, the water power, the right to convert it into electric energy, and the energy produced constitute property belonging to the United States. Ashwander v. Tennessee Valley Authority, supra. This electric energy may be rightfully disposed of by the United States through the action of the Congress, under section 3 of article 4 of the Constitution of the United States. Ashwander v. Tennessee Valley Authority, supra. Since floods frequently recur, and the needs of navigation are continuous, hydroelectric power generated at dams which control floods and improve navigation is continuously created, and the Government may adopt any appropriate constitutional means of disposing of the property. It is not limited in such disposition to a few, or to infrequent transactions.

This is the inevitable logic of the Ashwander decision, supra, 297 U.S. 288, at page 315, 56 S.Ct. 466, 468, 80 L.Ed. 688, in which every kind of electric facility, many miles of distribution and transmission lines and continuous and permanent operation were called in question because the contract attacked in that case was the contract of January 4, 1934, in which certain of these complainants, for valuable consideration, ceded sixteen counties to the TVA for electric service.

While the Government, in selling property of the United States, performs many functions that would be performed in the operation of a private business trading in similar property, inasmuch as the energy sold is created at dams lawfully erected within the Federal power, the Government in performing these functions is not entering into private business. It is merely using an appropriate method of disposing of its property. The Government may sell land belonging to the United States in competition with a real estate agency, carry parcels in competition with express companies, and manage and control its thousands of square miles of national parks even as a private company. The Government has an equal right to sell hydroelectric power, lawfully created, in competition with a private utility. There is no constitutional authority which denies the Government the right to seek a wider market (Ashwander v. Tennessee Valley Authority, supra), and the transmission and distribution lines erected are a proper facility for conveying the property of the United States to the market. The creation of the Authority is appropriate. The disposition of the energy is continuous and constant, and it is appropriate that a continuing agency be created in order to carry out this legitimate federal function.

We conclude that, since none of the complainants claims to operate under an exclusive franchise; since no fraud, malice, coercion, or conspiracy exists; since the Authority is not exceeding its statutory powers, and since the statute

is constitutional, the competition with these complainants is lawful. It follows that the holding in Alabama Power Co. v. Ickes, supra, recently decided, squarely applies. These complainants have no immunity from lawful competition, even if their business be curtailed or destroyed.

A decree will be entered denying the injunction sought, dismissing the bill of complainants, and taxing costs against the complainants. Findings of fact and conclusions of law will be filed.

SECTION A

TENNESSEE VALLEY AUTHORITY ACT AS AMENDED

[PUBLIC—No. 17—73D CONGRESS, 1ST SESSION]

[H.R. 5081]

[As amended by Public—No. 412—74th Congress, 1st Session]

[H.R. 8632]

AN ACT

To improve the navigability and to provide for the flood control of the Tennessee River; to provide for reforestation and the proper use of marginal lands in the Tennessee Valley; to provide for the agricultural and industrial development of said valley; to provide for the national defense by the creation of a corporation for the operation of Government properties at and near Muscle Shoals in the State of Alabama, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That for the purpose of maintaining and operating the properties now owned by the United States in the vicinity of Muscle Shoals, Alabama, in the interest of the national defense and for agricultural and industrial development, and to improve navigation in the Tennessee River and to control the destructive flood waters in the Tennessee River and Mississippi River Basins, there is hereby created a body corporate by the name of the "Tennessee Valley Authority" (hereinafter referred to as the "Corporation"). The board of directors first appointed shall be deemed the incorporators, and the incorporation shall be held to have been effected from the date of the first

meeting of the board. This Act may be cited as the "Tennessee Valley Authority Act of 1933."

SEC. 2. (a) The board of directors of the Corporation (hereinafter referred to as the "board") shall be composed of three members, to be appointed by the President, by and with the advice and consent of the Senate. In appointing the members of the board, the President shall designate the chairman. All other officials, agents, and employees shall be designated and selected by the board.

(b) The terms of office of the members first taking office after the approval of this Act shall expire as designated by the President at the time of nomination, one at the end of the third year, one at the end of the sixth year, and one at the end of the ninth year, after the date of approval of this Act. A successor to a member of the board shall be appointed in the same manner as the original members and shall have a term of office expiring nine years from the date of the expiration of the term for which his predecessor was appointed.

(c) Any member appointed to fill a vacancy in the board occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed for the remainder of such term.

(d) Vacancies in the board so long as there shall be two members in office shall not impair the powers of the board to execute the functions of the Corporation, and two of the members in office shall constitute a quorum for the transaction of the business of the board.

(e) Each of the members of the board shall be a citizen of the United States, and shall receive a salary at the rate of $10,000 a year, to be paid by the Corporation as current expenses. Each member of the board, in addition to his salary, shall be permitted to occupy as his residence one of the dwelling houses owned by the Government in the vicinity of Muscle Shoals, Alabama, the same to be designated by the President of the United States. Members of the board shall be reimbursed by the Corporation for actual expenses (including traveling and subsistence expenses)

incurred by them in the performance of the duties vested in the board by this Act. No member of said board shall, during his continuance in office, be engaged in any other business, but each member shall devote himself to the work of the Corporation.

(f) No director shall have financial interest in any public-utility corporation engaged in the business of distributing and selling power to the public nor in any corporation engaged in the manufacture, selling, or distribution of fixed nitrogen or fertilizer, or any ingredients thereof, nor shall any member have any interest in any business that may be adversely affected by the success of the Corporation as a producer of concentrated fertilizers or as a producer of electric power.

(g) The board shall direct the exercise of all the powers of the Corporation.

(h) All members of the board shall be persons who profess a belief in the feasibility and wisdom of this Act.

SEC. 3. The board shall without regard to the provisions of Civil Service laws applicable to officers and employees of the United States, appoint such managers, assistant managers, officers, employees, attorneys, and agents, as are necessary for the transaction of its business, fix their compensation, define their duties, require bonds of such of them as the board may designate, and provide a system of organization to fix responsibility and promote efficiency. Any appointee of the board may be removed in the discretion of the board. No regular officer or employee of the Corporation shall receive a salary in excess of that received by the members of the board.

All contracts to which the Corporation is a party and which require the employment of laborers and mechanics in the construction, alteration, maintenance, or repair of buildings, dams, locks, or other projects shall contain a provision that not less than the prevailing rate of wages for work of a similar nature prevailing in the vicinity shall be paid to such laborers or mechanics.

In the event any dispute arises as to what are the prevailing rates of wages, the question shall be referred to the Secretary of Labor for determination, and his decision shall be final. In the determination of such prevailing rate or rates, due regard shall be given to those rates which have been secured through collective agreement by representatives of employers and employees.

Where such work as is described in the two preceding paragraphs is done directly by the Corporation the prevailing rate of wages shall be paid in the same manner as though such work had been let by contract.

Insofar as applicable, the benefits of the Act entitled "An Act to provide compensation for employees of the United States suffering injuries while in the performance of their duties, and for other purposes," approved September 7, 1916, as amended, shall extend to persons given employment under the provisions of this Act.

SEC. 4. Except as otherwise specifically provided in this Act, the Corporation—

(a) Shall have succession in its corporate name.

(b) May sue and be sued in its corporate name.

(c) May adopt and use a corporate seal, which shall be judicially noticed.

(d) May make contracts, as herein authorized.

(e) May adopt, amend, and repeal bylaws.

(f) May purchase or lease and hold such real and personal property as it deems necessary or convenient in the transaction of its business, and may dispose of any such personal property held by it.

The board shall select a treasurer and as many assistant treasurers as it deems proper, which treasurer and assistant treasurers shall give such bonds for the safe-keeping of the securities and moneys of the said Corporation as the board may require: *Provided,* That any member of said board may be removed from office at any time by a concurrent resolution of the Senate and the House of Representatives.

(g) Shall have such powers as may be necessary or appropriate for the exercise of the powers herein specifically conferred upon the Corporation.

(h) Shall have power in the name of the United States of America to exercise the right of eminent domain, and in the purchase of any real estate or the acquisition of real estate by condemnation proceedings, the title to such real estate shall be taken in the name of the United States of America, and thereupon all such real estate shall be entrusted to the Corporation as the agent of the United States to accomplish the purposes of this Act.

(i) Shall have power to acquire real estate for the construction of dams, reservoirs, transmission lines, power houses, and other structures, and navigation projects at any point along the Tennessee River, or any of its tributaries, and in the event that the owner or owners of such property shall fail and refuse to sell to the Corporation at a price deemed fair and reasonable by the board, then the Corporation may proceed to exercise the right of eminent domain, and to condemn all property that it deems necessary for carrying out the purposes of this Act, and all such condemnation proceedings shall be had pursuant to the provisions and requirements hereinafter specified, with reference to any and all condemnation proceedings: *Provided*, That nothing contained herein or elsewhere in this Act shall be construed to deprive the Corporation of the rights conferred by the Act of February 26, 1931 (46 Stat. 1422, ch. 307, secs. 1 to 5, inclusive), as now compiled in section 258a to 258e, inclusive, of title 40 of the United States Code.

(j) Shall have power to construct such dams, and reservoirs, in the Tennessee River and its tributaries, as in conjunction with Wilson Dam, and Norris, Wheeler, and Pickwick Landing Dams, now under construction, will provide a nine-foot channel in the said river and maintain a water supply for the same, from Knoxville to its mouth, and will best serve to promote navigation on the Tennessee

River and its tributaries and control destructive flood waters in the Tennessee and Mississippi River drainage basins; and shall have power to acquire or construct power houses, power structures, transmission lines, navigation projects, and incidental works in the Tennessee River and its tributaries, and to unite the various power installations into one or more systems by transmission lines. The directors of the Authority are hereby directed to report to Congress their recommendations not later than April 1, 1936, for the unified development of the Tennessee River system.

(k) At any time before the expiration of five years from the date when this section, as amended, becomes law may in the name of and as agent for the United States and subject to approval of the President, dispose of any of such real property as in the judgment of the Board may be no longer necessary in carrying out the purposes of this Act, but no land shall be conveyed on which there is a permanent dam, hydraulic power plant, fertilizer plant, or munitions plant, heretofore or hereafter built by or for the United States or for the Authority.

(l) Shall have power to advise and cooperate in the readjustment of the population displaced by the construction of dams, the acquisition of reservoir areas, the protection of watersheds, the acquisition of rights-of-way, and other necessary acquisitions of land, in order to effectuate the purposes of the Act; and may cooperate with Federal, State, and local agencies to that end.

SEC. 5. The board is hereby authorized—

(a) To contract with commercial producers for the production of such fertilizers or fertilizer materials as may be needed in the Government's program of development and introduction in excess of that produced by Government plants. Such contracts may provide either for outright purchase of materials by the board or only for the payment of carrying charges on special materials manufactured at the board's request for its program.

(b) To arrange with farmers and farm organizations

for large-scale practical use of the new forms of fertilizers under conditions permitting an accurate measure of the economic return they produce.

(c) To cooperate with National, State, district, or county experimental stations or demonstration farms, with farmers, landowners, and associations of farmers or landowners, for the use of new forms of fertilizer or fertilizer practices during the initial or experimental period of their introduction, and for promoting the prevention of soil erosion by the use of fertilizers and otherwise.

(d) The board in order to improve and cheapen the production of fertilizer is authorized to manufacture and sell fixed nitrogen, fertilizer, and fertilizer ingredients at Muscle Shoals by the employment of existing facilities, by modernizing existing plants, or by any other process or processes that in its judgment shall appear wise and profitable for the fixation of atmospheric nitrogen or the cheapening of the production of fertilizer.

(e) Under the authority of this Act the board may make donations or sales of the product of the plant or plants operated by it to be fairly and equitably distributed through the agency of county demonstration agents, agricultural colleges, or otherwise as the board may direct, for experimentation, education, and introduction of the use of such products in cooperation with practical farmers so as to obtain information as to the value, effect, and best methods of their use.

(f) The board is authorized to make alterations, modifications, or improvements in existing plants and facilities, and to construct new plants.

(g) In the event it is not used for the fixation of nitrogen for agricultural purposes or leased, then the board shall maintain in stand-by condition nitrate plant numbered 2, or its equivalent, for the fixation of atmospheric nitrogen, for the production of explosives in the event of war or a national emergency, until the Congress shall by joint resolution release the board from this obligation, and

if any part thereof be used by the board for the manufacture of phosphoric acid or potash, the balance of nitrate plant numbered 2 shall be kept in stand-by condition.

(h) To establish, maintain, and operate laboratories and experimental plants, and to undertake experiments for the purpose of enabling the Corporation to furnish nitrogen products for military purposes, and nitrogen and other fertilizer products for agricultural purposes in the most economical manner and at the highest standard of efficiency.

(i) To request the assistance and advice of any officer, agent, or employee of any executive department or of any independent office of the United States, to enable the Corporation the better to carry out its powers successfully, and as far as practicable shall utilize the services of such officers, agents, and employees, and the President shall, if in his opinion, the public interest, service, or economy so require, direct that such assistance, advice, and service be rendered to the Corporation, and any individual that may be by the President directed to render such assistance, advice, and service shall be thereafter subject to the orders, rules, and regulations of the board: *Provided,* That any invention or discovery made by virtue of and incidental to such service by an employee of the Government of the United States serving under this section, or by any employee of the Corporation, together with any patents which may be granted thereon, shall be the sole and exclusive property of the Corporation, which is hereby authorized to grant such licenses thereunder as shall be authorized by the board: *Provided further,* That the board may pay to such inventor such sum from the income from sale of licenses as it may deem proper.

(j) Upon the requisition of the Secretary of War or the Secretary of the Navy to manufacture for and sell at cost to the United States explosives or their nitrogenous content.

(k) Upon the requisition of the Secretary of War, the

Corporation shall allot and deliver without charge to the War Department so much power as shall be necessary in the judgment of said Department for use in operation of all locks, lifts, or other facilities in aid of navigation.

(l) To produce, distribute, and sell electric power, as herein particularly specified.

(m) No products of the Corporation shall be sold for use outside of the United States, its Territories and possessions, except to the United States Government for the use of its Army and Navy, or to its allies in case of war.

(n) The President is authorized, within twelve months after the passage of this Act, to lease to any responsible farm organization or to any corporation organized by it nitrate plant numbered 2 and Waco Quarry, together with the railroad connecting said quarry with nitrate plant numbered 2, for a term not exceeding fifty years at a rental of not less than $1 per year, but such authority shall be subject to the express condition that the lessee shall use said property during the term of said lease exclusively for the manufacture of fertilizer and fertilizer ingredients to be used only in the manufacture of fertilizer by said lessee and sold for use as fertilizer. The said lessee shall covenant to keep said property in first-class condition, but the lessee shall be authorized to modernize said plant numbered 2 by the installation of such machinery as may be necessary, and is authorized to amortize the cost of said machinery and improvements over the term of said lease or any part thereof. Said lease shall also provide that the board shall sell to the lessee power for the operation of said plant at the same schedule of prices that it charges all other customers for power of the same class and quantity. Said lease shall also provide that, if the said lessee does not desire to buy power of the publicly owned plant, it shall have the right to purchase its power for the operation of said plant of the Alabama Power Company or any other publicly or privately owned corporation engaged in the generation and sale of electric power, and in such case the

lease shall provide further that the said lessee shall have a free right of way to build a transmission line over Government property to said plant paying the actual expenses and damages, if any, incurred by the Corporation on account of such line. Said lease shall also provide that the said lessee shall covenant that during the term of said lease the said lessee shall not enter into any illegal monopoly, combination, or trust with any privately owned corporation engaged in the manufacture, production, and sale of fertilizer with the object or effect of increasing the price of fertilizer to the farmer.

SEC. 6. In the appointment of officials and the selection of employees for said Corporation, and in the promotion of any such employees or officials, no political test or qualification shall be permitted or given consideration, but all such appointments and promotions shall be given and made on the basis of merit and efficiency. Any member of said board who is found by the President of the United States to be guilty of a violation of this section shall be removed from office by the President of the United States, and any appointee of said board who is found by the board to be guilty of a violation of this section shall be removed from office by said board.

SEC. 7. In order to enable the Corporation to exercise the powers and duties vested in it by this Act—

(a) The exclusive use, possession, and control of the United States nitrate plants numbered 1 and 2, including steam plants, located, respectively, at Sheffield, Alabama, and Muscle Shoals, Alabama, together with all real estate and buildings connected therewith, all tools and machinery, equipment, accessories, and materials belonging thereto, and all laboratories and plants used as auxiliaries thereto; the fixed-nitrogen research laboratory, the Waco limestone quarry, in Alabama, and Dam Numbered 2, located at Muscle Shoals, its power house, and all hydroelectric and operating appurtenances (except the locks), and all machinery, lands, and buildings in connection therewith, and

all appurtenances thereof, and all other property to be acquired by the Corporation in its own name or in the name of the United States of America, are hereby intrusted to the Corporation for the purposes of this Act.

(b) The President of the United States is authorized to provide for the transfer to the Corporation of the use, possession, and control of such other real or personal property of the United States as he may from time to time deem necessary and proper for the purposes of the Corporation as herein stated.

SEC. 8. (a) The Corporation shall maintain its principal office in the immediate vicinity of Muscle Shoals, Alabama. The Corporation shall be held to be an inhabitant and resident of the northern judicial district of Alabama within the meaning of the laws of the United States relating to the venue of civil suits.

(b) The Corporation shall at all times maintain complete and accurate books of accounts.

(c) Each member of the board, before entering upon the duties of his office, shall subscribe to an oath (or affirmation) to support the Constitution of the United States and to faithfully and impartially perform the duties imposed upon him by this Act.

SEC. 9. (a) The board shall file with the President and with the Congress, in December of each year, a financial statement and a complete report as to the business of the Corporation covering the preceding governmental fiscal year. This report shall include an itemized statement of the cost of power at each power station, the total number of employees and the names, salaries, and duties of those receiving compensation at the rate of more than $1,500 a year.

(b) All purchases and contracts for supplies or services, except for personal services, made by the Corporation, shall be made after advertising, in such manner and at such times sufficiently in advance of opening bids, as the board shall determine to be adequate to insure notice and oppor-

tunity for competition: *Provided,* That advertisement shall not be required when, (1) an emergency requires immediate delivery of the supplies or performance of the services; or (2) repair parts, accessories, supplemental equipment, or services are required for supplies or services previously furnished or contracted for; or (3) the aggregate amount involved in any purchase of supplies or procurement of services does not exceed $500; in which cases such purchases of supplies or procurement of services may be made in the open market in the manner common among business men: *Provided further,* That in comparing bids and in making awards the Board may consider such factors as relative quality and adaptability of supplies or services, the bidder's financial responsibility, skill, experience, record of integrity in dealing, ability to furnish repairs and maintenance services, the time of delivery or performance offered, and whether the bidder has complied with the specifications.

The Comptroller General of the United States shall audit the transactions of the Corporation at such times as he shall determine, but not less frequently than once each governmental fiscal year, with personnel of his selection. In such connection he and his representatives shall have free and open access to all papers, books, records, files, accounts, plants, warehouses, offices, and all other things, property, and places belonging to or under the control of or used or employed by the Corporation, and shall be afforded full facilities for counting all cash and verifying transactions with and balances in depositaries. He shall make report of each such audit in quadruplicate, one copy for the President of the United States, one for the chairman of the Board, one for public inspection at the principal office of the Corporation, and the other to be retained by him for the uses of the Congress: *Provided,* That such report shall not be made until the Corporation shall have had reasonable opportunity to examine the exceptions and criticisms of the Comptroller General or the General Ac-

counting Office, to point out errors therein, explain or answer the same, and to file a statement which shall be submitted by the Comptroller General with his report. The expenses for each such audit shall be paid from any appropriation or appropriations for the General Accounting Office, and such part of such expenses as may be allocated to the cost of generating, transmitting, and distributing electric energy shall be reimbursed promptly by the Corporation as billed by the Comptroller General. The Comptroller General shall make special report to the President of the United States and to the Congress of any transaction or condition found by him to be in conflict with the powers or duties entrusted to the Corporation by law.

SEC. 9a. The Board is hereby directed in the operation of any dam or reservoir in its possession and control to regulate the stream flow primarily for the purposes of promoting navigation and controlling floods. So far as may be consistent with such purposes, the Board is authorized to provide and operate facilities for the generation of electric energy at any such dam for the use of the Corporation and for the use of the United States or any agency thereof, and the Board is further authorized, whenever an opportunity is afforded, to provide and operate facilities for the generation of electric energy in order to avoid the waste of water power, to transmit and market such power as in this act provided, and thereby, so far as may be practicable, to assist in liquidating the cost or aid in the maintenance of the projects of the Authority.

SEC. 10. The board is hereby empowered and authorized to sell the surplus power not used in its operations, and for operation of locks and other works generated by it, to States, counties, municipalities, corporations, partnerships, or individuals, according to the policies hereinafter set forth; and to carry out said authority, the board is authorized to enter into contracts for such sale for a term not exceeding twenty years, and in the sale of such current by the board it shall give preference to States, counties,

municipalities, and cooperative organizations of citizens or farmers, not organized or doing business for profit, but primarily for the purpose of supplying electricity to its own citizens or members: *Provided,* That all contracts made with private companies or individuals for the sale of power, which power is to be resold for a profit, shall contain a provision authorizing the board to cancel said contract upon five years' notice in writing, if the board needs said power to supply the demands of States, counties, or municipalities. In order to promote and encourage the fullest possible use of electric light and power on farms within reasonable distance of any of its transmission lines the board in its discretion shall have power to construct transmission lines to farms and small villages that are not otherwise supplied with electricity at reasonable rates, and to make such rules and regulations governing such sale and distribution of such electric power as in its judgment may be just and equitable: *Provided further,* That the board is hereby authorized and directed to make studies, experiments, and determinations to promote the wider and better use of electric power for agricultural and domestic use, or for small or local industries, and it may cooperate with State governments, or their subdivisions or agencies, with educational or research institutions, and with cooperatives or other organizations, in the application of electric power to the fuller and better balanced development of the resources of the region: *Provided further,* That the Board is authorized to include in any contract for the sale of power such terms and conditions, including resale rate schedules, and to provide for such rules and regulations as in its judgment may be necessary or desirable for carrying out the purposes of this Act, and in case the purchaser shall fail to comply with any such terms and conditions, or violate any such rules and regulations, said contract may provide that it shall be voidable at the election of the Board: *Provided further,* That in order to supply farms and small villages with electric power directly as contemplated by this section, the

Board in its discretion shall have power to acquire existing electric facilities used in serving such farms and small villages: *And provided further,* That the terms "States", "counties", and "municipalities" as used in this Act shall be construed to include the public agencies of any of them unless the context requires a different construction.

SEC. 11. It is hereby declared to be the policy of the Government so far as practical to distribute and sell the surplus power generated at Muscle Shoals equitably among the States, counties, and municipalities within transmission distance. This policy is further declared to be that the projects herein provided for shall be considered primarily as for the benefit of the people of the section as a whole and particularly the domestic and rural consumers to whom the power can economically be made available, and accordingly that sale to and use by industry shall be a secondary purpose, to be utilized principally to secure a sufficiently high load factor and revenue returns which will permit domestic and rural use at the lowest possible rates and in such manner as to encourage increased domestic and rural use of electricity. It is further hereby declared to be the policy of the Government to utilize the Muscle Shoals properties so far as may be necessary to improve, increase, and cheapen the production of fertilizer and fertilizer ingredients by carrying out the provisions of this Act.

SEC. 12. In order to place the board upon a fair basis for making such contracts and for receiving bids for the sale of such power, it is hereby expressly authorized, either from appropriations made by Congress or from funds secured from the sale of such power, or from funds secured by the sale of bonds hereafter provided for, to construct, lease, purchase, or authorize the construction of transmission lines within transmission distance from the place where generated, and to interconnect with other systems. The board is also authorized to lease to any person, persons, or corporation the use of any transmission line owned by the

Government and operated by the board, but no such lease shall be made that in any way interferes with the use of such transmission line by the board: *Provided,* That if any State, county, municipality, or other public or cooperative organization of citizens or farmers, not organized or doing business for profit, but primarily for the purpose of supplying electricity to its own citizens or members, or any two or more of such municipalities or organizations, shall construct or agree to construct and maintain a properly designed and built transmission line to the Government reservation upon which is located a Government generating plant, or to a main transmission line owned by the Government or leased by the board and under the control of the board, the board is hereby authorized and directed to contract with such State, county, municipality, or other organization, or two or more of them, for the sale of electricity for a term not exceeding thirty years; and in any such case the board shall give to such State, county, municipality, or other organization ample time to fully comply with any local law now in existence or hereafter enacted providing for the necessary legal authority for such State, county, municipality, or other organization to contract with the board for such power: *Provided further,* That all contracts entered into between the Corporation and any municipality or other political subdivision or cooperative organization shall provide that the electric power shall be sold and distributed to the ultimate consumer without discrimination as between consumers of the same class, and such contract shall be voidable at the election of the board if a discriminatory rate, rebate, or other special concession is made or given to any consumer or user by the municipality or other political subdivision or cooperative organization: *And provided further,* That as to any surplus power not so sold as above provided to States, counties, municipalities, or other said organizations, before the board shall sell the same to any person or corporation engaged in the distribution and resale of electricity for profit, it shall require said

person or corporation to agree that any resale of such electric power by said person or corporation shall be made to the ultimate consumer of such electric power at prices that shall not exceed a schedule fixed by the board from time to time as reasonable, just, and fair; and in case of any such sale, if an amount is charged the ultimate consumer which is in excess of the price so deemed to be just, reasonable, and fair by the board, the contract for such sale between the board and such distributor of electricity shall be voidable at the election of the board: *And provided further*, That the board is hereby authorized to enter into contracts with other power systems for the mutual exchange of unused excess power upon suitable terms, for the conservation of stored water, and as an emergency or breakdown relief.

SEC. 12a. In order (1) to facilitate the disposition of the surplus power of the Corporation according to the policies set forth in this Act; (2) to give effect to the priority herein accorded to States, counties, municipalities, and nonprofit organizations in the purchase of such power by enabling them to acquire facilities for the distribution of such power; and (3) at the same time to preserve existing distribution facilities as going concerns and avoid duplication of such facilities, the Board is authorized to advise and cooperate with and assist, by extending credit for a period of not exceeding five years to, States, Counties, municipalities and nonprofit organizations situated within transmission distance from any dam where such power is generated by the Corporation in acquiring, improving, and operating (a) existing distribution facilities and incidental works, including generating plants; and (b) interconnecting transmission lines; or in acquiring any interest in such facilities, incidental works, and lines.

SEC. 13. Five per centum of the gross proceeds received by the board for the sale of power generated at Dam Numbered 2, or from any other hydropower plant hereafter constructed in the State of Alabama, shall be paid to the State of Alabama; and 5 per centum of the gross proceeds

from the sale of power generated at Cove Creek Dam, hereinafter provided for, or any other dam located in the State of Tennessee, shall be paid to the State of Tennessee. Upon the completion of said Cove Creek Dam the board shall ascertain how much additional power is thereby generated at Dam Numbered 2 and at any other dam hereafter constructed by the Government of the United States on the Tennessee River, in the State of Alabama, or in the State of Tennessee, and from the gross proceeds of the sale of such additional power 2½ per centum shall be paid to the State of Alabama and 2½ per centum to the State of Tennessee. These percentages shall apply to any other dam that may hereafter be constructed and controlled and operated by the board on the Tennessee River or any of its tributaries, the main purpose of which is to control flood waters and where the development of electric power is incidental to the operation of such flood-control dam. In ascertaining the gross proceeds from the sale of such power upon which a percentage is paid to the States of Alabama and Tennessee, the board shall not take into consideration the proceeds of any power sold or delivered to the Government of the United States, or any department or agency of the Government of the United States, used in the operation of any locks on the Tennessee River or for any experimental purpose, or for the manufacture of fertilizer or any of the ingredients thereof, or for any other governmental purpose: *Provided,* That the percentages to be paid to the States of Alabama and Tennessee, as provided in this section, shall be subject to revision and change by the board, and any new percentages established by the board, when approved by the President, shall remain in effect until and unless again changed by the board with the approval of the President. No change of said percentages shall be made more often than once in five years, and no change shall be made without giving to the States of Alabama and Tennessee an oportunity to be heard.

SEC. 14. The board shall make a thorough investigation as to the present value of Dam Numbered 2, and the steam

plants at nitrate plant numbered 1, and nitrate plant numbered 2, and as to the cost of Cove Creek Dam, for the purpose of ascertaining how much of the value or the cost of said properties shall be allocated and charged up to (1) flood control, (2) navigation, (3) fertilizer, (4) national defense, and (5) the development of power. The findings thus made by the board, when approved by the President of the United States, shall be final, and such findings shall thereafter be used in all allocation of value for the purpose of keeping the book value of said properties. In like manner, the cost and book value of any dams, steam plants, or other similar improvements hereafter constructed and turned over to said board for the purpose of control and management shall be ascertained and allocated.

The Board shall, on or before January 1, 1937, file with Congress a statement of its allocation of the value of all such properties turned over to said Board, and which have been completed prior to the end of the preceding fiscal year, and shall thereafter in its annual report to Congress file a statement of its allocation of the value of such properties as have been completed during the preceding fiscal year.

For the purpose of accumulating data useful to the Congress in the formulation of legislative policy in matters relating to the generation, transmission, and distribution of electric energy and the production of chemicals necessary to national defense and useful in agriculture, and to the Federal Power Commission and other Federal and State agencies, and to the public, the Board shall keep complete accounts of its costs of generation, transmission, and distribution of electric energy and shall keep a complete account of the total cost of generating and transmission facilities constructed or otherwise acquired by the Corporation, and of producing such chemicals, and a description of the major components of such costs according to such uniform system of accounting for public utilities as the Federal Power Commission has, and if it have none, then it is hereby empowered and directed to prescribe such

uniform system of accounting, together with records of such other physical data and operating statistics of the Authority as may be helpful in determining the actual cost and value of services, and the practices, methods, facilities, equipment, appliances, and standards and sizes, types, location, and geographical and economic integration of plants and systems best suited to promote the public interest, efficiency, and the wider and more economical use of electric energy. Such data shall be reported to the Congress by the Board from time to time with appropriate analyses and recommendations, and, so far as practicable, shall be made available to the Federal Power Commission and other Federal and State agencies which may be concerned with the administration of legislation relating to the generation, transmission, or distribution of electric energy and chemicals useful to agriculture. It is hereby declared to be the policy of this Act that, in order, as soon as practicable, to make the power projects self-supporting and self-liquidating, the surplus power shall be sold at rates which, in the opinion of the Board, when applied to the normal capacity of the Authority's power facilities, will produce gross revenues in excess of the cost of production of said power and in addition to the statement of the cost of power at each power station as required by section 9 (a) of the "Tennessee Valley Act of 1933", the Board shall file with each annual report, a statement of the total cost of all power generated by it at all power stations during each year, the average cost of such power per kilowatt hour, the rates at which sold, and to whom sold, and copies of all contracts for the sale of power.

SEC. 15. In the construction of any future dam, steam plant, or other facility, to be used in whole or in part for the generation or transmission of electric power the board is hereby authorized and empowered to issue on the credit of the United States and to sell serial bonds not exceeding $50,000,000 in amount, having a maturity not more than fifty years from the date of issue thereof, and bearing in-

terest not exceeding 3½ per centum per annum. Said bonds shall be issued and sold in amounts and prices approved by the Secretary of the Treasury, but all such bonds as may be so issued and sold shall have equal rank. None of said bonds shall be sold below par, and no fee, commission, or compensation whatever shall be paid to any person, firm, or corporation for handling, negotiating the sale, or selling the said bonds. All of such bonds so issued and sold shall have all the rights and privileges accorded by law to Panama Canal bonds, authorized by section 8 of the act of June 28, 1902, chapter 1302, as amended by the act of December 21, 1905 (ch. 3, sec. 1, 34 Stat. 5), as now compiled in section 743 of title 31 of the United States Code. All funds derived from the sale of such bonds shall be paid over to the Corporation.

SEC. 15a. With the approval of the Secretary of the Treasury, the Corporation is authorized to issue bonds not to exceed in the aggregate $50,000,000 outstanding at any one time, which bonds may be sold by the Corporation to obtain funds to carry out the provisions of section 12a of this Act. Such bonds shall be in such forms and denominations, shall mature within such periods not more than fifty years from the date of their issue, may be redeemable at the option of the Corporation before maturity in such manner as may be stipulated therein, shall bear such rates of interest not exceeding 3½ per centum per annum, shall be subject to such terms and conditions, shall be issued in such manner and amount, and sold at such prices, as may be prescribed by the Corporation, with the approval of the Secretary of the Treasury: *Provided,* That such bonds shall not be sold at such prices or on such terms as to afford an investment yield to the holders in excess of 3½ per centum per annum. Such bonds shall be fully and unconditionally guaranteed both as to interest and principal by the United States, and such guaranty shall be expressed on the face thereof, and such bonds shall be lawful investments, and may be accepted as security, for all fiduciary, trust, and

public funds, the investment or deposit of which shall be under the authority or control of the United States or any officer or officers thereof. In the event that the Corporation should not pay upon demand, when due, the principal of, or interest on, such bonds, the Secretary of the Treasury shall pay to the holder the amount thereof, which is hereby authorized to be appropriated out of any moneys in the Treasury not otherwise appropriated, and thereupon to the extent of the amount so paid the Secretary of the Treasury shall succeed to all the rights of the holders of such bonds. The Secretary of the Treasury, in his discretion, is authorized to purchase any bonds issued hereunder, and for such purpose the Secretary of the Treasury is authorized to use as a public-debt transaction the proceeds from the sale of any securities hereafter issued under the Second Liberty Bond Act, as amended, and the purposes for which securities may be issued under such Act, as amended, are extended to include any purchases of the Corporation's bonds hereunder. The Secretary of the Treasury may, at any time, sell any of the bonds of the Corporation acquired by him under this section. All redemptions, purchases, and sales by the Secretary of the Treasury of the bonds of the Corporation shall be treated as public-debt transactions of the United States. With the approval of the Secretary of the Treasury, the Corporation shall have power to purchase such bonds in the open market at any time and at any price. No bonds shall be issued hereunder to provide funds or bonds necessary for the performance of any proposed contract negotiated by the Corporation under the authority of section 12a of this Act until the proposed contract shall have been submitted to and approved by the Federal Power Commission. When any such proposed contract shall have been submitted to the said Commission, the matter shall be given precedence and shall be in every way expedited and the Commission's determination of the matter shall be final. The authority of the Corporation to issue bonds hereunder shall expire at the end of five years from the date when this section as amended herein becomes

law, except that such bonds may be issued at any time after the expiration of said period to provide bonds or funds necessary for the performance of any contract entered into by the Corporation, prior to the expiration of said period, under the authority of section 12a of this Act.

SEC. 16. The board, whenever the President deems it advisable, is hereby empowered and directed to complete Dam Numbered 2 at Muscle Shoals, Alabama, and the steam plant at nitrate plant numbered 2, in the vicinity of Muscle Shoals, by installing in Dam Numbered 2 the additional power units according to the plans and specifications of said dam, and the additional power unit in the steam plant at nitrate plant numbered 2.

SEC. 17. The Secretary of War, or the Secretary of the Interior, is hereby authorized to construct, either directly or by contract to the lowest responsible bidder, after due advertisement, a dam in and across Clinch River in the State of Tennessee, which has by long custom become known and designated as the Cove Creek Dam, together with a transmission line from Muscle Shoals, according to the latest and most approved designs, including power house and hydroelectric installations and equipment for the generation of power, in order that the waters of the said Clinch River may be impounded and stored above said dam for the purpose of increasing and regulating the flow of the Clinch River and the Tennessee River below, so that the maximum amount of primary power may be developed at Dam Numbered 2 and at any and all other dams below the said Cove Creek Dam: *Provided, however*, That the President is hereby authorized by appropriate order to direct the employment by the Secretary of War, or by the Secretary of the Interior, of such engineer or engineers as he may designate, to perform such duties and obligations as he may deem proper, either in the drawing of plans and specifications for said dam, or to perform any other work in the building or construction of the same. The President may, by such order, place the control of the construction

of said dam in the hands of such engineer or engineers taken from private life as he may desire: *And provided further*, That the President is hereby expressly authorized, without regard to the restriction or limitation of any other statute, to select attorneys and assistants for the purpose of making any investigation he may deem proper to ascertain whether, in the control and management of Dam Numbered 2, or any other dam or property owned by the Government in the Tennessee River Basin, or in the authorization of any improvement therein, there has been any undue or unfair advantage given to private persons, partnerships, or corporations, by any officials or employees of the Government, or whether in any such matters the Government has been injured or unjustly deprived of any of its rights.

SEC. 18. In order to enable and empower the Secretary of War, the Secretary of the Interior, or the board to carry out the authority hereby conferred, in the most economical and efficient manner, he or it is hereby authorized and empowered in the exercise of the powers of national defense in aid of navigation, and in the control of the flood waters of the Tennessee and Mississippi Rivers, constituting channels of interstate commerce, to exercise the right of eminent domain for all purposes of this Act, and to condemn all lands, easements, rights of way, and other area necessary in order to obtain a site for said Cove Creek Dam, and the flowage rights for the reservoir of water above said dam, and to negotiate and conclude contracts with States, counties, municipalities, and all State agencies, and with railroads, railroad corporations, common carriers, and all public utility commissions, and any other person, firm, or corporation, for the relocation of railroad tracks, highways, highway bridges, mills, ferries, electric-light plants, and any and all other properties, enterprises, and projects whose removal may be necessary in order to carry out the provisions of this Act. When said Cove Creek Dam, transmission line, and power house shall have been completed, the possession, use, and control thereof shall be intrusted to the

Corporation for use and operation in connection with the general Tennessee Valley project, and to promote flood control and navigation in the Tennessee River.

SEC. 19. The Corporation, as an instrumentality and agency of the Government of the United States for the purpose of executing its constitutional powers, shall have access to the Patent Office of the United States for the purpose of studying, ascertaining, and copying all methods, formulae, and scientific information (not including access to pending applications for patents) necessary to enable the Corporation to use and employ the most efficacious and economical process for the production of fixed nitrogen, or any essential ingredient of fertilizer, or any method of improving and cheapening the production of hydroelectric power, and any owner of a patent whose patent rights may have been thus in any way copied, used, infringed, or employed by the exercise of this authority by the Corporation shall have as the exclusive remedy a cause of action against the Corporation, to be instituted and prosecuted on the equity side of the appropriate district court of the United States, for the recovery of reasonable compensation for such infringement. The Commissioner of Patents shall furnish to the Corporation, at its request and without payment of fees, copies of documents on file in his office: *Provided*, That the benefits of this section shall not apply to any art, machine, method of manufacture, or composition of matter, discovered or invented by such employee during the time of his employment or service with the Corporation or with the Government of the United States.

SEC. 20. The Government of the United States hereby reserves the right, in case of war or national emergency declared by Congress, to take possession of all or any part of the property described or referred to in this Act for the purpose of manufacturing explosives or for other war purposes; but, if this right is exercised by the Government, it shall pay the reasonable and fair damages that may be suffered by any party whose contract for the purchase of elec-

tric power or fixed nitrogen or fertilizer ingredients is hereby violated, after the amount of the damages has been fixed by the United States Court of Claims in proceedings instituted and conducted for that purpose under rules prescribed by the court.

SEC. 21. (a) All general penal statutes relating to the larceny, embezzlement, conversion, or to the improper handling, retention, use, or disposal of public moneys or property of the United States shall apply to the moneys and property of the Corporation and to moneys and properties of the United States intrusted to the Corporation.

(b) Any person who, with intent to defraud the Corporation, or to deceive any director, officer, or employee of the Corporation or any officer or employee of the United States (1) makes any false entry in any book of the Corporation, or (2) makes any false report or statement for the Corporation, shall, upon conviction thereof, be fined not more than $10,000 or imprisoned not more than five years, or both.

(c) Any person who shall receive any compensation, rebate, or reward, or shall enter into any conspiracy, collusion, or agreement, express or implied, with intent to defraud the Corporation or wrongfully and unlawfully to defeat its purposes, shall, on conviction thereof, be fined not more than $5,000 or imprisoned not more than five years, or both.

SEC. 22. To aid further the proper use, conservation, and development of the natural resources of the Tennessee River drainage basin and of such adjoining territory as may be related to or materially affected by the development consequent to this Act, and to provide for the general welfare of the citizens of said areas, the President is hereby authorized, by such means or methods as he may deem proper within the limits of appropriations made therefor by Congress, to make such surveys of and general plans for said Tennessee basin and adjoining territory as may be useful to the Congress and to the several States in guiding and controlling the extent, sequence, and nature of development

that may be equitably and economically advanced through the expenditure of public funds, or through the guidance or control of public authority, all for the general purpose of fostering an orderly and proper physical, economic, and social development of said areas; and the President is further authorized in making said surveys and plans to cooperate with the States affected thereby, or subdivisions or agencies of such States, or with cooperative or other organizations, and to make such studies, experiments, or demonstrations as may be necessary and suitable to that end.

SEC. 23. The President shall, from time to time, as the work provided for in the preceding section progresses, recommend to Congress such legislation as he deems proper to carry out the general purposes stated in said section, and for the especial purpose of bringing about in said Tennessee drainage basin and adjoining territory in conformity with said general purposes (1) the maximum amount of flood control; (2) the maximum development of said Tennessee River for navigation purposes; (3) the maximum generation of electric power consistent with flood control and navigation; (4) the proper use of marginal lands; (5) the proper method of reforestation of all lands in said drainage basin suitable for reforestation; and (6) the economic and social well-being of the people living in said river basin.

SEC. 24. For the purpose of securing any rights of flowage, or obtaining title to or possession of any property, real or personal, that may be necessary or may become necessary, in the carrying out of any of the provisions of this Act, the President of the United States for a period of three years from the date of the enactment of this Act, is hereby authorized to acquire title in the name of the United States to such rights or such property, and to provide for the payment for same by directing the board to contract to deliver power generated at any of the plants now owned or hereafter owned or constructed by the Government or

by said Corporation, such future delivery of power to continue for a period not exceeding thirty years. Likewise, for one year after the enactment of this Act, the President is further authorized to sell or lease any parcel or part of any vacant real estate now owned by the Government in said Tennessee River Basin, to persons, firms, or corporations who shall contract to erect thereon factories or manufacturing establishments, and who shall contract to purchase of said Corporation electric power for the operation of any such factory or manufacturing establishment. No contract shall be made by the President for the sale of any of such real estate as may be necessary for present or future use on the part of the Government for any of the purposes of this Act. Any such contract made by the President of the United States shall be carried out by the board: *Provided,* That no such contract shall be made that will in any way abridge or take away the preference right to purchase power given in this Act to States, counties, municipalities, or farm organizations: *Provided further,* That no lease shall be for a term to exceed fifty years: *Provided further,* That any sale shall be on condition that said land shall be used for industrial purposes only.

SEC. 25. The Corporation may cause proceedings to be instituted for the acquisition by condemnation of any lands, easements, or rights of way which, in the opinion of the Corporation, are necessary to carry out the provisions of this Act. The proceedings shall be instituted in the United States district court for the district in which the land, easement, right of way, or other interest, or any part thereof, is located, and such court shall have full jurisdiction to divest the complete title to the property sought to be acquired out of all persons or claims and vest the same in the United States in fee simple, and to enter a decree quieting the title thereto in the United States of America.

Upon the filing of a petition for condemnation and for the purpose of ascertaining the value of the property to be acquired, and assessing the compensation to be paid, the

court shall appoint three commissioners who shall be disinterested persons and who shall take and subscribe an oath that they do not own any lands, or interest or easement in any lands, which it may be desirable for the United States to acquire in the furtherance of said project, and such commissioners shall not be selected from the locality wherein the land sought to be condemned lies. Such commissioners shall receive a per diem of not to exceed $15 for their services, together with an additional amount of $5 per day for subsistence for time actually spent in performing their duties as commissioners.

It shall be the duty of such commissioners to examine into the value of the lands sought to be condemned, to conduct hearings and receive evidence, and generally to take such appropriate steps as may be proper for the determination of the value of the said lands sought to be condemned, and for such purpose the commissioners are authorized to administer oaths and subpoena witnesses, which said witnesses shall receive the same fees as are provided for witnesses in the Federal courts. The said commissioners shall thereupon file a report setting forth their conclusions as to the value of the said property sought to be condemned, making a separate award and valuation in the premises with respect to each separate parcel involved. Upon the filing of such award in court the clerk of said court shall give notice of the filing of such award to the parties to said proceeding, in manner and form as directed by the judge of said court.

Either or both parties may file exceptions to the award of said commissioners within twenty days from the date of the filing of said award in court. Exceptions filed to such award shall be heard before three Federal district judges unless the parties, in writing, in person, or by their attorneys, stipulate that the exceptions may be heard before a lesser number of judges. On such hearing such judges shall pass de novo upon the proceedings had before the commissioners, may view the property, and may take

additional evidence. Upon such hearings the said judges shall file their own award, fixing therein the value of the property sought to be condemned, regardless of the award previously made by the said commissioners.

At any time within thirty days from the filing of the decision of the district judges upon the hearing on exceptions to the award made by the commissioners, either party may appeal from such decision of the said judges to the circuit court of appeals, and the said circuit court of appeals shall upon the hearing on said appeal dispose of the same upon the record, without regard to the awards or findings theretofore made by the commissioners or the district judges, and such circuit court of appeals shall thereupon fix the value of the said property sought to be condemned.

Upon acceptance of an award by the owner of any property herein provided to be appropriated, and the payment of the money awarded or upon the failure of either party to file exceptions to the award of the commissioners within the time specified, or upon the award of the commissioners, and the payment of the money by the United States pursuant thereto, or the payment of the money awarded into the registry of the court by the Corporation, the title to said property and the right to the possession thereof shall pass to the United States, and the United States shall be entitled to a writ in the same proceeding to dispossess the former owner of said property, and all lessees, agents, and attorneys of such former owner, and to put the United States, by its corporate creature and agent, the Corporation, into possession of said property.

In the event of any property owned in whole or in part by minors, or insane persons, or incompetent persons, or estates of deceased persons, then the legal representatives of such minors, insane persons, incompetent persons, or estates shall have power, by and with the consent and approval of the trial judge in whose court said matter is for determination, to consent to or reject the awards of the

commissioners herein provided for, and in the event that there be no legal representatives, or that the legal representatives for such minors, insane persons, or incompetent persons shall fail or decline to act, then such trial judge may, upon motion, appoint a guardian ad litem to act for such minors, insane persons, or incompetent persons, and such guardian ad litem shall act to the full extent and to the same purpose and effect as his ward could act, if competent, and such guardian ad litem shall be deemed to have full power and authority to respond, to conduct, or to maintain any proceeding herein provided for affecting his said ward.

SEC. 26. Commencing July 1, 1936, the proceeds for each fiscal year derived by the Board from the sale of power or any other products manufactured by the Corporation, and from any other activities of the Corporation including the disposition of any real or personal property, shall be paid into the Treasury of the United States at the end of each calendar year, save and except such part of such proceeds as in the opinion of the Board shall be necessary for the Corporation in the operation of dams and reservoirs, in conducting its business in generating, transmitting, and distributing electric energy and in manufacturing, selling, and distributing fertilizer and fertilizer ingredients. A continuing fund of $1,000,000 is also excepted from the requirements of this section and may be withheld by the Board to defray emergency expenses and to insure continuous operation: *Provided*, That nothing in this section shall be construed to prevent the use by the Board, after June 30, 1936, of proceeds accruing prior to July 1, 1936, for the payment of obligations lawfully incurred prior to such latter date.

SEC. 26a. The unified development and regulation of the Tennessee River system requires that no dam, appurtenant works, or other obstruction, affecting navigation, flood control, or public lands or reservations shall be constructed, and thereafter operated or maintained across,

along, or in the said river or any of its tributaries until plans for such construction, operation, and maintenance shall have been submitted to and approved by the Board; and the construction, commencement of construction, operation, or maintenance of such structures without such approval is hereby prohibited. When such plans shall have been approved, deviation therefrom either before or after completion of such structures is prohibited unless the modification of such plans has previously been submitted to and approved by the Board.

In the event the Board shall, within sixty days after their formal submission to the Board, fail to approve any plans or modifications, as the case may be, for construction, operation, or maintenance of any such structures on the Little Tennessee River, the above requirements shall be deemed satisfied, if upon application to the Secretary of War, with due notice to the Corporation, and hearing thereon, such plans or modifications are approved by the said Secretary of War as reasonably adequate and effective for the unified development and regulation of the Tennessee River system.

Such construction, commencement of construction, operation, or maintenance of any structures or parts thereof in violation of the provisions of this section may be prevented, and the removal or discontinuation thereof required by the injunction or order of any district court exercising jurisdiction in any district in which such structures or parts thereof may be situated, and the Corporation is hereby authorized to bring appropriate proceedings to this end.

The requirements of this section shall not be construed to be a substitute for the requirements of any other law of the United States or of any State, now in effect or hereafter enacted, but shall be in addition thereto, so that any approval, license, permit, or other sanction now or hereafter required by the provisions of any such law for the construction, operation, or maintenance of any structures

whatever, except such as may be constructed, operated, or maintained by the Corporation, shall be required, notwithstanding the provisions of this section.

SEC. 27. All appropriations necessary to carry out the provisions of this Act are hereby authorized.

SEC. 28. That all Acts or parts of Acts in conflict herewith are hereby repealed, so far as they affect the operations contemplated by this Act.

SEC. 29. The right to alter, amend, or repeal this Act is hereby expressly declared and reserved, but no such amendment or repeal shall operate to impair the obligation of any contract made by said Corporation under any power conferred by this Act.

SEC. 30.[1] The sections of this Act are hereby declared to be separable, and in the event any one or more sections of this Act be held to be unconstitutional, the same shall not affect the validity of other sections of this Act.

SEC. 31. This Act shall be liberally construed to carry out the purposes of Congress to provide for the disposition of and make needful rules and regulations respecting Government properties entrusted to the Authority, provide for the national defense, improve navigation, control destructive floods, and promote interstate commerce and the general welfare, but no real estate shall be held except what is necessary in the opinion of the Board to carry out plans and projects actually decided upon requiring the use of such land: *Provided,* That any land purchased by the Authority and not necessary to carry out plans and projects actually decided upon shall be sold by the Authority as agent of the United States, after due advertisement, at public auction to the highest bidder, or at private sale as provided in section 4 (k) of this Act.

---

[1]Section 15 of the amendatory Act provides as follows:

"That the sections of this Act are hereby declared to be separable, and in the event of any one or more sections of this Act, or parts thereof, be held to be unconstitutional, such holding shall not affect the validity of other sections or parts of this Act."

SECTION B

SENATE AND HOUSE REPORTS ON THE TENNESSEE VALLEY AUTHORITY ACT OF 1933

Senate Report No. 23

73d Congress, 1st Session

(Committee on Agriculture and Forestry, April 12, 1933)

MUSCLE SHOALS AND TENNESSEE VALLEY DEVELOPMENT

The Senate Committee on Agriculture and Forestry, to which was referred the bill S. 1272, "To improve the navigability and to provide for the flood control of the Tennessee River, to provide for reforestation and the proper use of marginal lands in the Tennessee Valley; to provide for the agricultural and industrial development of said valley; to provide for the national defense by the creation of a corporation for the operation of Government properties at and near Muscle Shoals in the State of Alabama, and for other purposes", having had the same under consideration, beg leave to report it back to the Senate, with the following amendments:

On page 7, line 2, after the word "donations" insert "or sales."

On page 22, line 18, strike out the numeral "24" and insert in lieu thereof "23."

As thus amended, the committee unanimously recommends that the bill be passed.

The bill, as thus reported, with the exception hereafter referred to, is practically the same bill that the committee has reported at various times during the last 12 years. In brief, the bill provides:

(1) For the organization of a governmental corporation called "The Tennessee Valley Authority." To this corpora-

tion is given broad authority to have general supervision, within certain limitations provided for in the bill, of all property of all kinds now owned by the Government at Muscle Shoals and elsewhere in the Tennessee Valley.

(2) That the building of Cove Creek Dam, mainly a flood-control and navigation proposition, shall be constructed by the Government and turned over to said corporation for control and operation.

(3) Provision is made for the operation of all locks on the Tennessee River.

(4) For the operation of experimental plants on a larger scale than has ever before been undertaken in the history of the world, for the purpose of discovering new methods of production of fertilizers, with the object of cheapening the cost of fertilizers, not only to the farmers in the Tennessee Valley, but everywhere in the Nation.

(5) That the surplus power not used for governmental purposes and for fertilizer purposes shall be sold to the people anywhere within transmission distance from the place where it is generated. In the sale of this surplus power, preference is given to States, counties, municipalities, and farm organizations, organized not for profit but for the purpose of obtaining cheap light and power for their members.

(6) Any power not thus disposed of or used by the Government in fertilizer operations shall be sold to private corporations for distribution to their customers. The bill contains a provision that in the sale of power to private corporations for distribution and sale to their customers, such sale shall be at a price to be deemed fair and just by the corporation.

(7) The new provision of the bill provides that for the proper use, conservation, and development of the natural resources of the Tennessee River drainage basin, the President is authorized within the limitations of appropriations made therefor by Congress to make such surveys and general plans for such Tennessee River drainage basin as may

be useful to the Congress and to the several States in guiding and controlling the extent, sequence, and nature of development that may be equitably and economically advanced through the expenditure of public funds or through the guidance and control of public authority. The President is authorized in making such surveys and plans to cooperate with the States affected thereby.

The object of this survey to be made by the President is for the general purpose of bringing about in said Tennessee River drainage basin, in conformity with said general purposes—

(1) The maximum amount of flood control.

(2) The maximum development of said Tennessee River for navigation purposes.

(3) The maximum generation of electric power consistent with flood control and navigation.

(4) The proper use of marginal lands.

(5) The proper method of reforestation of all lands in said drainage basin suitable for reforestation.

(6) The most practical method of improving agricultural conditions in the valleys of said drainage basin.

The President is also authorized to enter into contracts with any person or corporation for the purpose of obtaining title to any rights or property that may be necessary in carrying out the purposes of this bill, to contract with such owners for the payment of such rights by the delivery to such owners of power generated by the Government at any of its generating plants.

In general, the bill provides for a comprehensive method of development of the Tennessee Valley insofar as such development is of national concern in the proper use and control of the rivers and valleys of the entire Nation.

HOUSE REPORT NO. 48

73d Congress, 1st Session

(Committee on Military Affairs, April 20, 1933)

MUSCLE SHOALS

It was in the year 1824 that the Tennessee River navigation and Muscle Shoals question first made its appearance as a Federal problem. In that year President Monroe submitted to Congress the report of Secretary of War John C. Calhoun, recommending a survey of said river, looking to improve its navigation around the Muscle Shoals rapids, in aid of commerce and military operations. Alabama appropriated the proceeds of the sale of 40,000 acres of public lands that had been donated to that State by the Federal Government. From that day to this the subject has, from time to time, engaged the attention of the Nation. Finally, in the year 1916, the following provision was inserted in the National Defense Act, as section 124:

> SEC. 124. NITRATE SUPPLY.—The President of the United States is hereby authorized and empowered to make, or cause to be made, such investigation as in his judgment is necessary to determine the best, cheapest, and most available means for the production of nitrates and other products for munitions of war and useful in the manufacture of fertilizers and other useful products by water power or any other power as in his judgment is the best and cheapest to use; and is also hereby authorized and empowered to designate for the exclusive use of the United States, if in his judgment such means is best and cheapest, such site or sites, upon any navigable or nonnavigable river or rivers or upon the public lands, as in his opinion will be necessary for carrying out the purposes of this act; and is further authorized to construct, maintain, and operate, at or on any site or sites so designated, dams, locks, improvements to navigation, power houses, and other plants and equipment or other means than water power

as in his judgment is the best and cheapest, necessary or convenient for the generation of electrical or other power and for the production of nitrates or other products needed for munitions of war and useful in the manufacture of fertilizers and other useful products.

The President is authorized to lease, purchase, or acquire, by condemnation, gift, grant, or devise, such lands and rights of way as may be necessary for the construction and operation of such plants, and to take from any lands of the United States, or to purchase or acquire by condemnation, materials, minerals, and processes, patented or otherwise, necessary for the construction and operation of such plants and for the manufacture of such products.

The products of such plants shall be used by the President for military and naval purposes to the extent that he may deem necessary, and any surplus which he shall determine is not required shall be sold and disposed of by him under such regulations as he may prescribe.

The President is hereby authorized and empowered to employ such officers, agents, or agencies as may in his discretion be necessary to enable him to carry out the purposes herein specified, and to authorize and require such officers, agents, or agencies to perform any and all of the duties imposed upon him by the provisions hereof.

The sum of $20,000,000 is hereby appropriated, out of any moneys in the Treasury not otherwise appropriated, available until expended, to enable the President of the United States to carry out the purposes herein provided for.

The plant or plants provided for under this act shall be constructed and operated solely by the Government and not in conjunction with any other industry or enterprise carried on by private capital.

In order to raise the money appropriated by this act and necessary to carry its provisions into effect, the Secretary of the Treasury, upon the request of the President of the United States, may issue and sell, or use for such purpose or construction hereinabove authorized, any of the bonds of the United States now available in the Treasury of the United States under the act of August fifth, nineteen hundred and nine, the

act of February fourth, nineteen hundred and ten, and the act of March second, nineteen hundred and eleven, relating to the issue of bonds for the construction of the Panama Canal, to a total amount not to exceed $20,000,000: *Provided,* That any Panama Canal bonds issued and sold or used under the provisions of this section may be made payable at such time after issue as the Secretary of the Treasury, in his discretion, may deem advisable, and fix, instead of fifty years after date of issue, as in said act of August fifth, nineteen hundred and nine, not exceeding fifty years.

Under this power contained in section 124, President Wilson ordered construction to begin at Muscle Shoals by the erection of Dam No. 2, and its power house, and nitrate plants Nos. 1 and 2, for the fixation of atmospheric nitrogen, primarily for war purposes, and incidentally also for agricultural uses in time of peace.

SALVAGE VALUE OF WAR INVESTMENT

Unlike practically every other war project and war-time enterprise, this Muscle Shoals property has a great peace-time value for both agriculture and industry, in supplying both fertilizers and power, and also has a future value for national defense. In time of war our armies and fleets will use increasing quantities of nitrate explosives. Happily, the more we know about fixing nitrogen for agricultural purposes, the more rapidly we will be able to fix nitrogen for military purposes. The Muscle Shoals property is situated far inland, where it is unlikely, if not impossible, that enemy airplanes or airships may ever destroy it by bombing from the air. Plants situated within bombing distance of enemy airplane carriers are not dependable for war-time explosive supplies.

RECENT LEGISLATIVE HISTORY

Twice in recent years, once in 1928, and again in 1930, bills were passed by Congress and sent to the President for

his approval. Both those bills were very similar to the bill now reported favorably by your committee. And a large part of those bills was in the identical language of this bill. The bill passed in 1928 met a pocket veto by President Coolidge, and the bill passed in 1930 met a vigorous veto by President Hoover.

It is interesting to note some of the leading efforts to dispose of this long standing and much vexed question. The country is familiar with the efforts to lease by direct legislation to Henry Ford and to the American Cyanamid Co. Both of these efforts failed. But the country is not generally so familiar with the fact that on November 3, 1919, Senator Wadsworth, of New York, introduced a bill into the Senate, being S. 3390, which was reported favorably by the Committee on Agriculture. This bill proposed to organize a Government-owned corporation to operate the Muscle Shoals properties for the manufacture and sale of fertilizers in which the preference would be given to farmers.

On February 1, 1926, Senator Smith of South Carolina introduced into the Senate S. 2956, which provided for the creation of a Muscle Shoals Commission, and that this Commission should use the Muscle Shoals properties for the fixation of nitrogen to be sold for fertilizer purposes.

On April 19, 1926, Senator Deneen, of Illinois, introduced into the Senate a bill known as S. 4106, which sought to effectuate a lease of the Muscle Shoals properties to a corporation to be known as the Muscle Shoals Fertilizer Co. to manufacture fertilizer and to sell the same at cost plus 8 per cent.

On May 3, 1928, Representative Snell, of New York, introduced in the House, House Joint Resolution 2941, which proposed that the President, through the Secretary of War and the Chief of Engineers was authorized to contract for the sale of surplus power generated at Muscle Shoals, and to alter and repair nitrate plant no. 1 for the fixation of nitrogen and for the manufacture of fertilizers,

and to operate one unit of nitrogen plant no. 2 to determine whether or not fertilizers can be manufactured by that process at a cost favorably comparable with other processes, and to dispose of any fertilizer or fertilizers manufactured, and to enable the President to be in a position to consider all bids for the sale of power, the authority was expressly granted for the construction or lease of transmission lines in any direction from the dam and steam plant, either from appropriations made by the Congress or from funds from the sale of power.

In the Seventieth Congress Representative Morin of Pennsylvania, being chairman of the committee, introduced a bill which had been carefully prepared by a subcommittee appointed by him, and that bill set up a Government corporation for the sale of power and for the manufacture and sale of fertilizers. That bill was passed by the House of Representatives by striking out provisions requiring the manufacture of the complete fertilizer and limiting the activities of the Government corporation to nitrogenous plant food.

NATION-WIDE ASPECT OF PROBLEM

The increasing public interest in the Muscle Shoals situation has demonstrated how intimately it touches so many sides of life. But it is now manifest that the Muscle Shoals situation is only a factor and a part of the greater problems of conservation of natural resources, and of promoting navigation and flood relief. Obviously, the Muscle Shoals properties are only an integral part of the Tennessee Valley. In turn, the Tennessee Valley is merely typical of other regions in the Nation, whose treatment will ultimately be guided, either positively or negatively, by the lessons learned in the Tennessee Valley development program.

Accordingly, we are not surprised to find that President Roosevelt, in his language of April 10, 1933, in a message to Congress, vigorously expresses this central thought:

It is clear that the Muscle Shoals development is but a small part of the potential public usefulness of the entire Tennessee River. Such use, if envisioned in its entirety, transcends mere power development; it enters the wide fields of flood control, soil erosion, afforestation, elimination from agricultural use of marginal lands, and distribution and diversification of industry. In short, this power development of war days leads logically to national planning for a complete river watershed involving many States and the future lives and welfare of millions. It touches and gives life to all forms of human concerns.

In the minority views expressed by the maker of this report, in connection with the report by Representative Reece, of Tennessee, on S.J.Res. 49, in the second session of the Seventy-first Congress, this language was employed:

INDUSTRIAL RESULTS

But in the field of industry the results will surely be more marvelous and astonishing. The lessee will certainly find it advantageous to set up large establishments for the production of electrochemicals and ferro-alloys. In that section of the country are all the raw materials for the manufacture of chemicals and all steel products, at the same time numerous and valuable by-products will be manufactured. Furthermore, there are 11 valuable dam sites between the Cove Creek Dam and the Wilson Dam, and the construction of the Cove Creek Dam will double the power available at each one of these dam sites. Within the next generation perhaps all of the dams in that stretch of the river will be constructed and the power will be used not only at and near the dam, but will be sent in various directions to existing cities and towns and to new cities and towns within transmission distance.

Thus the 1,000,000 horsepower to be found along that 300-mile section of the Tennessee River from Cove Creek to Wilson Dam will become a great hive of industry. Perhaps millions of busy and industrious people will gather to use the electric energy there generated. New cities and towns will rise in places now unthought of. Many hundreds of millions of dollars

will be invested in new plants and in new enterprises, and proportionate profits will arise from these investments. From the day that earth is broken for the construction of the Cove Creek Dam, which will impound 3,000,000 acre-feet of water stretching over practically 60,000 acres, the largest artificial lake in the world, the eyes of the whole country will be turned upon that section and the footsteps of millions will be directed toward the Tennessee Valley. Agriculture in that section will thrive as never before, producing diversified crops and vegetables to feed the busy millions engaged in construction and in the conduct of industry. While such a picture dazzles the imagination, it is backed up by reason and human probability, and based upon the commanding influence of cheap power. Power is the secret of modern industry. Modern industry is the impelling force of modern civilization. In this Tennessee River Valley, so rich in the quantity and variety of mineral deposits, will spring up some of the greatest industrial activities of the world. With a magnificent climate, with a productive soil, with a strong and virile population to draw from in the surrounding States, with a people devoted to the ideals of our Republic and to the principles of our Constitution, resolved to maintain and preserve order and justice, that section presents a promise of future development and prosperity comparable to what has taken place in a commercial and financial way on Manhattan Island.

ECONOMIC AND INDUSTRIAL RESULTS

Let us take a glimpse into the future of what will probably be the result of wise and rational action by the leasing board. If the property is leased to a concern financially responsible which intends in good faith to carry out the purposes of the act, then I can envisage a marvelous development in the whole Tennessee River region and even in adjacent sections. The first and direct result will be the production of a cheap nitrogenous plant food which will demonstrate to the farmers and the business people of the United States, the actual cost of fixing nitrogen and of processing the same for use as fertilizer. Judging by numerous estimates made by experts, the reduction

will cut the present cost of nitrogen products from 25 to 40 percent. This should break the power of the Chilean nitrate trust which has extracted tribute from the world and especially from the farmers of the United States, merely because Chile has a monopoly upon mineral nitrate of soda. Two hundred and sixty-five million dollars has been paid into the public treasury of Chile as the export duty upon nitrate of soda exported to the United States alone. When to this is added the exports of nitrate of soda to other countries, especially prior to the World War, the total receipts by the Government of Chile for such export tax must amount to more than a billion dollars. Thus the people of Chile have shifted a large part of their tax burden upon the shoulders of the people of other nations, merely because they possess a natural monoply in an essential commodity vitally important in both peace and war.

In the next place, to ascertain the actual cost of producing such synthetic nitrogen for agricultural purposes will help to crush the world-wide Nitrogen Trust. At present the world price of nitrogen follows along and barely below the price of Chilean nitrate. Thus a monopoly on mineral nitrogen and a monopoly on synthetic nitrogen go hand in hand. If the United States Government can help break this trust team and set the farmers of this country free, it will be one of the greatest blessings that agriculture has ever received.

Commencing with 10,000 tons of pure nitrogen, in such form and combination as the leasing board may specify and as the lessee may subsequently decide to be most attractive to the farmer, the volume of fertilizers produced will increase and will probably increase very rapidly. With the advantages given to the protection of agricultural nitrogen, it is my belief that the lessee will find production profitable to himself, and therefore will be induced to increase the annual quantity. In order to dispose of such increased quantity, very naturally the lessee will resort to the reasonable and proper business method of combining nitrogen with phosphoric acid and perhaps with potash. Phosphate rock is found in great abundance in the Tennessee River Basin. This can be floated

down the river and subjected to electric-furnace methods at the time of the year when cheap secondary power is available, and thus phosphoric acid produced more cheaply than it is being produced today by the wet process. Then probably the potash shales in that section of the country can be economically treated so as to extract the potash for agricultural purposes and leave valuable by-products of high commercial value.

FERTILIZER POSSIBILITIES

Much confusion has been created by hostile interests concerning the fertilizer question at Muscle Shoals. In that connection I quote a part of the minority views of Representative Harry E. Hull, Representative John N. Morin, Representative Harry C. Ransley, Representative John Philip Hill, Representative Louis A. Frothingham, and Representative J. Mayhew Wainwright, in the first session of the Sixty-eighth Congress:

> The result is that it is now known that by taking advantage of modern scientific accomplishments and adding the benefit of hydroelectric power, it is possible to make atmospheric nitrogen available for the use of agriculture at low costs.
>
> The production of phosphoric acid, another essential food plant, has also been the object of scientific research and development. Further advances are reasonably to be expected, but it is known that by using the modern methods of nitrogen fixation and combining the product with phosphoric acid produced by methods known to be commercially available, a fertilizer product of high fertilizing value can be made where hydroelectric power at low cost is available and sold to the farmers of the country at a substantial reduction below the price they now pay for equivalent plant food. Thus it has become certain that fertilizer production can be carried on at Muscle Shoals with profit, at the same time substantially reducing the cost of fertilizer to the farmer.

In the same connection, the same gentlemen, with reference to the possibility of selling power in the South, used the following language:

USE OF POWER IN THE SOUTH

A large amount of evidence was brought before the committee to show the widespread demand in the South for hydroelectric power and the concern which is felt in that section lest the Muscle Shoals power be entirely withdrawn from public service.

Taking the Ford obligation at its full value, to make 40,000 tons of fixed nitrogen per annum this requires less than 100,000 horsepower, yet his offer requires the Government to build power plants which, with the steam plants, will give him over 850,000 horsepower, or 750,000 horsepower more than is necessary to carry out his fertilizer obligation. It is this power which the public in many sections of the Southeastern States are demanding shall be distributed for general use.

Due to the electric transmission lines which are connected in the Southeastern States, it is now possible, according to the testimony, for the Muscle Shoals power to reach the public at points over 600 miles from Muscle Shoals.

VIEWS OF JOHN C. M'KENZIE

In the first session of the Sixty-eighth Congress, on February 2, 1924, Representative John C. McKenzie, on behalf of the Committee on Military Affairs, reported for the committee a bill recommending the acceptance of the Ford offer, and at the conclusion of his report used the following language:

FOUR FIELDS OF USEFULNESS AT MUSCLE SHOALS

The majority of the committee recognized that there are four distinct fields of usefulness in which valuable service can be had at Muscle Shoals: First, nitrate manufacture for national defense; second,

fertilizer production; third, power development; fourth, navigation improvement.

The first two are closely associated, and the plant that is most valuable for production of explosives in time of war is most efficient as a source of nitrates for fertilizer in time of peace. It is also true that under such a plan as Mr. Ford has proposed there is a close relation between the power development and the navigation improvement. Under this proposal the power not only returns a fair rate of interest on the cost of its development but it returns interest to the Government on its navigation improvement and provides a sinking fund which refunds to the Government its entire navigation investment. Merely by the use of its credit the Government can secure 150 miles of slack-water navigation on the Tennessee River and its tributaries without any appropriation whatever.

When it is realized that we have expended nearly $20,000,000 on the improvement for navigation of the Tennessee River and its tributaries, outside of the present Muscle Shoals development, and practically one and a quarter billions of dollars on national river and harbor improvement as a whole, without the prospect or expectation of receiving any interest whatever on this huge outlay, or the return of any part of the principal, it is evident that here is a policy that is not merely of local interest at Muscle Shoals but that offers promise of Nation-wide benefits if adopted generally in the improvement of our navigable streams where power development is practicable.

FERTILIZERS IN PRESENT BILL

Broad powers are given to the Authority, either to operate the present plants, or to lease them, for the production of nitrogen and/or other fertilizer ingredients for agricultural uses. Specific and definite limitations are imposed as to the initial quantity to be produced and as to the gradual increase of the amount of production, according to market demands. All power necessary for ultimate capacity production of fertilizer and/or fertilizer ingredients is reserved.

FERTILIZER EXPERIMENTS

This feature of the bill is of very great importance. It contemplates extensive experiments in laboratories, and, in fact, the use of the entire nitrate plants as a huge laboratory, and also actual field demonstrations in the use of fertilizers of varying degrees of concentration and of varying proportions of constituents.

NATIONAL DEFENSE

Intimately interlocked with the production in peace of nitrogenous fertilizers is preparedness for national defense in time of war. But whether large-scale production of fertilizers is carried on at Muscle Shoals, we are assured that nitrate plant no. 2 will be maintained in stand-by condition for the manufacture of explosives, until Congress shall have by joint resolution released the Authority from that obligation. These sites should never be sold without express approval of Congress.

POWER FEATURES

The bill provides that all electric power not used in the navigation projects, and in the production of fertilizers, and in the conducting of fertilizer experiments, shall be sold, and in such sale preference shall be given to States, counties, municipalities, and nonprofit cooperative associations. Thirty-year contracts for power are permitted to States, counties, municipalities, and cooperative associations building their own transmission lines. But such contracts must stipulate that the power shall be sold and distributed without discrimination among customers of the same class. Private power companies employed in distribution and resale of electricity for profit must agree that the price at which they will sell power to the ultimate consumer will not exceed a figure found to be just, fair, and reasonable by the Federal Power Commission. The bills

which previously passed Congress contained a provision that contracts for the sale of power to private power-distributing companies might be canceled on 2 years' notice, if the power were demanded by the Authority, either for its own uses or for sale to States, counties, municipalities, and cooperative associations. The bill now reported has extended the time of notice to 5 years, and surely that is exceedingly fair to the power companies. That will give them ample time in which to construct power generating plants or to curtail their activities. Representatives of the power interests were urged to specify what length of time they thought would be fair and reasonable. Having declined to do this, the committee feels quite confident that 5 years is entirely generous to, and considerate of, the power companies.

TRANSMISSION LINES

Here has been the battle ground for all these long, laborious years. Surely the bill now recommended to the House is exceedingly just and liberal in this respect. In order to obviate the duplication of transmission lines, and thus prevent the waste or depreciation of invested capital, the board is authorized to negotiate with a private power company having a transmission line needed by the Authority, to enable it to serve the public, and to buy such transmission line at a fair and reasonable price. If negotiations fail, the Authority may acquire such transmission line by condemnation. But, of course, the full fair value of same will be paid. Thus, no new transmission line will probably be built, except where none now exists. The fear that much money might be wasted in duplicating existing transmission facilities has long been the cause of much opposition to the thought of transmission lines. Surely all ground for fear on this score has been removed. It is our hope and belief, from expressions uttered by the representatives of the power interests, that there will be cooperation in these respects, as in other respects, between the Authority and

the power interests in serving the public and in promoting the industrial, the agricultural, and the economic development in that region of the Nation.

COVE CREEK DAM

Everybody now agrees that the Cove Creek Dam should be built by the Government, and this includes even the representatives of the power companies themselves. It is indispensable to the final development of flood control, navigation, and power in the Tennessee Valley. This work should begin at once. Appropriations should be made so that the land may be acquired promptly, and the work of cleaning out the basin, of relocating roads and bridges and other structures, and of constructing the dam and the power house, should proceed promptly, and employ a great army of workers. Thus, the ranks of the unemployed will be thinned. Thus, the purchasing power of the people will be increased. Thus, the return of normal prosperity will be assisted.

CONDEMNATION PROCEEDINGS

Happily, we hear reports that the people of Tennessee, and especially of the Tennessee Valley part of that State, are organizing to insure cooperation with the Federal Government in its great program of development. However, we feel it necessary to provide special proceedings to govern condemnation of lands and other property rights, in order that there may be prompt taking of lands and at fair and reasonable prices. Aware of how selfish human nature sometimes asserts itself, we have sought to protect the Government against abuses and at the same time we have scrupulously guarded the rights of property owners by giving them jury trial on questions of fact and preserving the right of appeal on questions of law. Surely these provisions, certainly as to the purpose here sought to be accomplished, will meet with the approval of all.

OTHER DAMS ON BUSINESS BASIS

Cove Creek Dam and Dam No. 3 will be built as promptly as possible after the passage of this act. But after the construction of Cove Creek Dam and Dam No. 3, no other dam will be constructed unless there is a reasonable market demand for so much of the power as will yield a reasonable return on that part of the investment representing the cost of power production. This puts future power development upon a business basis.

In like manner, the Authority may enter into a contract with any responsible person, firm, or corporation, to lease a dam, or dams, upon self-liquidating terms to be approved by the President, insuring interest on the bonds and final amortization of the capital, and in such event the Authority may proceed to build any such dam. Surely these safety clauses should satisfy most of the objections to the general authorization for construction of future dams on the Tennessee River and its tributaries. The Authority cannot proceed upon a visionary and impractical program of construction. In addition to the limitations of law, there will be limitations of fact. The $50,000,000 to be derived from the sale of bonds, will hardly go farther than build Cove Creek Dam, and Dam No. 3, and make the necessary alterations, to modernize the nitrate plants, to install the necessary fertilizer equipment and to provide adequate working capital. For every other dollar that the Authority may use for constructing dams, it must come to the Congress for appropriations. Thus, Congress holds the reins upon the Authority. It is true that the Authority will have the revenues from the sale of power, but after the required interest and amortization payments have been made by the Authority, and after the running expenses are paid, it is not likely that there will be any funds sufficient to build any dam. There may be sufficient funds to lease, or to buy, or to construct necessary transmission lines. But any sum of money sufficient to build a dam would have to come from Congress by appropriation.

BOND ISSUE AUTHORIZED

For this reason, the bond issue is limited to $50,000,000. These bonds will be obligations of the United States, but to relieve them of being a direct charge upon the annual receipts of the Government, the interest on the bonds is made a lien upon the net proceeds of the sale of power, and from these net proceeds the Authority must pay the interest. If there be not sufficient net proceeds, undoubtedly Congress would be called upon through the Budget to appropriate sufficient money to pay the deficit.

USE OF PATENT RIGHTS

Much hysterical opposition has been expressed for several years to this feature of the bill. It is recklessly charged that it authorizes the confiscation and invasion of private property rights. Such argument entirely overlooks the fundamental principles involved. The monopoly of a patent right is a special privilege conferred by the Government. The inventor has no such monopoly by the law of nature, nor by the common law, but the Constitution of the United States authorizes the Congress to encourage inventions and discoveries by giving, for a limited period, a monopoly to the inventor or discoverer. But it has always been held by the Congress and the courts that the sovereign which confers to one citizen such exclusive right, as against all other citizens, itself has certain rights in the monopoly privilege. It would be a strange situation for a government to confer such right of monopoly, and then, in the hour of the government's necessity, find itself held at bay by the monopolist. This reservation of right to the Government is analogous to the right of eminent domain. It is inherent in sovereignty itself.

Therefore, it is not surprising that we find the general law of the United States expressed in the United States Code, in title 35, section 68, that the United States can use

any invention for which a patent has been issued, and that the sole and exclusive remedy for any claim of damages by the owner of the patent shall be a suit in the United States Court of Claims. But no such right to bring such suit belongs to a person who made the invention while in the employ of the United States. This law was enacted June 25, 1910, and the section of the pending bill is merely a declaration that the Authority is the agent of the United States in carrying out its constitutional powers.

NO SPOILS SYSTEM POSSIBLE

To relieve the board of the importunities of friends and relatives seeking jobs with the Authority, the board shall select only its limited clerical staff, and all other officers, agents, and employees will be selected by the general manager. The general manager will undoubtedly be a man of wide experience and of strong character. He is directed to set up merit and efficiency standards and systems. All employees will have the benefits of the United States Civil Service Employees' Compensation Act.

In like manner all agents, employees, and laborers will be entitled to have the Secretary of Labor settle any dispute arising concerning wages. The prevailing rate of wages, as it is defined in the act, will be the measure of wages paid. This same principle will apply to employees and laborers working for contractors upon projects under contracts with the Authority. But as further guaranty against the employment of unfit and incompetent persons it is provided that no political tests shall ever be applied by any member of the board in connection with the employment of any person nor by the manager nor anybody acting for him. Any person violating this provision will be summarily discharged.

AID FROM OTHER FEDERAL DEPARTMENTS

The President is authorized to detail any officer or agent of the United States to assist the Authority in carry-

ing on its program of development. Thus, we can envision a very considerable employment of the Corps of Engineers of the United States Army, and of the experts from the Bureau of Chemistry and Soils in the Department of Agriculture. Also, in the final reforestation and soil-erosion plans of the Authority, representatives of the Department of the Interior will surely be detailed to help. Possibly other departments of the Government will be drafted from time to time to assist in this work.

PLANNING FOR FUTURE DEVELOPMENT

The board of three members should not only be sound and experienced men of affairs, they should not only be soundly educated and widely traveled and well-read men, but they should be men of constructive vision, to seek to fit the future into the form of the present. Therefore, the board is charged with the duty of constantly studying the whole situation presented by the Tennessee River Valley, and the adjoining territory, with the view of encouraging and guiding in the orderly and balanced development of the diverse and rich resources of that section. It is a great responsibility imposed upon the members of the board. But it is a great opportunity that will come to those chosen for this great service. For such position of trust and responsibility, undoubtedly the President will search the Nation over for the right men to whom to entrust not only this vast investment of money but this great responsibility, not only to the people of that section of the country but to the people of the whole Nation. If, through the incapacity or the indifference of the members of the board, this great humanitarian project should fail, then progress along this line in other parts of the country will be set back for two or three generations.

With such a responsibility upon the President in choosing the right men, and with such a responsibility resting upon the consciences of the men thus chosen, we cannot believe that there will be failure. When the race advances,

it must do so along the road of faith in ourselves and our fellows. The members of the board are given the term of 9 years, so there may be consistency and continuity in the policies of the Authority.

CONSERVATION POLICIES

The policy of this bill for the development of the Tennessee Valley is no new policy in American politics. For more than 20 years the conservation of our natural resources and their preservation for the use and benefit of all the people to whom they belong, both by the law of the land and the law of nature, has been a burning issue in this Nation. Beginning with the year 1912, the Democratic Party, by its platform, proclaimed:

CONSERVATION

> We believe in the conservation and the development, for the use of all the people, of the natural resources of the country. Our forests, our sources of water supply, our arable and our mineral lands, our navigable streams, and all the other material resources with which our country has been so lavishly endowed, constitute the foundation of our national wealth. Such additional legislation as may be necessary to prevent their being wasted or absorbed by special or privileged interests should be enacted and the policy of their conservation should be rigidly adhered to.

In 1912 the Progressive Party, headed by Theodore Roosevelt, by its platform proclaimed its solemn determination that these natural sources of wealth, belonging to all the people, should be held in public hands and utilized for the general welfare:

CONSERVATION

> The natural resources of the Nation must be promptly developed and generally used to support the people's needs, but we cannot safely allow them to be

wasted, exploited, monopolized or controlled against the general good. * * *

We believe that the remaining forests, coal and oil lands, water-power sites, and other natural resources, still in State or National control (except agricultural lands) are more likely to be wisely conserved and utilized for the general welfare if held in the public hands.

In the year 1916 the Democratic Party reiterated its position with renewed emphasis:

CONSERVATION

For the safeguarding and quickening of the life of our own people, we favor the conservation and development of the natural resources of the country through a policy which shall be positive rather than negative, a policy which shall not withhold such resources from development but which, while permitting and encouraging their use, shall prevent both waste and monopoly in their exploitation, and we earnestly favor the passage of acts which will accomplish these objects, reaffirming the declaration of the platform of 1912 on this subject.

That same year the Republican Party, following, rather timidly, in the wake of the Progressive Party, now reunited with the mot er party, proclaimed its attitude in the following words:

CONSERVATION

We believe in a careful husbandry of all the natural resources of the Nation—a husbandry which means development without waste; use without abuse.

In 1920 post-war problems, with all their dislocating consequences, seemed to have crowded out of the Democratic Party any expression upon this subject. But the Republican Party in that year, 1920, took stronger ground on the question in the following language:

CONSERVATION

Conservation is a Republican policy. It began with the passage of the reclamation act signed by President Roosevelt. The recent passage of the coal, oil, and phosphate leasing act by a Republican Congress and the enactment of the water-power bill, fashioned in accordance with the same principle, are consistent landmarks in the development of the conservation of our national resources. We denounce the refusal of the President to sign the water-power bill passed after 10 years of controversy.

But in 1924 the Democratic Party returned to the subject with specific and definite commitments, as follows:

MUSCLE SHOALS AND FERTILIZERS

We reaffirm and pledge the fulfillment of the policy, with reference to Muscle Shoals, as declared and passed by the Democratic majority of the Sixty-fourth Congress in the National Defense Act of 1916, "for the production of nitrates or other products needed for munitions of war and useful in the manufacture of fertilizers."

We hold that the production of cheaper and higher-grade fertilizers is essential to agricultural prosperity. We demand prompt action by Congress for the operation of the Muscle Shoals plants to maximum capacity in the production, distribution, and sale of commercial fertilizers to the farmers of the country, and we oppose any legislation that limits the production of fertilizers at Muscle Shoals by limiting the amount of power to be used in their manufacture.

Again the Democratic Party in 1924 pledged itself to the retention by the public of the title to the Nation's water power:

CONSERVATION

We believe that the Nation should retain title to its water power and we favor the expeditious creation and development of our water power.

In 1924 the Republican Party took still stronger ground in declaring that such natural wealth as water power belonged to all the people, and is an inheritance to be transmitted to future generations, and employed the following language:

CONSERVATION

> The natural resources of the country belong to all the people and are a part of an estate belonging to generations yet unborn. The Government policy should be to safeguard, develop, and utilize these possessions. The conservation policy of the Nation originated with the Republican Party under the inspiration of Theodore Roosevelt. We hold it a privilege of the Republican Party to build as a memorial to him on the foundation which he laid.

In 1928 the Democratic Party reiterated in still stronger language its conviction that all the people should benefit from our natural resources, and stated its position as follows:

WATER POWER, WATERWAYS, AND FLOOD CONTROL

> The Federal Government and State governments, respectively, now have absolute and exclusive sovereignty and control over enormous water powers, which constitute one of the greatest assets of the Nation. This sovereign title and control must be preserved, respectively, in the State and Federal Governments to the end that the people may be protected against exploitation of this great resource and that water powers may be expeditiously developed under such regulations as will insure to the people reasonable rates and equitable distribution.

In 1928 the Republican Party asserted its priority to the claim of leadership in the development of our public water powers for the public benefit, and employed the following language:

CONSERVATION

The Republican Party has been forehanded in assuring the development of water power in accordance with public interest. A policy of permanent public retention of the power sites on public land and power privileges in domestic and international navigable streams and one third of the potential water-power resources in the United States on public domain has been assured by the Federal Water Power Act, passed by a Republican Congress.

In 1932 the Democratic Party spoke briefly but emphatically on all questions, and pledged the present administration to the development of natural resources in the common interest by using the following language:

The conservation, development, and use of the Nation's water power in the public interest:

The removal of Government from all fields of private enterprise except where necessary to develop public works and natural resources of the common interest.

In 1932 the Republican Party declared that all our natural resources should be set free from monopoly control, and again praised the splendid leadership in this field of Theodore Roosevelt. It employed the following language:

CONSERVATION

The wise use of all natural resources freed from monopolistic control is a Republican policy initiated by Theodore Roosevelt. The Roosevelt, Coolidge, and Hoover reclamation projects bear witness to the continuation of that policy. Forestry and all other conservation activities have been supported and enlarged.

When both great political parties, through a period of 20 years, have spoken so unequivocally and emphatically upon a great public question, it leaves no doubt as to where the sentiment of the masses of the people is upon this

question. These repeated utterances were not intended to be mere soothing sounds. The American public had a right, and still has a right, to believe that both these great political parties were sincere in their pledges. Now is the time for the representatives of both these organized bodies of citizens, called political parties, to begin in a definite and efficient way the accomplishment of the aims so long promised to the people. It so happens that this preservation of nature's rich gifts to all the people must begin somewhere. Under the peculiar situation confronting us for about 15 years with reference to a great war project placed at Muscle Shoals, this Nation-wide program must commence in the Tennessee River Valley with the Muscle Shoals properties as a nucleus. The Tennessee River as a great interstate highway, and fortunately the project now contemplated serves the fourfold causes of national defense, flood control, navigation, and power conservation.

When this Tennessee Valley development shall have progressed sufficiently for us to learn great lessons as to how best to serve the public, then development will follow in other great interstate and international water courses. Undoubtedly, there are several great areas in all sections of the country that will ultimately be developed by the application of the same principles and policies. It is the simple, fundamental American, Jeffersonian, Rooseveltian proposition of preserving and using for all the people those great sources of wealth conferred by the prolific hand of God upon the masses of the people who settled in this new continent, cleared its fields, opened its mines, navigated its rivers, built its cities, highways, and railroads, established its independence by their sacrifices and sufferings, have maintained its independence in war, and defended its honor at home and abroad, at the peril of their lives. In fact, millions have suffered in war, and many more millions have sacrificed and struggled in peace, throughout our 150 years, to bring this Nation where it is. Something is due these voiceless millions, and more is due to the unborn millions.

By this measure for the development of the Tennessee Valley, we, the representatives of the dead, of the living, and of the unborn, are fulfilling our pledges to them all, and seeking to make real the fundamental principle of popular government, that of the greatest good to the greatest number.

If the views expressed so often for 20 years by both great political parties, representing fully 95 percent of our whole population be socialistic, then we must suffer the stigma, because we cannot escape from our platform pledges. Why be frightened by adjectives? Increasing cooperation marks the progress of civilization.

MINORITY VIEWS.

The undersigned members of the Committee on Military Affairs of the House of Representatives are unable to approve of H. R. 5081, entitled "A bill to provide for the common defense; to aid interstate commerce by navigation; to provide flood control; to promote the general welfare by creating the Tennessee Valley Authority; to operate the Muscle Shoals properties, and to encourage agricultural, industrial, and economic development", in the form in which it is presented to the House because, in our opinion, it fails adequately to carry out the purposes of section 124 of the National Defense Act under whose provisions the Wilson Dam and the nitrate plants at Muscle Shoals were constructed, because it compels the Government to engage in the production and sale of power and fertilizer in competition with its citizens, and because it commits the United States to a program so vastly sweeping, yet so vague in its extent, that it threatens dangerously to increase the bonded indebtedness of the Nation to a point of impairing its credit.

The section of the National Defense Act cited reads, in part, as follows:—

> The President of the United States is hereby authorized and empowered to make, or cause to be made, such investigation as in his judgment is necessary to determine the best, cheapest, and most available means

for the production of nitrates and other products for munitions of war and useful in the manufacture of fertilizers and other useful products.

For this reason all legislation relating to Muscle Shoals has always been referred to the Committee on Military Affairs of the House. In the amended Hill bill, H. R. 5081, we are able to discover very little provision for national defense, and in a similar bill before the Senate there is none whatever. The only direct mention of this in the present Hill bill appears in subsection h of section 5, to wit:

> It shall be the duty of the board to maintain in stand-by condition nitrate plant numbered 2, or its equivalent, for the fixation of atmospheric nitrogen, for the production of explosives in the event of war or a national emergency, until Congress shall by joint resolution release the board from this obligation.

It is our view that this grants inadequate attention to the primary purposes of the Muscle Shoals development and that the bill as a whole vitiates the original intentions of the National Defense Act.

If fertilizer is manufactured in commercial quantities it would interfere with the business of more than 800 companies employing thousands of men and which have, according to the testimony of a representative of the National Fertilizer Association, encountered a loss of business since 1921 estimated at more than $300,000,000, owing to overproduction and lowering of prices. According to a report authorized by resolution of the Seventy-second Congress, the United States Government is at present in competition with private enterprise in 41 lines of activity. We believe that this tendency must be checked in the interest of business recovery.

We are opposed to Government operation of Muscle Shoals for the production of power for retail sale. At the present time 30 percent of the generating capacity of privately owned plants serving the States within transmis-

sion distance of Muscle Shoals is finding no market. This 30 percent amounts to a surplus capacity of approximately 400,000 horsepower. Yet the bill provides for the construction of Cove Creek Dam, Dam No. 2, and steam plant no. 2 which, when completed, would generate an additional 400,000 horsepower, making a total surplus in the vicinity of 800,000 horsepower.

The undersigned cannot visualize a market for this great additional power, particularly when one considers the financial condition of the country at this time.

Section 13 of the bill authorizes the board, with the approval of the President, to construct, lease, or authorize the construction of transmission lines within transmission distance not to exceed 400 miles from the place where generated if transmission lines are found economically justified and necessary under the provisions of the act.

If this provision is carried out, it might parallel existing transmission lines to the ultimate destruction of existing companies, with a consequent loss of bona fide investments in the amount of approximately $400,000,000, a great part of which is held by consumer customers and other citizens of the six Southern States. The Government would be seizing a market now their valuable property, and now served, according to competent testimony, adequately and at reasonable rates.

While the Hill bill, in section 24, provides that the board, acting for the Authority, is authorized and empowered to issue and sell bonds not exceeding $50,000,000 in amount, there is a similar bill now before the Senate which provides, in section 15, as follows:

> In the construction of any future dam, steam plant, or other facility, to be used in whole or in part for the generation of hydroelectric power, the board, if directed so to do by the President of the United States, shall issue its bonds for the payment in part or in full of that part of said development that is allocated to the production of hydroelectric power.

Under section 22 of the amended Hill bill, H. R. 5081, the President for 1 year from the date of the enactment of this act is authorized and empowered to enter into negotiations and to conclude agreements with any person, firm, or corporation for the exchange of electric energy generated and to be generated by the Authority in consideration of the conveyance by any such person, firm, or corporation of any property or property rights on which the Authority may construct a plant or plants for the production of electric energy, upon such terms, conditions, and limitations as the President shall deem "meet and proper".

There was no evidence introduced before the committee, either in public hearing or executive session, as to what is contemplated by this section.

Section 29 provides that all appropriations necessary to carry out the provisions of this act are hereby authorized. This project has been conservatively estimated as considerably in excess of $1,000,000,000.

It is the opinion of the minority that any additional appropriations needed will be obtained through the issuance of bonds rather than coming back to Congress for such additional appropriations. Thus while sacrifices are being made to balance the Budget, the public debt may be increased to an unlimited and potentially disastrous extent.

Section 27 provides, among other things, that it is "to aid further the proper use, conservation, and development of the natural resources of the Tennessee River Drainage Basin and of such adjoining territory as may be related to or materially affected by the developments consequent to this act".

There was no testimony given before the committee, either at public hearings or in executive session, as to what is contemplated by this language.

The same section further reads:

> To provide for the general welfare of the citizens of said areas.

There was no testimony given before the committee, either at public hearings or in executive session, as to what is contemplated by this language.

The same section also provides:

> The President is hereby authorized by such means or methods as he may deem proper within the limits of appropriations made therefor by Congress, to make such surveys of and general plans for said Tennessee River Basin and adjoining territory as may be useful to the Congress and to the several States in guiding and controlling the extent, sequence, and nature of development that may be equitably and economically advanced through the expenditure of public funds.

There was no testimony given before the committee, either at public hearings or in executive session, as to what is contemplated by this language, especially as to what extent it might involve Government funds.

The same section went further and states this is—

> All for the general purpose of fostering an orderly and proper physical, economic, and social development of said areas.

There was no testimony given before the committee, either at public hearings or in executive session, as to what is contemplated by this language.

The same section gives the President—

> In making said surveys and plans to cooperate with the States affected thereby.

No testimony was offered before the committee, either at public hearings or in executive session, as to what is contemplated by this language.

Section 28 of the amended Hill bill states:

> The President shall, from time to time, as the work provided for in this act progresses, recommend to Congress such legislation as he deems proper to carry

out the general purposes stated in said section and for the especial purpose of bringing about in said Tennessee Drainage Basin and adjoining territory in conformity with said general purposes (1) the maximum amount of flood control and for navigation purposes.

Which in the opinion of the minority is the limit of governmental jurisdiction.

Yet, section 28 also provides for the maximum generation of electric power consistent with flood control and navigation and for such items as the following:

(1) The proper use of marginal lands.

There was no testimony offered before the committee, either in public hearings or in executive session, to show what is contemplated by this language:

(2) The proper method for reforestation of all lands in said drainage basin suitable for reforestation.

There was no testimony offered before the committee, either in public hearings or executive session, to show what is contemplated by this language:

(3) The most practical method of improving agricultural conditions in the valleys of said drainage basin.

There was no testimony offered before the committee, either in public hearings or in executive session, to show what is contemplated by this language:

(4) The economic and social well-being of the people living in said river basin and all adjacent territory.

There was no testimony offered before the committee, either in public hearing or executive session, to show what is contemplated by this language.

Flood control and navigation are matters which naturally come under the direction of the Army engineers and

at no time during the hearings on this bill were any of the Army engineers called before the committee to testify on any of these matters. Neither were there any communications from the Secretary of War, or anyone connected with the Department of War, sent to the committee on this subject.

We feel that if the President has a definite program with reference to items numbered 1, 2, 3, and 4, above, the committee should have had the benefit of the experience and knowledge of the heads of the various departments affected or members of their respective staffs.

It will be seen that the bill effectually conceals its real purposes and aims and commits the country to the expenditure of vast sums of money, the amount of which can only be imagined, and, at a time when agriculture and industry are prostrate and our citizens staggering under the burden of governmental debts, even though this gigantic project will probably be financed by the sale of Government bonds —thereby adding to our large national debt.

SECTION C

EXCERPTS FROM PERTINENT APPROPRIATION ACTS AND COMMITTEE REPORTS

The following pages contain copies of those parts of the annual appropriation acts which deal with the Tennessee Valley Authority.

In addition, whenever parts of the reports of the Appropriation Committees of the House or Senate or of the conference reports on the appropriation measures have discussed the provisions for the Tennessee Valley Authority, copies of those parts have been set out immediately following the particular appropriation law to which they relate.

ACT OF JUNE 16, 1933

FOURTH DEFICIENCY ACT, FISCAL YEAR 1933 (H.R. 6034), PUBLIC, No. 77, 73d CONGRESS, 1st SESSION (48 STAT. 274):

NATIONAL INDUSTRIAL RECOVERY AND TENNESSEE VALLEY AUTHORITY

For the purpose of carrying into effect the provisions of the Act entitled "An Act to encourage national industrial recovery, to foster fair competition, and to provide for the construction of certain useful public works, and for other purposes", approved June 16, 1933, and also for the purpose of carrying into effect the provisions of the Act entitled "An Act for the relief of unemployment through the performance of useful public work, and for other purposes", approved March 31, 1933, and for each and every object thereof, to be expended in the discretion and under the direction of the President, to be immediately available, and except as hereinafter provided to remain available until June 30, 1935, $3,300,000,000; of which not to exceed $50,000,000 shall be available to the board of directors of the Tennessee Valley Authority, and to

remain available until expended, for the purpose of carrying out the provisions of the Act of Congress entitled "The Tennessee Valley Authority Act of 1933", approved May 18, 1933, including the acquisition of necessary land, the clearing of such land, relocation of highways, and the construction and/or purchase of transmission lines and other facilities, the construction of the Cove Creek Dam and powerhouse and all other necessary works authorized by said Act, and for printing and binding, law books, books of reference, newspapers, periodicals, purchase, maintenance and operation of passenger-carrying vehicles, rents in the District of Columbia and elsewhere and all necessary salaries and expenses connected with the organization, operation, and investigations of the Tennessee Valley Authority, including reimbursements for any expenses prior to the enactment of this appropriation incurred at the direction of the President [48 Stat. at 275].

ACT OF JUNE 19, 1934

EMERGENCY APPROPRIATION ACT, FISCAL YEAR 1935 (H.R. 9830), PUBLIC, No. 412, 73d CONGRESS, 2d SESSION (48 STAT. 1021):

EXECUTIVE

For an additional amount for carrying out the purposes of the Act entitled "An Act for the relief of unemployment through the performance of useful public work, and for other purposes", approved March 31, 1933 (48 Stat. 22); the Federal Emergency Relief Act of 1933, approved May 12, 1933 (48 Stat. 55); the Tennessee Valley Authority Act of 1933, approved May 18, 1933 (48 Stat. 58); and the National Industrial Recovery Act, approved June 16, 1933 (48 Stat. 195); and including $325,000 for an addition to the Executive Office Building and for the furnishings and equipment thereof; $899,675,000, to be allocated by the President for further carrying out the purposes of the aforesaid Acts and to remain available until June 30, 1935: *Provided,* That not exceeding $500,000,000 in the aggregate of any savings or unobligated balances in funds of the Reconstruction Finance Corporation may, in the discretion of the President, be transferred and applied to the purposes of the Federal Emergency Relief Act of 1933 and/or title II of the National Industrial Recovery Act, and any unobligated balances in appropriations (including allocations of appropriations) of the Federal Emergency Administration of Public Works may, in the discretion of the President, be transferred and applied to the purposes of such Federal Emergency Relief Act of 1933: *Provided further,* That the amounts to be made available under the authority of this paragraph for public works under the National Industrial Recovery Act shall not exceed in the aggregate $500,000,000 [48 Stat. at 1055-1056].

ACT OF AUGUST 12, 1935

SECOND DEFICIENCY APPROPRIATION ACT, FISCAL YEAR 1935 (H.R. 8554), PUBLIC, No. 260, 74th CONGRESS, 1st SESSION (49 STAT. 571):

TENNESSEE VALLEY AUTHORITY

For the purpose of carrying out the provisions of the Act entitled "The Tennessee Valley Authority Act of 1933", approved May 18, 1933 (48 Stat. 58), including the continued construction of Norris Dam, Wheeler Dam, Pickwick Landing Dam, and the beginning of construction on a dam at or near Guntersville, Alabama, and a dam at or near Chickamauga Creek, both on the Tennessee River, and a dam on the Hiwassee River, a tributary of the Tennessee River, at or near Fowlers Bend, and the continuation of preliminary investigations as to the location and desirability of a dam at or near Aurora Landing and a dam at or near Whites Creek, and the acquisition of necessary land, the clearing of such land, relocation of highways, and the construction or purchase of transmission lines and other facilities, and all other necessary works authorized by said Act, and for printing and binding, law books, books of reference, newspapers, periodicals, purchase, maintenance, and operation of passenger-carrying vehicles, rents in the District of Columbia and elsewhere, and all necessary salaries and expenses connected with the organization, operation, and investigations of the Tennessee Valley Authority, $36,000,000: *Provided*, That this appropriation and all appropriations, allotments, and other funds made available heretofore to the Tennessee Valley Authority, including any unexpended balances remaining from the appropriation of $50,000,000 made to the Tennessee Valley Authority by the Fourth Deficiency Act, fiscal year 1933, the allocation of $25,000,000 made to the Tennessee Valley Authority under the Emergency Appropriation Act, fiscal year 1935, and the receipts of the Tennessee Valley Authority from all sources, except as limited by section 26 of the Tennessee Valley Authority Act approved May 18, 1933 (48 Stat. 58), shall be covered into and accounted for as

one fund to be known as the "Tennessee Valley Authority Fund" and shall remain available until June 30, 1936: *Provided further,* That not to exceed $1,000,000 shall be expended on the dam on the Hiwassee River [49 Stat. at 596-597].

Report (No. 1261) of Committee on Appropriations, House of Representatives, 74th Congress, 1st Session, June 19, 1935, on H.R. 8554, Second Deficiency Appropriation Bill, fiscal year 1935:

"*Tennessee Valley Authority.*—The amount recommended for the Tennessee Valley Authority is $34,675,192, which is $15,324,808 less than the $50,000,000 allocation under the $300,000,000 general item. In connection with this reduction it is fair to state that the T. V. A. when appearing before the committee suggested a reduction in their estimate from $50,000,000 to $42,305,192 and this latter sum was the subject of the committee's consideration in making the appropriation. From this latter amount the committee has made a further reduction of $7,630,000. The estimate of $50,000,000 also contemplated the use of an anticipated unobligated balance on June 30, 1935, of $10,624,338.

"The T. V. A. has previously received an appropriation of $50,000,000 from Congress and an allotment of $25,000,000 by the President from emergency appropriations made for the current fiscal year. This $75,000,000 plus the amount in this bill bring their total appropriation to $109,675,192. While the amount allowed for 1936 is $34,675,192, the T. V. A. estimates there will be on hand on June 30, 1935, an unobligated balance from previous funds of $10,624,338, making the amount to be available for obligation in the fiscal year 1936, $45,299,530.

"In making the reduction of $7,630,000 in the program submitted by the T. V. A. in the revised estimates found on pages 475 and 476 of the hearings, the committee has approved the items as appearing in that statement for the fiscal year 1936 under the navigation and flood-control program for completion of Norris Dam and Reservoir and Wheeler Dam and Reservoir, for continuation of work on the Pickwick Landing Dam and Reservoir, for commencement of work on two main river-dam projects, namely, the

Guntersville Dam and the Chickamauga Dam, and the continuation of the general investigations of water resources of the Tennessee Basin, but postponed commencement of Hiwassee Dam. This postponement, together with reductions in other classes of contemplated expenditures, accounts for the $7,630,000 of reduction in the estimate.

"The committee has been advised by the T. V. A. that no purchases of transmission lines and other facilities are contemplated from this appropriation and no funds except approximately $215,000 are included in the estimates that would be affected by pending litigation. The $215,000 referred to is a part of the $7,630,000 which the committee has eliminated. If the litigation is decided favorably to the T. V. A. and this sum ultimately is to be expended as planned in Alabama, it can be provided at the coming session of Congress if it is not susceptible of being financed from funds then in hand.

"In providing for commencement of construction of the Guntersville Dam, at an estimated total cost of $17,000,000, and the Chickamauga Dam, at an estimated total cost of $15,000,000, and the postponement of the Hiwassee Dam which is estimated to cost $12,000,000, the committee is actuated by a desire to provide the projects in the program which seem to them to be most beneficial to flood control and navigation. The navigation program of the Tennessee River ultimately contemplates a 9-foot channel from the confluence of the Tennessee and the Ohio Rivers at Paducah, Ky., to Knoxville, Tenn. The construction of the Guntersville Dam will provide a 7-foot channel from Paducah to Chattanooga. The Chickamauga Dam will be of assistance in providing a 7-foot channel for about 70 miles above Chattanooga, but the main benefit to accrue from the Chickamauga Dam is in flood control. The city of Chattanooga sustains a very large proportion of the estimated average total annual damage from floods in the Tennessee Basin. Both the Guntersville and Chickamauga Dams are susceptible of power development, but such installations are not contemplated until there is a need for its generation. The Aurora Dam on the main river just above Paducah is considered essential to a 9-foot channel. At the present time its practicability has not been determined due to uncertain foundation conditions existing in that region. It has a place in the ultimate program but not during the fiscal year 1936.

"The net revenues of the T. V. A. from the electricity program available for interest, amortization, construction, and other purposes are estimated for the fiscal year 1936 at $713,000. However, in arriving at this sum there are gross revenues of $342,000 through charges to other T. V. A. activities for electricity to be furnished, so that only approximately half of the $713,000 is actual net income. Pending litigation, particularly that involving the situation at Knoxville, has served very materially to lessen the anticipated revenues from the sale of electricity and is responsible for the relatively small showing on the revenue side. Figures placed in the hearings show a very great increase in the consumption of electricity when it is made available to users at the reasonable T. V. A. rates. The experience of greatly increased use resulting from lower rates which has occurred in other communities has been found to repeat itself in the Tennessee Valley.

"The committee has made such investigation of the purposes of the T. V. A. through its hearings as time would permit. There has been criticism of the Board for some of its action under the Tennessee Valley Authority Act. The law under which T. V. A. is operating is broad and requires the members of the Board to believe in the purposes and policies expressed in it.

"The committee believes the Board to be sincere and earnest in endeavoring to carry out the law. The future of the T. V. A. in some of its power aspects is involved in litigation pending in the appellate courts. Irrespective of the outcome of that litigation, the other primary purposes of the act, such as navigation, flood control, national defense, fertilizer experimentation, and agricultural and regional development, constitute a broad field. The amount recommended in this bill, as revised by the T. V. A. from its original figures and as curtailed by action of the committee, form a logical and more moderate program than was contemplated under earlier estimates. In postponing the Hiwassee Dam project and curtailing some of the other estimates, the committee believes that under the funds provided for the fiscal year 1936 ample progress can be made upon the purposes of the Tennessee Valley Authority Act. Hiwassee Dam has a part in navigation, flood control, and power development; but in the judgment of the committee, it is not essential this year" (pp. 10-12).

Report (No. 1085) of Committee on Appropriations, Senate, 74th Congress, 1st Session, July 15, 1935, on H.R. 8554, Second Deficiency Appropriation Bill, fiscal year 1935:

"The changes in the amounts of the House Bill recommended by the committee are as follows:

"INCREASES RECOMMENDED BY COMMITTEE

* * *

"TENNESSEE VALLEY AUTHORITY

"It is recommended by the committee that the following be inserted in the bill:

> * * * the continued construction of Norris Dam, Wheeler Dam, Pickwick Landing Dam, and the beginning of construction on a dam at or near Guntersville, Alabama, and a dam at or near Chickamauga Creek, both on the Tennessee River, and a dam on the Hiwassee River, a tributary of the Tennessee River, at or near Fowlers Bend, and the continuation of preliminary investigations as to the location and desirability of a dam at or near Aurora Landing, a dam at or near Whites Creek, and * * * *Provided further*, That not to exceed $1,000,000 shall be expended on the dams on the Hiwassee River * * *.

"The appropriation is increased from $34,675,192, as proposed by the House to $38,000,000—an increase of $3,324,808.00" (pp. 1-11).

Conference Report (H.Rept. 1715), 74th Congress, 1st Session, August 6, 1935, on H.R. 8554, Second Deficiency Appropriation Bill, fiscal year 1935:

"Amendments nos. 78, 79, and 80, relating to the Tennessee Valley Authority: Inserts the specification of projects proposed by the Senate modified so as to make clear that the specification of the Aurora Landing project and the Whites Creek project include only preliminary investigations as to each; appropriates $36,000,000 instead of $38,000,000 as proposed by the Senate and $34,675,192 as proposed by the House; and limits expenditures on the Hiwassee Dam to $1,000,000 instead of to '$1,000,000 exclusive of the purchase of overflowed land', as proposed by the Senate" (p. 8).

ACT OF JUNE 22, 1936

FIRST DEFICIENCY APPROPRIATION ACT, FISCAL YEAR 1936 (H.R. 12624), PUBLIC, No. 739, 74th CONGRESS, 2d SESSION (49 STAT. 1597):

TENNESSEE VALLEY AUTHORITY

For the purpose of carrying out the provisions of the Act entitled "The Tennessee Valley Authority Act of 1933", approved May 18, 1933 (U.S.C., title 16, ch. 12a) as amended by the Act approved August 31, 1935 (49 Stat., 1075-1081), including the continued construction of Norris Dam, Wheeler Dam, Pickwick Landing Dam, Guntersville Dam, and Chickamauga Dam and the beginning of construction on a dam on the Hiwassee River, a tributary of the Tennessee River, at or near Fowler Bend, and the continuation of preliminary investigations as to the appropriate location and type of a dam on the lower Tennessee River, and the acquisition of necessary land, the clearing of such land, relocation of highways, and the construction or purchase of transmission lines and other facilities, and all other necessary works authorized by such Acts, and for printing and binding, law books, books of reference, newspapers, periodical, purchase, maintenance, and operation of passenger-carrying vehicles, rents in the District of Columbia and elsewhere, and all necessary salaries and expenses connected with the organization, operation, and investigations of the Tennessee Valley Authority, fiscal year 1937, $39,900,000: *Provided*, That this appropriation and any unexpended balance on June 30, 1936, in the "Tennessee Valley Authority Fund, 1936", and the receipts of the Tennessee Valley Authority from all sources during the fiscal year 1937 (except as limited by section 26 of the Tennessee Valley Authority Act of 1933, as amended), shall be covered into and accounted for as one fund to be known as the "Tennessee Valley Authority Fund, 1937", to remain available until June 30, 1937, and to be available for the payment of obligations chargeable against the "Tennessee Valley Authority Fund, 1936" [49 Stat. at 1607].

Report (No. 2591) of Committee on Appropriations, House of Representatives, 74th Congress, 2d Session, May 7, 1936, on H.R. 12624, First Deficiency Appropriation Bill, fiscal year 1936:

"TENNESSEE VALLEY AUTHORITY

"The Budget for the fiscal year 1937, pages 83 and 84, contains an estimate of $43,000,000 for the Tennessee Valley Authority for the coming fiscal year. This sum, together with an estimated unobligated balance of $1,217,816 on June 30, 1936, made a total request for obligation for the fiscal year 1937 of $44,217,816, exclusive of net revenues from electricity. The committee has reduced the Budget estimate of $43,000,000 to $39,900,000, which sum with the unexpended balance will make available for obligation, exclusive of electricity revenues, a total for the fiscal year 1937 of $41,117,816. This is a reduction in the requested appropriation of $3,100,000. The amount of $41,117,816 provides for the following construction and other general classes of work of the Authority:

Purpose	1936 allocation	1937 allocation	Approved by committee
Flood control and navigation:			
Wilson Dam and Reservoir	$75,514	$39,000	$39,000
Norris Dam and Reservoir	13,969,557	573,000	573,000
Wheeler Dam and Reservoir	15,441,661	1,336,000	1,336,000
Pickwick Landing Dam and Reservoir	8,972,959	10,716,716	10,716,716
Hiawassee Dam and Reservoir	1,000,000	3,337,228	3,337,228
Guntersville Dam and Reservoir	2,375,024	8,006,372	8,006,372
McReynolds Dam and Reservoir	2,490,866	5,563,000	5,563,000
Surveys and investigations, other main river dams	550,000	720,000	650,000
Surveys and investigations, tributary dams	317,349	250,000	.....
Engineering investigations, land planning surveys, reforestation, malaria control, economic investigations in connection with navigation, and flood control	609,944	882,500	500,000
General maps and map records	752,830	775,000	400,000
Total, navigation and flood control	46,555,704	32,198,816	31,121,316
Electricity program—gross	6,222,662	7,125,000	7,125,000
Less net receipts from operations	608,097	1,500,000	1,500,000
Net chargeable to appropriation	5,614,565	5,625,000	5,625,000
National defense	581,602	1,360,000	360,000
Fertilizer and agricultural development	3,749,154	4,484,000	3,732,000
Regional studies, experiments, and demonstrations	461,588	450,000	225,000
Other undistributed expenditures	1,300,000	100,000	54,500
Grand total	$58,262,613	$44,217,816	$41,117,816

"The amount to be available for the next year's operations on an obligation basis, if the committee's recommendations are approved, represents a reduction from $58,262,613 for the fiscal year 1936 to $41,117,816, or a decrease of $17,144,797.

"From the foregoing table it will be noted that the committee has allowed the full amount estimated for the

construction of dams and reservoirs in connection with flood control and navigation. The construction projects have all previously been passed upon by Congress for appropriation and are all under construction with the exception of the Hiwassee Dam and Reservoir for which a commencement appropriation of $1,000,000 was made the last session of Congress. In connection with flood control and navigation, the committee has eliminated the estimate of $70,000 under surveys and investigations of other main river dams requested for the proposed location of dams at Watts Bar and Coulter Shoals on the upper Tennessee River and has included $650,000 for such investigations in connection with a proposed dam and reservoir on the lower Tennessee River. There has also been eliminated the estimate of $250,000 for surveys and investigations incident to the proposed location of other dams on the tributaries of the Tennessee River.

"The committee has also eliminated from the request of the Authority the provision which would make it possible for the Authority to determine whether to construct the dam on the Hiwassee River or, as an alternate project, a dam on the Little Tennessee River near Fontana, N. C., and has provided for proceeding with the Hiwassee Dam.

"A provision is also inserted changing the name of the Chickamauga Dam to that of "McReynolds Dam" in honor of Representative McReynolds of Tennessee in whose district the dam is located. The committee makes this recommendation in recognition of Mr. McReynolds long-standing interest in and earnest advocacy of the development of the Tennessee Valley and the regulation and improvement of the Tennessee River and its tributaries.

"The estimate for the allocation covering engineering investigations, land-planning surveys, reforestation, malaria control and sanitation, and economic investigations in connection with navigation and flood control is reduced from $882,500 to $500,000, a sum which is $109,944 less than the estimated allocation for this purpose for the current fiscal year, but $45,000 more than the expenditures for the same purpose in the fiscal year 1935.

"The amount for the general mapping program is reduced from $775,000 to $400,000 in the belief that it is not necessary to proceed as rapidly with this class of work as the Authority has been undertaking to do.

"The committee has cut from $450,000 to $225,000 the amount requested for regional studies, experiments, and

demonstrations. This appropriation covers a wide range of projects on which there has been proportionately too large an expenditure of funds consistent with the primary purpose for which the Authority was established.

"The committee has allowed the full amount of the appropriation of $5,625,000 for the development of the electricity program. This amount is estimated to be augmented by net revenues from operations of $1,500,000, making available a total of $7,125,000 for the electricity program. The principal portion of this sum is for transmission lines to reach markets for the sale of electricity which will result in the production of additional revenue.

"The net revenues from operations of the electricity program, which are expendable for interest, amortization, construction, and so forth, in connection with that program, are estimated to increase from $608,097 for 1936 to $1,500,000 for the fiscal year 1937. These latter sums are not included in the total of the gross figures for appropriations and allocations for the entire T. V. A., program because of their direct applicability to the electrical program.

"The amount recommended for fertilizer manufacture and demonstrations in the use of fertilizer is $3,732,000. While this amount is $752,000 less than the allocation requested in the estimates, it is approximately the same amount that is being expended for such purposes in the current fiscal year. Fertilizer is not being manufactured for general distribution or sale. It is being utilized in conducting experiments and demonstrations in the use and application of the products developed by the T. V. A. and the committee feels that such studies can be carried on advantageously and with great benefit to agriculture generally with the amount of the current appropriation.

"A general item of undistributed expense in the requested amount of $100,000 has been reduced to $54,500.

"The amount for the national defense program is recommended at $360,000, which is $1,000,000 less than the estimated allocation. The amount for mineral investigations is left at $100,000 instead of $200,000 as requested by the Authority. The sum granted is the same as the allocation for the current year. From this request the committee has also eliminated the estimate of $900,000 submitted for placing in operating readiness and putting in stand-by condition, the ammonium nitrate portion of nitrate plant no. 2. This is the first time that an estimate

for this purpose has been presented although provided for in section 5 (g) of the Tennessee Valley Authority Act and the committee was not satisfied at this time of the advisability and necessity of making the investment. It believes that further cooperative study can profitably be given to the project, both on the part of the War Department and the Tennessee Valley Authority, without in any wise jeopardizing our preparedness for national defense.

"A provision is inserted establishing the Tennessee Valley Authority fund, 1937. This fund will consist of the unexpended balance in the Tennessee Valley Authority fund, 1936, created at the last session, plus receipts in the fiscal year 1937 (except as restricted by sec. 26 of the Tennessee Valley Authority Act as amended), and plus the appropriation carried in this bill. The practical effect of the provision is to carry forward and merge with the appropriation in this bill the balances in previous appropriations together with the receipts and make the new fund available until June 30, 1937, for discharging obligations outstanding against the Tennessee Valley Authority fund, 1936, and for the purposes of new obligations in the fiscal year 1937. The fund has decided accounting advantages and will in nowise affect such control over appropriations for the Tennessee Valley Authority as Congress now possesses under existing law" (pp. 12-15).

Report (No. 2108) of Committee on Appropriations, Senate, 74th Congress, 2d Session, May 27, 1936, on H.R. 12624, First Deficiency Appropriation Bill, fiscal year 1936:

"The changes in the amounts of the House bill recommended by the committee are as follows:

"INCREASE

* * *

"TENNESSEE VALLEY AUTHORITY:

"Construction, including a dam at or near Gilbertsville, Ky., and a dam at or near Watts Bar, Tenn. $1,200,000.00

"The committee recommends that the name of Chickamauga Dam be not changed to McReynolds Dam.

"It is also recommended that the following language be stricken from the bill: 'and the continuation of preliminary investigations as to the appropriate location and type of a dam on the lower Tennessee River'" (pp. 1, 3).

Conference Report (H.Rept. 3013), 74th Congress, 2d Session, June 17, 1936, on H.R. 12624, First Deficiency Appropriation Bill, fiscal year 1936:

"Amendment no. 28, relating to the Tennessee Valley Authority: Strikes out, as proposed by the Senate, the language of the House bill changing the name of the Chickamauga Dam" (p. 10).

ACT OF MAY 28, 1937

SECOND DEFICIENCY APPROPRIATION ACT, FISCAL YEAR 1937 (H.R. 6730), PUBLIC, No. 121, 75th CONGRESS, 1st SESSION (50 Stat. 213):

TENNESSEE VALLEY AUTHORITY

For the purpose of carrying out the provisions of the Act entitled "The Tennessee Valley Authority Act of 1933", approved May 18, 1933 (U.S.C., title 16, ch. 12a), as amended by the Act approved August 31, 1935 (49 Stat., 1075-1081), including the continued construction of Pickwick Landing Dam, Guntersville Dam, Chickamauga Dam, and Hiwassee Dam, and for construction of a dam at or near Gilbertsville, Kentucky, and for preliminary investigations of sites for dams at or near Watts Bar and at or near Coulter's Site on the Tennessee River, Tennessee, and the acquisition of necessary land, the clearing of such land, relocation of highways, and the construction or purchase of transmission lines and other facilities, and all other necessary works authorized by such Acts, and for printing and binding, law books, books of reference, newspapers, periodicals, purchase, maintenance, and operation of passenger-carrying vehicles, rents in the District of Columbia and elsewhere, and all necessary salaries and expenses connected with the organization, operation, and investigations of the Tennessee Valley Authority, and for examination of estimates of appropriations and activities in the field, fiscal year 1938, $40,166,270: *Provided,* That this appropriation and any unexpended balance on June 30, 1937, in the "Tennessee Valley Authority fund, 1937", and the receipts of the Tennessee Valley Authority from all sources during the fiscal year 1938 (except as limited by section 26 of the Tennessee Valley Authority Act of 1933, as amended), shall be covered into and accounted for as one fund to be known as the "Tennessee Valley Authority fund, 1938", to remain available until June 30, 1938, and to be available for the payment of obligations chargeable against the "Tennessee

Valley Authority fund, 1937": *Provided further,* That in addition to the amount herein appropriated, the Tennessee Valley Authority is hereby authorized to incur obligations and enter into contracts for the procurement of equipment to be installed in dams and power-houses in an amount not in excess of $4,000,000, and this action shall be deemed a contractual obligation of the Tennessee Valley Authority and the United States for payment of the cost thereof [50 Stat. at 217].

Report (No. 699) of Committee on Appropriations, House of Representatives, 75th Congress, 1st Session, April 28, 1937, on H.R. 6730, Second Deficiency Appropriation Bill, fiscal year 1937:

"TENNESSEE VALLEY AUTHORITY

"The appropriations for the Tennessee Valley Authority appear in this bill, instead of a regular annual appropriation bill, through an assignment of the work of the committee made by former Chairman Buchanan.

"The Budget estimates are found on page 113 of the Budget for the fiscal year 1938, transmitted to Congress in January last. The amount requested is $43,000,000, in direct appropriation and in addition authority to enter into contracts subject to future appropriations in the amount of $5,500,000, making a total of obligating privilege requested by the Authority for the fiscal year 1938 of $48,500,000.

"The committee recommendations comprise a direct appropriation of $40,166,270 and a contract authorization of $4,000,000, making a total to be available for obligation of $44,166,270. This sum represents a reduction in the total requested of $4,333,730, consisting of $2,833,730 reduction in the direct appropriation and $1,500,000 reduction in the amount of the contract authorization.

"The amount available for obligation in the current fiscal year is $48,690,702 consisting of $39,900,000 of direct appropriation for such fiscal year and an unobligated balance of $8,790,702 carried forward from the fiscal year 1936.

"The total amount to be available for obligation in the fiscal year 1938 under this bill, $44,166,270, compared with the amount available for obligation in the fiscal year 1937, $48,690,702, shows a decrease of $4,524,432.

"The following tabulation is a comparative statement by projects and classes of work of the estimated obligations for the fiscal year 1937, the budget recommendation for obligation for the fiscal year 1938, the amounts approved by the committee, and the increases or decreases between the committee's approvals and the budget estimates and the 1937 amounts:

COMPARISON OF ESTIMATED OBLIGATIONS

PURPOSE	Estimated Obligations Fiscal Year 1937	Estimated Obligations Fiscal Year 1938	Amounts of The Estimated 1938 Obligations Approved By The Committee	Increase (†) Or Decrease (—), Amount Approved By The Committee Compared With Estimated 1937 Obligations	Increase (†) Or Decrease (—), Amount Approved By The Committee Compared With Estimated 1938 Obligations

Method of financing estimated obligations:					
Direct appropriations [1]	$48,690,702	$43,000,000	$40,166,270	—$8,524,432	—$2,833,730
Contract authorization in addition to direct appropriation	.....	5,500,000	4,000,000	†4,000,000	—1,500,000
Grand total obligations [1]	$48,690,702	$48,500,000	$44,166,270	—$4,524,432	—$4,333,730

1—Consists of $39,900,000 appropriated for the fiscal year 1937 and $8,790,702 carried forward unobligated from the fiscal year 1936.

"The committee has denied the increase of $125,428 for general water control investigations, leaving the amount at the current appropriation of $283,198.

"An increase of $86,056 is allowed for continued investigation of the type and location of a dam on the lower Tennessee River in the vicinity of Gilbertsville, Ky., the amount for such purpose being increased from $656,383 of estimated obligation for the current year to $742,439 for the next fiscal year. In connection with this project the committee was urged to include provision in the bill of a small amount for commencement of construction of the project. The Gilbertsville Dam and Reservoir are presently estimated to cost $112,000,000. It is an important project in the program for unified control of the Tennessee River and its influence upon control of floods on the Ohio and the Mississippi. No Budget estimate was included for commencement of actual work and the committee was advised that the project would not be ready for construction for another year. The committee felt that inasmuch as there was contemplated to be expended for the fiscal year 1938 approximately $750,000 for continued investigation that it was not wise to include any funds for actual commencement until full and complete investigation of all phases had been completed. The preliminary data concerning the project indicate a dam 8,300 feet long with a maximum lock lift of 68 feet and a reservoir 184 miles long with a normal area of 148,000 acres.

"The committee has also rejected requested Budget allocations of $216,628 and $230,532 for further investigation of dams on the upper Tennessee River at Watts Bar and Coulter Shoals, respectively, both in Tennessee, and has also disallowed the sum of $382,450 for preliminary investigations of possible sites for dams and reservoirs on the major tributaries of the Tennessee River—the French Broad, the Holston, and Little Tennessee—and upon the Duck and Elk Rivers, minor tributaries, in connection with the possibilities of navigation for the transportation of phosphate rock.

"Under the heading of structure and improvements there is made available an allocation for obligation of $35,589,987, which is $293,193 less than the current year's estimated obligations and $3,134,850 less than the requested allocations for the next fiscal year. This latter sum

consists of $1,500,000 of contract authorization and $1,634,850 of direct appropriation. An increase of $90,000 is indicated for additions and betterments at Wilson Dam. Decreases of considerable size are shown for the Norris and Wheeler Dam projects due to completion of construction.

"Four major projects on the main river are now in process of construction—Guntersville Dam and Reservoir, Alabama; Hiwassee Dam and Reservoir, North Carolina; and Pickwick Landing Dam and Reservoir and Chickamauga Dam and Reservoir, both in Tennessee. The amount recommended for these four projects is $35,062,182 as against $31,854,431 for the current year, an increase of $3,207,751, and $3,134,850 less than the budgeted allocation for the fiscal year 1938. The decrease of $3,134,850 consists of $1,634,850 decrease in the direct appropriation and $1,500,000 reduction in the amount requested in the contract authorization for these four projects. By the end of the current fiscal year it is estimated that Pickwick Landing project will be 75 percent completed, the Guntersville project 33 percent completed, and the Hiwassee and Chickamauga projects each 25 percent completed.

"For electrical plant and equipment, which comprises additional transmission lines, substations, and investment in distribution properties, the allocation is approved in the amount of $5,100,000, which is $275,000 less than the current figure. The lines and stations proposed to be established are to be selected from a list of desired extensions set forth in the hearings and totaling approximately $8,500,000.

"The operating expenses in connection with sale of electricity are expected to increase from $1,548,639 to $1,795,302, or by $246,663. As against this increase in expense, revenues from the sale of electricity are expected to increase from $1,821,000 for 1937 to $3,775,000, or in the sum of $1,954,000. This difference between estimated operating expense and estimated revenue produces an excess of revenue for 1938 of $1,979,698 which will be available to apply against the estimated cost of the navigation, flood control, and hydroelectric program for 1938 and has been taken into consideration in framing the 1938 Budget request for appropriations.

"The committee has included $3,445,000 for the fertilizer and soil conservation program which is the amount of sug-

gested budget allocation less $61,600. This reduction is effected by reducing from $138,600 to $75,000, the sum suggested for research and development in farm equipment. The committee believes that too large a sum was proposed to be expended for this type of investigation in proportion to the other projects of the Authority.

"The amount for the national defense program is approved in the sum of $200,734, which is $119,040 less than the current allotment and $25,000 under the budget figure. In this instance the proposed allotment for mineral investigations is reduced from $50,000 to $25,000.

"The entire allocation for regional studies, experiments, and demonstrations is decreased from the Budget figure of $357,242 to $200,000, a cut of $157,242 under the estimates and $73,231 under the current allotment. The committee has made this decrease in the belief that while most of these investigations are desirable in connection with the social aspects of the development of the valley and the improvement of the condition of a segment of its population, they may proceed at a lower financial level for the entire group. If special emphasis needs to be stressed for some particular phase of the work the Board may decide to drop some investigation entirely and concentrate the funds on some more important aspect.

"The allocation for undistributed expense is set at the Budget figure of $50,000 which is a decrease of $1,542,082 under the current amount.

"In the decrease of $2,833,730 in the direct appropriation and $1,500,000 in the contract authorization the committee does not indicate any hostility to the purpose and intent of the Tennessee Valley Authority Act. They do believe that the work can be carried on in the coming fiscal year with the funds allowed and with suitable progress in the several lines of endeavor by the exercise of proper economy and curtailment of unnecessary expenditure. In making this decrease the committee has also in mind that there was an unallotted balance of approximately $500,000 in the Authority's funds as of a recent date and there is also a fund of $1,000,000 which the Authority has reserved as a continuing fund derived from revenues for emergency expenses and to insure continuous operation.

"In indicating approval of various allocations as submitted in connection with the 1938 estimates, the commit-

tee wishes it understood that should the Authority feel that it is necessary to divert some of those amounts to the construction of Guntersville, Pickwick Landing, Hiwassee, and Chickamauga projects there is that flexibility in the funds.

"If the amounts made available in this bill are approved, there will have been available to the Authority for obligation, from appropriations and revenues, a total to June 30, 1938, of approximately $196,000,000. The program of the Authority, as outlined to the committee at the last session, indicated a total cost of all projects and development of $479,000,000. The total cost as revised at the present session is $520,000,000" (pp. 2-6).

Report (No. 527) of Committee on Appropriations, Senate, 75th Congress, 1st Session, May 10, 1937, on H.R. 6730, Second Deficiency Appropriation Bill, fiscal year 1937:

"The changes in the amounts of the House bill recommended by the committee are as follows:

• • •

"DECREASE

"Tennessee Valley Authority $4,000,000.00

"It is recommended by the committee that the following language be stricken from the bill:

and the continuation of preliminary investigations as to the appropriate location and type of a dam on the lower Tennessee River

and the following inserted in lieu thereof:

and for construction of a dam at or near Gilbertsville, Kentucky, and for preliminary investigations of sites for dams at or near Watts Bar and at or near Coulter's Site on the Tennessee River, Tennessee.

"It is recommended by the committee that the following language be included in the bill:

Provided further, That in addition to the amount herein appropriated, the Tennessee Valley Authority is hereby authorized to incur obligations and enter into contracts for the procurement of equipment to be installed in dams and power-houses in an amount not in excess of $4,000,000, and this action shall be deemed a contractual obligation of the Tennessee Valley Authority and the United States for payment of the cost thereof'' (pp. 1-3).

Conference Report (H.Rept. 835), 75th Congress, 1st Session, May 19, 1937, on H.R. 6730, Second Deficiency Appropriation Bill, fiscal year 1937:

"Amendments nos. 8 and 9, relating to the Tennessee Valley Authority: Appropriates $40,166,270, as proposed by the Senate, instead of $44,166,270, as proposed by the House, and inserts the language, proposed by the Senate, for commencement of construction of the dam at or near Gilbertsville, Ky., and for preliminary investigations of sites for dams at or near Watts bar and at or near Coulter Shoals, both in Tennessee. In connection with the reduction of $4,000,000 in direct appropriation by Senate amendment no. 9, the managers on the part of the House report in disagreement Senate amendment no. 10, a contract authorization of $4,000,000 stricken from the bill in the House, in which concurrence will be recommended to replace the reduction of $4,000,000 of direct appropriation above referred to" (p. 3).

ACT OF AUGUST 25, 1937

THIRD DEFICIENCY APPROPRIATION ACT, FISCAL YEAR 1937 (H.R. 8245), PUBLIC, No. 354, 75th CONGRESS, 1st SESSION (50 Stat. 755):

TENNESSEE VALLEY AUTHORITY

Tennessee Valley Authority Fund: The appropriation under this head for the fiscal year 1938, contained in the Second Deficiency Appropriation Act, fiscal year 1937, shall, in addition to the objects specified under that head, be available for the reconstruction and relocation of the George Sam Houston Bridge across the Tennessee River at Guntersville, Alabama [50 Stat. at 759].

ACT OF MAY 23, 1938

INDEPENDENT OFFICES APPROPRIATION ACT, FISCAL YEAR 1939 (H.R. 8837), PUBLIC, No. 534, 75th CONGRESS, 3d SESSION:

TENNESSEE VALLEY AUTHORITY

For the purpose of carrying out the provisions of the Act entitled "The Tennessee Valley Authority Act of 1933", approved May 18, 1933 (16 U. S. C. ch. 12a), as amended by the Act approved August 31, 1935 (49 Stat. 1075-1081), including the continued construction of Pickwick Landing Dam, Guntersville Dam, Chickamauga Dam, and Hiwassee Dam, and for construction of a dam at or near Gilbertsville, Kentucky, and for preliminary investigations of sites for dams at or near Watts Bar and at or near Coulter Shoals on the Tennessee River, Tennessee, and the acquisition of necessary land, the clearing of such land, relocation of highways, and the construction or purchase of transmission lines and other facilities, and all other necessary works

authorized by such Acts, and for printing and binding, law books, books of reference, newspapers, periodicals, purchase, maintenance, and operation of passenger-carrying vehicles, rents in the District of Columbia and elsewhere, and all necessary salaries and expenses connected with the organization, operation, and investigations of the Tennessee Valley Authority, and for examination of estimates of appropriations and activities in the field, fiscal year 1939, $40,000,000: Provided, That this appropriation and any unexpended balance on June 30, 1938, in the "Tennessee Valley Authority fund, 1938", and the receipts of the Tennessee Valley Authority from all sources during the fiscal year 1939 (except as limited by section 26 of the Tennessee Valley Authority Act of 1933, as amended), shall be covered into and accounted for as one fund to be known as the "Tennessee Valley Authority fund, 1939", to remain available until June 30, 1939, and to be available for the payment of obligations chargeable against the "Tennessee Valley Authority fund, 1938" and for contractual obligations for the procurement of equipment as authorized in the Second Deficiency Appropriation Act, fiscal year 1937: Provided further, That in addition to the amount herein appropriated, the Tennessee Valley Authority is hereby authorized to incur obligations and enter into contracts for the procurement of equipment to be installed in dams and power-houses in an amount not in excess of $4,000,000, and this action shall be deemed a contractual obligation of the Tennessee Valley Authority and the United States for payment of the cost thereof [p. 20].

Report (No. 1662) of Committee on Appropriations, House of Representatives, 75th Congress, 3d Session, January 6, 1938, on H.R. 8837, Independent Offices Appropriation Bill, fiscal year 1939:

"TENNESSEE VALLEY AUTHORITY

"The amount of the 1938 appropriation for the Tennessee Valley Authority is $40,166,270, plus a contractual authorization of $4,000,000. The Budget estimate for 1939 is $40,000,000 and a contractual authorization of $4,000,000. The accompanying bill provides $37,087,000 for 1939 and includes the requested authority to contract.

"The amount in the bill is $3,079,270 less than the 1938 appropriation and is a reduction under the Budget of $2,913,000.

"*Gilbertsville Dam.*—The committee has applied $2,613,000 of the cut to the Gilbertsville Dam, for which there was alloted $2,898,000 of which $185,000 was set up for "project investigations" the remainder being for construction on the dam and various other items incident to such construction. The committee has eliminated all items incident to construction and has allowed an increase of $100,000, or a total of $285,000, for "project investigations."

"*Fertilizer and soil conservation program.*—The committee has applied the remaining $300,000 of the reduction to certain items under the fertilizer and soil conservation program, as follows:

Item	Amount estimated	Amount of reduction
Chemical engineering research and experimentation	$350,000	$100,000
Controlled soil and fertilizer investigations	200,000	50,000
Research and development of farm equipment	125,000	75,000
Reforestation and erosion control.	225,000	75,000"

(pp. 13-14)

Report (No. 1303) of Committee on Appropriations, Senate, 75th Congress, 3d Session, January 17, 1938, on H.R. 8837, Independent Offices Appropriation Bill, fiscal year 1939:

"The changes in the amounts of the House bill recommended by the committee are as follows:

"INCREASE

"TENNESSEE VALLEY AUTHORITY

"To carry out the provisions of the 'Tennessee Valley Authority Act of 1933'.....$2,763,000

"It is recommended by the committee that the following language be inserted in the bill:

and for construction of a dam at or near Gilbertsville, Kentucky _____

"Total increase .....$2,763,000" (p. 2).

Conference Report (H.Rept. 1906), 75th Congress, 1st Session, March 7, 1938, on H.R. 8837, Independent Offices Appropriation Bill, fiscal year 1939:

"IN DISAGREEMENT

• • •

"Amendments Nos. 26 and 27, Tennessee Valley Authority: Restores the House cut of $2,613,000 for the beginning of the construction of a dam at or near Gilbertsville, Ky., where the House had provided $285,000 for further study of the project only; and restores the House cut of $100,000 for chemical-engineering research and experimentation, and the House cut of $50,000 for soil and fertilizer investigations—a total restoration by the Senate of $2,763,000.

• • •

"Amendment No. 37, relating to certain employees compensated at the rate of $5,000 or more per annum: The amendment is as follows:

Sec. 6. No part of any appropriation contained in this Act or authorized hereby to be expended shall be used to pay the compensation of any experts or attorneys under any independent establishment, except the Tennessee Valley Authority, of the Government of the United States (except persons now in the employ of the Government and persons heretofore or hereafter appointed under the civil-service laws), the rate of which is $5,000 or more per annum, who shall not have been appointed by the President, by and with the advice and consent of the Senate."

(pp. 5-6)

Conference Report (H.Rept. 2222), 75th Congress, 3d Session, April 25, 1938, on Appropriations for Executive Office and Sundry Independent Executive Bureaus, Boards, Commissions, and Offices, fiscal year 1939:

"The amendments in controversy are as follows:

• • •

"Amendments Nos. 26 and 27: Relating to construction of the Gilbertsville Dam under the Tennessee Valley Authority.

• • •

"Amendment No. 37: Relating to Presidential appointment and Senate confirmation of certain experts or attorneys receiving compensation of $5,000 or more per annum under appropriations made in the bill or authorized thereby to be expended" (p. 2).

Conference Report (H.Rept. 2379), 75th Congress, 3d Session, May 19, 1938, on Appropriations for the Executive Office and Sundry Independent Executive Bureaus, Boards, Commissions, and Offices, fiscal year ending June 30, 1939.

"Amendment No. 37, relating to certain employees compensated at the rate of $5,000 or more per annum: Strikes from the bill the following provision inserted by the Senate:

> Sec. 6. No part of any appropriation contained in this Act or authorized hereby to be expended shall be used to pay the compensation of any experts or attorneys under any independent establishment, except the Tennessee Valley Authority, of the Government of the United States (except persons now in the employ of the Government and persons heretofore or hereafter appointed under the civil-service laws), the rate of which is $5,000 or more per annum, who shall not have been appointed by the President, by and with the advice and consent of the Senate."

(p. 2)

SECTION D

HISTORICAL ORIGINS OF CERTAIN FEDERAL POLICIES RELATING TO CONSERVATION OF WATER RESOURCES

1. *Multiple-purpose Projects*

1901, Message of President Theodore Roosevelt to the 57th Congress, 1st session, emphasizing reservoirs as a measure of flood control:

> The forests alone cannot, however, fully regulate and and conserve the waters of the arid region. Great storage works are necessary to equalize the flow of streams and to save the flood waters. Their construction has been conclusively shown to be an undertaking too vast for private effort. Nor can it be best accomplished by the individual States acting alone. Far-reaching interstate problems are involved; and the resources of single States would often be inadequate. It is properly a national function, at least in some of its features. It is as right for the National Government to make the streams and rivers of the arid region useful by engineering works for water storage as to make useful the rivers and harbors of the humid region by engineering works of another kind. The storing of the floods in reservoirs at the headwaters of our rivers is but an enlargement of our present policy of river control, under which levees are built on the lower reaches of the same streams.
>
> The Government should construct and maintain these reservoirs as it does other public works. Where their purpose is to regulate the flow of streams the water should be turned freely into the channels in the dry season to take the same course under the same laws as the natural flow [35 Cong. Rec. 86].

1908, Message of President Theodore Roosevelt transmitting preliminary report of the Inland Waterways Commission, S.Doc. 325, 60th Cong., 1st sess.:

> The report rests throughout on the fundamental conception that every waterway should be made to serve

the people as largely and in as many different ways as possible. It is poor business to develop a river for navigation in such a way as to prevent its use for power, when by a little foresight it could be made to serve both purposes. We can not afford needlessly to sacrifice power to irrigation, or irrigation to domestic water supply, when by taking thought we may have all three. Every stream should be used to the utmost. No stream can be so used unless such use is planned for in advance. When such plans are made we shall find that, instead of interfering, one use can often be made to assist another. Each river system, from its headwaters in the forest to its mouth on the coast, is a single unit and should be treated as such. Navigation of the lower reaches of a stream can not be fully developed without the control of floods and low waters by storage and drainage. Navigable channels are directly concerned with the protection of source waters and with soil erosion, which takes the materials for bars and shoals from the richest portions of our farms. The uses of a stream for domestic and municipal water supply, for power, and in many cases for irrigation, must also be taken into full account [p. iv].

1908, *Preliminary Report of the Inland Waterways Commission,* S.Doc. 325, 60th Cong., 1st sess.:

13. Locks and certain other works designed to improve navigation commonly produce head and store water in such manner as to develop power available for industrial purposes, while works designed to develop power on navigable and source streams affect the navigation and other uses of river systems; and these uses must necessarily be considered together. Information concerning water power in the several States and sections is incomplete, yet it is known to be a vast and intrinsically permanent asset which should be utilized for the benefit of the people of the country, in whose interests it should be administered with careful regard for present and prospective conditions. The facts ascertained in certain specific cases furnish a basis for the claim that the value of the power would pay the cost of all engineering and other works required in such cases to control the streams for naviga-

tion and other uses. In the light of recent progress in electrical application, it is clear that over wide areas the appropriation of water power offers an unequaled opportunity for monopolistic control of industries. Wherever water is now or will hereafter become the chief source of power, the monopolization of electricity produced from running streams involves monopoly of power for the transportation of freight and passengers, for manufacturing, and for supplying light, heat, and other domestic, agricultural, and municipal necessities, to such an extent that unless regulated it will entail monopolistic control of the daily life of our people in an unprecedented degree. There is here presented an urgent need for prompt and vigorous action by State and Federal governments [pp. 21-22].

15. The control of waterways on which successful navigation depends is so intimately connected with the prevention of floods and low waters, and works designed for these purposes; with the protection and reclamation of overflow lands, and works designed therefor; with the safeguarding of banks and maintenance of channels, and works employed therein; with the purification and clarification of water supply, and works designed therefor in conjunction with interstate commerce; with control and utilization of power developed in connection with works for the improvement of navigation; with the standardizing of methods and facilities and the coordinating of waterway and railway instrumentalities; and throughout the larger area of the country with reclamation by irrigation and drainage, and works designed primarily for these purposes —that local and special questions concerning the control of waterways should be treated as a general question of national extent, while local or special projects should be considered as parts of a comprehensive policy of waterway control in the interests of all the people [pp. 22-23].

A. We recommend that hereafter plans for the improvement of navigation in inland waterways, or for any use of these waterways in connection with interstate commerce, shall take account of the purification of the waters, the development of power, the control of

floods, the reclamation of lands by irrigation and drainage, and all other uses of the waters or benefits to be derived from their control [p. 25].

1908, *Report of National Conservation Commission,* S.Doc. 676, 60th Cong., 2d sess.:

We also especially approve and indorse the proposition that all uses of the waters and all portions of each waterway should be treated as interrelated; and we emphatically urge prompt and effective legislation providing for the immediate and proper development of the waterways of the country for navigation, water supply, and other interstate uses, preferably by direct federal appropriations; otherwise by the issue of bonds [p. 27].

1910, *Report of National Waterways Commission,* S.Doc. 469, 62d Cong., 2d sess.:

In providing for the future development of the country, consideration must be given to the fact that water, as well as land, is an asset which makes up an integral part of our natural wealth. Waters must ultimately be utilized not merely for navigation, but also for irrigation and for power, when available for these purposes; also, all practicable means must be used for their clarification and for the prevention of floods and droughts.

It is desirable that whenever navigation is improved the most careful attention be given to these other associated objects, and while it is not the opinion of the commission that waterway improvements for the development of navigation should be deferred until a comprehensive and final plan for the utilization of waters can be devised, on the other hand subjects pertaining to the control and most beneficial utilization of water should at all times be considered, and improvements looking to the promotion of navigation should, as far as possible, harmonize with the general uses and beneficial control of waters [app. I, p. 82].

1912, Act of July 25 (37 Stat. 201):

> In order to make possible the economical future development of water power, the Secretary of War, upon recommendation of the Chief of Engineers, is hereby authorized in his discretion to provide in the permanent parts of any dam authorized at any time by Congress for the improvement of navigation, such foundations, sluices and other works as may be considered desirable for the further development of its water power [p. 233].

1928, Boulder Canyon Project Act of December 21 (45 Stat. 1057):

> . . . That for the purpose of controlling the floods, improving navigation and regulating the flow of the Colorado River, providing for storage and for the delivery of the stored waters thereof for reclamation of public lands and other beneficial uses exclusively within the United States, and for the generation of electrical energy as a means of making the project herein authorized a self-supporting and financially solvent undertaking, the Secretary of the Interior, subject to the terms of the Colorado River compact hereinafter mentioned, is hereby authorized to construct, operate, and maintain a dam and incidental works in the main stream of the Colorado River . . . [p. 1057].

1930, Statement of Chairman Norris of the Senate Committee on Agriculture and Forestry in the debate on the Rivers and Harbors Bill of 1930 concerning the construction of the Cove Creek (now Norris) Dam for Mississippi flood control:

> Mr. President, it is very appropriate . . . in considering a rivers and harbors bill to call attention of the Senate and the committee to the intimate way in which rivers and harbors, so far as the rivers and harbors bill is considered, are interlocked and connected with flood control. In fact, flood control as applied to our rivers, navigation as applied to our rivers, irrigation as applied to our rivers, and power as applied to our rivers, all dovetail and harmonize with each other and help each other.

Food control is recognized . . . as a national problem.

* * *

The control of flood waters by the building of dikes and levees, while very often to a great extent successful, I think everyone must concede has also been to a considerable degree disappointing . . .

* * *

It seems to me the proper way to control the flood waters of the Mississippi Valley and the Mississippi River is to build dams near the source of the rivers wherever nature has provided a proper site for a storage reservoir. The waters thus stored will be released when the river is low, thus increasing the flow when an increased flow is desired, and they will be held back when the river is in flood, thus decreasing the height of the stream when desired.

Moreover, Mr. President, that kind of a system would improve the navigation of the main stream and the tributary streams as well, because more water would be put into the stream than during low water, and we should keep out of the stream by that means a great part of the water which flows into it when the river is in flood.

Where, particularly on the west side of the Mississippi River, there is not sufficient rainfall for the growing of crops, such impounded waters could be used for irrigation . . .

Mr. President, the building of flood-control dams and paying for them simply on the theory of protecting the lower reaches of the Mississippi, and its tributaries, would cost an enormous amount of money, but if we can increase navigation by that means, *if we can, as we could in many instances, double the navigability of the streams, it would be proper to charge a part of that expense to navigation, the improvement of which is another Governmental function.*

If we can make it easier for agriculture to obtain water for irrigation we may properly charge a part of the expense to agriculture . . .

In addition to all this, Mr. President, if such dams were built there could be developed an immense amount of power by the installation of proper machinery, and that power could be distributed over a great portion of the great Mississippi Valley by means of the flood waters impounded and held back by such dams. *Thus another useful service could be rendered, and a part of the expense could then be properly charged up to power*

• • •

. . . on the eastern side of the great Mississippi Valley we have Cove Creek, for the development of which we have provided in a bill which has passed both houses of Congress, but it is now held up in conference. The dam at Cove Creek should now be built. It would retain out of the Tennessee River 3,500,000 acre-feet of water—an enormous volume of water—which, if properly handled, would do more than any other one improvement to make the Tennessee River navigable from its mouth up to Cove Creek. Also it would prevent floods not only on the Tennessee River but to an appreciable extent on the Mississippi River . . . [72 Cong. Rec. 11295-11296; emphasis supplied].

1930, The Rivers and Harbors Act (46 Stat. 918):

The project for the permanent improvement of the main stream of the Tennessee River for a navigable depth of nine feet in accordance with the recommendations of the Chief of Engineers in House Document Numbered 328 of the Seventy-first Congress, second session, is hereby authorized: *Provided*, That an expenditure of $5,000,000 shall be authorized to be appropriated for the prosecution of work under this project: *Provided further*, That the Chief of Engineers is hereby directed to ascertain and report to Congress on the first day of the first regular session of the Seventy-second Congress, advising the prospective cooperation offered by responsible interests, under the Federal Water Power Act, in the program of construction recommended by the Chief of Engineers, providing for the nine-foot project by means of high dams [pp. 927-928].

1934, *Report of the National Resources Board:*

Interrelations of physical factors, interests and responsibilities make the development of the use and control of water factors a problem of coordination from several points of view. It is this multiplicity of coordinations that makes the problem a real challenge to intelligence and to capacity to plan.

(a) *Multiple Uses:* It has been the custom generally to approach a water factor as presenting only one specific problem of control or use; for instance, elimination of a flood hazard, or navigation, or irrigation, or power. Study of many situations indicates, however, that frequently the combination of factors is such that achievement of some particular objective may be promoted by combining other objectives with it. Usually a project is conceived because of some one hazard or of some one desired use; but if a large view is taken it becomes apparent that other uses are potential and should be included in the project, in order, on the one hand, to secure the greatest total benefit from the natural resource, and, on the other hand, to make the cost of each component benefit less than it otherwise would be. Many projects have been reviewed by the committee which, although inspired by a single purpose, offer excellent opportunities for combinations which would multiply benefits and reduce the cost of any one benefit below what it would be if sought by itself. Thus a project may at first appear to involve only the element of levee or reservoir control of floods, but careful consideration may disclose that reservoir control may carry with it opportunities for power generation, water supply for adjacent communities, and recreational facilities. In exceptional instances the same dam and reservoir may be made to serve flood control, irrigation, power, and recreational purposes. A dam conceived at first solely for navigation control may offer also power generation. No matter what the originating purpose, every other reasonable purpose should be considered in defining and planning a water project [pp. 263-264].

1935, Statement by Gerard H. Matthes, Principal Engineer of the Mississippi River Commission, appearing in *Transactions American Society of Civil Engineers,* LXI (1935), 919-920:

> Reservoirs possess important potentialities as flood-control structures . . . but the significant fact remains that surprisingly few have been built for that purpose despite the urgent need for flood control that exists on many streams. In 1920 there were in the United States a paltry dozen reservoirs and retarding basins devoted exclusively to the control of floods. This number includes such minor units as the retarding basin on Dry River, near Watervliet, N. Y., and another, even smaller, on Paxton Creek, for the protection of Harrisburg, Pa. From estimates compiled by the writer in 1920 there were then in the world at large fewer than 100 flood-control structures of these two types. More than one-half of these were in Europe, 21 being in one river basin in Germany. Until a few years ago this paucity of flood-control reservoirs had not changed materially. In the United States, during the past six years, many reservoir projects for flood control have been surveyed and reported on, but to date (1935) few of these projects have reached the construction stage. The chief obstacle appears to be their unwarranted cost.
>
> In general, a storage basin for the handling of large volumes of water ranks among the most costly of hydraulic structures, whatever may be its purpose. In hydro-electric development it is common for the dam and reservoir to represent the largest single item of investment cost, and the one upon which most often hinges the economic feasibility of the entire development. Experience teaches that reservoirs designed exclusively for flood control have been found less likely to be warranted on strict economic considerations, than have reservoirs designed for any other single purpose. There is a steadily growing tendency to build multiple-use reservoirs such that the cost may be prorated among two or more uses, often wholly unrelated. Flood

control, which is often included in such combinations, is gaining steadily in importance and is emerging from the incidental by-product class in which it has largely figured in the past, into a well-defined reliable status. Boulder Dam, on the Colorado River, which is designed primarily for flood control and at which power will be generated, as well as water furnished for irrigation, domestic supply, and navigation purposes, is the outstanding example of the multiple-use type. Norris Dam, on the Clinch River, Tygart River Dam, on the headwaters of the Ohio River, and Fort Peck Dam on the Missouri River, are to serve not less than two purposes each. The flood-control reservoirs being built for the Los Angeles District will be operated so as to make available the impounded waters for irrigation and water supply. The reservoirs of the Muskingum Conservancy District will serve other purposes beside flood protection to the Muskingum Valley. Credit should be given the larger of the existing Western irrigation reservoirs which derive their water supply mainly from flood run-off, for having reduced flood flow more or less effectively although they have never been operated for that purpose.

The conclusion is inescapable that the multiple-use reservoir is destined to play an increasingly important role in the future. This is supported by the following considerations: (*a*) in the United States, to date, only densely populated, highly industrialized areas can afford the cost of reservoirs for the sole purpose of flood control; (*b*) costly impounding structures for the sole purpose of preventing flood damage to small towns and farm lands situated in natural flood-plains can rarely be justified on a strictly economic basis; (*c*) to waste flood waters immediately they have been impounded, as must be done at retarding basins or at reservoirs designed solely for flood control, is contrary to the modern concept of water resources utilization; and, (*d*) multiple use of reservoirs divides the burden of cost between two or more interests, and the increased benefits which result are more likely to place the undertaking on a sound economic basis.

2. *Preferences Given to Public Agencies*

1902, Reclamation Act of June 17 (32 Stat. 388), as amended by section 5 of act of April 16, 1906 (34 Stat. 116):

> That whenever a development of power is necessary for the irrigation of lands under any project undertaken under the said reclamation Act, or an opportunity is afforded for the development of power under any such project, the Secretary of the Interior is authorized to lease for a period not exceeding ten years, giving preference to municipal purposes, any surplus power or power privilege, and the moneys derived from such leases shall be covered into the reclamation fund and be placed to the credit of the project from which such power is derived: *Provided,* That no lease shall be made of such surplus power or power privilege as will impair the efficiency of the irrigation project [p. 117].

1920, Federal Water Power Act of June 10 (16 U.S.C. 800):

> *Preferences in issuance of preliminary permits or licenses.* In issuing preliminary permits hereunder or licenses where no preliminary permit has been issued and in issuing licenses to new licensees under section 808 of this chapter the commission shall give preference to applications therefor by States and municipalities, provided the plans for the same are deemed by the commission equally well adapted, or shall within a reasonable time to be fixed by the commission be made equally well adapted, to conserve and utilize in the public interest *the navigation and water resources of the region* . . . [emphasis supplied].

1928, Boulder Canyon Project Act of December 21 (45 Stat. 1057):

> Contracts for the use of water and necessary privileges for the generation and distribution of hydroelectric energy or for the sale and delivery of electrical energy shall be made with responsible applicants therefor who will pay the price fixed by the said Secretary with a

view to meeting the revenue requirements herein provided for. In case of conflicting applications, if any, such conflicts shall be resolved by the said Secretary, after hearing, with due regard to the public interest, and in conformity with the policy expressed in the Federal Water Power Act as to conflicting applications for permits and licenses, except that preference to applicants for the use of water and appurtenant works and privileges necessary for the generation and distribution of hydroelectric energy, or for delivery at the switchboard of a hydroelectric plant, shall be given, first, to a State for the generation or purchase of electric energy for use in the State, and the States of Arizona, California, and Nevada shall be given equal opportunity as such applicants [pp. 1060-1061].

RECLAMATION TABLE 19.—*Power plants operated on Bureau of Reclamation projects during fiscal year 1931-32*

Project	Name of plant	Outgoing line voltage	Plant capacity (kilovolt-amperes)	Number of units	Head in feet	First cost of plant	Cost of operation and maintenance	Estimated depreciation	Cost per kilowatt-hour exclusive of depreciation	Distribution of kilowatt-hours generated				Total output, kilowatt-hours	Gross power sales

[1] April to September, inclusive.
[2] Minimum payment guaranteed on annual basis.

Footnotes to Reclamation Table, on page 110.
[1] 6,600-volt generators; all others 2,300 volts except as noted.
[2] Entire output delivered to Idaho Power Co.
[3] West Side plant operated only in case of emergency; not operated since 1927. Island plant dismantled, first cost included.
[4] Estimated.
[5] Includes purchased power.
[6] Operated by irrigation district or water users' association.
[7] Operated by Sierra Pacific Co. under lease assigned by Canyon Power Co.
[8] 11,000-volt generators.
[9] All 8 power plants feed into the same distribution system.

SECTION E

PERTINENT STATE LEGISLATION

Appellants, in their Appendix E, have reprinted statutes of the State of Tennessee authorizing municipalities and cooperative associations to contract with the Tennessee Valley Authority, but have omitted chapter 32 of the Public Acts of Tennessee of 1935. For purposes of completeness, that statute is reprinted here:

THE MUNICIPAL ELECTRIC PLANT ACT OF 1935, CHAPTER 32, PUBLIC ACTS OF TENNESSEE, 1935*

SENATE BILL No. 113

An act to authorize counties, incorporated cities and towns in the State of Tennessee to construct, purchase or otherwise acquire, and to operate and maintain electric generating or distribution systems, within or without the county or corporate limits, to construct, purchase or otherwise acquire, to operate maintain or use, individually or jointly, a transmission line or lines, within or without the corporate or county limits, to make improvements, extensions, betterments or additions to such electric systems, and such transmission line or lines to furnish electric power and energy to any consumer or consumers, to finance such acquisition, improvement, extension, betterment, or addition by the issuance of bonds and the acceptance of federal grants, to provide for the supervision, management and control of such electric systems and such lines, to prescribe rules and policies to govern resale rates, disposition of revenue, and other operating and management practices of such systems, in order to promote the increased domestic use of electricity in rural and urban areas by enabling such counties, incorporated cities and towns to utilize the surplus power generated by the Tennessee Valley Authority or the power generated at any other works or dams.

---

* This statute was upheld by the Tennessee Supreme Court in the case of *Tennessee Elec. Power Co.* v. *Fayetteville*, 114 S.W. (2d) 811 (1938); and in the case of *Kentucky-Tennessee L. & P.Co.* v. *Clarksville*, December term, 1937, reprinted in Appendix F.

SECTION 1. SHORT TITLE.—*Be it enacted by the General Assembly of the State of Tennessee,* That this Act may be cited as "The Municipal Electric Plant Act of 1935."

SEC. 2. DEFINITIONS.—*Be it further enacted,* That the following terms when used in this Act shall have the following meaning:

(a) The term "municipality" shall mean any county, incorporated city or town in the State of Tennessee.

(b) The term "electric plant" shall mean generating and/or transmission and/or distribution systems, together with all other facilities, equipment and appurtenances necessary or appropriate to any such system, for the furnishing of electric power and energy for lighting, heating, power or any other purpose for which electric power and energy can be used.

(c) The term "improvement" shall mean any improvement, extension, betterment or addition to any electric plant.

(d) The term "electric service" shall mean the furnishing of electric power and energy for lighting, heating, power or any other purpose for which electric power and energy can be used.

(e) The term "acquire" shall mean to purchase, to lease, to construct, to reconstruct, to replace, or to acquire by gift.

(f) The term "dispose" shall mean to sell, to lease, or otherwise transfer any interest in property.

(g) The term "improve" shall mean to acquire any improvement.

(h) The term "Federal Agency" shall include the United States of America, the President of the United States of America, or the Federal Emergency Administrator of Public Works, Reconstruction Finance Corporation, Tennessee Valley Authority, or any other similar agency, instrumentality or corporation of the

United States of America, which has heretofore been or may hereafter be created by or pursuant to any Act or Acts of the Congress of the United States of America.

(i) The term "law" shall mean any Act or Statute, general, special or local, of the State of Tennessee, including, but without limitation, the charter of any municipality.

(j) The term "governing body" shall mean the County Court, board, body or commission having general charge of the municipality.

SEC. 3. POWERS OF MUNICIPALITIES.—*Be it further enacted,* That every municipality shall have power and is hereby authorized:

(a) To acquire, improve, operate and maintain within and/or without the corporate or county limits of such municipality, and (with the consent of such other municipality) within the corporate or county limits of any other municipality, an electric plant and to provide electric service to any person, firm, public or private corporation, or to any other user or consumer of electric power and energy, and to charge therefor.

(b) To acquire, improve or use jointly with any other municipality a transmission line or lines together with all necessary and appropriate facilities, equipment and appurtenances, for the purpose of transmitting power and energy and/or connecting their respective electric plants with a wholesale source of supply, and to this end such municipalities may provide by contract for the method of holding title, for the allocation of responsibility for operation and maintenance and for the allocation of expenses and revenues.

(c) To accept grants, loans or other financial assistance from any Federal Agency, for or in aid of the acquisition or improvement of any electric plant.

(d) To contract debts for the acquisition or improvement of any electric plant, to borrow money, to issue its bonds to finance such acquisition or improvement

and to provide for the rights of the holders of the bonds and to secure the bonds as hereinafter provided, and to pledge all or any part of the revenues derived from electric service to the payment of such debts or repayment of money borrowed.

(e) To assess, levy and collect unlimited ad valorem taxes on all property subject to taxation to pay such bonds, and the interest thereon.

(f) To acquire, hold and, subject to the applicable provisions of any bonds or contracts, to dispose of any property, real or personal, tangible or intangible, or any right or interest in any such property in connection with any electric plant, and whether or not subject to mortgages, liens, charges, or other encumbrances, but no municipality shall dispose of all or substantially all of its electric plant except as provided in section 22 hereof.

(g) To make contracts and execute instruments containing such covenants, terms, and conditions as in the discretion of the municipality may be necessary, proper or advisable for the purpose of obtaining loans from any source, or grants, loans or other financial assistance from any Federal Agency; to make all other contracts and execute all other instruments as in the discretion of the municipality may be necessary, proper or advisable in or for the furtherance of the acquisition, improvement, operation and maintenance of any electric plant and the furnishing of electric service; and to carry out and perform the covenants terms and conditions of all such contracts or instruments.

(h) To enter on any lands, waters and premises for the purpose of making surveys, soundings and examinations in connection with the acquisition, improvement, operation or maintenance of any electric plant and the furnishing of electric service.

(i) To do all Acts and things necessary or convenient to carry out the powers expressly given in this Act.

SEC. 4. ELECTION TO AUTHORIZE BONDS—ELECTION, RESOLUTION AND PROCEDURE.—*Be it further enacted,* That

before any bonds are issued under this Act an election shall be held as follows: The governing body of the municipality shall adopt a resolution (herein called the "Election Resolution") which shall state in substance (a) the amount or maximum amount of bonds to be issued; (b) the purpose or purposes for which such bonds are to be issued; (c) the rate or maximum rate of interest which such bonds are to bear; (d) a brief concise statement (which need not go into any detail other than the mere statement of the fact) showing whether such bonds will be payable (1) exclusively from revenues, or (2) exclusively from taxes, or (3) from taxes only in the event of a deficiency in revenues, or (4) from taxes and additionally secured by a pledge of revenues; (e) the date on which such election will be held; (f) the place or places where votes may be cast; and (g) the hours between which such voting places will be open. Such Election Resolution shall be published in full at least once, not less than fifteen days prior to the date fixed for such election, in a newspaper published and circulating in the municipality, or, if there be no such newspaper, then such Election Resolution shall be so published in a newspaper circulating in the municipality and shall also be posted not less than fifteen days prior to the date fixed for such election, in five conspicuous places in the municipality. At such election the ballot shall contain the words "For the Issuance of Electric Plant Bonds" and "Against the Issuance of Electric Plant Bonds." Opposite each of said phrases shall be a hollow square, each side of which shall be not less than one-quarter inch nor more than one inch. Any qualified voter of such municipality shall be entitled to vote at the election. The voter shall indicate his vote "For the Issuance of Electric Plant Bonds" or "Against the Issuance of Electric Plant Bonds" by inserting a mark in the square opposite such phrase. It shall not be necessary to print any question or any other words or figures on any ballot, nor need the ballot be of any particular size, color or quality, nor need sample ballots be printed, posted, or distributed. At or before the regular meeting of the governing body of the municipality next succeeding the date of such election, such governing body shall canvass the returns and determine and declare the results of the election, and it shall be the duty of the governing body of such municipality to enter upon its

minutes the results and the returns in such election, which entry shall, after the delivery of, and payment for, any bonds voted upon at the election, be conclusive evidence of the result of such election. Except as otherwise provided in this Act, such election shall be conducted by the election authorities prescribed by the general law of the State of Tennessee and according to the provisions of the general election laws of the State of Tennessee.

SEC. 5. EFFECT OF ELECTION RESOLUTION AND ELECTION. —*Be it further enacted*, That if a majority of the qualified voters who vote in such election vote "For the Issuance of Electric Plant Bonds", the governing body of the municipality shall proceed to issue the bonds described in the Election Resolution, and if no such majority so assents, the proposition thus defeated shall not again be the subject of an Election Resolution until three months shall have expired from the time the Election Resolution relative to such bonds was published, or published and posted, as the case may be.

SEC. 6. PUBLICATION OF STATEMENT AFTER ELECTION; INCONTESTABILITY.—*Be it further enacted*, That if an election on the proposition is had and such election results in favor of the proposition, the Election Resolution shall again be published in a newspaper published and circulated in the municipality or, if there be no such newspaper, then such Election Resolution shall be so published in a newspaper circulating in the municipality and shall also, on the same day of such publication, be posted in five conspicuous places in such municipality. With such Election Resolution there shall be published, or published and posted, as the case may be, a statement substantially in the following form:

STATEMENT

The election referred to in the resolution published (or posted) herewith was held on the (here insert date of election). After such election (here insert designation of governing body and name of municipality) has found, determined and declared that the proposition was carried by a vote of ——— to ———. No suit, action or proceeding questioning the validity of the bonds described in

such resolution or proceeding for the issuance of such bonds can be commenced after the expiration of twenty days from the date of this publication (or posting). By order of the (here insert designation of governing body).

_____Clerk
(or other recording officer)

No suit, action or proceeding questioning the validity of bonds issued under this Act or proceedings for the issuance of such bonds shall be commenced after the expiration of twenty days from the date of publication, or publication and posting, as the case may be, of such an Election Resolution and such a Statement, substantially in the form above set forth.

SEC. 7. BOND PROVISIONS.—*Be it further enacted*, That the bonds may be issued in one or more series, may bear such date or dates, may mature at such time or times, not exceeding thirty years from their respective dates, may be in such denomination or denominations, may be in such form, either coupon or registered, may carry such registration and conversion privileges, may be executed in such manner, may be payable in such medium of payment, at such place or places, may be sold or hypothecated in such blocks, may be subject to such terms of redemption, with or without premium, and may be declared or become due after the maturity date thereof, as may be provided by resolution or resolutions of the governing body of the municipality. Such bonds may be issued for money or property at public or private sale, for such price or prices, at such rate or rates of interest, and may be hypothecated in such manner as the governing body may determine, but the interest cost to maturity of the property (at the value determined by the governing body, which determination shall be conclusive) or the money received for any issue of said bonds, shall not exceed six per cent (6%) per annum, payable semi-annually. Such bonds shall have all the qualities and incidents of negotiability. Such bonds shall not be subject to taxation.

In case any of the officers whose signature or countersignatures appear on such bonds shall cease to be such officers before the delivery of the bonds, such signatures and

counter-signatures shall nevertheless be valid and sufficient for all purposes, the same as though such officers had remained in office until the bonds had been delivered. Such bonds, when issued, shall be known as "Electric Plant Bonds".

SEC. 8. ADDITIONAL POWERS TO SECURE BONDS AND TO MAKE AGREEMENTS.—*Be it further enacted,* That in order to secure the payment of any of the bonds issued pursuant to this Act, the interest thereon, or in connection with such bonds, the governing body of any municipality shall have power as to such bonds, to the extent not inconsistent with the mandatory provisions of this Act:

(a) To pledge the full faith and credit and unlimited taxing power of the municipality to the punctual payment of the principal of and interest on such bonds.

(b) To pledge all or any part of the revenues derived from electric service.

(c) To provide for the terms, form, registration, exchange, execution and authentication of such bonds.

(d) To provide for the replacement of lost, destroyed or mutilated bonds.

(e) To covenant as to the use and disposition of the proceeds from the sale of such bonds.

(f) To covenant as to the rates and charges of the electric plant.

(g) To redeem such bonds, and to covenant for their redemption, and to provide the terms and conditions thereof.

(h) To covenant and prescribe as to what happenings or occurrences shall constitute "events of default" and the terms and conditions upon which any or all of such bonds shall become or may be declared due before maturity and as to the terms and conditions upon which such declaration and its consequences may be waived.

(i) To covenant as to the rights, liabilities, powers and duties arising upon the breach by it of any covenant, condition, or obligation.

(j) To vest in a trustee or trustees the right to receive all or any part of the income and revenue pledged and assigned to, or for the benefit of, the holder or holders of bonds issued hereunder, and to hold, apply and dispose of the same and the right to enforce any covenant made to secure or pay or in relation to the bonds; to execute and deliver a trust agreement or trust agreements which may set forth the powers and duties and the remedies available to such trustee or trustees and limiting the liabilities thereof and describing what occurrences shall constitute "events of default" and prescribing the terms and conditions upon which such trustee or trustees or the holder or holders of bonds of any specified amount or percentage of such bonds may exercise such rights and enforce any and all such covenants and resort to such remedies as may be appropriate.

(k) To make covenants other than, and in addition to, the covenants herein authorized, of like or different character, necessary or advisable to effectuate the purpose of this Act.

(l) To execute all instruments necessary or convenient in the exercise of the powers herein granted or in the performance of its covenants or duties.

SEC. 9. REMEDIES OF ANY HOLDER OR HOLDERS OF BONDS.—*Be it further enacted,* That any holder or holders of bonds, including a trustee or trustees for holders of such bonds, shall have the right, in addition to all other rights:

(a) By mandamus or other suit, action or proceedings in any court of competent jurisdiction to enforce his or their rights against the municipality, the governing body thereof, the board of public utilities hereinafter provided for, any and other proper officer, agent or employee of any of them, including, but without limitation, the right to require the municipality, the governing body, the said board, and any proper officer, agent or employee of any of them, to assess, levy and collect taxes, and to fix and collect rates and charges adequate to carry out any agreement as to, or pledge of taxes or electric plant revenues, and to require the

municipality, the governing body thereof, the said board and any officer, agent or employee of any of them to carry out any other covenants and agreements and to perform its and their duties under this Act;

(b) By action or suit in equity to enjoin any acts or things which may be unlawful or a violation of the rights of such holder of bonds.

SEC. 10. ADDITIONAL REMEDIES CONFERRED BY RESOLUTION.—*Be it further enacted*, That any municipality shall have power by resolution of its governing body to confer upon any holder or holders of a specified amount or percentage of bonds, including a trustee or trustees for such holders, the right in the event of an "event of default" as defined in such resolution or as may be defined in any agreement with the holder or holders of such bonds or the trustee or trustees therefor:

(a) By suit, action or proceedings in any court of competent jurisdiction to obtain the appointment of a receiver of the electric plant or any part or parts thereof. If such receiver be appointed he may enter and take possession of such electric plant or any part or parts thereof and operate and maintain the same, and collect and receive all revenues thereafter arising therefrom in the same manner as the municipality itself might do and shall deposit such moneys in a separate account or accounts and apply the same in accordance with the obligations of the municipality as the court shall direct.

(b) By suit, action or proceeding in any court of competent jurisdiction to require the governing body of the municipality and/or the board to account as if it were the trustee of an express trust.

Any such resolution shall constitute a contract between the municipality and the holders of bonds of such issue.

SEC. 11. DEBT LIMITS.—*Be it further enacted*, That bonds may be issued under this Act notwithstanding and without regard to any limits or restriction on the amount or percentage of indebtedness or of outstanding obligations of any municipality contained in any law.

SEC. 12. EXPENSES OF SURVEYS, COST ESTIMATES, EMPLOYMENT OF ENGINEERS, ETC.—*Be it further enacted,* That all expenses actually incurred by the governing body of any municipality in the making of surveys, estimates of cost and of revenues, employment of engineers, attorneys or other employees, the giving of notices, taking of options, selling of bonds, and all other preliminary expenses of whatever nature, which such governing body deems necessary in connection with or precedent to the acquisition or improvement of any electric plant and which it deems necessary to be paid prior to the issuance and delivery of the bonds issued pursuant to the provisions of this Act, may be met and paid out of the general fund of said municipality not otherwise appropriated, or from any other available fund.

All such payments from the general or other funds shall be considered as temporary loans and shall be repaid immediately upon sale and delivery of the bonds, and claim for such repayment shall have priority over all other claims against the proceeds derived from the sale of such bonds.

SEC. 13. APPOINTMENT OF BOARD OF PUBLIC UTILITIES. —*Be it further enacted,* That any municipality, excepting those which employ a City-Manager or which have a population of less than two thousand (2,000), issuing bonds under the provisions of this Act for the acquisition of an electric plant shall, and any municipality now or hereafter owning or operating an electric plant under this Act or any other law may, appoint a board of public utilities (hereinafter called the "board").

The board shall be created in the following manner: At the time the governing body of a municipality issuing bonds hereunder determines that a majority of the qualified voters voting on the Election Resolution have assented to the bond issue for the acquisition of an electric plant, the chief executive officer of the municipality shall, or if no such bonds are issued, or if the municipality employs a City-Manager or has a population of less than two thousand (2,000), then at any time he may, with the consent of the governing body of the municipality, appoint two (2) or four (4) men from among the property holders of such municipality who are residents of the municipality and

have resided therein for not less than one year next preceding the date of appointment to such board. No regular compensated officer or employee of a municipality shall be eligible for such appointment until at least one year after the expiration of the term of his public office.

The original appointees, if two be appointed, shall serve for two and four years respectively, or if four be appointed, shall serve for one, two, three and four years respectively, from the first day of July next succeeding the date of appointment, as the said chief executive officer shall designate. Successors to retiring members so appointed shall be appointed for a term of four years in the same manner, prior to the expiration of the term of office of the retiring members. In addition to the members so appointed, such chief executive officer shall also, with the consent of the governing body of the municipality, designate a member of such governing body, or in his discretion the City Manager, to serve as a third or fifth member of the board, as the case may be. The term of such member shall be for such time as the appointing officer may fix, but in no event to extend beyond his term of office in such governing body or his employment as City-Manager, as the case may be. Appointments to complete unexpired terms of office shall be made in the same manner as original appointments. Each member shall give such bond, if any, as may be required by resolution of the governing body and shall qualify by taking the same oath of office as required for members of such governing body.

A majority of the board shall constitute a quorum and the board shall act by vote of a majority present at any meeting attended by a quorum and vacancies in the board shall not affect its power and authority so long as a quorum remains. Within ten days after appointment and qualification of members, the board shall hold a meeting to elect a chairman. The board shall at the same time designate a secretary and treasurer, or secretary-treasurer, who need not be members of the board and fix the amount of the surety bond which shall be required of such secretary and treasurer, or secretary-treasurer, and shall fix his or their compensation. The board shall hold public meetings at least once per month, at such regular time and place as the board may determine. Changes in such time and place of meeting shall be made known to the public

as far in advance as practicable. Save as otherwise expressly provided, the board shall establish its own rules of procedure. All members of the board shall serve as such without compensation, but they shall be allowed necessary traveling and other expenses while engaged in the business of the board, including an allowance of not to exceed Five ($5.00) Dollars per month for attendance at meetings. Such expenses, as well as the salaries of the secretary and treasurer, or secretary-treasurer, shall constitute a cost of operation and maintenance of the electric plant.

Any member of the board may be removed from office for cause upon a vote of three-fourths of the members of the governing body of the municipality, but only after preferment of formal charges by resolution of a majority of the members of such governing body at a public hearing before such governing body.

Municipalities now or hereafter owning or operating a water works and/or sewerage works may confer upon the board the jurisdiction over such water works and/or sewerage works now or hereafter vested in any other board, commission or other body. If the board is given jurisdiction over such works it shall keep separate accounts for the electric plant and each works, making due and proper allocation of all joint expenses, revenues and property valuations.

SEC. 14. SUPERVISION AND CONTROL OF THE ELECTRIC PLANT.—*Be it further enacted*, That the general supervision and control of the acquisition, improvement operation and maintenance of the electric plant shall be in charge of the following agency (hereinafter referred to as the "supervisory body"): The board, or if there be no board, then the governing body of the municipality. If the latter, such governing body may by resolution delegate all or any of its powers or duties as supervisory body to the City-Manager, if any. The supervisory body shall appoint an electric plant superintendent (hereinafter called "superintendent"), who shall be qualified by training and experience for the general superintendence of the acquisition, improvement and operation of the electric plant. The superintendent need not be a resident of the state at the time of his appointment. His salary shall be fixed by the person or agency appointing such superintendent. The

superintendent shall serve at the pleasure of the supervisory body and may be removed by said body at any time.

Within the limits of the funds available therefor, all powers to acquire, improve, operate and maintain, and to furnish electric service, and all powers necessary or convenient thereto, conferred by this Act shall be exercised on behalf of the municipality by the supervisory body and the superintendent respectively. Subject to the provisions of applicable bonds or contracts, the supervisory body shall determine programs and make all plans for the acquisition of the electric plant, shall make all determinations as to improvements, rates and financial practices, may establish such rules and regulations as it may deem necessary or appropriate to govern the furnishing of electric service, and may disburse all moneys available in the electric plant fund hereinafter established for the acquisition, improvement, operation and maintenance of the electric plant and the furnishing of electric service. A copy of the schedule of the current rates and charges in effect from time to time and a copy of all rules and regulations of the supervisory body relating to electric service shall be kept on public file at the main and all branch offices of the electric plant and also in the office of the municipal clerk or recorder. The superintendent shall have charge of all actual construction, the immediate management and operation of the electric plant and the enforcement and execution of all rules, regulations, programs, plans and decisions made or adopted by the supervisory body. The superintendent shall appoint all employees and fix their duties and compensation, excepting that the appointment of all technical consultants and advisers and legal assistants shall be subject to the approval of the supervisory body. Subject to the provisions of Section 3 (f), the superintendent, with the approval of the supervisory body, may acquire and dispose of all property, real and personal, necessary to effectuate the purposes of this Act. The title of such property shall be taken in the name of the municipality. The superintendent shall let all contracts, subject to the approval of the supervisory body, but may, without such approval, obligate the electric plant on purchase orders up to an amount to be fixed by the supervisory body, but not to exceed Two Thousand ($2,000) Dollars. Any work or construction exceeding in cost Two Thousand Dollars shall, before any contract is let or

work done, be advertised by the superintendent for bids, but the supervisory body shall have power to reject any and all bids. The superintendent shall make and keep full and proper books and records, subject to the supervision and direction of the supervisory body.

SEC. 15. ELECTRIC PLANT FUND.—*Be it further enacted,* That all moneys derived from the issuance of bonds hereunder, together with any Federal grant made in connection therewith, shall be paid to the proper fiscal agent of the supervisory body. Such agent shall deposit such moneys, together with all receipts from electric service or any other operation of the supervisory body as such, in a separate bank account or accounts (hereinafter called "electric plant fund"), separate from all other municipal funds, and shall keep adequate records of all such receipts and their sources. The fiscal agent shall pay out such moneys only on voucher signed by the superintendent. No such voucher for the payment of any such moneys shall be issued except upon the resolution or order of the supervisory body, a certified copy whereof shall be filed in the office of the fiscal agent.

SEC. 16. DISPOSITION OF MONEYS RECEIVED FROM THE ISSUANCE OF BONDS.—*Be it further enacted,* That all moneys received from the issuance of bonds shall be used solely to defray the cost of acquiring or improving an electric plant, except that such proceeds may in the discretion of the supervisory body also be used for the payment of the interest on the bonds during the first two years following the date of such bonds. The cost of the electric plant shall include all costs of acquisition, or improvement, including all preliminary expenses described in Section 12 hereof, the cost of acquiring all property, franchises, easements, and rights in the judgment of the supervisory body necessary or convenient therefor; engineering and legal expenses, expenses for estimates of cost and revenues, expenses for plans, specifications and surveys, other expenses incident or necessary to determining the feasibility or practicability of the enterprise, administrative expense, and such other expense as may be incurred in the financing herein authorized, the acquisition or improvement of the electric plant, the placing of such plant in operation, including the creation of a cash working fund, and the performance of

the things herein required or permitted in connection therewith.

SEC. 17. DISPOSITION OF REVENUES.—*Be it further enacted*, That the supervisory body shall devote all moneys in the Electric Plant Fund derived from any source other than the issuance of bonds to or for the payment of all operating expense; bond interest and retirement and/or sinking fund payments; the acquisition and improvement of the electric plant; contingencies; the payment of other obligations incurred in the operation and maintenance of the electric plant and the furnishing of electric service; the redemption and purchase of electric plant bonds in which case such bonds shall be cancelled; the creation and maintenance of a cash working fund; the payment of an amount to the general funds of the municipality not to exceed a cumulative return of 6% per annum of the equity or investment, if any, of the municipality; and, if the governing body of the municipality shall by resolution so request, payments to the municipality in lieu of ad valorem taxes on the property of the electric plant within the corporate or county limits of the municipality not to exceed the amount of taxes payable on privately owned property of similar nature. Any surplus thereafter remaining, after establishment of proper reserves, if any, shall be devoted solely to the reduction of rates. In computing the equity or investment of the municipality, the value of the electric plant shall be taken as its historical cost. The payment of bonds or the acquisition or improvement of property from the receipts derived from electric service or any other operation of the surpervisory body as such shall not be considered to increase the equity or investment of the municipality.

SEC. 18. SERVICES RENDERED TO MUNICIPALITIES AND DEPARTMENTS AND WORKS THEREOF.—*Be it further enacted*, That the supervisory body shall charge the municipality and all departments and works thereof for any electric service furnished to them, at the rates applicable to other customers taking service under similar conditions. Revenues derived from such service shall be treated as all other revenues.

SEC. 19. RECORDS AND REPORTS OF THE BOARD.—Be it *further enacted,* That the board shall keep a complete and accurate record of all meetings and actions taken, and of all receipts and disbursements, and shall make reports of the same to the governing body of the municipality at stated intervals, not to exceed one year. Said reports shall be in writing, shall be filed in open meeting of the governing body of the municipality, at stated intervals, not to exceed one year. Said reports shall be in writing, shall be filed in open meeting of the governing body of the municipality, and a copy shall be filed with the municipal clerk or recorder.

SEC. 20. USE OF CERTAIN RIGHTS-OF-WAY.—*Be it further enacted,* That any municipality may use any right-of-way, easement or other similar property right necessary or convenient in connection with the acquisition, improvement, operation or maintenance of an electric plant, held by the state or any other municipality, *provided* that such other municipality shall consent to such use.

SEC. 21. CONDEMNATION.—*Be it further enacted,* That any municipality proceeding under the provisions of this Act is hereby authorized and empowered to condemn any land, easements or rights-of-way—either on, under or above the ground, for any and all purposes necessary in connection with the construction, operation and maintenance of an electric plant or improvements thereto. Title to property so condemned shall be taken in the name of the municipality. Such condemnation proceeding shall be pursuant to and in accordance with Sections 3109-3134, inclusive, of the Code of Tennessee, 1932; *provided, however,* that where title to any property sought to be condemned is defective, it shall be passed by decree of Court; *provided, further,* that where condemnation proceedings become necessary the Court in which such proceedings are filed shall, upon application by the municipality and upon the posting of a bond with the Clerk of the Court in such amount as the court may deem commensurate with the value of the property, order that the right of possession shall issue immediately or as soon and upon such terms as the court, in its discretion, may deem proper and just.

SEC. 22. ELECTION FOR DISPOSITION OF ELECTRIC PLANT. —*Be it further enacted,* That the governing body of the municipality may dispose of all or substantially all of the electric plant acquired by means of bonds issued hereunder, but only with the approval of the supervisory body and a majority of those voting in an election held as follows: The governing body of the municipality shall adopt a resolution which shall state in substance (a) that the supervisory body has approved the proposed disposition; (b) a full description of the property to be disposed of; (c) the purchaser or purchasers thereof; (d) the purchase price; (e) the terms or conditions of sale if such disposition is not for cash, payable in full at the time of such disposition; (f) the date on which such election will be held; (g) the place or places where votes may be cast; and (h) the hours between which such voting places may be open. At such election the ballot shall contain the words "For the Disposition of the Electric Plant" and "Against the Disposition of the Electric Plant." In all other respects the election shall be called and held in the manner set forth in Section 4 hereof.

SEC. 23. SUPPLEMENTAL NATURE OF ACT.—*Be it further enacted,* That the powers conferred by this Act shall be in addition and supplemental to the powers conferred by any other law. Bonds may be issued hereunder for the acquisition or improvement of an electric plant notwithstanding that any other law may provide for the issuance of bonds for like purposes and without regard to the requirements, restrictions or procedural provisions contained in any other law. Any proceedings heretofore taken by any municipality relating to the subject matters of this Act, whether or not commenced under any other law, may at the option of the governing body, be discontinued and new proceedings instituted under this Act.

SEC. 24. LIBERAL CONSTRUCTION OF THE ACT.—*Be it further enacted,* That this Act is for the public purpose of promoting the increased use of electricity in the urban and rural areas of this State, and to enable all counties, as well as cities and towns, to secure the benefit of the surplus power generated or to be generated by the Tennessee Valley Authority at Wilson Dam in the State of Alabama

and Norris Dam in the State of Tennessee, or the power generated at any other works or dams. This Act is remedial in nature and the powers hereby granted shall be liberally construed to effectuate the purposes hereof, and to this end every municipality shall have power to do all things necessary or convenient to carry out the purposes hereof in addition to the powers expressly conferred in this Act.

SEC. 25. EXCISION OF UNCONSTITUTIONAL OR INEFFECTIVE PARTS OF ACT.—*Be it further enacted*, That it is hereby declared that the sections, clauses, sentences and parts of this Act are severable, are not matters of mutual essential inducement, and any of them shall be exscinded if this Act would otherwise be unconstitutional or ineffective; it is the intention to confer upon every municipality the whole or any part of the powers in this Act provided for, and if any one or more sections, clauses, or sentences and parts of this Act shall for any reason be questioned in any court, and shall be adjudged unconstitutional or invalid, such judgment shall not affect, impair or invalidate the remaining provisions thereof, but shall be confined in its operation to the specific provision or provisions so held unconstitutional or invalid, and the inapplicability or invalidity of any section, clause, sentence or part of this Act in any one or more instances shall not be taken to affect or prejudice in any way its applicability or validity in any other instance.

SEC. 26. TIME OF TAKING EFFECT.—*Be it further enacted*, That this Act shall take effect from and after its passage, the public welfare requiring it.

Passed February 12, 1935.

W. P. Moss,
Speaker of the Senate.

WALTER M. HAYNES,
Speaker of the House of Representatives.

Approved February 14, 1935.

HILL MCALLISTER,
Governor.

SECTION F

UNPUBLISHED OPINION OF THE TENNESSEE SUPREME COURT

KENTUCKY-TENNESSEE LIGHT & POWER COMPANY

v.

CITY OF CLARKSVILLE, ET AL.

Montgomery Equity
December Term, 1937

OPINION

Under a franchise granted by the City of Clarksville the complainant maintains an electric distribution system, which it erected at a cost of $400,000. In 1936 the City Council initiated proceedings under Chapter 32, Acts 1935, to establish its own system and a majority of the voters approved a proposal of the City Council to issue $250,000 of bonds in furtherance of the plan.

The bill was filed to enjoin issuance of the bonds and establishment of the municipal power system upon the insistence that the City was proceeding under void statutes, and especially under Chapter 32 Acts 1935, alleged to violate the Constitution in several instances. The chancellor sustained the City's demurrer to the bill and the cause is here upon complainant's appeal and assignments of error which raise the question of whether or not the Act of 1935 contravenes Article I, section 8 and Article II, section 17 of the Constitution, and upon assignments of error directed to the action of the chancellor in relation to certain private acts.

Complainant's 5th and 14th assignments of error rest upon the charge that section 6 of the Act of 1935 imposes unreasonable limitation against actions or proceedings to question the validity of bonds issued under the Act and is a denial of due process contrary to Article I, section 8 of the Constitution. If we should construe this provision as a statute of limitations, it does not affect any preexisting right and as related to future actions it cannot be seen that the limit of 20 days for contesting the validity of pro-

ceedings for the issuance of bonds is so unreasonable as to amount to denial of due process. For reasons stated in the opinion by Mr. Justice McKinney in the cause of Tennessee Electric Power Company v. Fayetteville, we do not consider this provision violative of any constitutional right of complainant.

The other assignments of error involve application of Article II, section 17 of the Constitution. It is said that the caption of the Act afforded no reasonable notice of the following provisions in the body: (1) Subsection (d) and subsection (g) of section 3, authorizing municipalities to contract debts for the establishment and maintenance of the power plant otherwise than by issuance of bonds and acceptance of grants from the federal government; (2) section 6, imposing a limitation of 20 days within which to contest proceedings for the issuance of bonds; (3) section 11, authorizing issuance of bonds for the acquisition of a municipal power plant without regard to limitation imposed by other laws designed to avoid unreasonable debt and unreasonable taxation; (4) section 13, providing for the appointment by the municipality of a board of public utilities to supervise the plant and control its revenues, and by authority of the city government to exercise control over waterworks and sewers; (5) section 14 and subsequent provisions relating to the supervision and control of the power system and the disposition of its revenues; (6) section 22, empowering a municipality under prescribed conditions to dispose of its municipal electric plant; (7) section 23, providing that the powers conferred upon municipalities by the Act shall be supplemental to the municipal powers conferred by other laws.

It is sufficient to say, without copying the caption, that the purpose expressed therein is to authorize municipalities to acquire, and in their proprietary capacity to operate, a system for the distribution of electricity to consumers; to provide funds for the acquisition of the system and make rules and regulations for its management and the control and use of its revenues. Viewing the Act in its entirety, we find that provisions in the body, other than the last paragraph of section 13 hereafter discussed, relate, directly or indirectly, to the object expressed in the caption. The various provisions of the Act are germane to the common purpose expressed in the caption, of au-

thorizing municipalities to acquire and operate a system for the distribution of electricity, and meets the constitutional requirement as ruled in Cannon v. Mathes, 8 Heisk. 504, and many subsequent cases.

We find no merit in the 10th assignment of error, relating to the action of the chancellor in holding that the city is authorized to own and operate a power plant by its charter, Chapter 252, Acts 1929. That power is directly conferred by the charter and by another statute, which are to be construed in *pari materia* with Chapter 32, Acts 1935, providing means for the acquisition of the power system.

Other assignments of error directed to alleged infirmities in private acts mentioned in the record become immaterial. The last paragraph of section 13 of Chapter 32, Acts 1935, which introduced a provision authorizing the municipal governments to transfer control over their waterworks and sewers to the Electric Power Control Board, seems to be beyond the caption and unrelated to any purpose expressed either in the caption or in the Act. But the Court adopted the view expressed in the opinion of Mr. Justice McKinney in Tennessee Electric Power Co. v. Town of Fayetteville and as therein construed a majority of the Court holds the provision not beyond the caption. The decree of the chancellor is affirmed.

COOK, J. (s)

OFFICE OF CLERK OF THE SUPREME COURT

For the Middle Division of the State of Tennessee.

I, DAVID S. LANSDEN, Clerk of said Court, do hereby certify that the foregoing is a true, perfect, and complete copy of the Opinion of said Court, pronounced at its December term, 1937, in case of *Kentucky-Tennessee Light and Power Company* against *Clarksville* as appears of record on file in my office.

In Testimony Whereof, I have hereunto set my hand and affixed the seal of the Court, at office in the Capitol at Nashville, on this, the 4th day of April, 1938.

DAVID S. LANSDEN (s), *Clerk.*

SEAL

By————————*D. C.*

SUPREME COURT OF THE UNITED STATES.

No. 27.—October Term, 1938.

The Tennessee Electric Power Co., et al., Appellants, *vs.* Tennessee Valley Authority, et al.	On Appeal from the United States District Court for the Eastern District of Tennessee.

[January 30, 1939.]

Mr. Justice Roberts delivered the opinion of the Court.

The Tennessee Valley Authority Act[1] erects a corporation, an instrumentality of the United States, to develop by a series of dams on the Tennessee River and its tributaries a system of navigation and flood control and to sell the power created by the dams. Eighteen corporations which generate and distribute electricity in Tennessee, Kentucky, Mississippi, Alabama, Georgia, West Virginia, Virginia, North Carolina, and South Carolina, and one which transmits electricity in Tennessee and Alabama, filed a bill in equity, in the Chancery Court of Knox County, Tennessee, against the Authority and its three executive officers and directors. The prayers were that the defendants be restrained from generating electricity out of water power created, or to be created, pursuant to the Act and the Authority's plan of construction and operation; from transmitting, distributing, supplying or selling electricity so generated, or to be generated, in competition with any of the complainants; from constructing, or financing the construction of, steam or hydro-electric generating stations, transmission lines or means of distribution, which will duplicate or compete with any of their services; from regulating their retail rates through any contract, scheme or device; and from substituting federal regulation for state regulation of local rates for electric service, more especially by incorporating in contracts for the sale of electricity terms fixing retail rates. The defendants removed the cause to the United States District Court for Eastern Tennessee and there answered

[1] Act of May 18, 1933, 48 Stat. 58, as amended by Act of August 31, 1935, 49 Stat. 1075; 16 U. S. C. Sec. 831, *et seq.*

the bill. As required by the Act of August 24, 1937,[2] a court of three judges was convened which, after a trial, dismissed the bill.[3] Fourteen of the complainants are here as appellants.[4] They contend that water power cannot constitutionally be created in conformity to the terms of the Tennessee Valley Authority Act, and the United States will, therefore, acquire no title to it, because it will not be produced as an incident of the exercise of the federal power to improve navigation and control floods in the navigable waters of the nation. They affirm that the statutory plan is a plain attempt, in the guise of exerting granted powers, to exercise a power not granted to the United States, namely, the generation and sale of electric energy; that the execution of the plan contravenes the Fifth, Ninth, and Tenth Amendments of the Constitution, since the sale of electricity on the scale proposed will deprive the appellants of their property without due process of law, will result in federal regulation of the internal affairs of the states, and will deprive the people of the states of their guaranteed liberty to earn a livelihood and to acquire and use property subject only to state regulation. The appellees contest these contentions. For reasons about to be stated we do not consider or decide the issues thus mooted.

The Authority's acts, which the appellants claim give rise to a cause of action, comprise (1) the sale of electric energy at wholesale to municipalities empowered by state law to maintain and operate their own distribution systems; (2) the sale of such energy at wholesale to membership corporations organized under state law to purchase and distribute electricity to their members without profit; (3) the sale of firm and secondary power at wholesale to industrial plants.

The appellants are incorporated for the purpose and with the authority to conduct business as public utilities. Several do so only within the states of their incorporation; those chartered elsewhere have qualified as foreign corporations under the laws of the states in which they manufacture, transmit, or distribute electricity. Most of them have local franchises, licenses, or easements granted

[3] 21 F. Supp. 947.

[4] Georgia Power Company was enjoined from maintaining the action. See Georgia Power Co. *v.* Tennessee Valley Authority, 17 F. Supp. 769; 89 F. (2d) 218, 302 U. S. 692. Four other complainants have since been permitted to withdraw from the litigation without prejudice to its prosecution by the remaining appellants.

by municipalities or governmental subdivisions but it is admitted that none of these franchises confers an exclusive privilege.

While the Authority has not built or authorized any transmission line, has not sold or authorized the sale of electricity, or contracted for, or authorized any contract for, the sale of electricity by others, in territory served by nine of the appellants, it has done some or all of these things in areas served or susceptible of service by five of the companies; and it plans to enter in the same way the territory of other appellants. It is, clear, therefore, that its acts have resulted and will result in the establishment of municipal and co-operative distribution systems competing with those of some or all the appellants in territory which they now serve, or reasonably expect to serve by extension of their existing systems, and in direct competition with the appellants' enterprises through the sale of power to industries in areas now served by them or which they can serve by expansion of their facilities. The appellants assert that this competition will inflict substantial damage upon them. The appellees admit that such damage will result, but contend that it is not the basis of a cause of action since it is *damnum absque injuria*,—a damage not consequent upon the violation of any right recognized by law.

The appellants invoke the doctrine that one threatened with direct and special injury by the act of an agent of the government which, but for statutory authority for its performance, would be a violation of his legal rights, may challenge the validity of the statute in a suit against the agent.[5] The principle is without application unless the right invaded is a legal right,—one of property, one arising out of contract, one protected against tortious invasion, or one founded on a statute which confers a privilege.[6] The appellants urge that the Tennessee Valley Authority, by competing with them in the sale of electric energy, is destroying their property and rights without warrant, since the claimed authorization of its

transactions is an unconstitutional statute. The pith of the complaint is the Authority's competition. But the appellants realize that competition between natural persons is lawful. They seek to stigmatize the Authority's present and proposed competition as "illegal" by reliance on their franchises which they say are property protected from injury or destruction by competition. They classify the franchises in question as of two sorts,—those involved in the state's grant of incorporation or of domestication and those arising from the grant by the state or its subdivisions of the privilege to use and occupy public property and public places for the service of the public.

The charters of the companies which operate in the states of their incorporation give them legal existence and power to function as public utilities. The like existence and powers of those chartered in other states have been recognized by the laws of the states in which they do business permitting the domestication of foreign corporations. The appellants say that the franchise to be a public utility corporation and to function as such, with incidental powers, is a species of property which is directly taken or injured by the Authority's competition. They further urge that, though non-exclusive, the local franchises or easements, which grant them the privilege to serve within given municipal subdivisions, and to occupy streets and public places, are also property which the Authority is destroying by its competition. Since what is being done is justified by reference to the Tennessee Valley Authority Act, they say they have standing to challenge its constitutionality.

The vice of the position is that neither their charters nor their local franchises involve the grant of a monopoly or render competition illegal. The franchise to exist as a corporation, and to function as a public utility, in the absence of a specific charter contract on the subject, creates no right to be free of competition,[7] and affords the corporation no legal cause of complaint by reason of the state's subsequently authorizing another to enter and operate in the same field.[8] The local franchises, while having elements of property, confer no contractual or property right to be free of competition either from individuals, other public utility corpora-

tions, or the state or municipality granting the franchise.[9] The grantor may preclude itself by contract from initiating or permitting such competition,[10] but no such contractual obligation is here asserted.

The appellants further argue that even if invasion of their franchise rights does not give them standing, they may, by suit, challenge the constitutionality of the statutory grant of power the exercise of which results in competition. This is but to say that if the commodity used by a competitor was not lawfully obtained by it the corporation with which it competes may render it liable in damages or enjoin it from further competition because of the illegal derivation of that which it sells. If the thesis were sound, appellants could enjoin a competing corporation or agency on the ground that its injurious competition is *ultra vires*, that there is a defect in the grant of powers to it, or that the means of competition were acquired by some violation of the Constitution. The contention is foreclosed by prior decisions that the damage consequent on competition, otherwise lawful, is in such circumstances *damnum absque injuria*, and will not support a cause of action or a right to sue.[11]

Certain provisions of state statutes regulating public utilities are claimed to confer on the appellants the right to be free of competition. Each of the states in which any of them operates, save Mississippi,[12] has established a commission to supervise and regulate public utilities. While the statutes[13] differ in their provisions, all but that of Virginia require a public utility to obtain a certificate of convenience and necessity as a condition of doing business. The appellants commenced business in the various states prior to the

[12] In Mississippi there is no State Commission, but municipalities are given the authority to regulate utilities within their territorial limits. Mississippi Code (1930) §§ 2400-1, 2414.

[13] Alabama Code (1928) § 9795; Carroll's Kentucky Statutes (1936) § 3952-25; North Carolina Code (1935) § 1037(d); Williams' Tennessee Code (1934) §§ 5502-3; South Carolina Code (1934 Supp.) § 8555-2(23); Virginia Code (1936) §§ 3693-3774 k; West Virginia Code (1937) § 2562(1).

adoption of the requirement of such certificates and, so far as appears, they have none covering their entire operations. They have, however, obtained certificates for extensions made since the passage of the statutes; and they claim that, in any event, these laws afford them protection from the Authority's competition since any utility now seeking to serve in their territory must obtain a certificate, and hence they have standing to maintain this suit against the Authority which has none. The position cannot be maintained. Whether competition between utilities shall be prohibited, regulated or forbidden is a matter of state policy. That policy is subject to alteration at the will of the legislature.[14] The declaration of a specific policy creates no vested right to its maintenance in utilities then engaged in the business or thereafter embarking in it.

Moreover, the states in which the Authority is now functioning have declared their policy in respect of its activities. Alabama has enacted that federal agencies, instrumentalities, or corporations shall not be under the jurisdiction of its Public Service Commission;[15] that municipalities and improvement authorities may own and operate electric generating and distributing systems and may contract with a federal agency such as the Authority for the purchase of energy, and stipulate as to the use of the energy, including rates of resale;[16] that nonprofit membership corporations may be formed for the distribution among their members of electricity with like power to contract with the Authority for the required energy.[17] Tennessee has amended Section 5448 of its Code, which defines public utilities, so as to exclude federal corporations such as the Authority from the jurisdiction of the State Utilities Commission;[18] has authorized municipalities to own and operate electric generating transmission and distribution systems and to contract for power with the Authority on terms deemed appropriate, including the fixing of resale prices;[19] has authorized the formation of nonprofit membership

electric corporations with like powers to contract.[20] Kentucky has authorized municipalities to establish and maintain light, heat, and power plants;[21] and has provided for the organization of nonprofit cooperative electric corporations which may contract with the Authority for purchase of energy and stipulate as to resale prices.[22] Mississippi, which has no state law for regulation of utilities, has empowered municipal and county governments to establish and maintain electric distribution systems which may buy power from the Authority and contract as to resale prices;[23] has created a rural electrical authority and authorized the formation of power districts and nonprofit competitives, all competent to purchase energy from the Authority and distribute it and to contract with the Authority as to resale rates to consumers.[24] The Authority's action in these states is consonant with state law, but, as has been shown, if the fact were otherwise, the appellants would have no standing to restrain its continuance.

As the Authority has not acted in any way in North Carolina, South Carolina, Virginia or West Virginia, the appellant's contention that its proposed entry into some or all of them confers a right to sue for an injunction against injury thereby threatened has even less support.[25]

The appellants may not raise any question of discrimination forbidden by the Fourteenth Amendment involved in state exemption of the Authority from commission regulation. For this reason *Frost* v. *The Corporation Commission*, 278 U. S. 515, on which they rely, is inapplicable. Manifestly there can be no challenge of the validity of state action in this suit.

---

[20] Tennessee Public Acts 1937, chap. 231, p. 882.

[21] Carroll's Kentucky Statutes (1936) §§ 3480 d-1 to 3480 d-22.

[22] Kentucky Acts, Fourth Extraordinary Session, 1936-1937, chap. 6, p. 25.

[23] Mississippi Laws, 1936, chap. 185, p. 354; chap. 271, p. 531.

[24] Mississippi Laws, 1936, chap. 183, p. 334; chap. 187, p. 370; chap. 184, p. 342.

[25] In fact several of the states in question have statutes which would to some extent, and in some circumstances, permit the purchase and use of power created by the Authority. In all of them municipalities may establish and operate their own distribution systems: North Carolina Code (1935) § 2807; South Carolina Code (1932) §§ 7278-7280, 8262; Virginia Code (1936) § 3031; West Virginia Code (1937) §§ 494, 591(86). North Carolina and Virginia have statutes permitting the formation of cooperatives which may buy power from the Authority under contracts fixing resale rates: Public Laws of North Carolina, 1935, chap. 291, p. 312; Virginia Code (1936) chap. 159 A. South Carolina has created a State Rural Electrification Authority with power to buy electricity from any federal agency: South Carolina Code (1936 Supplement) §§ 6010-2 ff.

A distinct ground upon which standing to maintain the suit is said to rest is that the acts of the Authority cannot be upheld without permitting federal regulation of purely local matters reserved to the states or the people by the Tenth Amendment and sanctioning destruction of the liberty said to be guaranteed by the Ninth Amendment to the people of the states to acquire property and employ it in a lawful business. The proposition can mean only that since the Authority sells electricity at rates lower than those heretofore maintained by the appellants such sale is an indirect regulation of appellants' rates. But the competition of a privately owned company authorized by the state to enter the territory served by one of the appellants would, in the same sense, constitute a regulation of rates. The contention amounts to saying that competition by an individual or a state corporation is not regulation but competition by a federal agency is. In contracting with municipalities and nonprofit corporations the Authority has stipulated respecting the price at which the energy supplied shall be resold by its vendees. That is said to be a regulation of the appellant's business. But it is nothing more than an incident of competition; it is but a method of seeking and assuring a market for the power which the Authority has for sale, and a lawful means to that end.[26] The sale of government property in competition with others is not a violation of the Tenth Amendment. As we have seen there is no objection to the Authority's operations by the states, and, if this were not so, the appellants, absent the states or their officers, have no standing in this suit to raise any question under the amendment.[27] These considerations also answer the argument that the appellants have a cause of action for alleged infractions of the Ninth Amendment.

Finally, it is asserted that the right to maintain this suit is sustained by certain allegations of concerted action by the officials of the Authority and the Public Works Administrator. The bill alleges that having adopted an unlawful plan the defendants have cooperated, and threaten to continue to cooperate in its execution, with Harold L. Ickes, as Administrator of the Federal Administration of Public Works, in a systematic campaign to coerce and intimidate the complainants into selling their existing systems in municipalities or territory in which the Authority desires to seize

[26] Oregon & Calif. R. R. v. United States, 238 U. S. 393; United States v. Gratiot, 26 Fed. Cas. 12, 13-14; affirmed 14 Pet. 526.

[27] Compare Georgia Power Co. v. Tennessee Valley Authority, 14 F. Supp. 673, 676.

the market for electricity; that, in order to make this coercion effective, Ickes has, in cooperation with, or on request of, the Authority, announced loans and grants of federal funds to municipalities; that the Authority and Ickes have cooperated, and continue to do so, to force municipalities to purchase the Authority's power under threats that, unless they do, proposed loans and grants for municipal systems will not be made. The bill states that, though Ickes "confederated and acted with the defendants in some of its illegal acts and is, therefore, a proper party, he is not a necessary party and is not joined as a defendant because he is beyond the jurisdiction of the court." There is a prayer that the defendants be restrained from confederating and acting in concert with Ickes for the described ends.

The District Court finds that the Authority has not indulged in coercion, duress, fraud, or misrepresentation in procuring contracts with municipalities, cooperatives or other purchasers of power; has not acted with any malicious or malevolent motive; and has not conspired with municipalities or other purchasers of power. The record justifies these findings. It is claimed, however, that they are inconclusive since the court erroneously excluded much proffered evidence tending to sustain the charge. An examination of the record discloses that certain of the evidence offered was properly excluded, and that in other instances the rejection of that offered constituted, at most, harmless error.

Error is assigned to the trial court's refusal to permit the taking of the deposition of the Public Works Administrator. In view of the prior opportunity which the claimants had to take this deposition, the lateness of the application, and other factors, permission to take the deposition was a matter within the court's discretion and it does not appear that the discretion was abused.

The remaining assignments of error directed to the exclusion of evidence of cooperation between the two federal agencies go to the rejection of evidence consisting largely of correspondence between them and press releases or announcements by officers of one or the other. The record contains all but a few of these rejected documents, those omitted apparently not being thought of importance. Scrutiny of them compels the conclusion that if the rejected evidence had been admitted, the trial court's holding that a conspiracy had not been proved should not be overruled.

The only findings on this subject requested by the appellants were to the effect that the Public Works Administration has cooperated with and assisted the Tennessee Valley Authority in the furtherance of the latter's power program and that the former has made contracts and allotments for loans and grants to twenty-three municipalities in the states of Alabama, Mississippi, and Tennessee, amounting to about fourteen million dollars, for the purpose of constructing municipal systems to distribute the Authority's power in competition with the appellants; that the applications for loan and grant in some instances specify that the municipal system will duplicate a privately owned system; in others that a large business will be done by the municipal plants because of the low promotional rates of the Authority; that some of the applications state they were filed to take advantage of the low rates offered by the Authority and that, with few exceptions, they state that the electricity to be distributed in the city will be purchased from the Authority. A further requested finding is that the applications of certain Alabama cities recite that they have secured written contracts from practically all consumers; that these contracts refer to lower rates to be secured, provided the rates charged by the city shall be thus prescribed by the Authority for resale at retail. The court refused to make the requested findings and error is assigned to this refusal. It is apparent that if the court had made the findings no conclusion of confederation or conspiracy, with malicious intent to harm the appellants or to destroy their business, would thereby have been required.

Cooperation by two federal officials, one acting under a statute whereby funds are provided for the erection of municipal plants, and the other under a statute authorizing the production of electricity and its sale to such plants, in competition with the appellants, does not spell conspiracy to injure their business. As the court below held, such cooperation does not involve unlawful concert, plan, or design, or cooperation to commit an unlawful act or to commit acts otherwise lawful with the intent to violate a statute.

In no aspect of the case have the appellants standing to maintain the suit and the bill was properly dismissed.

The decree is affirmed.

Mr. Justice REED took no part in the consideration or decision of this case.

SUPREME COURT OF THE UNITED STATES.

No. 27.—October Term, 1938.

The Tennessee Electric Power Co., et al., Appellants, *vs.* Tennessee Valley Authority, et al.	On Appeal from the United States District Court for the Eastern District of Tennessee.

[January 30, 1939.]

Mr. Justice Butler.

The decision just announced goes too far. It excludes from the courts complainants seeking constitutional protection of their property against defendants acting, as it is alleged, under invalid claim of governmental authority in setting up and carrying on a program calculated to destroy complainants' business. The issues joined by the parties, tried below and fully presented to this Court, include the question whether, when construed to authorize the things done and threatened by defendants, the challenged enactment is authorized by the Constitution or repugnant to the Fifth, Ninth, and Tenth Amendments. The issues also include the question whether, as being applied, the Act is void because the execution of defendants' program will deprive complainants of their property without due process of law in contravention of the Fifth Amendment. This Court holds complainants have no standing to challenge the validity of the Act and puts aside as immaterial their claim that by defendants' unauthorized acts their properties are being destroyed.

The opinion states: "The Authority's acts which the appellants claim give rise to a cause of action, comprise (1) the sale of electrical energy at wholesale to municipalities empowered by state law to maintain and operate their own distribution systems; (2) the sale of such energy at wholesale to membership corporations organized under state law to purchase and distribute electricity to their members without profit; (3) the sale of firm and secondary power at wholesale to industrial plants."

That the substance of complainants' case may not be so compressed is disclosed by the summary of their bill that follows:

Complainants are 19 public utilities. Each, authorized by law, is engaged in generating and selling electricity within the political subdivisions of various States. Some have long-term contracts under which they furnish large quantities of electricity. They are more than able to fill the needs of the territories in which they operate and are ready to supply such additional facilities as may be needed in the future. Their properties are modern and economically operated and possess great value as going concerns. Their rates yield no more than a reasonable return and are fully regulated by the States in which they serve.

Defendants are the Tennessee Valley Authority, a body corporate created by the Act of May 18, 1936, with the right to sue and be sued, and its three directors, charged with the duty of exercising the powers of the Authority. Harold L. Ickes, the Administrator of the Public Works Administration, has confederated with defendants in some acts charged to be illegal; he is not sued because beyond the jurisdiction of the court. From its principal office at Knoxville, Tennessee, the Authority carries on a proprietary business as a public utility for the generation, transmission, distribution and sale of electricity in Tennessee, Mississippi, Georgia and Alabama.

On its face, the Act discloses purpose to authorize a large and indeterminate number of great works for the primary purpose of creating a vast supply of electric power, to use this power to establish the United States in the business of producing, transmitting, and selling electric power, and to dispose of this power in a manner inconsistent with the principles of our dual system and so as to govern the concerns reserved to the States. Any references in the Act to navigation or to any other constitutional objective are unsubstantial and mere pretenses or pretexts under which it is sought to achieve an object reserved to the States. Except with respect to power available at Wilson Dam prior to the acts complained of, the program is one of creating an outlet for power deliberately produced as a commercial enterprise to be sold in unlawful and destructive competition with power now available in adequate quantities.

The program contemplates ultimately the development of all power sites on the Tennessee River and all its tributaries as an integrated electric power system, the construction and operation of hydro-electric plants at these sites, the use of auxiliary steam plants, the interconnection of all plants, and the elimination of existing privately owned utilities.

In the area of over 40,000 square miles, there are 149 water power sites which, with auxiliary steam plants, will produce 25 billion k.w.h. annually. Present consumption of the area is 56% of that quantity. The electric power to be produced by defendants can only be sold through displacement of the complainants. Execution of the program will necessarily destroy all or a substantial part of the business and property of each of the complainants.

Defendants have taken over Wilson Dam and the nitrate plant and have commenced, or recommended to Congress, the construction of 10 other dams; their program calls for 11 completed dams by July 1, 1943. They have prepared plans for the construction of high-tension transmission lines from the dams to at least 14 cities and indeed to the whole area. They have purchased or are attempting to purchase distribution systems in at least 15 cities. They have entered into contracts to sell power to various communities and industries for a 20-year period and have agreed to supply firm power to other and larger cities.

The avowed purpose of the program is to effect a federal regulation of intrastate electric rates and service by a so-called "yardstick" method or "regulation by competition". The yardstick for wholesale rates is the wholesale rate charged by the Authority. It is unreasonable and confiscatory as a measure of complainants' rates in that it excludes the cost of the major part of the investment necessary to render the service and excludes necessary operating expenses. The yardstick for retail rates is the sum of the wholesale rate and the amount which the Authority allows municipalities to add to the wholesale rate to cover cost of local distribution; it excludes many items of necessary cost of rendering the service.

Pursuant to a plan promulgated in 1933, defendants are conducting a systematic campaign for the purpose of disrupting the established business relations between complainants and their customers, destroying the good will built up by complainants, seizing their markets and inciting the residents of communities served by

them to cooperate with defendants in their scheme to develop an absolute monopoly.

With full knowledge of the noncompensatory and confiscatory character of the yardstick rates, they have represented to the inhabitants of communities served by complainants that these "yardsticks" were fair measures of reasonable rates and have thereby attempted to incite the inhabitants to build publicly owned systems using power furnished by the Authority, to lead them to believe that they are being charged unreasonable rates, to stir up political agitation against privately owned utilities and to bring complainants into disrepute and disfavor.

The defendants attempt to coerce complainants to sell distribution systems and transmission lines, in territories which defendants intend to appropriate, at prices far below fair value by threatening that, unles complainants acede, they will construct, or cause to be constructed, duplicate facilities subsidized in construction and operation by federal funds and render complainants' properties wholly valueless. The Administrator of the Public Works Administration has ccoperated with defendants. Defendants inform the owners that, unless they sell, either the Authority or the municipalities will build duplicate systems with federal funds. At defendants' request, the Administrator authorizes and announces a gift to the municipality of from 30% to 45% of the cost of the duplicate system and agrees to lend the balance, repayable out of earnings, if any, of the duplicate plant, upon condition that the municipality will agree to use power of the Authority and will, as soon as possible, oust the existing utility. If the utility agrees to sell, the allotments are canceled without regard to the will of the municipality. This policy has already been applied in certain cities. The defendants and Administrator also cooperate to force municipalities to agree to purchase power furnished by the Authority by threats that otherwise federal allotments for public works will be canceled or denied.

Defendants have caused bills, designed to forward their power program, to be submitted to the legislatures of various States in the area and have lobbied for and brought about their passage. They have installed Authority personnel throughout the area to disseminate propaganda in behalf of the program. The Electric Home and Farm Authority, a corporation set up as a governmental agency of which the individual defendants are directors, finances

sale of electrical devices, prints and circulates costly advertising in praise of the Authority program. Defendants have offered to supply electricity to large industrial customers of some of the complainants at noncompensatory and discriminatory rates. They have attempted to persuade complainants' customers to break existing contracts. Complainants cannot meet this competition because of the noncompensatory rates and because they are forbidden by state law to make discriminatory rates.

The bill prays invalidation of the Act as unconstitutional and injunction and other relief against defendants.

Unquestionably, the bill shows that complainants are not asserting a right held or complaining of an injury sustained in common with the general public. They allege facts that unmistakably show that each has a valuable right as a public utility, nonexclusive though it is, to serve in territory covered by its franchise, and that, inevitably the value of its business and property used will suffer irreparable diminution by defendants' program and acts complained of. If, because of conflict with the Constitution, the Act does not authorize the enterprise formulated and being executed by defendants, then their conduct is unlawful and inflicts upon complainants direct and special injury of great consequence. Therefore, they are entitled to have this Court decide upon the constitutional questions they have brought here. See *Massachusetts* v. *Mellon*, 262 U. S. 447, 488; *Frost* v. *Corporation Commission*, 278 U. S. 515, 521.

Mr. Justice McREYNOLDS joins in this opinion.
